Keller, Va., Jan. 25.—*Editor Forest and Stream:* In your publication of the 23d inst. I find an inquiry from Mr. O. D. Foulks, Stockton, Md., who asks: "Where are the ducks?" It affords me much pleasure to give what light I can to our friend in regard to the duck supply in Hog Island Bay. Brant and black ducks have been plenty there since November till now. We see persons from Upshires Neck (which is the mainland boundary of Hog Island Bay) almost every day, and are informed by them that the bay is swarming with wildfowl to such an extent that their sleep is actually disturbed at night by their chattering.

In years gone by I shot a great deal in our seacoast broadwaters and narrows, and especially in that of Hog Island, and under the most adverse circumstance I always killed a good bunch of birds every day, while not infrequently our day's shooting would amount to several dollars. Since then the chances should be better, as our bays are patrolled night and day by police boats to prevent trapping, night shooting and the use of guns above a certain size. I am informed that this regulation is already showing its good effects in the increased quantity of birds.

To secure good shooting, the quantity of birds is not more a question than to know their habits—this must be well understood. The late William Doughty, of Hog Island, or Capt. Nathan Cobb, of Cobb's Island, would always place themselves in such a way that the birds were bound to go to them. It is therefore, with shooting men, a matter of the first importance to secure practical men as guides. We no longer shoot at all ourselves, but will be glad to direct sportsmen who may be visiting our shores to good, experienced guides. This done, there is no doubt but that good results will attend their coming to the eastern shore in search of game.

T. G. E.

Monadnock Club.

The Monadnock Club has been organized to promote interest in fishing and shooting parties near Mt. Monadnock, N. H. The club has acquired grounds on Lake Contocook and built a club house, which will be open from April 1 to Nov. 1 to its members and visitors. The locality affords excellent fishing and shooting. The club numbers twenty-five members, and will gladly receive others.

The officers are: James S. Milner, President; Charles D. Bete, Vice-President; Frederic W. Bashforde, Treasurer; J. Frank Hayes, Secretary; Wm. E. Leake, Captain. Address in city, 136 Atlantic avenue, Brooklyn, or East Jaffrey N. H.

Maine Guide Licenses.

It seems that Fish and Game Commissioner Carlton, of Maine, is disposed to modify his guide license bill a good deal, and that the pressure has been so great against it that he has come out in the newspapers in defense of it. He says, over his own signature, in one of the papers, that he is willing to waive the matter of license fees if the guides will pay for their own badges. He also declared that the bill is not framed to interfere with the friend or farmer who presumes to accompany a sportsman on a fishing or shooting trip. He says that steamboat captains, into whose hands the hunters and fishermen visiting Maine trust their lives, have to have a license, then why should not guides who take care of the same sportsmen in the woods be licensed? He does not say that he would license every railway engineer, fireman, conductor or brakeman for the same reason. Neither does he propose that stage, buckboard or carriage drivers should be licensed by the State. Yet they all presume to take care of the visiting hunters and fishermen. His principal line of defense for his bill is that it is impossible to stop summer shooting with the means now provided, and that licensed guides will do it. He does not say where the cook or the hired man leaves off and where the guide begins. He is very fair about the matter and invites a full hearing at Augusta on Wednesday, Feb. 3. The railroads in that State have generally granted half fares to that hearing, and it promises to be one of great interest. The best sportsmen with whom I have talked agree that there can be no real objection to empowering the best of the guides to enforce the fish and game laws, but that a general license law for all guides or persons working for sportsmen would be a great failure. They also say that some law that will prevent the guides from shooting game for sportsmen, and to sell to them, will save more game than is killed by summer shooting.

SPECIAL.

Where the Wild Horse is a Nuisance.

Wild horses are getting to be quite numerous again on the flats in the Texas Panhandle and in Beaver county. They are very troublesome, as they lead away the horses belonging to the cow men and grangers, and when a domesticated horse once gets with a wild bunch it is an all day's job, and sometimes it takes several days, to catch him. The laziest old crowbait alive, or the gentlest family horse, after associating for a few days with these mustangs, seems to forget his raising; all the old-time wildness of his forefathers seems to crop out in him, and although formerly he may have allowed himself to be caught anywhere, he will not then permit a man to get within half a mile of him. About the only way to recover a horse of this kind is to run the entire bunch down and corral them, or rope the ones wanted. Nearly all our stockmen have lost horses in this manner, and the mustang, instead of being looked upon with respect and with covetous eyes, as in the past is now considered an intruder and a pest, and is shot down whenever opportunity offers. Since horses became so cheap there is no object in catching mustangs, and this once valuable representative of the best friend of man is now classed in the same category as the coyote and other "varmints."—*Beaver (Oklahoma) Herald.*

Thinks it not of Vital Interest.

Boston, Jan. 26.—*Editor Forest and Stream:* Inquiry and replies as to "Who Owns the Game Killed by the Guide," in your late issues, cannot be to most of your readers a matter of vital interest.

To those others we might suggest the usefulness of the guide in preventing them from losing their way; in taking them to correct grounds, that they may not waste their vacation in tramping a country where no game is to be found; in teaching them the habits of the birds and in handling the dogs; in showing them where they may not correctly use the gun, and explain how it happens that the birds get away so often; in assisting them in many ways, as carrying the lunch and the extra shells, in marking the dead birds and the live ones.

So that perchance those others will reach that point where, when the guide turns up with his gun, either the guide or his gun remains in camp, and it won't matter much which.

Special Hackle.

Bears Killed in Maine in 1896.

Bethel, Me., Jan. 23.—*Editor Forest and Stream:* I have received letters from the treasurers of ten towns bordering on the unbroken forests of northern Oxford county, replying to my inquiries as to how many bounties they had paid on bears the past season, and find they aggregate fifty-one killed. Bethel is the banner town, having secured fourteen. Newry killed ten, and Gilead eight, and Roxbury seven.

H. T. Stiles, of West Bethel, shot six running loose in the woods, they being the most killed by any one man in these parts. Two years ago there were eighty killed in these towns; last year only a few.

J. G. Rich.

Deer in Southern New Hampshire.

Manchester, N. H., Jan. 29.—The Legislature is now in session. We hope to see a bill passed to prevent killing deer in the southern counties. There have been quite a number seen in the city limits, and some have been killed very near here. We have a large amount of second growth of hardwood, miles in extent, that is good cover for deer; and in a few years they would be quite plenty if they could have full protection. Jug the man that kills a deer near here within the next five to ten years.

H.

Sportsman (to Snobson, who hasn't brought down a single bird all day)—"Do you know Lord Peckham?"

Snobson—"Oh, dear, yes; I've often shot at his house."

Sportsman—"Ever hit it?"—*Punch.*

Farmer—"You've shot my cow!"

Dooley—"Be gobbs, an' I told ther grocer mon as plain as cud be to give me *bu-r-r d* shot!"—*Puck.*

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Camp-Fire Flickerings.

"That reminds me."

The Most Peculiar Thing he had ever Noticed.

A correspondent who wrote from Currituck, N. C., the other day, tells of the untoward fortune of duck shooting there during his stay, and winds up with a good story:

"I have been most of the time aggravated almost beyond endurance by the wildfowl. We have had nothing but summer weather, warm and lazy-like; there are plenty of birds, but they would not decoy well, but congregate in large rafts in the middle of the Sound, every once in a while rising in vast clouds, and such honking and quacking you have never heard. As I am writing I can hear them at it; sounds like a half dozen country schools let loose for recess at the one time. Within the last three days we have had some cold, stormy weather, consequently more birds and better prospects. I noticed particularly one large flight of sprigs with a few bunches of redheads. There are a great many swans here, and from the house one can at any time see a thousand of them sitting on the bar less than a mile away, looking for all the world like a big snow bank.

"One of White's guides, a nephew, told me a story the other day while in the blind that deserves a place in your 'That Reminds Me' column. I wish you could hear the native twang with which the story was told. I had asked him what was the most peculiar thing he had ever noticed while gunning. 'Wal, I'll tell yer. We was a-setting out in the Sound a-shooting and I noticed a canvasback a-comin' from the no'th right smart, and then I seed another canvasback comin' from the south and he was flying right peart. The sun was a-shinin' just so as one bird never noticed the other, and pretty soon they come together crash and fell in the water. I went and picked them up, both stone dead. They was both split open clean from their bills down their breasts, and that's gospel truth.'

"I suggested that the medal at Washington was his if he would only claim it, but as the idea seemed to kind of hurt his feelings I have not pressed it too much."

W. E. Sawyer.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

THE MASSACHUSETTS ASSOCIATION.

Boston, Feb. 1.—*Editor Forest and Stream:* The members and guests of this Association, 180 of them, assembled at the Copley Square Hotel last Saturday evening to discuss a good dinner (tickets $3), review the work of the year and enjoy an evening of right down good-fellowship—all of which they did in a large degree. Col. Rockwell presided and the special guests were Governor Wolcott; Hon. Winslow Warren, Collector of the Port; Judge Edgar Aldrich, of the U. S. District Court; E. B. Haskell, Esq.; Hon. Hubert Williams, Fish Commissioner of Connecticut; A. W. Robinson, president of the Megantic Club, and Geo. H. Lyman, Jr. Others present were ex-President B. C. Clark, ex-President Geo. W. Wiggin, Hon. W. F. Ray, J. G. Ray, Hon. J. Q. A. Field, Wm. H. Sweatt, A. D. Thayer, Charles Stewart, Dr. J. T. Stetson, J. Russell Reed, Waldron Bates, J. S. Duncklee, Sidney Chase, E. T. Barker, William Almy, Geo. O. Sears, W. F. Almy, Rollin Jones, John N. Roberts, Chas. G. Gibson, E. E. Small, Sidney Chase, Alexander Pope, N. L. Martin, Dr. W. J. Brigham, E. C. Norton, Dr. G. H. Payne, Secretary Kimball, H. D. Litchfield, W. B. Hastings, H. F. Coleman, Benj. F. Stevens, A. R. Brown, H. G. Kyser, S. W. Rich, C. M. Blake, Hon. Robt. S. Gray, E. E. Allen, W. B. Kehoe, J. Payson Bradley, C. F. Munroe, Chas. A. Allen, Warren Hapgood, J. N. Akerman, Hon. A. B. R. Sprague, Mayor of Worcester; B. V. Howe, Dr. E. W. Branigan, A. A. Glasier, John E. Hall, Thomas Hall, C. M. Bryant, Dr. Robert M. Read, L. W. Sumner, W. K. Churchill, Wm. C. Thairlwall, Wm. F. Bacon, Edward E. Hardy, Loring Crocker, Dr. J. W. Ball, Henry J. Thayer, Dr. W. H. Tobey, E. P. Wilbur, C. W. Dimick, Chas. F. Proctor, S. A. Lincoln, Chas. S. Lewis, Geo. Rimbach and Walter M. Brackett. The dining hall was very elaborately decorated, the walls being hung with handsome skins, while fine heads of moose, deer and caribou were very much in evidence. The dinner was an excellent one and was made up largely of the most tempting specimens of fish and game. Tom Henry's orchestra played and the company joined in singing several of the popular songs of the day. When cigars were reached President Rockwell opened the speech making.

Col. Rockwell's Address.

Although this is not an occasion for "business" in the ordinary sense of the word, but is for other purposes, useful in their way—and well understood by you—yet following the established and appropriate custom, I shall very briefly pass in review the events of the past in which this Association has had an agency or exerted an influence. The story of 1896 is short, but important. There were presented to the Legislature several measures which engaged the attention of your officers, and were watched with their usual assiduity and circumspection, especially by your president, Mr. Clark, your counsel, Mr. Reed, and your secretary, Mr. Kimball. Two only were of such importance, in respect to the general policy of our laws, as to require mention. In neither case, I am glad to say, was any injurious enactment secured; and the defeat of the propositions was exactly in line with the purpose of this Association as avowed, and, as I believe, consistently maintained—to serve the interest of the community as a whole, as distinguished from private interests, whether of the mercantile sort or of the kind imputed to amateur sportsmen. The two matters to which I allude were the propositions to reduce the length limit of lobsters, and to permit the sale of game at all seasons of the year irrespective of the legality of its possession. Neither of these matters need to be argued here. You thoroughly understand the pernicious nature of both propositions. Notwithstanding that the Legislature was induced by the pressure of private interests to approve the short lobster bill, that bill failed to become a law through the wisdom and firmness of the executive, Acting Governor Wolcott.

We trust the lobster question is not to be reopened at present. It has been with us for twenty years; and though the benefits of restrictive legislation have been amply demonstrated, I personally believe much larger and more beneficial results might be obtained by increasing the present restrictions. It is, however, agreed that it would be unwise to seek for any such legislation at present.

The scheme of the game dealers to open the doors to the practically unrestricted sale of game in Massachusetts at all seasons, whether illegally exported from other States or not, was successfully resisted. It would seem that it ought to be impossible to revive it, in view of the stringency of the laws of other States, even of those having a much larger commercial interest than Massachusetts in the disposal of game.

Massachusetts law already gives the dealer privileges unknown to the other States, and to extend them cannot fail to work disastrously.

Carrying our retrospect back over the twenty-two years of our existence, we are able to take satisfaction in the measure of good work done, and of evil successfully resisted. As a few of the elders will remember, this Association was first called the "Anglers' Association." It was formed by a coterie who had in view at the time a very limited field of labor as compared with that which we now cover. The objects named in their charter were simply and only "the securing and enforcing proper restrictions upon the taking and killing of fish, shellfish and bivalves, and the promotion of fishculture." Their first campaign was devoted to nothing more nor less than the protection of the smelt fishery. That fishery was in danger of extermination so far as Massachusetts was concerned, but the Anglers succeeded in saving it, and to-day the smelt is found in our waters in profusion. The community, which prizes this fish so highly, certainly owes to our predecessors a meed of gratitude for their disinterested labors in this case. In succeeding years came beneficial action as to trout and lobsters; and later still came the change to our present title, and the enlarged field of labor and increased scope of usefulness as to game.

It is needless to parade those details which would cover the statistics of the work which has been done, or to estimate the value of the faithful and zealous labor of those who have had your cause in hand, to say nothing of your constant support and help as a body, and of the considerable sums of money expended. To sum up results would be to say that conditions as to the laws and their enforcement are greatly improved; and that the public sentiment, which must make the present laws and their enforcement realize their full fruits, and make possible further advances in the same direction, has been educated to the point where we can confidently appeal to it in support of any wise and conservative measures.

While we hope and believe that during the current year it will be expedient to rest contented upon the ground we now hold, it is certain that the work of this Association is not done. Even the Massachusetts Fish and Game Commission, which is generally deemed a pretty conservative body, have pointed out in their recent report evils to be remedied and objects to be gained in the line of our policy.

Our Association has been the subject of various criticisms, which, if I were to place in groups, I should say were, first, that we have done too much, and second, that we have done too little. From my knowledge of the history of the Association from the start, I am able to state my belief that the first criticism is unfounded, and if there is any ground for the second, it is not because the officers for the time being have refrained from attempting to gain an advanced position when there was any decent prospect of success. As to the execution of the laws, if, as some believe, more energy would be useful, I express my belief that that is not properly our field. The policy of the State is so thoroughly settled, and the public sentiment is so far crystallized in its support, that it appears to me that police duty should be done by the constituted authorities, with only such auxiliary aid from us as any body of good citizens should give in like cases.

This leads me to say in conclusion, that I hope and believe one great result has been accomplished, or so nearly accomplished that we can rely upon its helpfulness in our future work, and that is, that we have attained that strong position as a moral force in the community for which we have striven during all these years. I had occasion to say at the recent dinner of the Megantic Club, when we were alluded to as a "sister organization," that while I recognized the family relation and was proud to acknowledge it, I considered the relation something different; that is to say, that their organization—one of the best, most useful of its kind, and collaterally giving assistance to our work—was essentially a private organization, with private interests predominating, and general interests subordinate thereto; while we have no private interests to serve, except as they are incidental to a few individuals. We have suffered sometimes defeat, and many times delay, in our public work from the imputation of selfish motives. We were said to be a club of sportsmen, working for laws and restrictions for our personal benefit. It has been idle for us to protest to the contrary, or to point out the fruits of our labors in measures manifestly in the general interest. To-day, however, I believe a better understanding exists, and while we could hardly be credited with pure altruism, we may claim to be esteemed for what we have done and what we are. It should certainly be our aim in the future to establish ourselves in a position to confidently anticipate the public support; to make for ourselves the reputation of laboring for results which have no taint of self-interest, but are absolutely consistent with a sound and permanent public policy.

Gov. Wolcott was received with great enthusiasm, as he has a very warm place in the hearts of the members of the Association. He spoke feelingly of the objects of the men who had made the Association a power in the matter of fish and game protection, and he had no doubt that it would continue in the good work. Hon. Winslow Warren, collector of the port, followed with an entertaining talk, taking occasion to refer to the arbitration treaty, and claimed for Massachusetts a large share of credit in that most beneficent work. E. B. Haskell, Esq., the well-known editor and proprietor, with President Rockwell, of Ellerton Lodge at the Rangeleys, made a humorous speech from the fisherman's side. At this point Mr. Warren Hapgood

claimed the attention of the company, and proceeded to present ex-President B. C. Clark with an exceedingly life-like oil portrait of himself, by artist W. W. Churchill. Mr. Clark made a feeling response. Brief speeches were made by Hon. Mr. Williams, Fish Commissioner of Connecticut; Arthur M. Robinson, president of the Megantic Club; Geo. H. Lyman, Esq., and Dr. Heber Bishop. The affair would not have been complete without some surprises sprung upon the party by Dr. Bishop, and they came in due course. First, what purported to be a big pie was brought in and placed in front of the president. Upon the cover being removed a couple of baby lions from the Zoo were taken out and led up and down the table, apparently wondering what it was all about. Next the Mexican midget Princess Chiquata appeared and made a tour of the head table, shaking hands with each guest. She requested the Governor to name her pet wolf cub, and he promptly said "Massachusetts." The whole affair was a most enjoyable one, and the evening was well advanced before the festivities were brought to a close. Wm. B. Smart.

ADIRONDACK GUIDES' ASSOCIATION.

Saranac Lake, N. Y., Feb. 1.—On Wednesday evening, Jan. 27, the fourth annual meeting and banquet of the Adirondack Guides' Association took place at the Opera House in the village of Saranac Lake, the metropolis of this mountain and lake region, now famous as a resort of health and pleasure seekers. No such interest has before been manifest in matters pertaining to the Adirondacks as was shown at this meeting. The large hall was packed with men and women from throughout the entire wilderness, and representatives from Malone, Plattsburgh, Albany, New York and Boston were also in attendance. The speakers included clergymen, lawyers, doctors, hotel men and railroad men, all of whom have a mutual interest with the guides in the preservation of the woods and waters, the game and the fish.

The Adirondack Guides' Association is an organization composed of competent, well-equipped and trustworthy guides of the Adirondack wilderness, and, as associate members, of men who are interested in the protection of the game and the fish of the Adirondacks. This organization guarantees to the tourist and sportsman, if he engages as a guide a member of the Association, a man who has a thorough knowledge of the vast Adirondack forest, of its various routes from place to place, and of the habits of its denizens of game and fish; who shall be properly equipped and trustworthy in every respect. Not only this, but such employer is aiding, by his employment of a member of the Adirondack Guides' Association, the most practical means of protection to the Adirondack forests ever yet proposed. The forests can best be protected by those residing within their borders, and especially by those who are interested in their preservation, that their means of livelihood may be retained. Long before the tourist or sportsman reaches the Adirondacks he will have been informed through newspapers, magazines, circulars and notices that such an organization exists; that its members are men who are content to perform the duties devolving upon them, and that they are pledged to the protection of the forests and all that pertains to them. They will know also where to find these members, and it is but natural that a sportsman or tourist should engage, in preference to all others, a man backed by a guarantee like that of the Association. Thus membership in the Adirondack Guides' Association is in itself a credential than which no man can have a better. Guides only are admitted to membership. The associate membership is, however, open to all those interested in the objects and purposes of the Association. Many of the most prominent citizens of New York State have been enrolled. Among them are State officials, hotel men, prominent physicians and attorneys, members of the press and of the various Adirondack clubs.

The president of the Association, Mr. Oatman A. Covill, of Saranac Lake, called the meeting to order. After the minutes of the last annual meeting were read and approved, and the reports of the secretary and treasurer were accepted, letters from the honorary president, Hon. Verplanck Colvin, of Albany, were read by Mr. Seaver A. Miller. Mr. Colvin in his letters made a number of valuable suggestions, and among other things spoke of a new method of hunting in the Adirondacks which he believes greatly increases the destruction of deer. This is the free importation of hounds and dogs from all portions of the settlements. At the beginning of hounding, if not earlier, a great number of strange dogs are turned loose in our great deer preserves in such a manner as to secure the greatest results for "pot-hunters," or men who are more desirous of destroying the deer than of enjoying some weeks of camp life, with its rest and health, in the exhilarating atmosphere of the woods. A party of men from the settlements, loaded with guns and ammunition, leading a pack of dogs, and staying but a few days in the wilderness for the purpose of killing deer, are not beneficial to the country, but are destructive not only to the deer, but to the business in which the guides themselves, the hotels, railroads, etc., are engaged. He said there are plenty of hounds now in the Adirondacks, indeed it is quite likely there are too many for the good of the deer, and believed that the importation of hounds from the settlements for the purpose of wholesale slaughter is one deserving earnest consideration and correction. Parties thus coming and going in a hurry often lose their hounds and the dogs are left in the woods. If they are not picked up by a guide, or do not starve, they may run to and fro from settlement to settlement, hunting whatever they can find and doing much harm. In some sections a pack of hounds have been found in the woods away from settlements and without known owners. Such wild dogs, said Mr. Colvin, may become as injurious as wolves. He suggested that the remedy probably consists in placing a tax, to be collected at each railroad depot where dogs are imported, and believed that if this tax could be appropriated to the improvement of trails and to an old age fund for disabled woodsmen, from $1,000 to $10,000 might be obtained from this tax on imported dogs and applied to good purposes.

Another matter which Mr. Colvin believed should be urged upon the State authorities is the importance of acquiring large areas of forest land in the central portion of the wilderness, and particularly the reservation by the State of the shore lines of all the beautiful lakes, so as to prevent their disfigurement and the destruction of the timber by lumbering along such shores. He said also that it was essential that the guides in all the several sections of the Adirondack region should act together, and that only those who are reliable men and thoroughly good guides should be on the list of membership; that to be a first-rate guide is to be thoroughly acquainted with a large extent of the country; to have and to furnish a good boat and rifle, fishing tackle, tents, and a hound, if need be, while all should be skillful and capable cooks; that there are many men in these days who claim to be guides and yet have not the local knowledge or any knowledge of woodcraft, or of the forests, streams, trails or carries, and do not furnish either boats, guns, fishing tackle or tents, and cannot cook or chop wood, yet they claim to be guides and demand the same compensation as guides. He believed this to be unjust, but it is a situation which the guides are forced to meet, and it seemed to him that it would be proper for them not only to make up their list of regular guides, fit to be employed by sportsmen, travelers and tourists, and receive a daily compensation of $3 due a guide, but that they recognize and designate other classes of labor, noting that the mountain guides, though not furnishing boats, are thoroughly regular in their employment, inasmuch as they carry heavy packs and all the baggage of their employer over the mountain ranges and to the summits of the high peaks, a work fully equivalent in labor to the use of a boat.

Mr. Colvin suggested that they designate this secondary class of labor as: First, packmen; strong, healthy men, who can carry burdens and do the heavy work under the direction of the guides. Such men can generally be hired at about half the pay of the guides, and should be selected by the guides with a view to the labor which they are called upon to perform. The packmen need not necessarily know the trails, nor have any special training in woodcraft, but should be physically men of strength and endurance. Second, axemen; in a large party in camp, where much wood is to be cut for the camp-fires or cooking, or where log camps are to be built, the guides can generally hire for their parties good axemen who are not members of the Guides' Association, and will not claim the same pay as members, and thus will not create the idea among many men that they are guides simply because they are employed at the same time with guides to help them in their work. In a similar way other laborers, boatmen, etc., may at times be hired by the guides to assist in the labor of the camp; and probably by making definite these positions of packmen, axemen, boatmen and laborers, the attempt on the part of untrained, unskillful and incompetent men to take parties into remote sections of the wilderness to procure for them deer or trout may be avoided.

In accordance with the authority vested in him by the constitution and by-laws, the honorary president named the following from among the associate members as honorary trustees: R. Babcock, W. S. Durant, Dr. A. G. Gester, Col. A. G. Mills, J. J. Broome, G. O. Shields, of New York; A. N. Cheney, Glens Falls; Hon. Verplanck Colvin, of Albany; Ulysses S. Grant, San Diego, Cal.; R. H. Kissell, Morristown, N. J.; Senator G. R. Malby, Ogdensburgh; Schuyler Merritt, Stamford, Conn.; Hon. Warner Miller, Herkimer; Samuel J. Tilden, New Lebanon, N. H.; W. C. Witherbee, Port Henry; William R. Weed, Potsdam.

Dr. John C. Russell, president of Saranac Lake village, then delivered an address of welcome to the Association. He congratulated them upon their healthful growth and prosperity and the influence for good they were exerting in Adirondack affairs, and expressed the hope that they would continue to hold their annual meetings and banquets in this village. The doctor then introduced the Rev. Walter H. Larom, who delivered a strong and practical address, which was listened to with close attention. The reverend gentleman said that in his position he was often thrown among guides and also with their employers; that it had been his privilege to obtain either permanent or temporary employment for many of their number, and that he had yet to hear of a dishonest Adirondack guide. He suggested that the Association adopt some sort of a dress for its members, which would be entirely representative of the region and of their vocation. Mr. Larom spoke about thirty minutes, and his remarks were frequently punctuated with applause. Frederick G. Paddock, Esq., district attorney of Franklin county, was the next speaker of the evening. The Association has made application for incorporation, and Mr. Paddock proceeded to explain the effect of the corporation laws as to the liability of members and the responsibility of officers joining in such reorganization. The district attorney said that in his official position hundreds of violations of the fish and game laws were presented to him annually, but that a member of the Adirondack Guides' Association had never yet appeared before him as such an offender.

The Hon. Geo. A. Stevens, ex-Member of Assembly from Essex, was introduced, and spoke in a particularly pleasing manner twenty or thirty minutes. Mr. Stevens said that there was a peculair fascination for him in that word (guide), for had not he himself for several years guided the sportsmen across lakes, over carries and through woods in search of the deer and fox, and to the favorite haunts of trout to lure from their deep abode the wily fish? He spoke of the Adirondacks as the "Switzerland of America," and the need of wise and practical legislation and careful guardians, such as the members of this Association had proven themselves to be, to preserve them forever in their present beauty and grandeur. Mr. Stevens believed that the guides were better fitted than any other men for game protectors, and believed that it would be a step in the right direction should the Legislature or the chief game protector appoint them as such.

Dr. Carter McV. Tobey, of Boston, was also one of the speakers. Dr. Tobey spoke particularly of the movement on foot to increase the New England tourist travel in the Adirondacks this coming summer. He said that the Boston & Albany R. R. had promised to put on a through sleeper to Saranac Lake if the N. Y. C. would agree to take it from Albany; that the Fitchburg Co. have promised to put on a day chair car to run direct to Plattsburgh via Rutland and Whitehall if the D. & H. will take the car from Rutland.

The Doctor requested that a letter, general in its character, signed by the members of the Association, be addressed to H. Walter Webb, of the N. Y. C., asking that the Adirondacks be given a through sleeping car from New England by connecting with the B. & A. at A. Should the enterprise succeed, he believed it would add thousands to the number of tourists who will be in the mountains during the summer of 1897, and put many dollars into the pockets of the Adirondack guides.

The Rev. C. J. Sevell, of the Baptist Church, spoke of his pleasant experiences with Adirondack guides, and said he had never met a more worthy and honorable body of men. There was a diversity of opinion regarding the game laws, but the majority believed it would be for the best interests of the Adirondacks, the sportsmen and the guides should hounding be entirely abolished, and the open hunting season be extended into October.

An adjournment was made to the rooms below, where a sumptuous banquet was prepared, in which some 200 guests and members of the Association participated. After banqueting and story-telling for an hour and a half, the meeting was again called to order by the president. A resolution was unanimously adopted to incorporate the Association, and a committee appointed to attend to the necessary proceedings.

The election of officers and reorganization were taken up and the following were regularly and duly elected officers of the Association for the ensuing year: Honorary President, Hon. Verplanck Colvin, of Albany; President, Warren J. Slater, of Saranac Lake. Vice-Presidents: Thomas Healy, of Saranac Lake; Douglas Martin, Paul Smith's; Albert Billings, Lake Placid; Warren Cole, Long Lake; C. C. McCaffery, Saranac Inn; James McBride, Moody; E. L. Scrafford, Fulton Chain; C. W. Blanchard, Blue Mountain Lake; and John Hinkson, Childwold. Secretary, E. E. Sumner, Saranac Lake; Treasurer, Oatman A. Covill, of Saranac Lake. Executive Committee—For Saranac Lake: Marshall Brown, Wm. Ring, Geo. Mussen; for Paul Smith's: Ross Hays, Ezra Bruce and Tom Redwood; for Lake Placid: Miles Kennedy, Geo. Alford; for Saranac Inn: Justin Farrington; for Blue Mountain Lake: Espen Jansen (Denmark); for Long Lake: Charles W. Robinson; for Duane and Meachem Lake: Halsey Sprague; for Fulton Chain: Ben Parsons, Wm. Burke; for Childwold: H. B. Marden. Local Committee: Marshall Brown, Hiram S. Moody, Geo. Mussen, Peter A. Solomen, Benj. Moody, Geo. Johnson, Wm. Ring, Warren Bryant and Calvin Brown.

A motion was carried that the officers compose the board of directors for the year. Among the names added to the list of associate members were: Francis S. Bangs, Landon Carter, W. Dallas Goodwin, J. S. Ehrich, John H. Sprague, R. Babcock, Edgar Logan, all of New York; William Linton Landreth, M. C. Paul, Phila.; Rev. Sheldon M. Griswold, Hudson; Robt. T. Wilkinson, Poughkeepsie; Francis K. Kyle, Troy; Rev. Walter H. Larom, of Saranac Lake; Washington Wilson, Elberon, N. J., and Henry C. White, New Haven, Conn.

It was a late hour when the convention finally adjourned, after voting to hold its fifth annual meeting at Saranac Lake on the third Wednesday in January, 1898.

Seaver A. Miller.

MEN I HAVE FISHED WITH.

Francis Endicott.

Concluded.

Going down Broadway last week I met an old angling friend, who asked: "When are you going to write up Frank Endicott?"

"The sketch of him is now in the hands of the printer; just left it with the editor, but there was so much material on hand and so many reminiscences in memory that some were left to be told afterward. If you have an anecdote or two of him let me have it; you knew him so well that you must have some of his stories of fishing adventure."

We stepped into Conroy's to get out of the roar of the street, where conversation was hard labor, and after assuring the salesman that we did not need fishing tackle in midwinter, my friend said: "Some years ago, after a day of good bass fishing on Greenwood Lake, we were comparing notes by the hotel fireplace and talking of the successful flies, baits and places where the black bass were most likely to be found in that famous water, when Mr. Endicott came in from the supper table, for he had been fishing at the farther end of the lake and was late. Harry Pritchard was there and asked: 'Wha' l-l-luck t t to-day, M-m-mr. Endi-c-c-cott?' He said: 'Harry, if you were as drunk as my boatman was, you would be able to talk better than that. I thought we never would get home to-night; I found a bottle half full of whisky, emptied it overboard and replaced the liquor with water, but he had a reserve somewhere. I was casting a minnow with my back to him, and noticed that he fumbled long in the bait car alongside the boat for a live minnow, but thought he might be selecting a bait of a medium size, as I had requested. Then while replacing a lost hook and getting a knot out of the leader, I was dimly conscious that he was using the tin cup as a bailer, and after getting ready and waiting what I thought a reasonable time I again asked for a bait. My boatman replied: 'All ri', Mis'r Endicott, they's sca'ce, an' I'm bailin' out the wasser so's to fin' 'em;' and I'm a sinner if he wasn't trying to bail out the bait car!"

That reminded me, and I said: "You know how Frank loved a good dinner and what a judge he was of one well cooked and served. He was an authority on a mayonnaise dressing for a salad and once said to me, as I essayed my 'prentice hand at mixing one: 'Fred, that is good; it is more than good, it is excellent. Call the waiter and have him send it up to Bellevue Hospital, where they need mustard plasters; but, my boy, you forgot that what we need is a salad dressing. Vinegar and mustard are useful things in their way, especially when the object is to raise a blister as a counter-irritant, but in a dressing of this kind you should bear in mind the fact that the object is not to dress leather, but to tickle a human palate and help a human stomach to digest those difficult things which we call vegetables. Pour on the oil, but drop on the vinegar, that is the first grand rule for a salad dressing." And that is a rule which I never forgot, and which years of practice has confirmed, and I can now distinguish a salad dressing from a mustard plaster.

Tom Conroy had listened to these stories, and after some reflection remarked: "Mr. Endicott came in here many years ago with a friend from a far-off region whom he had often visited and shot and fished with, and now wished to entertain on his first visit to New York. His friend selected what he needed and they went away. The next morning Mr. Endicott came in the store and he looked tired and disgusted. Naturally, I asked after his friend and he said: 'He's all right; I took him to the theater, and in remembrance of the many courtesies he had shown me in his home among the trout streams and the quail grounds I thought I

could never do enough to entertain him, and so after the theater I took him down to Delmonico's, and, handing him the menu and suggesting certain delicacies and a bottle of barzac, my guest told the waiter that he would like ham and eggs and a glass of beer!' I imagine, continued Tom, that the next friend from the quail grounds of North Carolina or from the trout streams of the Adirondacks that Frank Endicott entertained would be led down to Fulton Market and stuffed with clams."

There was a charm of easy wit about my friend which, backed as it was by a generous course of reading, classical and other, rendered him an entertaining companion and correspondent, and while I have some of his serious poetical efforts of no mean order, *me judice*, I take more delight in his attempts at jocularity, in which I was the object of his assumed wrath: "Your old friend —— has got the theosophical bee in his bonnet, and has gone clean daft. He bored me for an hour about mahatmas—things that you are not capable of understanding—but I will tell you they are not fish, and so you don't have to know anything of them. He says we've all been on this earth many times in different forms, and perhaps we have; but you, you rascal, if you had been with us, you would have irreverently alluded to Nat. Goodwin's song, 'We've all been there before, many a time, many a time;' but I listened with more respect than you would have done, and our friend looks upon me as a possible recruit to theosophy. When I got home I thought this all over, and while musing on it over a pipe the following thought came up in rhyme:

" 'When first I met you, Fred, one time,
Ten thousand years or more,
When ganoids moved among the slime
Along old Egypt's shore:
A reptile crawled from out the Nile
And bit a stork that flew;
I was the bird that soared the while,
The ugly cuss was you.'

"Bring down some blood worms and we'll have a day with the striped bass, and I'll forgive you the mean trick you served me several centuries ago."

In his early boyhood, when he used to go down to shoot and fish at the old homestead at Canton, Mass., he once took down a new Westley Richards double gun, which delighted the eye of an old native who used to shoot with the boy. The fine lines and exquisite workmanship delighted the old fellow, who fondled it, brought it to his shoulder and then felt the smooth working of the locks. Turning to the youth, he asked: "What did she cost ye, Frank?"

"It cost just $100 landed in New York."

The old man looked from the gun to the boy, drew a long breath and exclaimed: "Whew! It's my opinion ye orter have a gardeen 'p'inted over ye. A hundred dollars; well, I swan!"

Mr. Endicott was a natural mechanic as well as an artist, and he showed me two split bamboo fly rods which he had made in the early 70s, metal ferrules and all, and they compared favorably with the professional work of that day. He also tied flies when the fancy struck him, but he agreed with me that it was much cheaper to sit down and smoke and let some other fellow make the rods while the girls tied the flies, and the only physical and mental exercise necessary to get the best rods and flies was to remember in which pocket the purse was carried and to count out the sum required. I once had a trifle of mechanical skill, and evidence of it hangs in my den, but it was never directed to the making of any kind of fishing tackle, which can be bought so much better than any amateur can make it, not to mention the time he could more profitably put to other use. There's a heap of stuff written about taking the materials for fly tying with you and then trying to imitate the fly that the fish are rising to on that particular day. Pardon me for the digression—my old friend Endicott would sustain me if he was on earth—but my advice is to go and buy an assortment of flies of different forms and colors, paying attention to the sizes of the hooks for the waters they are to be used in and the probable size of the fish to be caught there, and taking plenty of them, and you should have something near any kind of fly that may rise, as well as some equally good nondescripts.

Mr. Endicott invented the first fly-book in which the gut snell was kept straight by stretching. It is still on the market and bears his name. I once asked him if he ever got any money out of it. "No," he replied, "I didn't expect to get any, but I patented it to keep others from claiming the invention; no doubt the makers of it have made something, although the papers were not drawn broadly enough to keep off infringements, and of course other forms were soon on the market."

In his later life he was a frequent guest at the fishing clubs at Newport, Cuttyhunk, Squibnocket, and other resorts in Martha's Vineyard, where the striped bass of salt water are taken of large size; and he wrote up this sea sport for *Harper's Magazine* and for "American Game Fishes" (1892), which was in press when the genial angler had crossed the Styx. But among the famous bass resorts mentioned he never matched the big bass he took in 1876 in the surf at Squam Beach, N. J., which weighed 47lbs., and was safely landed after a long fight on a sandy beach. He used to take his son George with him on fishing and shooting excursions as soon as he was old enough, and on these trips they were more like old chums than father and son, and under such a tutor the young man grew up to be a finished and scholarly sportsman.

Last week I related how my friend kept up his spirits, and joked with me while actually dying. To me this increased my admiration for him, for I have seen many men die in many ways, and somehow disliked to hear a man snivel and whine at the inevitable. No man dreaded to be born, and death is a corollary of birth; divested of suffering it should—but you know as much of this as I do, perhaps more. But what led to this train of thought was the fact that after I had seen my friend for the last time, his brother, Mr. George Munroe Endicott, of Boston, came to see him, and asked if he was not tired of the diet of milk which had been ordered by the doctors. "No," said Frank, "I like it, for I have been used to it. I once lived on milk for a whole year."

"How was that? I don't remember your having been ill before. When was it?"

"No, you can't remember it, Munroe," said the dying man, "it was so long ago; it was the first year of my life." These anecdotes show the man as I knew him, gentle, brave and cheerful; three qualities which are absolutely necessary to make a man beloved by those who knew him intimately. Frank Endicott's word was a bond, and as he voluntarily promised to wait for me upon the banks of the Styx a few years, provided there were the ghosts of fishes in it, he will meet me there. "But," said he, "if you wait too long, or the ghostly fishes won't rise to my ghostly flies, I'll just pay your ferriage to old Charon and wait for you beyond the further shore."

Long after the old friend of my boyhood, Port Tyler, was dead, Frank and I were fishing for weakfish off Staten Island, and while waiting for a bite I told him some stories about the old trapper and market-shooter, remarking that he had missed a great deal in not knowing him; but in telling how the old man used to cook young quawks and 'pokes and declare that they were good, he said:

"Perhaps they are good, I can't say; but when you talk of birds for the table, my boy, the woodcock, snipe, grouse, some kinds of duck, as well as a few that are not strictly game, such as meadow larks, wild pigeons and others, are, by nature of their food, so superior to any of the fish-eating waders that they are not to be mentioned in the same day."

I was fixing a fresh shedder crab on my hook, and after casting out and getting the line in shape for a run said: "Confound you! I did not say that Old Port compared young quawks and 'pokes with the birds you have named; I only quoted him as saying they were good, and by 'good' we understand them to be fairly palatable, just as this ham sandwich and cold chicken is good. You don't wish me to understand that every blooming thing that's good to eat, including those greasy possums that I've tried to enjoy out of compliment to the very excellent dinners which you have given, where there were real good things before and after your *piece de resistance*, were to be ranked with game?"

"No," said he, as he removed a weakfish from the hook and reached for a shedder. "But you were speaking of the shitepoke as a table bird, and there was no occasion to go off and abuse the possum, of which, by the way, you always eat your portion, and no one ever claimed that either the 'poke or the possum was in that high class of bird or mammal life which we call game. I'll tell you about the quawk as a table bird. Bill Chadwick swears by 'em, and once when George and I were shooting down on Tom's River we killed a couple and also a 'poke, and took them up to Chadwick, who not only cooked them, but insisted that we should actually eat 'em. With all respect to your old friend Port Tyler, I don't hanker after any more. Bill said the quawks were not young enough to be good, and I believe him. George sampled the 'poke, and declared the flavor to be equal to any axle grease which he had ever smelled, and Chadwick thought possibly the bird was too fat. George thought so too, and as far as I was concerned the verdict was satisfactory. No doubt a 'poke properly stuffed with any of the commercial fertilizers would be an improvement on Chadwick's simple cooking."

One of his conceits was to get up "a thirteen dinner" after the manner of the famous Thirteen Club, of New York city. Something prevented my attendance; it was early for possums and he substituted roast sucking pig. I have a diagram of the table, a copy of which was at each plate; with the name of Burrows, host of the Nautilus Hotel, at the head and Endicott at the foot, were arranged the names of the following well-known Staten Islanders: J. Wells, Harry Jones, Dr. McDougall, C. S. de Forest, George Buckingham, Raymond Brown, C. Peck, Col. Wm. Patten, J. J. Kenney, E. J. Cunningham and Fred Jones. In the middle a skull and crossbones rested on a tablet containing the date "Nov. 29, A.D. 1888," and below all was the black flag, with the death's head, so dear to those who served under the pirate captain of the last century, the terrible Jolly Roger. Now mark the sequel of this braving of superstition. Fred Jones, who took my place at the dinner, was an athlete and a member of that once great baseball team known as the Giants. Within a month, so Frank informed me, that man's bull terrier was chewed up by a mongrel dog, and a dozen soft crabs which he had bought in Fulton Market were not only lost, but his best coat was ruined at the same time by the way he sat down in a ferry boat.

"It may be all right to fly in the face of old sayings," I remarked to Frank, "but I'm awfully glad that I missed that Thirteen Dinner. You remember that Falstaff says: 'There is divinity in odd numbers, either in nativity, chance or death,' and don't you remember the story of the old Dutchman whose dog howled at night and in the morning paper he read to the doubting Katrina: 'Dere vos a man died in Philadelphy,' how about that? I tell you, my boy, 'there are more things in heaven and earth than are dreamt of in your philosophy.'"

He looked at me, more in sorrow than in anger, and replied: "Such superstition as this would be funny if it were not sad. To quote Jack Falstaff's saying is very bad authority for a belief in fate. The Dutchman's dog is, however, a howling argument in favor of your evident belief in fatalism, but somewhere I have read.

" 'Tis writ on Paradise's gate,
Woe to the dupe that yields to fate.

Give me another shedder crab, my bait is gone."

In September, 1887, Mr. Endicott wrote me from Chadwick concerning the bluefish there: "The sport of casting in the surf is grand and fish are plenty, but not of large size, running from 3 to 5lbs. Raymond Brown is here with me, but for some reason he wants you; why, is more than I can tell. He is wild over this surf fishing, and as Chadwick says the run may last two weeks, you should come down and see some fishing—real fishing, I mean—but don't put yourself out to do it, for there is a mill-pond near you, and when you want to fish you can dig some worms, get a string, bend a pin and capture the noble sunfish near the dormitory where you pass your time."

This was a challenge—a taunting and aggravating one that could not well be passed—and while we were casting in the surf of New Jersey there was a lull in the run of small bluefish, probably caused by a school of larger ones, and then Raymond Brown landed an 8-pounder. Endicott was busy with something, and I played it on him as a specimen from the mill-pond at Cold Spring Harbor. The school of big fish struck off up the coast and we continued to get the smaller ones, but the worm had turned, and vengeance was mine.

In July, '89, he wrote: "Staten Island is a good place for striped bass. There is a place which I discovered and kept to myself for a number of years, but was indiscreet in giving it away to a friend, who in turn let in a whole lot of his friends. You cannot do worse, so come down and share my bed and bass grounds. Come to-morrow; don't try to make any other date for the bass to bite, for you are apt to forget the angler in the wretched fishculturist that you are. You seem to think that fish should want to feed when you offer food, as you do to your tame trout bred in the troughs, but the wild striped bass has some knowledge of tides and does not govern his appetite by your arbitrary rules. Go to Mr. —— and get a lot of worms; the 'blood worm' or 'white worm,' that is the only bait for striped bass on Staten Island; the sand worm will not do. If you find that blood worms are not in stock, send out and get them no matter what they cost. I know that you don't value 5 cents more than a farmer values a yoke of two-year-old steers, but get the worms if you have to sell a bond. Please take this seriously, if you can so consider any proposition, for you might as well offer a bait of carpet tacks to a striped bass on this beach as to try them with sand worms. Shedders are of no account, shrimps have no call and only blood worms are in demand." We took a few bass, the largest weighing 9lbs. and the smallest something less.

In 1882 Mr. Endicott organized the National Rod and Reel Association, which held annual tournaments in Central Park, New York city, and which did so much to popularize fly-casting and bring forward experts whose records were most wonderful, and were at first received with doubt in England. He was its president for many years, and by his personal magnetism held it together years after cliques were formed and elements of discord were developing. These he held in check with a tact that never gave offense to any who were gentlemen, but his firm hand came down on any mug hunter who deserved it, and as membership was open to any who wished to join, this firmness became necessary. The Association did not live long after he resigned because it required a great amount of labor to keep it going, which to him was a labor of love, to which he could devote his whole time, if necessary."

This is a rude picture of a man whom I was proud to call my friend, and to whom I could quote Hamlet's saying:

"Give me that man
That is not passion's slave, and I will wear him
In my heart's core, ay, in my heart,
As I do thee."

FRED MATHER.

NEW YORK FISH COMMISSION.

THE preliminary report of the New York Commission of Fisheries, Game and Forests for 1896 contains a summary of the work done, with a number of suggestions and recommendations, some of which here follow:

During the fiscal year ending Sept. 30, 1896, this Commission has hatched and planted in public waters in the State 191,726,678 fish of various kind, all the eggs having been taken from stock fish at the hatching station ponds, or secured from wild waters in the State. The fish were hatched and distributed at a total cost of 19.6 cents per thousand. The cost per thousand in previous years has been as follows: 1894, 30 cents; 1893, 48 cents; 1892, $1.11.

Output for the Year.

One of the most important items in the cost of hatching and distributing fish is the rearing of fingerlings (eight months old) and older fish.

Within the year we have reared and planted 130,400 trout of eight and ten months of age, and 14,585 trout from twelve to eighteen months of age, or a total of 144,985 trout above the age of what are commonly called fingerlings. Previous to the date of the organization of this Commission, the printed reports of the fisheries work in the State made scarcely any mention of the rearing of fingerling fish, as practically all the fish hatched were planted in the fry stage as soon as they were hatched, and before they required to be fed. In addition to the fish hatched and distributed from the State hatcheries the United States Fish Commission contributed to the State 27,417,533 fish and eggs, the eggs being hatched at the State hatcheries, making a grand total of 219,144,211 fish of all kinds planted in State waters during the year.

Authority to Close Waters.

We would again most earnestly recommend that power be given to this Commission to close waters for a term of years, not exceeding five, when in the judgment of the Commissioners it is necessary to close streams for nursery purposes or to establish or re-establish fish in such waters. Already similar commissions of sister States have this power by posting printed notices on the banks of waters it is desired to close.

Three New Fish.

During the past year the Commission has obtained from the New Hampshire Fish Commission a number of adult sunapee trout and planted them in public waters in this State. This is a famed fish, found only in two lakes in New Hampshire and one in Maine, and is the highest type of game fish and one of the most delicate of food fishes. We have also obtained from the United States Fish Commission 75,000 eggs of the steelhead trout from the Pacific coast, and hatched and planted them in State waters. Another new fish obtained during the past year, from a lot of eggs sent to the National Government by the Swiss Government, is the Swiss lake trout. These three new species, having been obtained and planted in the waters of the State since the last session of the Legislature, have no protection under the law, and it is most desirable that a close season be provided for them similar to the close season already provided for the native brook and lake trout.

Salmon in the Hudson.

Since the year 1882, plants of Atlantic salmon fry and yearlings have been made in the waters of the upper Hudson River annually, until the total plantings amount to about 3,500,000, and the Government has furnished 100,000 eggs to be hatched and planted the coming spring. Dams and falls in the river have prevented the salmon on their return from the sea ascending to their natural spawning grounds, where they were planted as baby fish, and they have been obliged to seek clear water and gravel beds wherever they could be found together for spawning purposes. Where these spawning grounds were located was not determined until last autumn, when it was found by this Commission that salmon were running up Livingston Creek on the left branch of the Hudson, below Linlithgo Station of the New York Central & Hudson River Railroad, where they found clear, cold water and gravel bottom in what was once a famous trout stream. It is the intention of the Commission to visit this stream when the spawning season of the salmon again comes around and capture the fish on their spawning beds, now plainly to be seen, and take the eggs artificially for the purpose of hatching them and planting the young higher up the main river. In spite of the law to the contrary, it has been found that the salmon were speared on their beds or while making their way up Livingston Creek to

their beds, and it is recommended that the stream be closed to all fishing for a term of years to enable the Commission to use it for the purpose of a nursery stream for young salmon and breeding ground for the adult fish.

In this connection it is again urged that means be provided to open the upper Hudson River to the salmon by building fishways in the dams and over the falls between Troy and Luzerne.

Eels and Trout Spawn.

Fish of all kinds are spawn eaters to a greater or less extent, but the eel is more destructive of spawn than any other fish, as it does not spawn in fresh water, and is ready to prey upon both the fall and spring spawning fishes.

At night, when the lake trout are spawning on a shoal in mid-lake, the eels are present in vast numbers to eat the spawn as fast as it is deposited by the trout. Section 143 of the game law provides that "eel-pots of a form and character such as may be prescribed by the Commissioners of Fisheries may be used in any waters not inhabited by trout, lake trout, salmon trout or landlocked salmon." We would ask that this Commission have power to use or authorize the use of eel-pots in all waters, whether inhabited by trout or not, for it is in trout waters particularly that eels are proving destructive to young fish.

Black Bass.

We would again most earnestly recommend the absolute necessity for a shorter close season for black bass if the fish is to be saved from practical extermination in State waters. The applications each year call for millions of bass, and the supply is limited to a few thousands. Black bass spawn through the month of June, and the present open season begins on May 30. Not satisfied with catching black bass in June, when they are spawning or brooding their young, a comparatively new mode of destruction is being practiced by fishermen. As cold weather approaches black bass congregate on shoals in deep water, where they partially hibernate during the winter months, and there the fishermen resort and catch the fish, stupid from the low temperature, in vast numbers. We would recommend that the close season begin on Oct. 15 and extend to July 1 following. We would also recommend that the law which now applies to the waters of the St. Lawrence River be made to apply to all other waters in the State, namely, that no black bass shall be taken under 10in. in length, and that not more than twelve black bass shall be taken or possessed by one person in one day; or twenty-four bass by two persons fishing together.

Black bass cannot be propagated like trout and pike-perch; and there is no opportunity for getting stock fish except from waters which already show the effects of over-fishing, and which the Commission is now called upon to restock. It is only by protecting the black bass during their spawning season and by other restrictions, and having the law rigidly enforced, that we can hope to preserve this fish from practical extermination.

The Legislature has already passed a law limiting the catch of black bass to be taken by one person in one day, and we would recommend that a similar law be passed to regulate the number of pounds of trout to be taken in one day by one person, so that not to exceed 10lbs. of brook trout nor 20lbs. of lake trout may be taken or possessed by one person in one day.

Section 249 should be Repealed.

Section 249 of the game law should be repealed, as it puts a premium upon crime in sister States that have non-export game laws, as most of them have, and is a menace to the game in our own State, and makes it difficult to convict game law violators who kill our game out of season. This section permits the sale of game at any season of the year, if it can be proved that the game "was shipped from a point at least 300 miles distant from the State of New York." All that is necessary to traffic in game under this section is to violate the laws of other States, for the close season of all the States is practically the same, and once the game is within our borders it can be sold openly for twelve months in the year. Not only is the State in the position of a receiver of stolen goods, but the law operates against our own game. Courtesy and justice to other States, and the difficulty of protecting our own game with this law in force, demands its repeal, and we earnestly recommend that it be striken from the statutes.

Nets in Lake Ontario.

Net fishing within the mile limit should be absolutely prohibited throughout Lake Ontario. Chaumont Bay and the adjoining bays at the head of the St. Lawrence River are natural spawning grounds for black bass and other fishes, and act as feeders to and nurseries for the St. Lawrence River, and we know of nothing that would do more to improve the fishing of the St. Lawrence than to protect these waters a mile from the mainland and the islands at that end of the lake. There is no good reason why exceptions should be made of any portion of the water within the mile limit. On the other hand, there is every reason why these waters should be protected as well, if not better, than at any other point on the lake.

Game Seasons.

We also recommend that the open season for deer shall not exceed forty-five days, and that hounding and jacking be prohibited. Although the hounding season was shortened one-half last year, there were probably as many deer killed as during the year before, and we believe the only way to preserve the deer is to prohibit hounding entirely, at least for a term of years.

We further recommend that the woodcock and grouse season shall not open before Sept. 1 in each year, and that it shall close not later than Nov. 30.

The present law provides the same close season for black and gray squirrels, hares and rabbits. We would recommend that a separate section be provided for squirrels and that the season for hunting shall begin Sept. 1 and close Dec. 1.

Game Laws in Brief.

The *Game Laws in Brief*, current edition, sold everywhere, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

Maine Ice-Fishing.

Boston, Jan. 30.—The storm and blizzard of last week has put a stop to ice-fishing for the present on all the ponds in New England. Such fishing for pickerel, ostensibly, was being carried on to excess in many sections. No snow on the grouud, or the ice, made the work of getting to the ponds and cutting the holes very easy; the ice withal not being very thick. The residents about some of the ponds and lakes in Maine have taken alarm at the excessive fishing, even for pickerel, besides the fact that landlocked salmon and trout in many cases fall an easy victim to these pickerel catchers. From Lake Auburn there is noted considerable complaiht that the fishermen take all they can get, whether pickerel, salmon or trout; though the salmon and trout are strictly forbidden by law. For this reason the commissioners have granted a hearing in regard to fishing on Lake Pennessewassee, in Norway. Evidence at the hearing showed how great the value of the lake was for fishing, but that it had been greatly over fished, and that stocking with landlocked salmon and trout was likely to prove a failure unless so much ice-fishing was stopped. The commissioners decided to close the lake and its tributaries to all fishing for four years from Feb. 11, 1897. It is suggested that some of the Winthrop, Monmouth and Readfield ponds should be regulated in some way. The ponds in Belgrade are also being badly over fished. Special.

Black Bass for Rhode Island.

Providence, R. I., Feb. 1.—*Editor Forest and Stream:* In his annual message to the General Assembly last week Governor Charles Warren Lippitt had the following to say concerning inland fisheries:

"The season of 1896 has been remarkable for the quantity of food sea fish in the waters of the State. The abundance of cod and mackerel has been unprecedented. From Newport to Burrillville 70,000 young trout have been distributed among the inland waters of the State. There have been received from the United States Fish Commission 2,000 large-mouthed black bass. A preserve for both the large and the small-mouthed black bass has been secured in the town of Westerly, from which the other parts of the State will be supplied in the future."

David Mowry, one of the oldest men in northern Rhode Island, died on Jan. 25 in the ninety-second year of his age, having been born June 5, 1805. During his younger days he was one of the most famous fox hunters in that section of the country. W. H. M.

THE U. S. F. T. C. TRIALS.

The United States Field Trial Club's trials began on Monday, Jan. 18. The judges were Dr. George Ubank, of Birmingham, Ala., and Mr. J. D. King, of Jackson, Tenn. They worked industriously and zealously to bring out the winners, but they erred sadly in permitting too loose and disorganized a competition. The dogs and handlers were often widely separated, thus working on distinct territory, which split up the heats, made them much more difficult to judge, and encouraged a great deal of fast and undignified riding. The handlers were mounted, and in some heats the dogs could not beat out the ground properly and keep ahead of the horses. There was too much hurry and scramble, fast walking, fox trotting, galloping. The finding dogs were not protected in their efforts to locate and point, the competing dogs being freely permitted to go in at such times and hustle for the points, and this generated much scrambling, some old-time jockeying and bad temper on the part of the handlers. The judges also erred in taking up the dogs at the end of the time limit as a rule, whether there had been anything definite or not in the way of competition.

During the first three days the need of more grounds was apparent. The grounds themselves have deteriorated in value for field trial purposes. When first secured they were insignificantly under cultivation, and were practically all open. Now they are largely under cotton cultivation, and wire fences are so numerous as to be seriously obstructive, since they disarrange and interfere with the competition. Also, the birds are unevenly distributed, owing to large areas of cottonfields being bare and the sedge being burnt off.

There was a very good attendance of visiting sportsmen, among whom were Edward Dexter, Buzzard's Bay, Mass.; Philip M. Essig, Natchez, Miss.; W. S. Bell, Pittsburg; B. Wostriakoff, Moscow, Russia; J. H. McIlhenny, Avery's Island, La.; H. H. Mayberry, J. J. Odom, T. W. O'Byrne, H E. Smith, N. Stanley, L. Brandes, F. W. Dunham, Birmingham; B. Forbes, Pensacola; A. C. Waddell, Waverly, Miss.; Dr N. F Grinstead, Cairo, Ill.; R. R. Morgan, Peter Lesh, Thos. Bond, J N. Seale, Jackson, Tenn.; H. B. Ledbetter, Farmington, Mo.; Geo. W. Hull, C. A Draper, F. J. Trost, Toledo, Ohio; Walter Holliday, Prairie Station, Miss.; Prof. Edmund H. Osthaus, Toledo, O.; L. W. Blankenbaker, Louisville, Ky.; C. E. Smith and E E Posey, Mobile; N. Wallace, Farmington, Conn.; W. F. McCarley, Jackson, Tenn., and others.

The weather was mixed, pleasant and unpleasant, favorable and unfavorable.

The club held several meetings during the week. It was decided to hold trials in North Carolina at a place to be selected by a committee, and the winter trials were fixed for Jan. 9, 1898, at West Point, Miss. All the stakes are to be mixed stakes, excepting the Derby to be run at West Point, which will be a pointer Derby and a setter Derby. The cash prizes will be the same as are given this year. The winners of first prizes in All-Age stakes are not eligible to run in the club's All-Age stakes. The application of the Union Field Trials Club was laid upon the table. The secretary was ordered to pay the West Point land-owners of grounds the old indebtedness of the Southern Field Trials Club.

Following is the new Board of Governors: N. T. Harris, E. Dexter, P. M. Essig, St. M. M. Mundy, W. S. Bell, J. M. Avent, W. B. Stafford, T. T. Ashford, J. N. Seale, P. Lorillard, Jr, H. S. Smith, Hobart Ames, Geo. Crocker, J. A. McIlhenny, H. M. Ledbetter. Several new applicants were admitted to membership.

Officers: Norvin T. Harris, President; Edw. Dexter, First Vice President; H. S. Smith, Second Vice-President; W. B. Stafford, Secretary-Treasurer.

A resolution was passed by the board of governors recommending that the club's trials in 1898 follow the Continental trials. This was with a purpose to have the club alternate their dates hereafter.

The complications arising from running two stakes in one, the All-Age Setter and Amateur stake, as mentioned hereinafter in the report of that stake, should be a warning to clubs to avoid such complications

The Pointer Derby.

There were eleven pointers in this stake, run as follows:

T. W. O'Byrne's l. and w. dog Redskin (Love's Kent—Fritz's Fay), N. B. Nesbitt, handler, with C. S. Shoop's l. and w. bitch Aloysia (Rip Rap—Dolly D.), Geo. Gray, handler.

H. H Mayberry's liv. and w. bitch Alabama Girl (Von Arrow—Lady Mill), D. E. Rose, handler, with Del Monte Kennels' liv. and w. dog Tony Works (Tick Boy—Lulu K.), Frank Richards, handler.

Geo H Smith's liv. and w. bitch Diana (Count Graphic's Pat—Bessie Croxteth), W. M. Hindley, handler, with T. W. O'Byrne's b. and w. dog Moerlein (Rip Rap—Belle of Ossian) N. B. Nesbitt, handler.

J. S. Crane's liv. and w. bitch Firefly (Rip Rap—Clipaway II), G o. Gray, handler, with H. S. Smith's liv. and w. bitch Ripple (Rip Rap—Pearl's Dot), J. H. Johnson, handler

Bar Harbor Kennels' b. and w. dog Young Rip Rap (Rip Rap—Pearl's Dot), Geo. Gray, handler, with T. T. Ashford's liv. and w. bitch Elgine (Kent Elgin—Julia Paine), J. M. Avent, handler.

Del Monte Kennels' b. and w. dog Tick's Kid (Tick Boy—Lulu K.), a bye, Frand Richards, handler.

This stake was for pointers whelped on or after Jan. 1, 1895. First $250, second $150 third $100. Two forfeits of $10 each, and $10 additional to start.

This stake was on the whole a poor one, the winners being, with one exception, the only dogs which made a competition worthy of the name. Being so commonplace, extended comment is unnecessary.

Young Rip Rap, winner of first, made quite a meritorious competition. He displayed a good nose and excellent judgment, was a successful finder and a good ranger. He was given a more severe trial than was any other dog in the stake.

Elgine, second, did not make an even competition, though in her second heat she made an excellent exhibition of good finding and pointing. She had a fast pace and ranged well.

Ripple, third, ran an excellent race, and, taking her work all in all, she was very close to second. She ranged fairly wide and fast, and was quite reliable in her bird work.

The judges placed the dogs quite right, though in reaching their decisions they, in my opinion, erred in taking in Tick's Kid instead of Firefly. However, this did not affect the result. They also erred in taking into the stake a dog which did not belong in it, as is mentioned hereinafter.

Monday.

The grounds were heavy consequent to the heavy rains of Saturday night and Sunday. Birds were in abundance in parts of the grounds; in others scarce. With the exception of the competition of four dogs, the work was distinctly flat and inferior.

First Round.

Redskin and Aloysia began at 8:47. They started in a frolicsome manner and did not begin real work for some minutes. Birds were in abundance throughout the heat, and the work was far short of the opportunities. Although birds were found in abundance, it was not from any good seeking on the part of the dogs. Up at 9:25. Redskin made the better competition. Their range was less than middling.

Alabama Girl and Tony Works were started at 9:25. Tony ran in greatly improved form over that displayed in former trials. Nevertheless the heat was commonplace. Their range was medium. Both pointed well and both were none too reliable in backing. Up at 10:08, with no chance to win.

Diana and Moerlein, cast off at 10:15, proved to be commonplace performers. Diana made several flushes on bevies, and Moerlein pointed one. Range close. Up at 10:58.

Firefly and Ripple started at 11:14. Firefly flushed a bevy excusably across wind in woods. Ripple pointed a bevy in corn, Firefly joining independently in the point. Ripple pointed twice on scattered birds and flushed once. Up at 12:06. This was the first work of any real merit as a competition. Both dogs ranged well at good speed and beat out a fair range. Ripple was the better.

Young Rip Rap and Elgine began after lunch at 1:14. Rip had the better of the heat in every way, though Elgine showed merit enough to be taken into the second series. Rip pointed a bevy, Elgine backed to order, pushed forward and seemingly disturbed Rip; he moved on and flushed the bevy, Elgine close up with him at the time. Rip pointed in a plum thicket and was steady to shot; Elgine not near. Elgine took a long cast to the left and found nothing. Rip took a cast to the right and pointed a bevy nicely. The dogs were brought together. Rip made three points in succession on the scattered birds. He displayed good nose and judgment. Elgine pointed a bevy and made a point on the scattered birds. Up at 2:05. Both were good rangers, Elgine the wider, though not with the best judgment. Rip was the better finder and the better on birds.

Tick's Kid, the bye, was run with a setter, which was an error of judgment, since it was first of all a pointer stake, and second, a dog which was not entered in the stake had no right to be dragged into it. The stake within itself afforded all the competition that was necessary. The judges were at first disposed to run a dog which had already run, but it was held by some handlers that such dog might go on and run much better than it had done in its first heat, an

argument which if admitted embodied every reason why such dog should be run again instead of smothering it. However, the setter made a very satisfactory exhibition of what a setter can do when striving for a low standard, so that no harm was done. They started at 2:16 Down 38 minutes The heat was very commonplace.

Second Round.

Four dogs were taken into this round, which was correct as to the right number, but incorrect in that Tick's Kid was brought in instead of Firefly, which had shown much more dash, spread, range and endurance, and better capacity for bird work.

RIPPLE AND ELGINE began at 3:08. It was an excellent working heat. Elgine stole some work from Ripple, but nevertheless her work showed good capability. She was none too honest in backing, but she proved to be a finder and accurate and capable in point work. She pointed three bevies, one of which Ripple was roading accurately, and which Elgine pointed by crossing in ahead, and made six points on singles, one of which was divided with Ripple. The latter pointed a bevy accurately; another bevy flushed wild as she was accurately roading it, and she made seven points on singles, one divided with Elgine. Both were fast and fairly good rangers. Up at 3:47.

TICK'S KID AND YOUNG RIP RAP started at 3:56. Rip pointed on the trail of a bevy flushed in the prior heat. At the same time Kid pointed a bevy. The dogs were then widely separated, and after some minutes were brought together. Rip made two points on scattered birds. Kid ranged moderately well in the beginning of the heat, but had almost quit working in the last of it. Rip Rap had the advantage in every respect. Up at 4:45.

YOUNG RIP RAP AND RIPPLE began at 5:03 and ran till 5:16. Rip drew very skillfully about 100yds. up wind and pointed. Ripple was not held in, as she should be according to rule and usage, and she secured a point on the bevy by cutting across the corner. Rip had the better of the heat. He had been given a very severe trial, inasmuch as he ran three heats very close together.

This ended the running in the Pointer Derby.

The Setter Derby.

There were ten starters in this stake, drawn to run as follows:

P. M. Essig's b., w. and t. bitch Saragossa Belle (Gleam's Pink—Maud E.), J. H. Johnson, handler, with W. R. Holliday's b. and w. dog Billy T. (Revenue—Daisy Bondhu), F. Richards, handler.

J. P. Greene's b., w. and t dog Sarsfield (Rodfield—Opal), J. H. Johnson, handler, with Charlottesville Field Trial Kennels' b. b. bitch Pin Money (Count Gladstone IV.—Daisy Croft), C. E. Buckle, handler.

F. R. Hitchcock's b., w. and t. dog Tory Rustic (Count Gladstone IV.—Rhoda Rod), J. M. Avent, handler, with Fox & Blythe's b., w. and t. bitch Caroline (Antonio—Countess Rush), J. H. Johnson, handler.

H. Ames's b., w. and t. bitch Christina (Blue Ridge Mark—Lou R.), D. E Rose, handler, with Theo. Goodman's b., w. and t. dog Dave Earl (Count Gladstone IV.—Dan's Lady), J. H. Johnson, handler.

Avent & Thayer's b., w. and t. dog Peconic (Count Gladstone IV.—Hester Phryne), J. M. Avent, handler, with S. P. Jones's b., w. and t. dog Hurstbourne Zip (Tony Boy—Dimple), D E. Rose, handler.

The conditions were the same as those applied to pointers in the corresponding stake.

More running of the best dogs was done than is necessary, and the judges made the mistake several times of ordering the dogs up at the expiration of the time limit, and before any definite results were established, which made it all the harder to determine which were the best dogs at the late stages of the competition.

Pin Money won first on a performance below her best form, and with none too much to spare Still she possesses all the admirable qualities described in previous reports, marred as they were by a patchy performance.

Christina, winner of second, made a good competition, though her work averaged far below that of Dave Earl She ran an excellent race in her last heat, and it seems as if that led to an overvaluation of her competition. In their first heat Dave outworked her positively While she ran a very pretty heat with Pin Money all her point work was built on Pin Money's finds. She ranged prettily to the eye, but worked her ground with poor judgment, and often turned in toward her handler at the end of her casts. She would have made a passable third.

Dave Earl and Tory Rustic divided third. The former ran a heat with Christina, in which he beat her thoroughly. In his heat with Pin Money neither had much to show in the way of bird work; and in his heat with Tory Rustic he had a decided advantage, Tory not making a single find, and his only point—after the dogs were ordered up once and sent on again for a moment—was on marked birds. Tory, in his heat with Caroline, was outworked by her, both going slower at the end of the heat. In his heat with Hurstbourne Zip the latter thoroughly beat Tory, whose work was far below the opportunities presented, and he was going slower at the end of each heat excepting the last one. In my opinion, the winners should have been Pin Money, Dave Earl and Christina, in the order named.

All the dogs which ran at Tupelo were not running up to the form displayed at that place.

Tuesday.

The weather was cool and favorable for good work. Birds were found too plentiful in a small part of the grounds and entirely too scarce in a large part of them, and also there was not sufficient grounds for running without pressing closely on ground already covered. The competition dragged monotonously many times, and many heats were lacking in definite results. The handlers and dogs were often separated, which made matters indecisive and hard to manage. This was the result in most instances of permitting one handler to go on working his dog when the competing dog was pointing. Also the judges erred in permitting one dog to break in on the work of another when roading, thus often depriving the finding dog of the full merit of his find, or all of it, and at least marring it.

First Round.

SARAGOSSA BELLE AND BILLY T. were cast off at 9:05. Billy distinguished himself by flushing several bevies in succession. He made a point on one bevy so close to it that it was a wonder how he accomplished the feat. Belle ranged fairly well. The heat was a very poor one. Up at 9:42.

PIN MONEY AND SARSFIELD were cast off at 9:47. Pin pointed a bevy on bare ground close by a plum thicket. She probably saw the birds, for she made a jump in and flushed the bevy. Pin roaded to a point on a bevy. Sarsfield pointed scattered birds. Pin was not running up to her best form. She seemed to be idling on small birds in some of her running, and her range was less than her best. Sarsfield went fairly well, but was hard to handle. Up at 10:26.

CAROLINE AND TORY RUSTIC were started at 10:32 Each one found and pointed a bevy well, and on singles Tory made one point, one flush, and he made a point to which there was nothing found. Caroline made two points on singles. Both ranged fairly well, both going slower at the end of the heat, the advantage being with Caroline. Up at 11:04

DAVE EARL AND CHRISTINA were started at 11:12. Dave apparently flushed a bevy by a hedge, but it was impossible to determine definitely whether he was guilty or not. Christina made two flushes excusably on singles. Each found and pointed a bevy. Dave apparently found and pointed a bevy in woods The dogs became separated, and were worked widely apart for some minutes. Dave's bevy was followed, and he located and pointed it again. In the meantime Christina made two points on singles. Both were fast, fair rangers, Dave the better slightly. Up at 11:50.

PECONIC AND HURSTBOURNE ZIP were started at 11:59. Peconic took a cast and pointed a bevy nicely, holding his point till his handler came up. At the same time Zip in another field made game, and roaded the bevy to a flush. The ground was quite bare. Sent on, Zip pointed at the same moment the bevy flushed. On the scattered birds Zip roaded, Peconic went in ahead and stole the work. Peconic made a point on a bevy, and later made a point which had nothing to it. Zip was over cautious, and when on game was disposed to feather and point on slight cause. He was slow when working on scent. In range he was medium. Peconic made a fairly good heat of a patchy kind.

The party went to lunch.

Second Round.

Six dogs were kept in, and of these Hurstbourne Zip hardly deserved further consideration, while on the other hand Caroline, left out, should have been kept in. She had made quite as good a showing as Tory Rustic, if not a better

PIN MONEY AND DAVE EARL were started at 1:36. Both made game and pointed, Pin at length locating and pointing the bevy The ground was rough, and wire fences added greatly to the difficulties of the running. Pin pointed, rounded, and moved on Earl coming up, pointed the bevy. Both were fast and covered a reasonable range, yet neither was working up to best form. The heat was a close one.

PECONIC AND CHRISTINA started at 2:38. Christina flushed a bevy up wind. Peconic made two false points, and Christina backed nicely. Christina pointed a bevy, and was steady to shot. Peconic pointed in woods; nothing found. Christina pointed a single. Up at 3:36, and soon afterward Peconic flushed a bevy. Both were going slow at the end of the heat, though both worked diligently. Christina had the better of it. Her range was faulty in that it was poorly planned, and she crossed the same ground too often.

TORY RUSTIC AND HURSTBOURNE ZIP began at 4:07. A large number of birds were found in this heat, not so much from good seeking as from working a stretch where birds were plentiful. Zip pointed and Tory backed; nothing found. A bevy was seen to flush, but the cause of it was hidden from view. The birds were followed. Zip pointed, moved on to locate, and Tory was sent in and took the point on a bevy. The birds were followed and Zip pointed them in corn. They were again followed. Zip pointed scattered birds in woods. Tory was out of sight in woods from the judges and it was claimed that he pointed a bevy. Zip pointed two singles and Tory pointed a bevy and flushed a single. The dogs were working distinctly apart most of the time during the heat. Up at 5:07. The quantity of birds found added nothing to the excellence of the performance. Zip was over cautious, would point prematurely and was slow in getting to his birds. Tory was the wider ranger. His point work was less than the opportunities.

Wednesday.

A most unpromising weather outlook confronted the field trial party. Heavy banks of storm laden clouds covered the sky, and the grounds were saturated with water from the steady rainfall of the night. So unfavorable was the weather that the start was deferred till after lunch The birds were extremely difficult to work upon. They ran from the points and were in the humor to take long flights. A great many birds were found notwithstanding the unfavorable conditions. A raw wind blew all the afternoon.

Third Round.

The six dogs of the second round were all kept in and run over again. Hurstbourne Zip and Peconic could have been very well left out, as they had made a much more inferior competition than the others. Further running added but little to the knowledge already gained of the dogs' capabilities.

CHRISTINA AND PIN MONEY began at 12:52. Pin found and pointed two bevies and made one point on a single bird. Christina made two points on singles; she backed well. Both ranged well, there being but little difference in that respect. Pin proved the better finder, and her work on birds was the more skillful. All the point work that Christina secured was through the finds of Pin Money.

DAVE EARL AND TORY RUSTIC were cast off at 1:29. Earl pointed on a side hill, drew by the bird, which was flushed afterward. He was held on point some moments, so that the inaccuracy was excusable. Tory pointed in woods; nothing found. Sent on, Dave pointed in open. A single flushed close by. The birds were scattered about. Johnson beat about, but failed to flush. Several birds were flushed near by after the dogs were sent on. Dave was taking a cast close by a bevy, and a horseman at the same time rode up and the bevy flushed. The dog could hardly be blamed for the flush. The birds were followed and were not found. Up at 2:03. Mr. Avent complained that his dog had not been on birds, which was not the fault of the judges nor of the birds, as the latter had been found during the heat. The dogs were sent on again, and in a few yards each pointed the birds. Both ranged wide and fast, Dave the speedier. Tory made no find during the heat, and made but one point on scattered birds.

PECONIC AND HURSTBOURNE ZIP began at 2:10. Each found and pointed a bevy. Zip made a point to which nothing was found, and Peconic made two with a disposition to make more He seemed to be tired and off his nose at the close of the heat. Both were going slower at the close, though the heat was not fast at any time, and was poor throughout. Up at 3:01.

The heat closed the competition of this stake

The All-Age Pointer Stake.

There were eleven starters, run as follows:

Ashford & Odom's liv. and w. dog Von Gull (Kent Elgin—Fannie V Croxteth), D. E. Rose, handler, with N. T. de Pauw's liv. and w. bitch Sister Sue (Jingo—Roony C.), N. B. Nesbitt, handler.

H. K. Devereux's liv. and w. bitch Virginia (Little Ned—Pearl's Dot), George Gray, handler, with Del Monte Kennels' b and w. dog Tick Boy (King of Kent—Bloom), Frank Richards, handler.

Bar Harbor Kennels' b. and w. dog Young Rip Rap (Rip Rap—Pearl's Dot), George Gray, handler, with F. W. Dunham's l. and w. dog Elgin's Dash (Kent Elgin—Mack's Juno), D. E Rose, handler.

Charlottesville Field Trial Kennels' liv. and w dog Delhi (Rip Rap—Queen III.) C. E Buckle, handler, with H. S. Smith's b. and w. dog Ripsaw (Rip Rap—Croxie Kent), owner, handler.

Charlottesville Field Trial Kennels' liv. and w. dog Tippoo (Rip Rap—Monterey), C. E. Buckle, handler, with J. H. Johnson's liv. dog Crackerjack (Lad of Rush—Cyclops), owner, handler.

Charlottesville Field Trial Kennels' b. and w. dog Nabob (Rip Rap—Dolly D.), Prof. Edm. H. Osthaus, handler, a bye.

This stake was for all pointers which had never won a championship stake nor more than one first prize in an all-age stake in any public field trial in the United States. Forfeit, $10; $20 additional to start.

Tippoo made a very good showing on the whole, though not putting the intelligence in his work that Young Rip Rap showed, nor did he show the latter's ability in handling his birds, and Elgin's Dash also excelled him in that respect. Rip Rap showed the highest quality of any dog in the stake.

Tippoo and Elgin's Dash were very close competitors for second and third, range and pace being something in favor of Tippoo, while Dash was the better on birds.

The winners wese Tippoo, Young Rip Rap and Elgin's Dash, placed in the order mentioned.

Ripsaw and Nabob were the competitors for the Dexter cup, which was for amateur competition. The competitors in the amateur competition were restricted to club members who were amateurs. Ripsaw won. His first heat was far inferior to Nabob's, and he had no advantage in the second heat, so that he was hardly entitled to the win.

First Round.

VON GULL AND SISTER SUE started at 3:18. Von pointed a marked bevy by a ditch. Sue backed. Sent on, Von pointed some remaining birds. Sent on, soon Von pointed a bevy in the open, Sue pointing a separated part of same bevy. Sent on, each found and pointed a bevy. Von pointed a single; Sue pointed twice on singles. Up at 4, with the heat largely in Von's favor, though Sue ran fairly well.

VIRGINIA AND TICK BOY began at 4:13. Tick ran stiffly and slow till birds were found. Virginia found and pointed three bevies in quick succession. Each made two points on scattered birds. Virginia had much the better of the heat in every way. Up at 4:45.

Thursday.

The sky was overcast and the air was full of a raw dampness. The afternoon proved more favorable, the sun shining now and then for a few moments and the weather changing to milder. Some new and additional grounds on this day were secured, which improved the conditions greatly. More birds were found, and there was an improved competition in general.

YOUNG RIP RAP AND ELGIN'S DASH began at 8:51. Dash found and pointed three bevies, and was roading another when it flushed wild. He made one point to which nothing was found. The dogs were separated a great deal during the heat. Dash showed excellent ability in pointing bevies and singles. Rip also showed similar ability, and had some advantage in range and thereby covering more ground. He found and pointed two bevies and made three points on singles. Up at 9:36.

DELHI AND RIPSAW started at 9:42. Delhi found a bevy and pointed up wind of it. He moved on to locate. Ripsaw was closer to it, moved on and pointed it. Ripsaw made a point on a single bird. He pointed a bevy, then went willfully in and flushed it. Delhi made three points on singles. He pointed a bevy in open sedge which his handler failed to flush by not walking out far enough in front. Ripsaw pointed, moved on and a single flushed. Both were moderate rangers. The heat was a poor one as a whole. Up at 10:20.

TIPPOO AND CRACKERJACK began at 10:30. Crackerjack was first to point, then Tippoo joined. Both were up wind of the bevy; sent on, the bevy flushed down wind of them. On scattered birds Crackerjack made a point and a flush, Tippoo a point. Both were fast and wide rangers. Up at 11:07.

NABOB, the bye, was run with a setter, Ranée. On some marked birds Nabob made a shaky point. Next he made two good points on scattered birds. Next he pointed a single, moved on and the bird 0. Nabob backed, but indifferently well. Next he pointed a single and than made two flushes, one of which was excusable.

Lunch was next in order.

Second Round.

Six dogs were kept in, the judges selecting the right dogs nicely. Ripsaw and Nabob were kept in merely to decide the cup competition. Tick Boy, being ill, was withdrawn.

VON GULL AND VIRGINIA were started at 1:09. Von flushed some scattered birds, pointed well twice on singles, made two points to which nothing was found, and pointed a bevy. He idled often during the heat, trifled on false scents and made a very ordinary showing. Virginia pointed two bevies, one of which she found when sent on to work on scattered birds, and she made a point on a single. She showed some indecision on point, though she pointed accurately. She beat Von Gull quite thoroughly in range and speed. Up at 2:14. Virginia did not run equal to the form displayed in her first heat.

YOUNG RIP RAP AND SISTER SUE started at 2:22. Sue roaded to a point on a single bird in weeds. Next she pointed a bevy The dogs were working separately. Rip took a long cast and pointed a bevy in woods, holding his point stanchly several minutes till his handler came up. Each flushed a single. Sent on, Rip found two bevies in succession. Sue backed his last point on a bevy, crept by and stole the point. Sue pointed a bevy, held it and scored a point on the bevy. Rip ranged wide, fast and with judgment, proving a good finder. He showed excellent skill in locating and pointing bevies. Sue had no further chance in the competition. Up at 3:22.

Tippoo and Elgin's Dash were cast off at 3:28. Tippoo took a long cast to the right and pointed a bevy nicely. Dash roaded into a bevy and flushed it—a careless piece of work. On scattered birds in woods some very rapid and good work was done. Tippoo made eight points on singles and one flush, while Dash made two points on a divided bevy, one point on another bevy and ten points on singles. This big score of points does not necessarily denote a superiority accordingly. No other brace had such an opportunity to make such a number of points. The birds were scattered about in a timber island, and while the dogs took advantage of the opportunities, the latter were exceptionally favorable in every respect. Most of the work of the afternoon was on ground secured in the morning and which had not been run on before this week. Tippoo had the wider range, and had a trifle the better speed, but on birds and the manner of handling them he was outworked by his competitor. Many of Tippoo's points were secured when the dogs were separated. When they were together, Dash proved himself the better. Up at 4:30.

Nabob and Ripsaw were retained in the competition to decide the cup Soon after being cast off, Nabob made game close in to a bevy and flushed a bird. He nosed about when he should have pointed. Ripsaw coming up soon afterward pointed at the same place. Nabob backed, broke back and both dogs moved on and the birds flushed. Sent on, Ripsaw pointed a bevy, drew on by it, Nabob drawing ahead on back at the same time; the latter caught scent, pointed the bevy stanchly while Ripsaw continued roading. Sent on, both made game near the edge of woods in an open field and failed to locate the bevy. It was flushed by horsemen a short distance away. The birds were marked down in a cornfield. Each dog secured a point on singles; then both drew together to a point on scattered birds. In woods Nabob made three clean and sharp points on singles, Ripsaw one point. Then on the last bird Ripsaw pointed; Nabob made a crawling back, following up Ripsaw's handler as he went in to flush. Ripsaw jumped in on what seemed to be a wounded bird. This demoralized both dogs. They nosed eagerly for the bird; Nabob scented it, jumped to capture and the bird unharmed flushed and flew away. The heat abounded with errors. Both dogs seemed to be strange to their handlers, and Nabob was certainly so, as he hardly knew his handler when the heat began. Up at 5:18. The judges decided that Ripsaw won.

Friday.

The weather was delightfully clear and pleasant. Birds were found in abundance at times; at other times there was a dearth. Wire fences seriously interfered with the running and the heats were disarranged a great deal by them. There was a good deal of hard riding at times, too hard to be any part of sport with pointers and setters.

Final.

Tippoo and Young Rip Rap started at 8:49. Rip soon made a point on a single bird. Tippoo took a long cast and pointed two straggling birds of a bevy. Sent on, he pointed more straggling birds of the bevy, which apparently was running. Rip took up the trail and roaded to a point on the rear of the bevy. The dogs were ordered out of the woods. By sheer disobedience Tippoo went back, while Rip went on properly to order. Tippoo got a point on a single in the meantime. Sent on, Rip pointed birds in the open; Tippoo came in ahead and pointed the same birds. Tippoo next pointed a single, and Rip made a point; nothing found to it. Tippoo flushed part of a bevy, then pointed the rest. Sent on, Rip pointed a bevy in open sedge; Gray sent him on to locate better; he lost scent, and Tippoo coming in pointed the bevy. Tippoo had the wind; Rip did not. The find was Rip's, and Tippoo had no right to interfere while Rip was locating his birds, but this rule was repeatedly violated at all stages of the trials. Sent on, Tippoo pointed a bevy in the open. The birds were followed. Rip made two points on singles, and Tippoo was unsteady to wing. Up at 9:52. Rip, though ranging well, was going a bit gingerly. He showed the better class of work on birds. Tippoo ranged fairly well, but was lacking in judgment in beating out his ground, and was handled with difficulty.

Mr. Buckle marred a long and courteous career as a handler by loudly proclaiming to the judges, when Tippoo pointed a certain bevy, that Rip Rap had worked over the same ground. It is far from nice in any handler to announce what he deems to be defects in his competitor, besides therefrom the implied inability of the judges to understand matters unless they have them explained to them. A handler never seems more at his best than when minding his own affairs.

This concluded the running of the All-Age Pointer Stake.

The Setter All-Age Stake.

There were sixteen starters, and of these several were entered more particularly for the Harris cup, the competitors being limited to club members who were amateurs. The competition for the Dexter and Harris cups was decided in the regular competition in the stakes. The dogs were drawn to run as follows:

N. T. Harris's b., w. and t. dog Tony Boy (Antonio—Laundress), D. E. Rose, handler, with Fox & Blythe's b., w. and t. dog Tony Gale (Antonio—Nellie G.), J. H. Johnson, handler.

H. B. Ledbetter's b , w. and t. dog Marie's Sport (Gleam's Sport—Marie Avent), George E. Gray, handler, with E. A. Burdette's b., w. and t. dog Cincinnatus Pride (Cincinnatus—Albert's Nellie), Frank Richards, handler.

P. M. Essig's b., w. and t. bitch Saragossa Belle (Gleam's Pink—Maud E.), owner, handler, with Tabasco Kennels' b., w. and t. dog Tabasco Boy (Medoc—Fay), owner, handler.

I. Hoagland's b., w. and t. bitch Ránée II. (Gladstone's Boy—Buena Vista), D. E. Rose, handler, with Del Monte Kennels' b., w. and t. dog Rod's Chaff (Roderigo—Gladstone's Girl), A. C. Waddell, handler.

H. R. Edwards's b., w. and t. dog Harwick (Topsy's Rod—Opal), George E. Gray, handler, with Jackson & Denmark Kennels' b., w. and t. bitch L'llian Russell (Philip Gladstone—Lou K.), J. N. Seale, handler.

P. M. Essig's b., w. and t. dog Rod's Top (Roderigo—Topsy Avent), owner, handler, with L. S. Thompson's b., w. and t. bitch Novelist (Woodhill Bruce—Novelty), W. F. McCarley, handler.

F. R. Hitchcock's b., w. and t. bitch Tory Luna (Roi d'Or—Tony Diamond), W. F. McCarley, handler, with P. M. Essig's b., w. and t. bitch Lillian Hall (Jean—Sister Sue), owner, handler.

L. Shonfield's b., w. and t. dog Leo Noble (King Leo—Minnie T.), N. B. Nesbitt, handler, with W. H. Beazel's b., w. and t. dog Harold Skimpole (Whyte B.—Nettie Bevan), Geo. E. Gray, handler.

Tony Boy won first on an excellent competition. He made a well sustained showing throughout. He was difficult to manage at times, but proved to be a good finder, and his point work was sharp and true. In pace and range he was excellent.

Tony Gale, second, was a wide, fast ranger, was successful in finding and pointing, though at times he pointed old or false scents, or dwelt on them too long. Still the fault was not serious and marred his work only. He was a very strong second.

Marie's Sport, third, showed excellent capabilities, but was running in poorer form than at any time this season. His bird work was lacking in its best trueness and quickness, and his range was not so regular nor so wide as in his best previous competition.

For the Harris cup, a competition for amateurs, there were entered Saragossa Belle, Tabasco Boy, Lillian Russell, Rod's Top, Novelist, Tory Luna and Lillian Hall, seven of the sixteen starters. Rod's Chaff was also entered for the cup, but was later withdrawn. Of these but three were retained in the second round, namely, Novelist, Lillian Russell and Tory Luna. It was apparent in their heat that Novelist was beating Lillian. This would leave only Novelist and Tory Luna in the competition for the cup, and both these dogs were handled by Mr. W. F. McCarley, so that whichever of the two won Mr. McCarley was the winner of the cup. Luna had run excellently well, and under expert handling was presumably a dangerous competitor for a place in the money. Tory Luna is owned by Mr. F. R. Hitchcock, and was in charge of Mr. J. M. Avent. The latter asked permission to withdraw Luna from competition for the cup, retiring her amateur handler and permitting himself to handle her as a professional. Judges and club members were doubtful as to the correctness of such a change. An open field board meeting was called in the middle of the heat between Tony Gale and Cincinnatus Pride, delaying the heat for some minutes and taking one judge nearly a half hour from his duties. The board of governors decided that Luna could be withdrawn from the amateur cup competition, her amateur handler could retire, she could be continued on in the regular competition, and Mr. Avent could handle her. The judges objected to the board's ruling, and Mr. King declared that he would retire from the judging rather than be a party to any such doings. Thereupon another meeting of the board was called, and it was decided that the matter be left with the judges. The judges announced that the cup competition must be run to a finish, after which Mr. Avent could handle Luna. Mr. Avent strongly objected, and called the judges' attention to the fact that the board had passed on the question, and that they should go on with the running. He was informed that Luna must compete for the cup. He said it was a great injustice to his employer, Mr. Hitchcock, who had paid him $100 on her account, and had also paid $30 entrance money, if he were deprived from competing under his handling. He was informed that being so employed he should have handled her from the start himself, and that any hardship, if there were any, flowed thus from his own acts in permitting her to start in charge of another. He then said her amateur handler had returned to town to take a train. His attention was called to the fact that the train time was nearly three hours later, and that there were several on the grounds who intended to take the same train. He asked if he could have some other amateur handle her, and the judges assented. He then stoutly maintained that the judges in so assenting to a change of handlers had virtually consented to his handling her. They demurred. He said then he would have to withdraw her. The judges were prepared to start the heat with Minnie T. as a running mate, when some dilatory tactics were used. The theory of the opposition seemed to be that the judges would back down at the last moment. The judges again prepared to start. One of the handlers impatiently asked the judges if they were ready. "Cast off your dogs" was the answer, and the heat began. After some minutes the secretary informed the judges that Mr. Avent had consented to have Luna handled by an amateur. The judges informed him that Luna was no longer in the stake. Mr. Avent later lodged a protest against the action of the judges.

As to the conditions of the amateur competition, it was to be a part of the regular stake, to be decided as an incident of the regular running. The special purpose of it was to swell the entries of the All-Age Stake. No extra fee was required above the regular one. The point raised by Mr. Avent was merely a bit of sharp play to try for the regular prizes after it was certain his friend had the amateur prize won to a moral certainty. Had he cared to do so, he could have learned all details before starting. The amateur competition was an integral part of the regular competition, so that no partial withdrawal of a competitor could be made. A dog must needs stay in entirely or go out entirely. The judges decided quite correctly, and could they have heard the words of commendation and praise bestowed on them by a majority present, they could not have felt less than gratified in addition to the satisfaction of having had the pluck to maintain what was right. Most of the debate was in public, and some of it was not in the best of temper.

Novelist won the Harris cup.

First Round.

Tony Boy and Tony Gale began at 9:59. Down 32 minutes. Each soon scored a point. Tony Boy took a wide cast and found and pointed two bevies. Gale in the meantime pointed a bevy. Gale made three points on singles. Each dog had good speed, Tony Boy the wider range.

Marie's Sport and Cincinnatus Pride ran 37 minutes, beginning at 10:37. Pride pointed a bevy and Sport joined in point. Sent on, Pride pointed a bevy and each made a point on the scattered birds. Pride, separated from his competitor, roaded to a point on a bevy, and next made a flush on a single, a point on another. Sport made two points on singles and one flush while working alone. Sport was not running in his best form. Pride ran him a very even heat, and in bird work had the better performance. Both had fairly good range and good speed.

Ranée and Rod's Chaff were cast off at 11:58. Down 30 minutes. Both made game. Chaff pointed, Ranée refused to back. They roaded about, but failed to locate. One of the handlers flushed the bevy, which was not followed, though it went into woods close by. As the heat stood there was nothing definite.

Harwick and Lillian Russell were cast off at 1:32, after lunch. Harwick found and pointed two bevies, and made a point on a single. Lillian made two points on singles and a point on a bevy. Harwick was sharper in his work and had some advantage in speed. Both ranged well. Up at 2:07

Rod's Top and Novelist began at 2:10. The latter was the better worker in every respect. She made a good showing in finding, locating and pointing, and was exceptionally steady to wing. She found and pointed two bevies, and made a point on scattered birds and one flush. Up at 2:37.

Tony Luna and Lillian Hall ran 33 minutes. Luna found and pointed sharp and well, doing good work both on bevies and scattered birds Her range and speed were good. Lillie made a commonplace showing.

Leo Noble and Harold Skimpole began at 3:38. Harold made some pretty work on single birds, he pointing twice sharp and precise and flushing one Leo in the meantime flushed a bevy. Sent on, each found and pointed a bevy. Leo flushed twice. Up at 4:10. Harold made the better competition in every respect.

Second Round.

Marie's Sport and Tony Boy began at 4:20. Up at 5:18. The heat was a hard heat to follow, and was so broken by many turnings and twistings and obstructed by wire fences that it was unsatisfactory. Tony pointed a bevy. Sport 200 or 300yds. away pointed; nothing found, but it was said that a bird flushed from the point. Sent on, in about 200yds. Sport dropped to a point in cornfield, and a few birds were flushed to it. Tony crossed in about 50yds. ahead and pointed a single. Sent on, Tony pointed a bevy. Sport was lost for a few moments and was found pointing a bevy. Tony went in and pointed the same bevy. Rose went in and flushed the bevy as if it were his dog's find and point, something he had no right to do. Sent on, Sport pointed some remaining birds of the bevy. Sent on, the handlers called point in a thicket dense with switch cane and brush. It was said that Tony waded to a flush on a bevy Sport pointed; Tony backed; nothing found; footscent probably. The bevy was followed. Sport pointed in the open. Boy backed and held back to caution. A plover flushed some yards away and other than it there was nothing found. Boy pointed some scattered bird which when flushed were again followed. Boy stopped to a flush, pointed and some remaining birds were flushed to his point. Sport roaded a single which flushed, and lit on the overhead limb of a tree 20ft. from the ground. Boy roaded on the same trail, pointed where the bird flushed; the bird flew from the overhead limb, and there was much wonderment expressed that he could point a bird so far overhead. Both took a cast up the bottom. The handlers called point, and when a judge reached the scene both dogs were pointing the same bevy. There was no one with the dogs and handlers for some time save one judge, and he reported three single bird points for Tony Boy and one for Sport. Up at 5:18. Tony Boy was quicker in his work, was not given to pointing on footscent and was a better ranger.

Saturday.

The weather was clear, cool and favorable for good work.

Novelist and Lillian Russell began at 9:00. Lillian flushed a bevy down wind, pointed a bevy, made five points on singles and two flushes. Novelist found and pointed three bevies, made five points on singles and had the better range and speed. Lillian made an excellent competition and was very skillful herself. Up at 10:00.

Tony Gale and Cincinnatus Pride were started at 10:13. Gale outclassed Pride in every particular except point work on birds. His range was wider; he had better pace and finding abilities. Gale found three bevies and made one point on a single. Pride made one bevy point and one point on singles. Up at 11:15. The board of governors met while the heat was being run, one dog being up, the other working, and there was some delay caused by the meeting. The matter under consideration was the question raised by Mr. Avent in respect to Tory Luna

Another meeting was held after the heat ended, the particulars of which are given in the introductory.

Harold Skimpole and Tory Luna were the next brace, but the latter was withdrawn and Minnie T. was brought in as a running mate Harold pointed two bevies well He next pointed; nothing found. He next flushed some birds of a bevy, then stopped to a point on the remainder. On singles he made a point and a flush. He next flushed an outlying single, then pointed the bevy. His range was but fairly good.

Final.

Tony Boy and Tony Gale began at 1:41. Each made game and pointed; nothing found. Each found and pointed two bevies Gale pointed a single in plum thicket. Boy at the same time pointed near same place. Sent on, a bevy flushed suspiciously near Boy in the open. Up at 2:32. Boy had a slight advantage in the heat. There was too much hurry and hustle and fast riding for good work or proper method.

This ended the stake.

Absolute of Derby.

Young Rip Rap and Pin Money, Derby winners, were started at 2:42. It was an excellent heat in every particular, both dogs doing admirable work. They ranged wide and fast, found well, and their point work was clean and accurate. Pin Money found four bevies and made five points on singles. Rip pointed three bevies and made three points on singles. Pin's work on birds was sharper than Rip's. It was a very excellent competition.

Challenge Class Prizes.

New York.—*Editor Forest and Stream:* Referring to "Setter's" article of last week on "Challenge Prizes" in dog shows, I have received the inclosed reply from Mr. Mortimer, superintendent of the coming New York show, to a letter from me asking that three prizes be offered there in challenge setter classes. I therein showed Mr. Mortimer by his catalogues of 1893, '94, '95 and '96 that the average entries of the first three years were: Of Irish setters, 11 challenge, 27 open, 12 pups, 17 novice; and of Gordon setters, 11 challenge, 18 open, 10 pups, 7 novice; but that in 1896 the puppy entries fell off to four of each breed, while those of English setter pups fell off from seventeen to five; thus indicating that owners had tired of sending their little fellows to almost certain death from distemper contracted at the shows. The other classes in 1896 held up to their average pretty well.

I hope that no motion will prevail to amend our A. K. C. rules as to challenge classes so as to imitate English customs. All our present regulations need is to make challenge wins attainable only upon competition (*i. e.*, at least two in a class)—three wins with such competition to make a championship. This will prevent a "walkover."

I look upon this matter of attracting our challenge winners to exhibitions as important, if the quality of our shows is to be kept high. Why, even the novice classes have three prizes, although mostly composed of dogs that probably can't win in any other class. JAMES B. BLOSSOM,

Pres. Gordon Setter Club; Vice-Pres. Irish Setter Club.

(Mr. Mortimer's letter to Mr. Blossom, referred to above, is of the same tenor as his letter in another column, excepting the following paragraph: "I shall give notice at the next meeting of the American Kennel Club of the desirability of making the classification at shows held under its rules similar to that at shows held under English Kennel Club rules in England, whereby a dog does not outlive its usefulness from a show point of view.")

NEW YORK, Jan 30.—Kindly say in your next that the Westminster Kennel Club has decided to give a second prize of $10 in all challenge classes containing three or more entries.

Our list of special prizes (offered by the different specialty clubs and from private sources) has been largely increased, so that in numbers and value it exceeds all previous records. Our entries close on Monday, Feb 8.

JAS. MORTIMER, Supt.

U. S. F. T. C. TRIALS.

The All-Age Absolute.

AFTER the Derby Absolute was decided on Saturday, Jan. 23, the All Age winners were next in order of competition for the Gould cup. Mr. Rose, the handler of Tony Boy, objecting to running him, as the dog was ill. Mr. Buckle raised no objection, and the judges decided to postpone the running of the All-Age Absolute till a time in the following week. The secretary so posted the announcement later on the club's bulletin board in the hotel, and it stood thereon for several hours. Later in the evening the judges most inexplicably decided that Tippoo had won by the default of Tony Boy. It is regrettable that they should have blundered so badly at the finish. There was no default on the part of Tony Boy, for he was on the ground, and the judges personally examined him, accepted the circumstances as they then were, and announced the contest for the next week. Aside from this, they could not award the cup on the grounds presented in their decision—that is, the default of Tony Boy—for one of the conditions governing the cup is as follows: "The absolute trial for the Gould cup must be of at least one hour's duration in the Derby and two hours' duration in the All-Age Stake," etc. It is clear that this is a mandatory condition, and if not complied with there is then no contest. In the Tippoo-Tony Boy case there was no contest, so that the cup's ownership remained unchanged. Mr. Geo. Gray, the holder of the cup, refused to deliver it to the club, as he very correctly and justly claimed that there had been no contest for it at the U. S F. T. C. trials. Once admit the win by default, and a principle would be introduced which would weaken the competition for the cup, and make the honor of winning it of but little valne.

F. T. C. A. Meeting.

AT a meeting of the Field Trial Champion Association, held at West Point, Miss., Jan. 26, Messrs. Dexter, Bell, Buckle and Stafford present, with a sufficient number of proxies to make a quorum, it was decided that owing to the blizzard, and that with the consent of the parties interested, the champion stake be declared off. Entries for 1898 for those eligible at that time close on Dec. 15, 1897, and the stake is to be advertised in October of that year. A committee was appointed, Mr. Dexter, chairman, to engage three judges, who are to be announced when the stake is advertised.

The Champion Stake.

We live in a swift age, one of rapid thought and action, and of the things which are swift a field trial is not the least. The Champion Stake, however, was a record breaker. For a sudden beginning and a quick conclusion no field trial contest ever equaled it. It is regrettable that a stake with possibilities so great and interests so important should have been so neglected and so mismanaged. Instead of arranging for the Champion trial months ago, as should have been done, no action was taken until recently, when in a perfunctory manner the announcement was made that the Champion Stake would be run on Feb. 16. This was entirely too short a notice to the parties interested, the intervening time being too short in which to prepare the dogs and make other necessary arrangements. Aside from this, the date was badly chosen, inasmuch as the Champion Stake, if it be a success, must follow closely after the last trial of the circuit, so that it may secure its chief support from the trainers already on the grounds, and also that the visitors already present may attend it.

It is not a stake which can be run successfully on dates distinctly separated from those of the main trials by an important interval of time.

However, after thoughtlessly fixing on the February date, the Champion Association learned at West Point, Miss., what it should have known months ago as a matter of common knowledge that the Champion Stake must be run soon after the last trials. A meeting of the Association was held on Monday, Jan. 18, and it was decided that the stake be advertised in the sporting press that week, and that the entries should close two days later—that is, on Jan. 20; in other words, the entries closed before the public could learn of the change of date, or even read the club's advertisement. Nothing so stupid or incompetent could well be imagined. The time fixed for running the stake was Jan. 26. It was held by some that the U. S. F. T. C. All-Aged Stake, being open to all-aged winners, really filled all the needs of a champion stake, which proved not that there was no need of a champion stake, but that it is a grave mistake to have one man the secretary of two clubs. Had there been a secretary of the Champion Association with any pride or interest in the Association's success, the stake would not have been arranged, advertised, judges engaged, entries closed, and the stake declared off, all in the space of a few days.

There was something of a quandary in respect to judges. Mr. W. S. Bell, who was a visitor at the trials, consented to act as one judge. Mr. N. Wallace, of Farmington, Conn., another famous and popular judge, was telegraphed to. He happened to be at Asheville, N. C., and he also consented; and the third one engaged was Mr. J. N. Seale, a popular sportsman of large field trial experience.

Still the Champion Stake was only such in name under the circumstances, for only a few people knew it was to be run at all and only a few could possibly know it. The Association then could only secure its support from such dogs as were in touch with its elbows.

As a result there were but five starters, dogs already present on the grounds. On Tuesday morning, Jan. 26, the weather was extremely cold; Mr. Seale had sent word that he could not be present. There was little interest manifested in the stake, and those directly concerned held a meeting and decided to declare it off for that time. After paying the U. S. F. T. C. $25 for the grounds at West Point, on which the stake was to have been run, and paying the expense of judges, etc., those who were ready to start had about $25 per starter returned to them on a *pro rata* division of the entry fees.

TOHO.

OF all the different fallacies which have encumbered the training of the dog for field work, none has been more assiduously commended than the teaching of "toho," a term used to denote that the dog is to stand still when he hears it uttered. It is held forth as an aid to pointing.

Much that is fallacious is perpetuated by imitation. One generation accepts on trust the beliefs and teachings of the preceding generation. Writers are loth to run counter to the world's teachings even in matters of fallacy, so that when they needs must write they write up old matters over again. Old ideas are presented in new combinations and in new dresses. Out of the great mass of writing there is but a fraction that is new, original and independent. Much of it too is speculative or impractical. It is much easier to write of a thing as one thinks it should be than to investigate and learn of it as it really is. And thus it comes that to separate the sound article of literature from the rubbish is a slow process and a matter of much time.

Nearly all writers on training teach that the dog should be taught to stop to command, and thus establish a sure and positive method of making him stop stanchly on his point. It is assumed that there is a close relationship between the stop to order in the proximity of game and a true point on it. To the novice such idea is convincingly plausible. He does not consider that a dog may stop to order in the immediate vicinity of game and still have no more idea of a true point than would a horse which stopped under similar circumstances. In either instance the stop is made to command as a matter of obedience. The dog does not refer the act to extraneous objects, whether they are birds, rocks or cabbages

In practice the trainer who requires the dog to obey the order "Toho!" when he is drawing on birds does much to spoil his work.

Experience is the only correct practice. It involves failure and success. The dog can only learn from it the different degrees of intensity in the scent, whether cold or hot, foot or body scent, and he can only acquire by experience the skill in pointing and roading, and the purposes of the gun. A mere mechanical stop to order conveys to the dog no more experience in the details of point work than would a lecture to him. He must have the practical experience with the coincident training. He will make errors. They are inseparable from his progress. It is only by error and correction that he can learn what to avoid. To assume that there is any system which will start a dog into work to the gun without error and with the skill which comes from experience is to assume what is contrary to nature in the phenomena of all organic life, and in practice to adopt what is palpably absurd and inefficient It is absurd because when an inexperienced dog is making game the handler does not know whether it is near by or far away. To bawl out "Toho" is to give the order at a venture. If the dog obeys he does not know why he stops, so far as the birds are related to it. He may suppose that he is checked for following the scent, a much more direct and logical conclusion than that he should know the "toho" referred to some birds but remotely in evidence.

The order "toho" is uttered at a time when there should be quiet. When a dog is roading and doing his best it is the height of stupidity to bawl out orders to him. Such alarm the birds, balk the dog and disgust the looker-on. The dog's progress is broken, he imperfectly comprehends his trainer's purposes, and he loses confidence in himself and his teacher.

Only by having all the parts of field work taught as they actually occur in practice can the dog learn them properly. Each detail is then learned as it exists and as it relates to all others. He cannot know what constitutes a mistake till he has made it. He avoids them when he has experience enough and consequent teaching to perceive their harm. He adopts the methods which are most conducive to accomplish the desired results.

Reject the "toho." Teach him to go to his birds on his own judgment. If he flushes willfully, punish him; if through mistake, ignore it. The dog will make mistakes in using his nose. His judgment will at times be faulty; and in this he differs not from his master. To teach "toho" to either or both would add nothing to the skill or experience of either, or to the purpose. The experienced trainer concerns himself not with toho. The amateur who attempts to teach it expends first much pains to teach it, and has something which is valueless when taught.

Snap and the Carriage.

Editor Forest and Stream:

Snap (a dog belonging to a young lady friend of mine—a dog who named himself by snapping at everything which came near him in his puppyhood) is very fond of riding out in state. He would be taken out oftener did he not want the most prominent seat in the carriage His mistress's mother is more apt to take him than is his mistress. A mutual friend described to me a few days ago Snap's mistress's mother crying out to her as their carriages passed—they both taking advantage of a fine day for a drive: "'How do you do? I didn't know you!' And," said the narrator, "she didn't know me because Snap sat erectly on her lap, hiding all in front of her from her view; she could only see to the right and left." Snap's mistress was present when this story was told, and laughed as heartily as any of us, so I have presumed that I might repeat the story. All this I tell that may be understood an habitual action of Snap. He has a good faculty of time, and will watch about on the grounds until the carriage is rolled out of its house. Then he will get on a seat and wait. He knows thoroughly well who is disposed to allow him to go riding, and who is not. When his mistress's mother appears he quivers and wriggles all over with joy. When the mistress comes he slinks back, gives every evidence of disappointment, and then plainly begs to not be compelled to get to the ground, and manifests all of his graces of look, attitude and action in the hope that his mistress's resolve will give way. It is very amusing—the nervous anxiety with which he regards the path from the house to see who is coming for to-day's ride—so amusing the men about have more than once fooled him. They would roll the carriage out. Snap would jump in and begin his vigil upon the path from the house. When they had enjoyed the show long enough they would (to Snap's disgust) roll the carriage back under cover again. But he soon "caught on," and now will not get into the carriage unless he is sure from certain indications, such as bringing out the horses, that a ride is coming off. In all this Snap shows that within his woolly personality there is an individual—a conscious, self-conscious, rational individual. Think of how many several persons and things he is as fully aware as any human being could possibly be—his mistress, her mother, the men about, the horse, the carriage, and so on. Then he is able to put things together. He knows from indications when the carriage is going out and when it is not. Though he can not hitch the horses up, he knows what hitching up means as well as anybody does. Snap has a rational soul. CHARLES JOSIAH ADAMS.

ROSSVILLE, S. I.

Dogs and Music.

WESTGROVE, Pa.—*Editor Forest and Stream:* Kindly inform me whether the effect produced on dogs by music is pleasurable or the reverse. In other words, does it cause them to howl from pleasure or grief? And if they do not enjoy it why is it that they make no apparent effort to escape from it—in fact, seem in a great many cases to rather seek the society of the musician? To sum up, do dogs love music or not? HERO.

[Certainly dogs like music, and they howl in unison or discord for that reason.]

POINTS AND FLUSHES.

Exhibitors should bear in mind that the New York bench show entries close on Feb. 8. Premium lists and all necessary information can be obtained of the superintendent, Mr. James Mortimer, 813, 66–70 Beaver street, New York.

Spratts Patent have issued a most attractively gotten up calendar for 1897, the illustrations of dogs by R. H. Moore being a particularly pleasing feature. Much valuable information concerning dogs is conveyed in every page.

The act of the U. S. F. T. Club in barring first prize winners from its All-Age Stakes is one of common sense. It learned from experience what it could have learned months ago had it read the available information on the subject and digested it properly.

The report of the U. S. F. T. Club's trials, published in full in our columns this week, failed to reach us in time for publication last week, owing to delay of the Southern mails caused by bad weather.

Mr. N. Wallace, of Farmington, Conn., who was engaged as one of the judges of the Champion Stake, was *en route* to West Point, Miss., on the train which was held up on a branch of the Southern Railway, near Eldridge. The robbers did not attempt to rob the passengers, their efforts being confined exclusively to the express car. Mr. Wallace describes the scenes as both serious and amusing. Passengers were secreting their valuables in frantic haste in places they thought most secure. The news agent, in a momentary fit of valor, drew his revolver, but on reaching the passenger coach he most generously offered it to an inactive passenger and urged him to go forward and participate in the trouble. We interviewed the news agent on the return trip, and he countered by saying that there were some sportsmen aboard during the robbery who tremulously took their shotguns out of the cases, and notwithstanding that they shook badly they succeeded in getting the guns put together. They then remembered that their ammunition was all in the baggage car. A lady who had watched the brave display remarked: "You gentlemen no doubt are a sure thing on little birds, but you do not amount to much on train robbers."

A complication which may be of some interest to the amateurs who were engaged in the Amateur and All-Age stakes of the U. S. F. T. C. is that they now fill the requirements which constitute a professional, that is, they have run in a public trial with professionals for money prizes, the very grounds on which objections were raised against Capt. A. C. Waddell handling in the Amateur Stake.

Much praise was bestowed on the Continental Field Trials Club's trials, run at Tupelo, Miss. Since that event the club has received a large number of applications for membership, which will be acted upon at the club's annual meeting at Chicago during the week of the Mascoutah Club's show.

The governors of the Baltimore Kennel Association met recently and elected the following officers for the year: Col. Henry D. Loney, President; Leonard M. Levering, Vice-President; William P. Riggs, Secretary; and J. Chambers Weeks, Treasurer.

The resignation of Mr. P. T. Madison, as secretary of the Continental Field Trials Club, has been accepted and Mr. W. S. Bell, Pittsburg, has accepted the office *pro tem.*

The Rev. R. O'Callaghan, LL.D., died suddenly on Jan. 9. In the United States he was famous as a breeder of Irish setters, and many of the fine imported Irish setters were from his kennel. He was a talented divine, an influential member of the English Kennel Club, a keen sportsman and accomplished athlete, and had the love of all who knew him.

The Avent protest, lodged by Mr. Avent against the judges ruling that Tory Luna could not run in charge of other than an amateur handler till the Amateur Stake of the U. S. trials was finished, was very properly dis-

allowed. The matter is treated more at length in the report of the trials.

The Mobile & Ohio Railroad Co., through the general passenger department, of which Mr. E. E. Posey is general agent, has issued a circular in the interest of sportsmen which deserves more than a passing notice. Three field trials were to be held on its line: the Continental at Tupelo, Miss.; the U. S. and Champion trials at West Point, Miss. All agents from St. Louis to Mobile inclusive were instructed to sell tickets at the rate of one fare, all tickets for return passage being limited to fifteen days from date of sale. The further instructions were added: "You are requested to assist the sportsmen as much as possible by seeing that their camping outfit, dogs, etc., are carefully and promptly handled, and by rendering them all the service you can. Dogs and camping outfit will be carried free in baggage car as customary, provided they are delivered to and received from the main baggage men at the baggage car door." All these liberal concessions to sportsmen were thoroughly appreciated, the large attendance of visitors and their kind words being ample praise.

Dr. H. T. Foote, New Rochelle, N. Y., informs us of the death of champion Bromfield Sultan (20,668) after a short illness. His bench show career in England was exceptionally successful. Dr. Foote imported him six years ago, he then being two years old. He won over forty first prizes in England and met with but four defeats, which were attributed to lack of condition.

Leed's Barry, the famous St. Bernard owned by the Swiss Mountain Kennels, died recently from injury to the intestines caused by a large piece of glass which he had swallowed.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

NAMES CLAIMED.

Mr. Erwin M. Beale claims the name Earl Jingo for pointer dog Iphwed April 8, 1896, by Jingo—Pearl's Dot.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is partic ularly desirable.

THE BEGINNER AWHEEL.

[*Concluded.*]

Scene—A Ninth avenue express train on the elevated road, New York. Enter Mr. White (Number 'leventy-'leven in the L. A. W.), who takes a seat beside Mr. Brown, recently graduated from the bicycling academy.

"Howd' do, old man? You were telling me yesterday of your experiences when you tried wheeling on the Boulevard instead of around the inner periphery of a riding school. How do you like the change, and did you ever get up to 110th street? I am anxious to know."

"If you will permit me to answer one question at a time, I will say first that I should like wheeling on the Boulevard immensely provided the course was kept clear of street cars, vehicles and other bicycle riders; and secondly, that I not only reached 110th street, but rode far beyond."

"You surprise me. I thought the doctor when he suggested your taking up cycling cautioned you to take only the shortest rides."

"Quite true; but then, as Fred Mather—beg pardon, Balzac—says, 'I can resist anything but temptation.' When I got to 110th street I felt pretty well played out, but just then I happened to notice a fellow riding along abreast of me that I recognized as a man who had been in the cycle school at the same time that I was there. I had always felt a little jealous of his abilities as a rider, and I made up my mind at once that he wasn't going to pass me. 'Not on your life, you greenhorn!' I said to myself. 'You can't show a rear tire to me.'"

"So you determined to give him a taste of your dust instead, eh?"

"No, not exactly. I didn't care to pass him, only show him that I was his equal in every respect, and that he couldn't pass me."

"I see."

"We rode along at a constantly increasing pace, one next the car track and the other next the curb, neither letting on that he had recognized the other, till we got to the 125th street cable road crossing. Here we were scorching at such a rate that I confidently expected to be arrested by one of the cycle policemen for fast riding. I can tell you, though, he would have had to sprint to catch us!"

"But I thought you were opposed to scorching. Yesterday you couldn't say enough against scorchers."

"Yes, I know, my dear fellow; but then it is different when we do these things ourselves. Besides, it was hardly my fault, for I never should have ridden so fast if it hadn't been for the other fellow."

"True, I forgot him. Every one seems to have conspired against you."

"Well, I am sure I didn't scorch from the love of it. I was so tired out when we came to climb that hill beyond the car track that I would have given up and walked home if it hadn't been for the aggravating way in which the other fellow hung at it."

"His action was highly provoking."

"I could see all the time that he wasn't enjoying himself. Going up that hill he worked not only his legs, but his whole body as well—sort of pumped along by a series of contortions—while his bicycle wabbled from side to side as if it were drunk. Wasn't having a much better time of it myself, but then I would have died sooner than give up first."

"What a fool the other fellow was!"

"That's exactly what I thought all along. 'Why don't you turn off somewheres, you blanked ass?' I kept saying to myself."

"Saying to yourself of yourself, I suppose."

"No, you blockhead, I was referring to the other fellow. We crossed Spuyten Dyvil bridge and rode on out Broadway without another rider within half a mile of us, and yet neither of us showed by any sign that he was conscious of being in company. By that time we had lost some of our ginger, and instead of trying to be a good yard ahead I was content to feel that I had a foot the advantage of him."

"Are you sure he didn't have a little the advantage of you at times?"

"No doubt he may have thought so. He certainly needed some such encouragement to keep him going."

"Well, we rode all the way to Yonkers that way without exchanging a glance, and when we got there I was content to know that I led him by an inch. My spirit was worn, but not broken. An inch isn't much of itself, but where a principle is involved it counts for a good deal."

"I applaud the sentiment, but how in the world did you ever manage to stop? If both of you were as obo-couragious in your determination to do or die you might be riding yet."

"I am coming to that immediately. Beyond Yonkers, as it happened, neither of us knew the road. By chance we turned up the wrong street, and the first thing I knew we had run plumb up against a stone wall, part of the Aqueduct, I believe. It was the end of the street, and we could go no further."

"Well, no doubt you turned around as if you were doing a perfectly natural thing and kept yourselves company in some other direction."

"That is exactly what we did do. He turned to his right and I turned to my left; we changed sides of the street and rode back again, and though we just avoided colliding by a hair's breadth we never even looked at each other"

"You didn't ride all the way back to New York that way?"

"No, fortunately not. We failed to find the street we had come on, and by mistake rode straight down to the river. It had grown dark meanwhile, and just as we were executing a flank movement to go back up the hill a policeman came along and arrested us for not having our lamps lighted. Neither of us would stop, and he jerked the other fellow off his wheel first, so I felt that I had won.

"We made it up between ourselves at the station house, and incidentally with the police. The first thing I asked him was where he had been going when I met him. He was still a little touchy, and he said, 'You write down the answer to that too, and we will exchange papers.' I was willing, and when we came to read them will you believe it, both said 'Grant's Tomb'!"

There was a creaking of the door, and the guard put his head inside the car long enough to say

"Warr'n street!"

"My station," said White.

Dan Daly.

CHICAGO CYCLE SHOW.

The annual Chicago show of the National Cycle Board of Trade was in progress during the entire week. Opinions are divided as to the success of the enterprise this year. Some dealers were discouraged by the smallness of the attendance, which was much lighter than was fairly to be expected, and by the infrequency of sales of their goods. Such manufacturers say there is no good purpose served by holding these mammoth exhibitions. Others are quite as enthusiastic in favor of their continuance, and it is not likely there will be any change in the original purposes of the association. The truth is that the cycle show, as every form of business and amusement, has been affected this year by the hard times in this section of the country, the like of which has rarely been seen here, in spite of all efforts made to cover up that fact. It was the hard times which made persons so unready to buy wheels, and which made them apparently unwilling to come out to see the great show. Of itself, the show was a magnificent affair. The vast Coliseum building is perfect for such a convention of manufacturers, as it was perfect for a great political convention. The interior was handsomely and expensively decorated, and was a great panorama of mingled artistic and business display. There was hardly a leading industry of the country connected with wheeling goods which was not represented at the show, and that right royally. All the mechanical, technical and professional side of bicycling was shown in its most alluring and fascinating form. It was a gr at and interesting object lesson, one appealing to the masses of the people, for it is the masses and none less who do the buying and riding of the bicycle to-day. The wonderful invention, with all its development and all its improvements, was shown, a thousand fold, and many were the thousands who noted narrowly each little variation from the features of the past in the way of improvement and perfection. Space fails to make any extended description of the show, or to speak in detail of the new things which were offered to the cycling world. The newspapers are really helpless when it comes to covering an affair like this, because the cycle show takes the place of all the newspapers as a vehicle of information. At it the professional may learn what is ahead for him, and the amateur may jostle shoulders with him in front of the latest tire, the cushion frame, the newest lamp, the new crank hanger, or the pretty girl in risky costume who hands out literature to the public. Great is the cycle show, as is the horse show or the dog show or the flower show. How shall we do without it? Therefore let not hard times cause the promoters of this fixture to be cast down, or to plan a discontinuance of that which has been so well and happily begun. H.

Chicago, Jan. 30.

Yachting.

As the yachting journal of America, the Forest and Stream *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public.*

The report of the special committee of the New York Y. C. on the question of the proposed yacht league is about as positively unfavorable as it could possibly be made; a conclusion not entirely unexpected from the make-up of the committee, the majority of the members being known from the outset to be strongly opposed to the scheme. The report, which we publish in full, is a lengthy document, and enumerates a large number of reasons why the New York Y. C. should stand by itself in yachting, and aloof from all smaller and inferior clubs. Its adoption by the club places that body positively and publicly in the position which it has for so many years maintained in a less pronounced way: of opposition to all advance and improvement in yachting. To the extent that it defines thus clearly and positively the position of the New York Y. C., the present movement whatever the result may be, has not been altogether a waste of time. It makes plain to all yachtsmen what has thus far been fully appreciated only by a comparatively small number who have been engaged from time to time in the past sixteen or eighteen years in the work of improving and unifying the various rules of yachting.

In behalf of the report, it must be said that it is in a way comprehensive, and certainly most positive. It deals with three main points: the formation of a national union of yachtsmen, the formation of a union within a certain limited territory, and the position of the New York Y. C. as related to all other American yacht clubs. In discussing the details under each of these heads there is no sign of doubt or uncertainty; the conclusions of the special committee, like those of the club's regatta committee, are final beyond possibility of discussion or appeal.

The reasons for the summary rejection of the first proposition, as very briefly stated by the committee, are two: if carried out successfully, the plan would result in the formation of a very large national association; and this association or "league" would be composed of many heterogeneous elements. In this respect it would only be like many existing associations in this country and abroad, composed of numbers of persons brought together through a common interest in one general subject—not necessarily in the same minute details of a subject. Such unions have long existed among scientists, professional men and sportsmen; in many cases they have proved successful in spite of innumerable obstacles which could not exist in the present case; differences of race, religion, politics and other material points being sunk by common consent, and all meeting on a neutral field for the common good. Leaving out of the question the innumerable secret orders, composed of large numbers of most heterogeneous human elements, nearly all of the recognized sports, such as wheeling, tennis and canoeing, have found it not only possible, but highly advantageous, to form national or very large local associations.

We have realized from the first that the task of carrying out the scheme proposed and elaborated by Mr. Lovejoy, even with the assured co-operation of the New York Y. C., would not be an easy one, or a matter of a single season; but would require no small amount of good judgment and patient labor. At the same time we cannot see that it is in any way chimerical or impossible of itself. We know of nothing in the composition of the average yachtsman that unfits him for such harmonious association with others of his kind as is found in other sports and more serious pursuits.

On one point the report is discreetly silent: it does not intimate the future policy of the New York Y. C. in its attitude toward the gradual union of American yachting interests outside of the club, and we can only hope that it will be nothing more serious than *laissez faire, laissez aller;* but, in any event, it is beyond question that the unifying influences so strongly at work for a few years past will continue to grow, and that it is only a question of time before a union of the Atlantic and Lake clubs is formed; this extending later to include all American clubs. The visible feeling among many clubs and individual yachtsmen, the great progress made in a very short time after long years of apparently fruitless work, and the constantly extending efforts toward local union on Long Island Sound, Massachusetts Bay and the Great Lakes, all point to the one conclusion. The New York Y. C. and its committee to the contrary, all the tendencies of the times are toward the consummation of the work which they have pronounced impossible, when all that can fairly be said against it is that it is difficult.

In its hasty and sweeping dismissal of the proposed scheme, the committee has framed a most complete indictment against the existence of the New York Y. C. itself, as opposed to smaller and differently constituted clubs; it is preëminently "composed of so many heterogeneous elements, and, by reason of its mere size, so unwieldy that no good results can be expected from it." One might search in vain for a more apt and fitting characterization of the New York Y. C of to-day. Its membership is composed of men who are yachtsmen, heart and soul, but who have no voice in the club because they are no longer yacht owners; of men who are owners of racing yachts, but who are similarly disfranchised because their craft are of the small sizes that still race rather than the larger sizes that no longer race; of men who control the destinies of the club by virtue of the ownership of craft long obsolete even for cruising; of men who never were yachtsmen and men who never will be yachtsmen; of men who, by recent purchase of a steam yacht, are instantly qualified to make rules for racing yachts, of which they know nothing. What is the record, in the way of "good results," from this unwieldy body of over 1,200 members, whose destinies are decided by votes of from twelve to twenty-five men at its meetings?

In disposing of the second point the committee covers more ground, three separate objections being made. The first of these is that the work proposed has already been partly done, so there is no necessity for completing and perfecting it. It is true that the efforts of the smaller clubs, in which they have not even had the sympathy of the New York Y. C., have resulted in the establishment of a partial uniformity and harmony of action. At the present stage these can neither be considered complete nor permanent; they are results almost entirely of individual work within the different clubs, of time and labor freely given to club committees and inter-club conferences as the result of a devotion to the interests of yachting at large It cannot be expected that the labor thus given in the hope of establishing sooner or later a permanent union with the necessary officers will be available for all time. With a few more such efforts to discourage them as the present one on the part of the New York Y. C., even the most enthusiastic of workers may find reasons for withdrawing. The work is partly done, there is no disputing that; for this very reason, if no other, it is incumbent now that the clubs should come forward officially and recognize it, the New York Y. C. first of all, if it is what it aspires to be, the *premier* yacht club of the Western Hemisphere, even the Royal Squadron of America.

The second objection is that there would be a final court of appeal from the decision of club regatta committees, and that this final court might be unfairly constituted. The first point is one of the strongest on the side of the proposed scheme; it is a clearly recognized fact that the club regatta committees, those of the New York Y. C. not excluded, are by no means infallible either in judgment or absolute fairness, and that injustice is at times done to racing owners, with no possible appeal. It would be to the advantage of every fair and competent regatta committee in the country if its decisions could be passed upon under certain conditions by the right sort of superior tribunal; at least the intent of the committee would be justified, even though an error were shown in its judgment, and it would relieve the committee of much responsibility. As to the rac-

ing owner, it would give him a protection that he not only is entitled to from the erroneous decisions of a committee which naturally will not admit that it has done wrong, but that he too often needs. It would be by no means impossible to find instances, even within the New York Y. C., where the regatta committee, "with an intimate knowledge of facts derived from personal observation," to quote the report, has made a wrong decision, from which the injured party has had no appeal whatever.

As to the composition of the final court of appeal, four men elected for terms of four years each, one withdrawing each year, the very highest honor in the gift of the national league, we have little fear that unknown and improper members of small clubs would be selected, or that any serious abuse of so prominent an office, even if it should by chance occur, would be long tolerated. The publicity that would be given to the decisions of such a body in the important cases appealed to them would be a decided advantage in raising the standard of racing ethics.

In the event of such an international dispute as may arise at any time, it is easy to see how much superior the decision of such a national court of appeal, composed presumably of the pick of American yachtsmen, to that of a club committee, elected for a year, and possibly involved as an interested party in the original dispute.

The third reason is that the power to amend the rules of yachting would be transferred from the individual clubs to the national body. This in itself, we believe, will be generally recognized as an important advance. The committee very properly says: "Changes in racing rules and in classification should, in our opinion, be made with the utmost deliberation, and only when their advisability or necessity is clearly established, and then with due regard to all existing interests." This proposition will commend itself to all yachtsmen; the day has gone by for such hasty and unfair legislation as, for instance, the changing of the deed of gift of the America's Cup; and it is generally recognized that changes of rules must be made only when they are clearly necessary, and then carefully, deliberately and publicly. This is exactly what the details of the proposed scheme call for; all proposed changes will be framed by competent persons, advertised in advance of the meeting at which they will be acted upon, and thoroughly discussed by a large number of representative yachtsmen, the delegates from the many clubs. There will be no possible chance for one club, for instance, to call a special meeting at three or four days' notice and make radical changes in its rules, nor for any clique to lobby through a new rule that shall bar a winning boat.

The objection of the committee on this point is weak in the extreme; it might be that the national body would be controlled by the small yacht interests, and they might make rules unsuitable for the large yachts. Such a contingency is remote enough and could easily be prevented; but as a matter of fact there are to-day practically little other than small yachts concerned in the racing. With the exception of four schooners all the racing of last season was confined to small yachts of not over 50ft. racing length. The great events of the year, which are supposed to bring out the full strength of the New York Y. C. fleet—the June regatta, the August cruise, and even the Goelet cup race itself—were confessed failures through the lack of adequate entries.

One of the serious problems of the day in yachting is the restoration and maintenance of racing in the classes of 70ft r.l. and upward. The various larger clubs that profess to devote themselves primarily to this branch of the sport have one and all failed utterly within the past five years in enacting rules which should promote general building and racing The most serious obstacle to-day in the way of general inter-club racing in the larger classes is the nominal existence of the 90ft. class, created by the New York Y. C. to defend the America's cup, a type of yacht too large and costly by far for other than the special work for which it was produced; but by its existence even in the present moribund condition, and by the possibility of its revival at some future day, discouraging the establishment of a smaller and thoroughly practicable size of a racing cutter.

When it comes to what may be called the personal objections to the proposed league, the committee gets on very thin ice, beginning with the excuse that the New York Y. C. has never been a purely racing organization, but one whose members take a broader interest in the sport of yachting. What American clubs can be classed as purely racing organizations, or what exist for other objects than the New York Y. C.? Certainly not the Eastern, the Larchmont, the Seawanhaka or the Atlantic. We are surprised at such a statement deliberately put forward as an argument by the gentlemen composing the committee. The New York Y. C. has always aspired to be a leader among these clubs in all the varied fields of yachting, racing first; and it has gone further in claiming preëminence through its many races for the America's Cup. There is no doubt whatever, the committee to the contrary, that the present prosperous condition of the club, with a membership of over 1,200 as compared with 400 in 1885, and with a large surplus to its credit instead of none at all at the former date, is due solely and entirely to the series of international races which began in 1885 and has continued to the present time. The history of the club for the ten years from 1875 to 1885, and from that date to the present, shows just how much it owes to racing.

The future of the club depends on its racing, and that alone; let it abandon racing, or let the recognized control of racing pass to the possession of another club or a national body, and the New York Y. C. must drop, in spite of its fleet and its membership, into a subordinate and unimportant position as compared with the live racing clubs.

It requires no great discernment to appreciate the fact that the demand of the day in American yachting is for the improvement and advancement of racing methods, and that those clubs which endeavor to meet this demand will take the lead in yachting. The New York Y. C. has decided that it will have no part in this work.

The intimation that the club has higher aims than mere racing, and the assumption that to the club is due the credit for such vessels as Margarita, Varuna, Arcturus, Yampa, Intrepid, Namouna, Fleur de Lis, White Ladye and Mayflower, that fly its burgee in foreign seas, add nothing whatever to the force of the committee's arguments. Just as the encouragement of racing is purely *club* work, the building and running of cruising yachts is purely *individual*, and independent of the clubs. If the New York Y. C. went out of existence to-morrow there would be just as many cruising yachts afloat, under one burgee or another, as there are to-day. One thing the club has done for cruising within its home waters, and an excellent thing too, the establishment of the numerous local stations; outside of this it has done nothing, and that a score or so of its 1,200 members indulge in offshore cruising is due solely to their individual preferences, and not to the encouragement of the club.

The suggestions that the club must submit its racing rules and classification to others in the event of joining a league sounds well, but will not bear a close analysis in the light of history. Outside of the legislation relating to the America's Cup, for which the club is entitled to whatever of credit may pertain to it, and to the heavy responsibility as well, what rules has it made, for itself or others? The principle of measurement by length and sail area was first introduced in this country by the Seawanhaka C. Y. C. After it had been put to a practical test by that club, the New York Y. C. went so far as to adopt it in a mild form. After some years the club made another step forward and adopted the present form, already thoroughly tested by many small clubs as well as its originators.

The first uniform classification of racing yachts among the large clubs, adopted in 1887, originated outside of the New York Y. C., and was merely adopted by it after being perfected elsewhere. The present classification by racing length was proposed and perfected by the other large clubs in 1889, but its adoption was deferred for years on account of the uncompromising opposition of the New York Y. C., which only died out with the advance of time. The rules adopted last fall were framed by the Larchmont Y. C. and merely adopted by the New York Y. C. Outside of the America's Cup, it would be difficult to find a detail of modern yachting rules which originated within the New York Y. C., or that was adopted by the club without serious opposition and long delay even when proved to be beneficial. In the face of this record it is idle to talk of surrendering its autonomy and its law-making power to other clubs.

The defense of the regatta committee as a tribunal of last resort is offset by the experience of many clubs, the New York included, to the effect that a committee of three, elected for a term of one year, is not the proper composition of a court of last resort which may be called upon to pass judgment on its own acts and errors. The questions which arise in modern yachting, local as well as international, demand some higher and less interested tribunal than the ordinary club regatta committee, however capable, fair and honest it may be; and the proposal to establish such a body is one of the great points in favor of the scheme which the New York Y. C. has condemned.

The objections conjured up, that the club might be robbed of its date for the June regatta or even the Goelet cup race, are purely fanciful. The experience thus far of the different organizations shows that, while disputes arise at times, the general tendency is to recognize the established rights of all parties in the matter of fixtures and similar details. The attitude of the committee seems to be one of fear and apprehension that this proposal is but a trick of the "small" clubs, jealous of the power and position of the great New York Y. C., to get it within their grip and rob and degrade it We regret that the committee could not have taken a broader, a more liberal and more progressive view of the entire situation; that would have led it to very different conclusions.

The Proposed Yacht League.

THE special meeting of the New York Y. C. called to receive and consider the report of the special committee on the proposed national league of yachtsmen met at the club house on Jan. 26 with Com. Brown in the chair. The following report was read and adopted, after which the meeting adjourned.

To the New York Y. C.:

At a special meeting of the New York Y. C., held on Dec. 22, 1896, the following resolution was passed:

"*Resolved*, That a committee of seven, one of whom shall be the commodore, be appointed by the chair, for the purpose of considering the advisability of action by this club for organizing a yacht racing league, the object of which league shall be to establish uniform co operation of measurement, classification and racing rules, the promotion of yacht building, the encouragement and development of the sport, and the preservation of yachting history and racing records. And that said committee report back to the club at a special meeting to be called for that purpose."

The undersigned, having been appointed a committee under said resolution, do respectfully report that at its first meeting your committee, after perfecting its organization, gave a hearing to Mr. John F. Lovejoy, who at the meeting of the club at which this subject was brought forward had made the principal argument in support of the proposed measure.

Mr Lovejoy laid before the committee certain suggested rules for the constitution of a yacht racing league, being the same rules which were read by him at the meeting of the club, and explained in detail the objects sought to be effected by the proposed measure and its general scope and plan.

The principal objects which those who favor this movement hope to attain through its instrumentality are the encouragement of yacht racing, the promotion of yacht building, and the establishment of uniform classification and racing rules.

The general features of the plan suggested include the formation of a yacht racing league, to be composed of American yacht clubs in good standing, having each not less than fifty members and not less than fifteen yachts enrolled upon its books, and to be governed by a written constitution.

The proposed constitution contains provision for the representation of clubs, members of the league, by delegates; representation being apportioned among the several constituent clubs to a certain degree according to their respective numerical membership.

The active participation in the league by each club is effected through the delegates representing it. The principal function of the delegates is to elect the officers of the league. These officers consist of a council of twelve and a supreme council of three, in addition to the executive officers, the president, the secretary and the treasurer.

The functions of the council may be summarized as follows: To pass on applications for membership, to control the general policy and finances of the league, to make or authorize all necessary contracts, to appoint an official measurer, to frame and modify rules, subject to the action of the supreme council, to assign dates for the racing events of the season, and to enforce penalties for violation of racing rules.

The supreme council is to have power to decide all questions submitted to it by the council, or protests submitted to it by the regatta committee, or by a member of any club in the league.

The constitution further provides for the division of the membership into four districts, to be known respectively as the "Eastern District," the "Gulf District," the "Lake District," and the "Pacific District," each district to have local officers, who are to perform their respective duties in subordination to the general officers and rules of the league.

From this brief description of the proposed association some idea of its extent and scope may be gathered.

Your committee have been unable to ascertain the number or the numerical strength of the clubs which would be eligible to join such a league, but they are informed that in a part only of the Eastern District—namely, that portion extending from Pennsylvania to Maine—there are enough clubs which would be expected to join it to make an aggregate membership of over 10,000.

From this it is readily seen that if the proposed plan were to be carried out to the full extent suggested, so as to embrace yacht clubs in all parts of the country, on the Western and Gulf coasts and on the Great Lakes, it would result in the formation of a league composed of many hundred clubs, with many thousand members.

Your committee are of the opinion that on the face of the proposition such an organization could not be successfully formed, and that if formed it would be composed of so many heterogeneous elements, and would, by reason of its mere size, be so unwieldy that no good results could be expected from it.

If the question referred to them were simply whether it is advisable for the New York Y. C. to take the initiative in a movement to bring about a league of such a character, your committee would have no hesitation in arriving at an adverse decision upon this ground alone, without considering those advantages or disadvantages which might attend an attempt to form a league of less extravagant dimensions.

They feel, however, that to condemn the project on this ground alone would hardly be just to those who have expended so much time and thought upon a proposition the only purpose of which is to advance the interests of yachting, and it is manifest that the objection above stated, which your committee consider an insuperable one as applied to a scheme of the proportions indicated, would become of less and less force as the scope of the proposed enterprise might be curtailed.

It may well be said that while such an objection might be fatal to the adoption of a scheme which contemplated bringing all the yacht clubs in the country into a single league, yet if the scope of the scheme were to be limited or cut down so as to embrace a much smaller number of clubs—as, for instance, only those clubs in the Eastern district, or in only a part of the Eastern district—this objection would lose its force in direct proportion to the curtailment of the scope of the plan; and that finally a point might be reached at which it would be outweighed by the advantages to be secured from the association.

It therefore seems proper that your committee should report its conclusions with reference to such modifications as might be made in the proposed plan in the direction indicated.

We are thus brought to consider whether the object sought to be attained by the suggestion in question would be to any, and if any what, extent brought about by the formation of a league upon the lines suggested, but confined within more moderate limits than are proposed in the plan laid before us, within, let us say, those portions of our seacoast lying between Pennsylvania and Maine.

Laying aside for the moment those considerations which apply with peculiar force to the New York Yacht Club, and which will be referred to in a later part of this report, and dealing only with the general question thus presented, your committee begs to submit the following views:

First—The objects of the association are to bring about uniformity in classification, uniformity in racing rules, and uniformity in the construction of rules and in decisions thereon, and by these means to encourage yacht building, and generally to promote the interests of the sport of yacht racing.

The principal clubs within the district mentioned are the New York Y. C., the Eastern, the Larchmont, the Atlantic, the Seawanhaka, and the Corinthian, of Philadelphia.

Recent movements in this direction have already brought about, in large degree, uniformity of classification and of racing rules among these clubs, and it may be reasonably expected that within a comparatively short time all these leading clubs will have established uniformity among themselves in these particulars So far, therefore, as concerns those classes of vessels which belong to these clubs, and in which they are interested, these desired objects may be regarded as already attained, and in the judgment of your committee the classification of the racing code concurred in by these clubs would become the standard classification or code. Such a classification would control designers, and all new vessels may reasonably be expected to be designed with reference to it.

Your committee are, therefore, of the opinion that there is no urgent demand for the formation of an association of the character proposed. Its main objects may be regarded as having been for all practical purposes already accomplished.

Second—The means by which uniformity in construction of racing rules and in decisions thereon is proposed to be obtained is by giving to the supreme council of the league power to rehear and finally decide all protests which may be brought before it by the regatta committee or by any member of any club who may feel aggrieved by the decision.

Undoubtedly this, or some similar device, is the only means by which a uniform rule or decision could be attained through the instrumentality of a league or association, but in the judgment of your committee it is open to very grave objection.

As such matters are now regulated, the decision of the regatta committee of each club is final as to all events which take place under the auspices of such club.

The members of the regatta committee are present in person at races, and thus possess in a great majority of cases the very important advantage of being themselves witnesses of the occurrences upon which they are called to pass judgment.

To give an appeal from such a body to a council who could only hear the case upon the evidence of others, and to make the decision of such council final, would be to transfer the ultimate decision to a tribunal which would probably be no better fitted, by knowledge and experience, to make a proper disposition of the case, and which would certainly be deprived of what has always been found of incalculable advantage in reaching a correct conclusion—the intimate knowledge of the facts, derived from impartial personal observation of the occurrences in dispute.

Your committee cannot but feel that any system which would subject the ultimate tribunal which is to decide all racing protests to so great a disadvantage would be found to work far less satisfactorily than the system now in use.

Again, even after curtailing the dimensions of the proposed league to a minimum, it would still be composed of so many different clubs, with memberships so varied in character, with vessels so different in class and size, and with such diversified interests in yachting, that it would be impossible to be assured of the election to the supreme council of members who would be recognized by the larger clubs as thoroughly fitted for their positions. It is not unreasonable to suppose that club politics and rivalry would make themselves felt; that differences would arise between the few large and the many small clubs, and that the latter, being by far the more numerous body, would insist upon a proportionate representation. And while we do not mean to assert that there are not as competent judges to be found in the smaller clubs as in the larger, it must still be true in the nature of things that as a general rule the membership of the larger clubs should include by far the greater proportion of yachtsmen qualified to discharge these important and delicate functions.

Third—Another very important element in the scheme of the proposed league is that which confides to the league the absolute power to make changes in the racing rules.

Much of what has been said under the last head is equally applicable to this.

Changes in racing rules and classification should, in our opinion, be made with the utmost deliberation, and only when their advisability or necessity is clearly established, and then with due regard to all existing interests.

To confide this important and vital function to a league which might be controlled by a majority consisting of clubs having memberships and fleets interested only in small boat racing would, in the judgment of your committee, be exceedingly unwise.

Your committee expresses no opinion on the question whether an organization or association on the lines of the proposed league, but confined wholly to those clubs which are interested chiefly in small boat racing, might not result in important advantages to its members.

For the reasons above given your committee are, however, of the opinion that the formation of a league such as proposed, consisting indiscriminately of the large clubs, or those whose fleets are composed of vessels of the larger classes, and the small clubs, or those which are chiefly interested in small boat racing, is inadvisable.

There are other reasons which, in their judgments, make it inadvisable for the New York Y. C. to take the initiative in any such movement, or, indeed, to participate in it to any degree.

It is manifest that this club could not consistently promote the formation of such an organization unless it were willing to become itself a member of it, and to this we think there are insuperable objections.

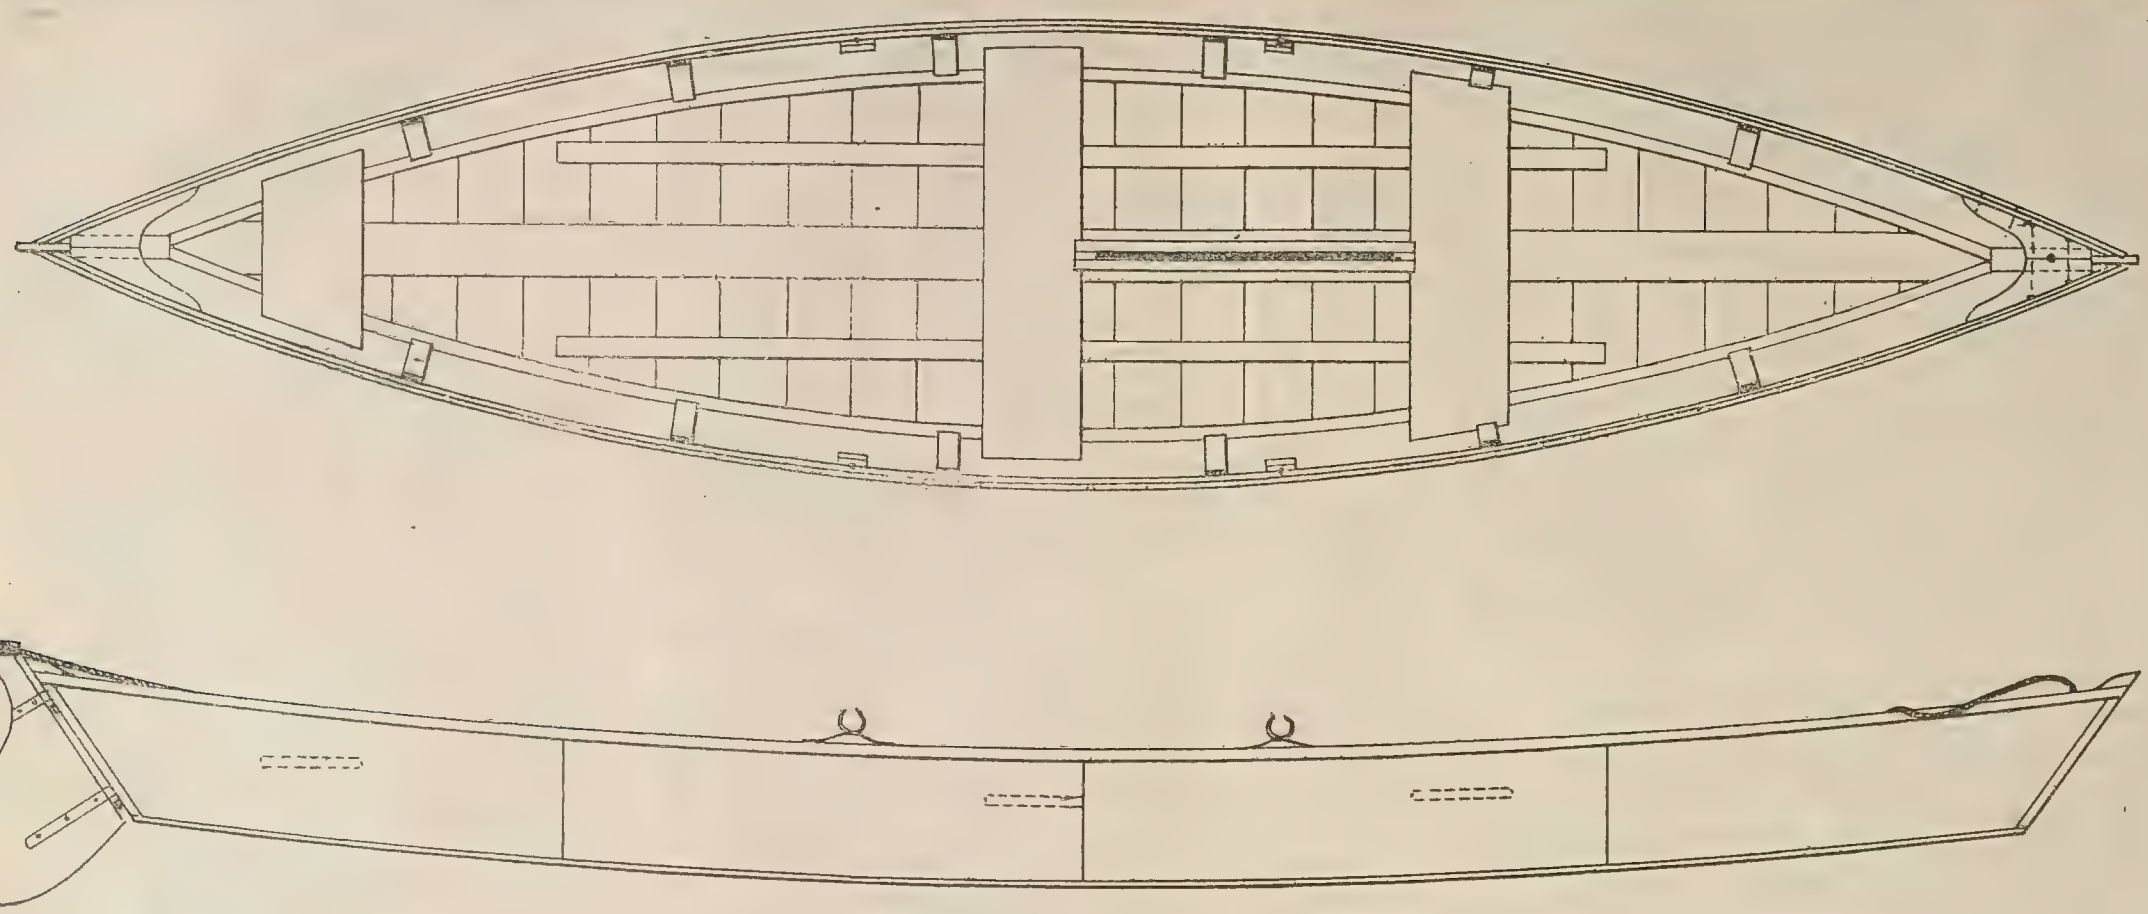
The New York Y. C. has never been a purely racing organization; if it had been it may well be doubted if it would ever have reached its present position.

From its early beginnings the club has shown a marked partiality for deep-water cruising. While it has wisely fostered an active interest in racing, it has not existed for that alone. Its splendid fleet of cruising vessels bears witness to the broader interest which its members have taken in the sport.

It would require cogent reasons indeed for such a club to surrender its autonomy to the control of others; and yet this is what the proposition under consideration means for the New York Y. C.

If it should join a league such as that now proposed, it must submit its classification and racing rules to the manipulation of others.

Its regatta committee, no longer a tribunal of last resort, must become a mere agency for the transmission of protests to a higher power for decision—a power, too, constituted, not by the act or vote of the New York Y. C., but by the votes of innumerable small clubs, whose membership is practically without limit, and whose only limit is that placed upon the size of their vessels.



Its events must no longer be within its own control, but it must conform them to the dates fixed by this higher power.

Under the terms of the constitution submitted to us, its June regatta might be changed against its protest, or the date for the race for the Goelet cups might be altered by the same supreme power.

Even its right to discipline its own members would be taken away from it, for it is a part of the proposed scheme that the power to enforce the penalties for violations of racing rules should be vested in the council.

In the opinion of your committee it has everything to lose and nothing to gain in becoming a member of the proposed league.

Your committee therefore report, as their conclusion, that it is not advisable for the New York Y. C. to take any action toward the or-

ST. LAWRENCE RIVER "SKIEF."

ganization of the Yacht Racing League mentioned in the resolution under which they were appointed.

All of which is respectfully submitted.

The Payne Bill.

From the Marine Journal.

If the President of the United States does not take advantage of his constitutional right to veto to-day (Saturday, Jan. 30) House bill 8,038, it becomes a law, and next Monday morning our readers can congratulate themselves upon the fact that hereafter if the Anglo-American millionaire desires to build, purchase or charter a foreign yacht she will have to enter and clear at the Custom House, pay tonnage dues, in fact, be amenable to the laws that govern all foreign built vessels, which is practically prohibition, as no yacht owner would subject himself to this annoyance, to say nothing of the expense. The bill referred to amends the revised statutes. The amendment is in italics and reads as follows:

"Section 4,216.—Yachts belonging to a regularly organized yacht club of any foreign nation which shall extend like privileges to the yachts of the United States shall have the privilege of entering or leaving any port of the United States without entering or clearing at the Custom House thereof or paying tonnage tax, *provided that the privileges of this section shall not extend to any yacht built outside of the United States and owned, chartered or used by a citizen of the United States, unless such ownership or charter was acquired prior to the passage of this act.*"

This bill originated with the *Marine Journal* upon the earnest solicitation of some of the most influential of our patrons. Congressman S. E. Payne, chairman of the House committee on Marine and Fisheries, introduced it and championed it through the House the first session of the Fifty fourth Congress. Senator Wm P. Frye, chairman of the commerce committee, would have got it through the Senate during the same session had it not been for the determined opposition of a member of the Senate who was at last through Senator Frye's earnest efforts prevailed upon to withdraw his opposition, thereby enabling the latter to pass the bill last week, soon after which it went to the President, who, we hope, will sign it; if not, it is the opinion of those interested that he will allow it to become a law without his signature

This is a very important bill in the line of shipbuilding, which includes skilled labor in nearly 3 0 different industries, all of which are largely indebted to Senator Frye and Congressman Payne, who never lost an opportunity to advance it to its final passage. The part the *Marine Journal* took in the matter was a pleasant duty it owes its constituents, and is another one of the many bills that we have advocated in the interest of the merchant marine, and the licensed officers of the United States that have become fixed on the statute books for all time, we hope. American designers and American builders can furnish our millionaires with a better yacht than they can get abroad; hence this new law can do no American any injury; it will simply oblige the Anglo-American to pay a handsome revenue into the Treasury of the United States if he cannot exist outside a British built craft.

We would not rob our contemporary of a tithe of the credit which it assumes for this most cowardly bill. Every true American should blush at the knowledge that American shipbuilders, after failing utterly in the attempt to compete in quality with their rivals of the Clyde, have gone to Congress with a cowardly plea for special legislation that should protect them from a fair and open competition on the part of men whom they thus acknowledge are more skillful than themselves.

Thus far we have been unable to learn just what the effect of the new law will be, and we believe that no one yet knows; it will probably take several suits at law to determine some of the questions now in doubt. It is possible that the bill may act as its promoters intend: to exclude all foreign yachts, both sail and steam, from American waters; to prevent even such instructive and profitable experiments as the racing of Minerva and Clara. On the other hand, it is possible that the framers of the bill have overreached themselves, and that it may fail entirely in achieving its principal objects.

In any case it is a sorry exhibition of the skill and spirit of the American shipbuilder of the end of the century.

Society of Naval Architects.

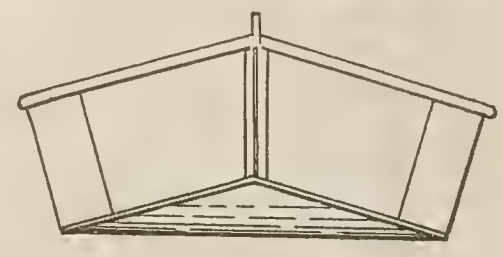
Under date of Dec. 21, 1896, the president of the Institution of Naval Architects, 5 Adelphi Terrace, London, W. C., invited the Society of Naval Architects to visit England toward the commencement of next July, to attend an international congress of naval architects and marine engineers, in London, under the honorary presidency of His Royal Highness, the Prince of Wales, to celebrate the sixtieth year of the reign of Her Majesty, Queen Victoria.

By direction of the council, given at a special meeting held on Jan. 21, President Griscom has accepted this invitation for the society.

Members who propose to attend the congress are requested to notify the secretary, Francis T. Bowles, at their earliest convenience.

The executive committee, charged by the council with such detailed arrangements as may be necessary, will further communicate through the secretary with members who signify their wish to accept the invitation.

The Compartment System in Early Vessels.



Editor Forest and Stream:

In looking over some old books lately I have come across descriptions of early compartment vessels, which may be of interest to readers of the Forest and Stream.

Marco Polo, writing early in the fourteenth century, is said to credit the Chinese with this system of construction in their river junks. We know that Le Compt, the Jesuit, writing in 1690, says of these same vessels and their builders: "They divide them into five or six apartments, separated by good partitions, so that when they touch at any place upon a point of rock only one part of the boat is full, while the others remain dry and give time to stop the hole."

The most curious description of this compartment system is that given by Dampier in describing a trading junk. Writing under date of May 21, 1687, then being in the Bay of Siam, the captain records that they fell in with "a great junk that came from Palimbar, a town on the island of Sumatra. This vessel was of the Chinese make, full of little rooms or partitions like our well-boats."

On June 25 of this same year Dampier anchored off the northeast end of St. John's Island. This island lies "on the

south coast of the province of Quantung or Canton in China." Here Dampier boards another junk and gives a full account of her:

"She was built with a square, flat head as well as stern, only the head or fore part was not so broad as the stern. On her deck she had little thacht houses like hovels, covered with palmeto leaves and raised about 3ft. high, for the seamen to creep into. She had a pretty large cabin wherein there was an altar and a lamp burning. I did but just look in and saw not the idol. The hold was divided in many small partitions, all of them made so tight that if a leak should spring up in any one of them it could go no farther, and so could do but little damage, but only to the goods in the bottom of that room where the leak springs up. Each of these rooms belongs to one or two merchants, or more, and every man freights his goods in his own room, and probably lodges there if he be on board himself."

Knowing John Chinaman's large care for his person and goods, it is a question whether the bulkhead was first introduced to protect the ship or the merchant and his venture.

A. C. Stott.

Stottville, N. Y., Jan. 26.

YACHTING NEWS NOTES.

W. B. Stearns, of Marblehead, yacht designer and builder, is the promoter of a class of 16-foot racing fin-keels of moderate cost, designed for racing and afternoon sailing in Marblehead Harbor. The boats will be 22ft. over all, 16ft. waterline, about 5ft. 6in. beam, and about 4ft. draft. They will carry 250sq. ft. of sail in jib and mainsail rig. The promise of quite a number of orders in the class is a good one, and the racing of the boats would make interesting sport. Parker H. Kemble has agreed to offer a special cup for the boats if five are built, and C. F. Lyman will offer a second cup if ten are built.—*Boston Globe*

C. H. Olding & Bro., of Fall River, are building for their own use from designs by F. T Wood, of that city, an open racing cat of 33ft. over all, 2ft waterline with crew on board, 10ft. extreme beam and 8ft. 5in. beam at waterline. The hull draws but 6in. The centerboard is of wood, weighted with about 75lbs. of lead, and is 8ft. 6in. long, with a drop of 5ft. 6in. The boat's least freeboard is 16in. She will have no outside keel or deadwood, and will steer with a balanced metal rudder. Her model is on the same principle as the ½-raters Paprika and Question. She will have a sail area of 735sq. ft., the sail dimensions being as follows: Foot 32ft. 1in., head 20ft. 9in., hoist 21ft. The spars will be light and the mast will have a headstay, backstays and shrouds with spreaders. In construction the boat will be very light. The keel is of spruce, 9in. wide and 1¾in. thick, strengthened vertically by sills 1ft deep and 1⅜in. thick. The frames are of oak, sided 1in. and moulded ⅞in., and spaced 9in. on centers. The planking is $^{11}/_{16}$in. cedar and the deck is of $^{7}/_{16}$in pine, covered with canvas. The boat will be raced in the Fall River Y. C.'s 18' to 21ft. catboat class.—*Boston Globe.*

The Brief's" Illustrations.

I have just been comparing the subjects of field illustration in the *Game Laws in Brief* with the Frost outing water colors which have recently been canvassed about the country, and was struck with their typical characteristics. Of course the Frost collection is exclusively field pictures; but if a stranger from the planet Mars should desire a typical album illustrative of American sport, he would hardly find so many phases of it in so small a compass as the thirteen photos at the end of your compendium.

Charles Hallock.

Canoeing.

THE ORIGINAL ST. LAWRENCE SKIFF.

There is, or was at one time, a good deal of dispute as to what was, or is, the St. Lawrence River skiff, "only" or otherwise; but I think that no one who knows that river from the Long Sault to the Gulf—and that is no small distance—has the slightest doubt as to what was the original "St. Lawrence River skiff," or indeed as to what is the typical rowing craft of this great water. They have canoes and half-raters and other abnormal creations of degeneracy on the St. Lawrence about Montreal; and pilot boats, yawls and most villainous dingeys about Quebec; but aside from those exotic colonies of modernity the craft in almost universal use on the "river" is the "skief." In my opinion the "skief" was not invented for use on the river, nor indeed has the river greatly affected the form of the "skief," for the French-Canadian is not an inventive person. He is prone to believe that what was good enough for his father is good enough for him, and his great great-great-grandfather probably brought the idea of the "skief" from the Breton river sides when as a forced or free colonist he came to New France in the long ago picturesque time of Louis XIV.

Be that as it may, the "skief" is a mighty good boat, and to this day when it comes down to business, when big stretches of the river have to be crossed among the drifting floe ice of spring or the "Fraseal" of winter, when a November gale on Lac St. Peter has to be faced, it is almost always the despised green-painted "skief" with the pin oars that is selected for the work—not the varnished, lapstreaked skiff from "up the river," with her fancy woods, spoon oars, and general piano finish.

The "skief," as the accompanying sketch shows, is the river's sister of the ocean's dory, but as used on the St. Lawrence she is always flat-bottomed, without other frames than a few stiffening battens nailed to her sides, and fitted with short ash pin oars The sides are generally one single piece of clear white pine, and in the actual boats, while the stern is nearly perpendicular, the stem has a strong rake. The bottom is always planked athwartship without caulking, and is never painted, so that the swelling of the wood may keep the boat tight.

The "pingeys" of the raftsmen are big skiffs, the sides being built up to 3 and 4ft in height, generally lapstreak of rough fashion. There are but few of these most picturesque craft in existence now. The Caughnawaga Indians still use them, and Big John still takes his "big boat" through the steamer channel upon occasions; but apart from this they are numbered with the Durham boats and "Northwest" canoes.

Not so the "skief." All along both sides of the river, from the Long Sault to Quebec, every farmer with a river frontage, every other villager, and every fisherman and riverman has his "skief." Every "pin flat" (and there are still lots of these almost prehistoric craft afloat), every barge and schooner has her "skief," and nearly all the fishing and shooting on the river is done from these boats.

Mr. Wickstead's drawing is of a "skief," but a modernized and symmetrical "skief," such a skiff as we would all like to own; and still I doubt whether in essentials she would be one whit better than one of the Varannes boats, that can be bought for $1 a foot, paint included.

When the French-Canadian riverside man uses a sail in his "skief" he uses a little rag of a sprit sail, a rough, oblong, blanket-shaped thing, and the mast is generally stepped amidships. I never saw one of them attempt to ply to windward in these craft, and in fact the "Chambly canoe" is the only French-Canadian craft that has any pretensions to weatherliness. The "pin flat" and the "barge" are only intended to run before the wind, although the "barge" now carries a gaff sail. I think it was originally a lateen or settee.

That is all I know about cows, "skiefs" I mean, but their color, which is variegated, but generally green. In this they fall far behind the "pingeys," which were red, or the "pin flats," which are frequently blue, with fine big black eyes to see out of. When the drawings of the "pin flats," "pingeys," "Durham boats," "Chambly canoes," "north shore canoes" and "barks" that Mr. Wickstead has promised for this series are completed, I will have something more to say about these cattle; but, like little Tommy, "I now says no more; compositions is done for this week." Retaw.

The Forest and Stream is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., Jan. 24.—The following scores were made by members of the Cincinnati Rifle Association to-day. Conditions: 200yds., strictly off-hand, at the standard target, 7-ring black. The poor scores to day were due to a b inding glare from the snow-covered ground and a tricky wind. The scores:

Feb. 22. WISSINOMING STATION, P. R. R., Pa.—All day shoot of the Florists Gun Club, of Philadelphia. Targets.

Feb. 22.—PARKERSBURG, W. Va.—All-day shoot of the Mountain State Gun Club. Targets. Leo Epstein, Sec'y.

Feb, 22.—NEWARK, N. J.—All-day shoot of the Forester Gun Club. Targets. H. E. Winans, Sec'y.

March 13-17.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed.

March 23-25.—NEW YORK.—Interstate Association's fifth annual Grand American Handicap (live birds), at Elkwood Park. $1,000 guaranteed in the main event, all surplus added. Entries close March 20.

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open to-all tournament.

April 14-16.—BALTIMORE, Md.—Tournament of the Interstate Association, under the auspices of the Baltimore Shooting Association.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

April 21-23.—SAN ANTONIO, Tex.—Second annual meeting and tournament of the Texas State Sportsmen's Association. O. C. Guessaz, Sec'y.

April 28-29.—RICHMOND, Va.—Tournament of the Interstate Association, under the auspices of the West End Gun Club.

May 5-7.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association, Fred T. Durrant, Sec'y.

May 26-29.—EAST ST. LOUIS, Ill.—Annual tournament of the King's Smokeless Gun Club.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

DRIVERS AND TWISTERS.

It seems that a mistake was made in crediting the Audubon Gun Club, of Buffalo, N. Y., with the promotion of the tournament held recently in that city. The following letter is from a member of the Audubon Gun Club who prefers to remain anonymous: "I notice that in your issue of Jan. 30 you state that the midwinter tournament at Buffalo, N. Y., was under the management of the Audubon Gun Club. This is an error, as the Audubon Gun Club was in no way connected with the management of said tournament, it being given under the management of Mr. William E. Garbe, and was held at Audubon Park. I would like to state further that all tournaments held by the Buffalo Audubon Club have been successful, and undoubtedly had the one in question been under its management it also would have been a success, as the club numbers 125 enthusiastic members. By making this correction you will confer a favor on a number of members of the Buffalo Audubon Club."

The Brooklyn Gun Club, of Brooklyn, N. Y., is a new organization. We have received the following notice in regard to its opening shoot: "The opening shoot of the Brooklyn Gun Club will be held at its grounds, Enfield street, near Liberty avenue, Brooklyn, on Saturday, Feb. 13. Sweepstakes will be the order of the day, and shooting will commence at 10:30 A. M. Lunch and loaded shells on the grounds. Take Kings County Elevated and ride to the end of the road, which is within five minutes' walk of the grounds." The Brooklyn Club is an organization specially gotten up to further the interests of trap-shooting in Brooklyn and New York; it is composed of energetic members who will leave no stone unturned to make the future of the club a success.

Next week will be a busy one at the grounds of the Bergen County Gun Club, of Hackensack, N. J. On Feb. 10 (Wednesday) the second contest for the New Jersey amateur championship cup will be shot off On Friday, Feb. 12, Lincoln's Birthday, there will be a 100-target handicap race, unknown angles, entrance $2, targets extra at 1 cent each; there will also be optional sweeps on each 25 targets. A full programme of events will be scheduled for each of the above days; shooting commences on both days at 10 A. M. The contest for the cup and the handicap race will be started at noon on their respective days. The club will follow its usual (almost unusual for this part of the country) custom of entertaining its guests at lunch during the shoot.

The quality of the birds at Larchmont cannot be cavilled at. They were a splendid lot, "as good as ever were trapped." They were of the class known as Gilbert match birds, being specially selected by Messrs. Gilbert, of Philadelphia. The price to the shooters may seem a little steep to some people, viz., 90 cents a pair, but they were actually worth the money, being all alike, all good and nearly every one of them a bird that required the best of work to stop it within bounds.

R. A. Welch won the Larchmont Y. C.'s amateur championship cup on Jan. 29-30 by scoring 92 out of 100 birds at 30yds. rise and 21yds. boundary. His nearest competitor was G. S. McAlpin, who was second with 84, a difference of 8 birds. This shows how well Welch must have shot, particularly when he could reckon among his competitors George Work, Fred Hoey, C. A. Macalester, Edgar Murphy, T. S. Dando, L. T. Duryea, Dr. Wynn, F. G. Moore, H. B. Gilbert, etc.

Manager Elmer E. Shaner announces that the Interstate Association will hold a two days' tournament at Richmond, Va., April 28-29, under the auspices of the West End Gun Club, of that city. This makes another good city on the Association's list for 1897, the tournament in the capital of Old Virginny promising to be one of the best on its circuit for this season. Richmond should draw shooters from Washington, Charlotte, Lynchburg, Charleston, S. C., and any amount of other convenient points.

The boys had a cold deal as regards weather at San Antonio this year. Even the warmth of the greeting and the hospitality tendered them by the Big Three could hardly atone for the uncongeniality of the weather. Southern hotels are scarcely ever well fitted to resist the attacks of thirteen degrees of frost. That's good, brisk weather for our climate, but for the South——! And Ferd Van Dyke went down with a light spring overcoat!

The Warren, O., Gun Club held its annual meeting and election of officers on Jan. 19. The following list of officers was elected for 1897: President, C. L. Schoonover; Vice-President, L. F. Craven; Secretary, R. W. Ewalt; Treasurer, George H. Jones; Captain, E. A. Biery. Last year was a very satisfactory one to the club, and another season fully as satisfactory is anticipated for 1897.

The Altoona, Pa., Rod and Gun Club has elected the following officers for 1897: President, Sheriff G. T. Bell (re-elected for the third time); Vice-President, W. C. McDonald; Secretary-Treasurer, R. H. Fay; Captain, J. F. Killits; Directors: J. H. Davidson, W. E. Bell, W. W. Wilson, Ed. Kottman, W. B. Sands, H. F. Forney and J. F. Killets.

The Baltimore *Sun* of a recent issue is answerable for the announcement that at the forthcoming Interstate Association tournament in that city, April 14-16, there will be two days at targets and one day at live birds. Substantial added money attractions are promised.

Sweepstake shooting at live birds takes place every Saturday afternoon at Elkwood Park. Shooting commences at 1 P. M., so that it is an easy matter for anybody from New York or vicinity to get to the grounds in plenty of time. Tickets should be bought to Branchport station on the New York & Long Branch Railroad.

It has been stated that New York was poorly represented at Elkwood Park on the opening day. As a matter of fact, Fred Hoey was at home sick, Edgar Murphy was in Philadelphia on business, while George Work is taking little interest in shooting owing to his being so seriously out of form.

Miss Annie Oakley and Frank Kleinz, of Philadelphia, will shoot a 50-bird race at Yardville, N. J. (Zwirlein's grounds), on Feb. 22. Kleinz has met Miss Oakley twice in live-bird matches, defeating her once and tieing the second time with 45 each out of 50 shot at.

The Riverton Gun Club, of Riverton, N. J., has elected the following officers for 1897: President, J. C. S. Davis; Vice-President, C. M. Moody; Secretary, Moncreiff Cleland; Treasurer, J. C. Jones; Board of Governors: J. C. W. Frismuth, E. B. Showell, S. B. Stinson, H. B. Powell and T. S. Dando.

The Gilbert cup, offered for competition on the Carteret grounds by H. B. Gilbert, is now the propeety of G. S. McAlpin. He won it for the third time on Wednesday, Jan. 27, tieing with Hooper on 10 straight. In the miss-and-out to settle the tie McAlpin won in the second round.

On the way home from Larchmont on Friday evening the following team race was arranged: McAlpin-Murphy vs. Work-Macalester. The conditions are 100 live birds per man, 30yds. rise, 30yds. boundary, Westminster Kennel Club grounds. No date was fixed for the match.

Joe Baker's win of the Boiling Springs handicap live-bird shoot on Saturday, Jan. 23, came somewhat in the nature of a surprise. A score of 20 straight, even from the 27yds. mark, is a good one and is something that Baker may well be proud of.

Twelve 15-target events make up the programme for the Washington's Birthday shoot of the Mountain State Gun Club, of Parkersburg, W. Va. The Rose system of dividing purses will be used.

The Peekskill, N. Y., Gun Club will hold a tournament this spring. Dates will be chosen and the programme announced in due time, plenty of notice being given to avoid clashing of dates.

The officers of the Upland Gun Club, of Philadelphia, for 1897 are: President, John W Hulme; Vice President, Holmes Seaman; Secretary, Harry Rowe; Treasurer, Henry Flounders.

The Elkwood Park programme for Feb. 22 is a good one and should attract shooters to the new grounds. It is published in full elsewhere in these columns.

FEB. 2. EDWARD BANKS.

The San Antonio Midwinter.

ALTHOUGH the full report of the San Antonio, Tex., midwinter tournament has not come to hand, we are able to give some little details about the first and second days' shooting that may prove of interest.

On the first day the weather was extremely cold for a point as far south as San Antonio. To keep the boys warm two large fires were kept burning in rear of the scores, although some of the old standbys were strictly in it as usual. Taking the figures given in the San Antonio *Daily Express* of Wednesday, Jan. 27, we note that of those who had shot out their scores in the eight 20-target events, Heikes, of course, was in the lead with 151 out of 160. Parmelee was second with 149 out of 160. Heikes's total was made up of three straights, three 19s and two 17s.

The following figures show how the leaders stood: Heikes 151, Parmelee 149, Dickey 143, Sergeant and Fulford 142, Grimm 141, Elliott 140, Wallace Miller 139, Glover 137, Gilbert 136, Van Dyke 132, Powers 131. McMurchy was clean off his form, if the figures given are correct, as his total for the 160 shot at is only 119.

The same authority quoted above states that Dr. Carver and C. W. Budd were both in bed with the grip. It adds sententiously: "They brought it here." Winston, whose total does not appear at all, was the luckiest man of the day, winning first money alone in No. 3, his straight netting him $55.

On the second day there were five 20-target events and the contest for the Schmelzer trophy on the programme. The *Daily Express* of Jan. 28 says: "Heikes, as usual, heads the list with 97 out of 100" in the five 20-target events. Royal Robinson, secretary of the Limited Gun Club, of Indianapolis, shot a great gait, scoring one straight and three 19s out of the four 20-target events he shot in. Fulford, Bartlett, Gilbert, Powers, Sergeant and Sexton all made 90 per cent. or better.

The contest for he Schmelzer trophy was not finished when darkness came on, some of the shooters having to finish their scores the next morning. Of those who had finished, Heikes led with 82, Sergeant and Sexton were next with 79, Calhoun had 66, and Sumner 63. As matters stood at the end of the second day, Fulford had to break 19 out of 25 to beat Heikes, Charlie Young and Ferd. Van Dyke having to break 22 to perform the same feat. The contest is at 100 targets, reversed order, and the targets at San Antonio were thrown far and fast, the angles of No. 1 and No. 5 being very acute.

A MIDWINTER SPECIAL.

SAN ANTONIO, Texas, Feb. 2.—*Special to Forest and Stream:* The midwinter tournament closed on Saturday, Jan. 30. The weather throughout was wretchedly bad; it sleeted, snowed, hailed and rained alternately. Heikes won first average on the first day with 94.3; on the second day he led with 97 per cent.; Parmelee won first average on the third day with 93.7; Gilbert was first on the fourth day with 94.1. On the fifth day Heikes was again in the lead with 93 per cent. For general averages on all five days Heikes is first with 92.2; Fulford second with 89 8; Parmelee third with 89.2. Heikes, Young and Van Dyke tied on 82 for the Schmelzer trophy. Royal Robinson won the E. C. cup. PAUL R. LITZKE.

At Watson's Park.

AUDUBON GUN CLUB, OF CHICAGO.

CHICAGO, Ill., Jan. 20.—The monthly live-bird shoot of the Audubon Gun Club, of this city, was held at Watson's Park to-day. A handicap of misses as kills is allowed each member of the club. All start in at 30yds. in January, fresh handicaps of yards being allowed in following shoots. To-day's scores were:

O von Lengerke (1)	2222222222222222	15+1	—15
F R Bissell (3)	1101211111222221	14+3	—15
C S Wilcox (2)	1201112221111112	13+2	—15
J M Gillespie (2)	1011112012201212	12+2	—14
W H Dupee (2)	2022222210220000	10+2	—12

Practice scores to-day were:

Dupee	21121222210220012211000211221	—24
Gillespie	2102211111222022	—14
Barto	1020110112211212	—13
Wilcox	2122112211	—10

Jan. 22—R. Kuss and Dr. Liddy shot some practice birds to-day. Kuss scored 65 out of 75; Dr. Liddy 26 out of 30. Scores:

R Kuss	2222112122221112221111122	—25
	2110121221212222102222102 2	—22
	2220202012222200201021221	—18—65
Dr Liddy	1212022022122212211012101111111	—26

Jan. 30.—The members of the Garfield Gun Club held their monthly live-bird shoot at Watson's Park to-day. The scores made are given below:

J P Hicks (30)	0112112021112122221 1	—18
J von Lengerke (30)	2220102222202222222 2	—18
J M Young (28)	1120102210012101111 2	—15
F M Fish (27)	2211011211100222211	—17
C E Comley (27)	2001010222110121111	—15
E E Neal (30)	2222201102121222122	—18
D E Russell (25)	0012000200101020022	— 8
S Palmer (30)	2222122222102121202 2	—18
G E Goodman (27)	1012221210221212122 2	—18
R W Wright (30)	2112212112112212210	—19
R Kuss (30)	1212000122111211121	—17
Dr Liddy (30)	2112120012011102212 1	—17

The men below were not present at the December shoot, so shot their December scores to-day:

Von Lengerke	2222222220222222222 2	—19
D E Russell	2120010000200001002 0	— 7
A W Wright	2111222101122111122 0	—18
E E Neal	2222122222221211122	—20

RAVELRIGG.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Jan. 27.—The Rochester Rod and Gun Club held an all day's tournament to-day on the Cobb's Hill grounds. The programme called for ten regular events, which were shot off. No. 7 was a free merchandise contest with twelve prizes. The cold weather and high wind kept a large number of well-known marksmen from the neighboring towns away. The shooting of Davis, Byer, Stewart, Borst and Foley was very good. The prizes were won in the following order: Byer first, Tassell second, B. Richman third, Davis fourth, Borst fifth, Redmond sixth, Ward seventh, Bates eighth. The scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	15	10	15	10	25	15	10	10
Borst	7	10	10	8	10	8	20	14	9	7
Tassell	7	10	10	9	11	10	23	12	7	6
Lowe	4	7	12	8	12	7	21	10	..	..
Byer	9	8	12	6	12	8	24	14	9	8
Wyness	7	9	13	8	11	6	20	9	..	..
Ward	9	9	14	7	13	8	16	12	8	7

Redmond	..	..	..	..	..	..	17	..	5	..
Meyer	..	..	..	..	..	..	..	11	9	7

The tournament was arranged and managed by E. D. Hicks.

DE WITT.

Cobweb Gun Club.

NEW YORK, Jan. 29.—P. F. McKeon and Grant Nichols, members of the Cobweb Gun Club, of this city, shot a 50-bird race to day on the grounds of the club at Baychester. There was a foot of snow on the ground, and a strong northwest wind blowing directly over the traps. The birds were a good lot of strong flyers and took a lot of stopping, the white ones in particular being hard to see. Both men shot in excellent form, tieing with 45 each. The tie will be shot off some time in February. In the 29th round No. 2 trap broke, the match being finished by mutual consent with 4 traps only. Scores:

Another match was also shot during the afternoon, the contestants being McDonnell and Elliott, both members of the club. The conditions were 15 birds per man, McDonnell wagering his gun against the cost of the birds. The match was a close one, McDonnell just managing to retain his gun by the narrow margin of 9 to 8. Score:

McDonnell .....110012200201022—9 Elliott.....111002002001021—8

Washington's Birthday at Elkwood Park.

ELKWOOD PARK, Long Branch, N. J., Jan. 30.—Please announce in your trap-shooting columns that on Washington's Birthday, Feb. 22, there will be live-bird shooting all day, commencing at 10 A. M., or rather on the arrival of the 8:30 train from New York, *via* Central R. R. of N. J., foot of Liberty street.

No. 1, the Washington: 15 birds, $10 entrance, 3 moneys, Rose system. Professionals 32yds., amateurs 30yds.

No. 2, the Long Branch Handicap: 10 birds, $5 entrance. Handicaps from 25 to 30yds. Those at 25 and 26yds. allowed 2 misses as "no birds"; 27 and 28yds., 1 miss as a "no bird." High guns; ties, miss-and-out. Allowances do not run on ties.

No 3, a star miss-and-out handicap, $1 entrance. Contestants can re-enter as often as they wish by paying double previous entry. Handicaps from 27 to 32yds. Open to all.

Trains stop at Elkwood Park: Central R. R. of N. J., from New York, 8:30 and 10:45 A. M.; Penn. R. R., 9:10 A. M. Returning, leave Elkwood Park: Penn. R. R., 5:51 P. M., and Central R. R. of N. J., 6:54 P. M.

Purchase railroad tickets for Branchport and return.

DALY & CHANFRAU, Managers.

Herriott Gun Club, of Yonkers.

YONKERS, N. Y., Jan. 29.—Below are the scores made to-day by members of the Herriott Gun Club, of this place, on the grounds at Oakhill Park:

Thomas Mack	1111111111111111111110111—24
Geo Banzer	1111011101111111111111000—20

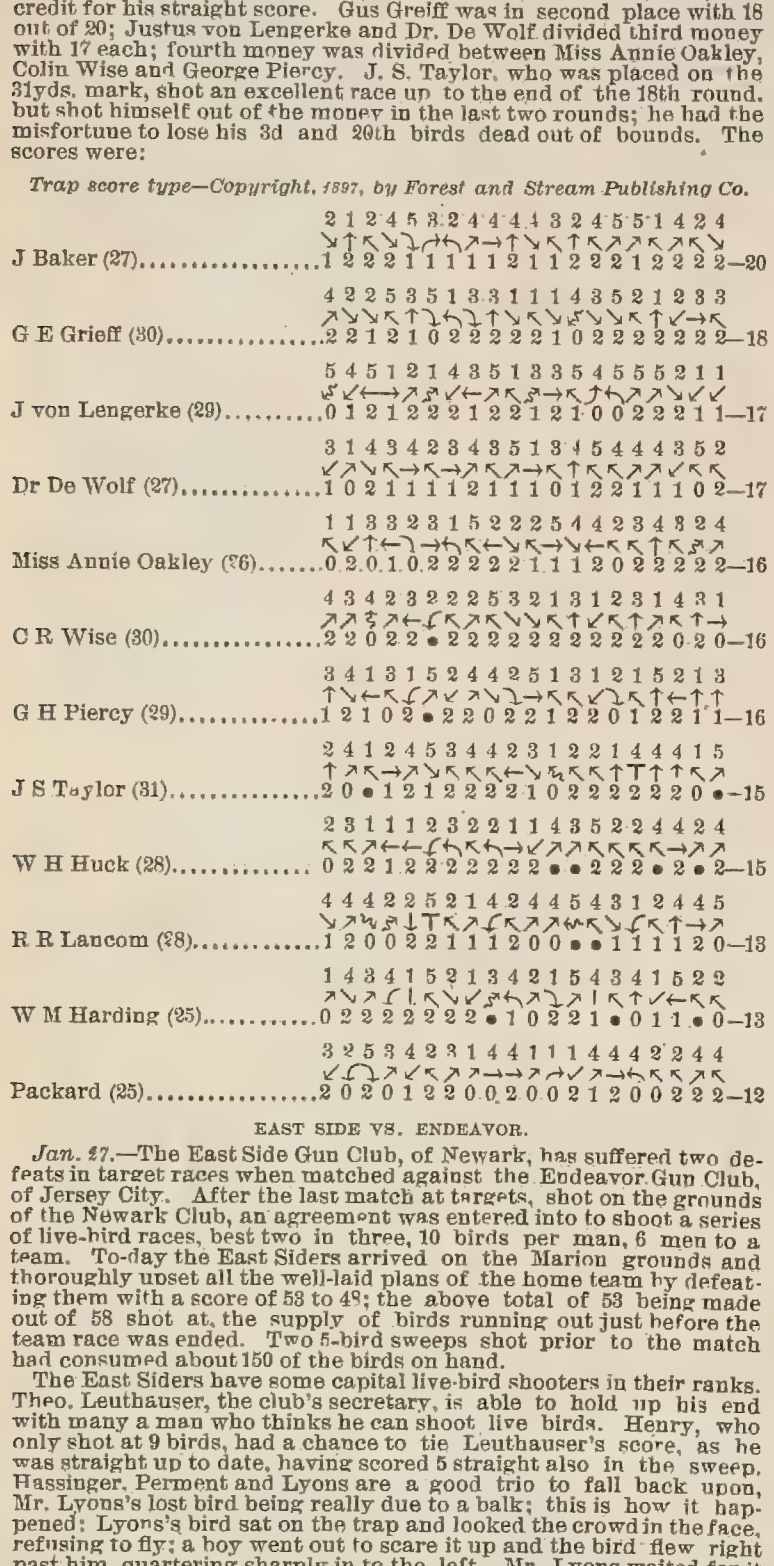
Wood	0020222120—6—37	Gerard	0001100010—3—27



L. G.

IN NEW JERSEY.

BOILING SPRINGS HANDICAP.

Jan. 25.—The 20 bird handicap race shot to-day on the grounds of the Boiling Springs Gun Club, of Rutherford, was favored with excellent weather for live-bird shooting. The wind from the northwest almost reached the dignity of a gale, and swept the birds from the traps in a manner that caused much trouble to the majority of the shooters. Joe Baker was lightly handicapped and was also rather favored in the luck of the birds, but nevertheless he deserves great credit for his straight score. Gus Greiff was in second place with 18 out of 20; Justus von Lengerke and Dr. De Wolf divided third money with 17 each; fourth money was divided between Miss Annie Oakley, Colin Wise and George Piercy. J. S. Taylor, who was placed on the 31yds. mark, shot an excellent race up to the end of the 18th round, but shot himself out of the money in the last two rounds; he had the misfortune to lose his 3d and 20th birds dead out of bounds. The scores were:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

EAST SIDE VS. ENDEAVOR.

Jan. 27.—The East Side Gun Club, of Newark, has suffered two defeats in target races when matched against the Endeavor Gun Club, of Jersey City. After the last match at targets, shot on the grounds of the Newark Club, an agreement was entered into to shoot a series of live-bird races, best two in three, 10 birds per man, 6 men to a team. To-day the East Siders arrived on the Marion grounds and thoroughly upset all the well-laid plans of the home team by defeating them with a score of 53 to 48; the above total of 53 being made out of 58 shot at, the supply of birds running out just before the team race was ended. Two 5-bird sweeps shot prior to the match had consumed about 150 of the birds on hand.

The East Siders have some capital live-bird shooters in their ranks. Theo. Leuthauser, the club's secretary, is able to hold up his end with many a man who thinks he can shoot live birds. Henry, who only shot at 9 birds, had a chance to tie Leuthauser's score, as he was straight up to date, having scored 5 straight also in the sweep. Hassinger, Perment and Lyons are a good trio to fall back upon. Mr. Lyons's lost bird being really due to a balk; this is how it happened: Lyons's bird sat on the trap and looked the crowd in the face, refusing to fly; a boy went out to scare it up and the bird flew right past him, quartering sharply in to the left. Mr. Lyons waited for it to get well away from the boy before firing, and really had no room to kill it in; had he refused to accept it, Ed Taylor, of the Laflin & Rand Powder Co., who was acting as referee, would most certainly have allowed him another bird. Mr. Lyons is well known in the vicinity of Albany, being a prominent member of the West Side Gun Club, of that city.

On the side of the Endeavors Carl von Lengerke did some good work, scoring 19 out of 20, his single lost bird being a dead out of bounds. Harry Welles was responsible for 9 out of 10, some of the birds he drew being good fivers. Lott, who is at present handicapped by having no gun to shoot live birds with, pulled himself together in the team race and scored 8 out of his 9.

The birds were a mixed lot, many of them being rattling good flyers. The conditions on which they were furnished to the shooters were generous enough: 25 cents each and the shooter to have his own dead birds. The afternoon was a pleasant one so far as a sociable gathering of sportsmen was concerned; there was, however, too much nip and snow in the air to make it entirely pleasant for shooting. It was good to hug the stove now and then—when one got the chance, that is to say. A return match will be shot soon on the grounds of the East Side Gun Club under precisely similar conditions as to number of men on the teams and number of birds per man. Scores in to-day's race were:

East Side Gun Club.

ORITANI FIELD CLUB.

Jan. 23.—The regular competition for the club's badge took place this afternoon on the grounds of the Oritani Field Club at Hackensack. This competition is a handicap affair, 30 singles per man, handicap allowance of extra targets to shoot at, 15 known and 15 unknown angles, the allowance being shot off at unknown angles. Raymond was the winner of to day's event, Bell, the scratch man, pushing him hard for first honors. The weather was decidedly unfavorable for target shooting, a strong wind causing the targets to take most erratic flights. In the table of scores made in practice sweeps, No. 5 was shot under similar conditions to those that govern the badge contest. Scores were:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	*10*	*10*	*10*	*10*	*30*	Targets:	*10*	*10*	*10*	*10*	*30*

ENDEAVOR GUN CLUB.

Jan. 30.—Below are the scores of the shoot on the Marion grounds on the above date. The afternoon was a very pleasant one. It was a return visit of the Bergen County G. C. for the one that the Endeavors paid them on New Year's Day, and I wish to say that the Endeavors were royally entertained on that occasion. The return visit was very much appreciated by us, and was also gratifying, as it shows some return of what we have worked for as a club, viz., to bring about a good feeling between the different clubs in this vicinity. The shooting was very hard on account of the wind and light. The main event was a team race selected from both clubs by Capts. Jackson and Piercy, the members of each team being from either club. The scores in this event were:

Jackson's Team.

Apgar	0110101011110101011111010—16
L Piercy	1011011111111110110101111—20

HANDICAP AT SINGAC.

Jan. 30.—There was a 25 bird handicap at Bunn's grounds, Singac, to day The seven entries found good birds to shoot at, particularly in the last half of the match, when Arthur Bunn produced some of his hummers. The scores of that part of the match show that the shooters were up against some fast birds. Scores:

ON LONG ISLAND.

NEW UTRECHT GUN CLUB.

Jan. 23.—The fortnightly live-bird shoot of the New Utrecht Gun Club was held this afternoon at Dexter Park. Five members of the club put in appearance, while seven other shooters took part in the afternoon's sport as guests of the club. The club shoot was shot as a miss-and-out by the guests of the club, while Dr. Parr and E. G. Frost, who tied in 1896 for the class C prize, agreed to shoot off the tie in this event. Both men tied again on 7 out of 10, and shot off that tie miss-and out, Parr winning in the third round. A 5-bird sweep was also shot with nine entries, J Gaughen being the only man to score his 5 birds. Scores were as below:

	Club shoot.	Tie.	Sweep
J Gaughen	2222222202— 9	...	22222—5
C Furgueson, Jr	20?22•2222— 8	...	.....

CRESCENT A. C. VS. GARDEN CITY G. C.

Jan. 23.—The strong wind this afternoon spoiled the scores in the return match of the Crescent Athletic Club, of Brooklyn, and the Garden City Gun Club. The match took place on the grounds of the Crescent Athletic Club at Bay Ridge, the wind having a clean sweep across the waters of New York Bay. The conditions of the match were six-men teams, 25 targets per man, known traps and angles. Scores were:

Crescent A. C.

J S S Remsen	0011110110110100110110111—16

Trap Around Philadelphia.

HOW THE FLORISTS FARED AT NORRISTOWN.

PHILADELPHIA, Pa., Jan. 20.—Twelve members of the Florists Gun Club, of this city, went to Norristown, Pa., this afternoon and met a like number of marksmen on the grounds of the Penn Gun Club, of that city. On the way to the shooting grounds the Florists were a very jolly crowd, but oh! what a difference in the evening. Penn 240, Florists 201. On the return home they were hardly to be recognized as the same crowd that had occupied one-half of the smoking car. On the return they occupied the whole train, each one trying to get as far away from his brother marksmen as possible. There was S. P. Life, who managed by dint of good luck to break 20. Will claims that the snowflakes looked as big as snowballs when they would light on the gun and obscure the sight, and in trying to find the target would pull himself off the score. And where was Capt. George Anderson? He was not on the train. It is believed that he walked home, as it would give him more time to think of "how they didn't do it." John Burton had nothing to say. Ed Reid buried himself in a paper and nobody dared approach his corner. They were all thinking the same think. What will the Penns do to us when they shoot the return match? It snowed to-day and they scored 240. What will their score be if it does not snow? What have we run up against?

And the Norristown boys said they were sorry that the Florists could not shoot better, and that they had beaten them so badly, but somehow or other the targets would collide with the shot and the referee would have to call it a dead bird. Nevertheless the victors were jubilant, and only regretted that the victims could not remain longer. Jake Yost says that he has another team back in the woods that can lick the tar out of to-day's team, and when they shoot the return match he will bring down his team of backwoodsmen.

Some two weeks ago the Florists Club challenged the Penn Club to shoot a series of three matches. The Penn Club won the series last year, "and it was not necessary to shoot the third match to do it" Therefore, knowing a good thing when they see it, they promptly accepted the challenge. The conditions are: 25 inanimate targets per man, 12 men on a team, A. S. A. rules, known traps and angles. The score:

Jan. 23.—A 20-bird, four-cornered shoot was contested on the grounds of the Stockton Gun Club, Stockton, N. J., this afternoon. The marksmen were: A. Vincent, S. Leaming, M. La Rue and H. Vorhees. The conditions were 20 birds each, A. S. A. rules, 30yds. rise, 50yds. boundary. It was the original intention to shoot at 25 birds each, but at about the 15th round some person opened the crate and allowed about 20 birds to escape. At the end of the 10th round Leaming was picked for a winner, but at the close of the match La Rue was one bird ahead. The birds were a fine lot of good starters, and a great many started off on a zigzag course which baffled the marksmen and made the shooting very erratic. Leaming was very fortunate in drawing several easy birds in the first 10 rounds, but his last 10 birds were faster and he shot in the same erratic form as the others. Vorhees was unfortunate enough to have 5 birds fall dead outside, some of them only a few feet over. The score:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

No. 7 was another 5-bird and resulted as follows: E. C. Burkhardt and Krotz 5, Sweet and Huebbers 4.

BUFFALO, N. Y., Jan. 27.—Messrs. Brooks & Klipfel have donated a medal emblematic of the inanimate target championship of the city of Buffalo. The first contest of the series that is to decide the ownership of the medal took place to-day at Audubon Park. The attendance was small, owing chiefly to lack of advertising. E. C. Burkhardt tied with Alexander on 42 out of 50. On the shoot-off at 25 targets each, Burkhardt won with 22 to 18. Scores were as below:

Baltimore Shooting Association.

BALTIMORE, Md, Jan. 27.—A match was shot to-day on the grounds of the Baltimore Shooting Association between Sims and Bond. The conditions were: 100 live birds per man, $100 a side, Sims at 30yds. and Bond at 28yds. Sims was unable to allow his opponent the 2yds., meeting defeat by 8 birds, with scores standing 88 to 80 in favor of Bond. The match grew out of a statement made by Sims that he could give any man in Anne Arundel county 2yds., and beat him out in a 100-bird race. Another match will be shot in the near future between the same parties, both men standing at 30yds. To-day's scores were:

Bond	1022111211222212121?22122—24
	1111221112?2111001101122?11—23

Larchmont's Amateur Championship.

THE third annual contest for the Larchmont amateur championship took place on the shooting grounds of the Larchmont, N. Y., Y. C., Friday and Saturday, Jan. 29-30. The weather was all against large scores, a strong northwest wind that reached the dignity of a gale about midday on Friday forming an extremely large factor in the matter of scores. Time after time, too often in fact for an accurate record of such happenings to be kept, birds were swept out of bounds with the wind under their wings. A 21yds. boundary may be all right on slow birds, but on birds such as were trapped at Larchmont on the above dates the element of luck far too heavily discounted skill A swift right-quarterer from No 5 trap was no second barrel bird. It had to be a center with the right or the chances were it would be over the boundary whether the second barrel did its work or not. The totals, barring Welch's 92, look decidedly ragged, but every allowance must be made short boundary line, strong quartering wind and the very best birds obtainable. The winner's 92 is a splendid record to look back upon, and was the result of extraordinary precision with the first barrel. Welch won the cup by fairly and squarely outshooting his opponents, never letting an easy one get away from him and scoring many a screamer that looked like a streak as it left the traps.

KNAPP WON IN 1895.

The Larchmont amateur championship was first inaugurated in the winter of 1895, the contest being held on Jan. 11-12. At that time the club's 50yds. boundary was in use, and J. P. Knapp won the trophy and the title with a score of 95, scoring 49 out of his last 50, the lost bird being one that he had knocked to the ground with his first barrel and neglected to put in his second, as it looked so safe. When the dog went for it the bird rose and fell outside the boundary before being gathered. George Work was second with 90, Louis Duryea running into third place with 89. In that year there were six other entries: Capt Money, Dr. W. Wynn, Fred G. Moore, C. Furgueson, W. S Edey and E. C. Potter.

EDGAR MURPHY IN 1896.

In 1896 the contest took place on Jan. 10-11. On this occasion there were fourteen entries: Edgar Murphy, C. A. Macalester, J. P. Knapp, Louis Duryea, George Work, H B. Gilbert, Yale Dolan, Fred G. Moore, Fred Hoey, E. F. Thomas (of Denver), W. A. H. Stafford, W. G. Brokaw, W. S. Edey and J. B Ellison. At the close of the 100th round Murphy and Macalester were tied with 92 each, Murphy winning on the shoot-off. Knapp ran into third place with 90, Duryea taking fourth money with a total of 89, the same total that he made in 1895. The club's 50yds boundary was used and, as in 1895, all stood at 30yds. Both the above matches were refereed by the late John S Hoey.

THE CONTEST OF 1897.

The number of entries this year were larger than in 1896. Although the number of shooters only reached the same total as last year, viz, 14, the entry list was larger, and at least one more shooter would have been on hand had not J. P. Knapp been prevented from taking part in the shoot owing to the death of a near relative. Mr. Knapp's absence was felt very severely, as he has been the moving spirit in all three contests; in fact, it is to him alone that the Larchmont amateur championship really owes its being.

The event is open only to members of certain clubs, among them being: Westminster Kennel Club, Tuxedo, Country Club of Westchester, Larchmont Y. C., Carteret, Riverton Gun Club, Philadelphia Gun Club, New Utrecht Gun Club, etc The list of 14 entries was as follows: Carteret: George Work, Fred Hoey, G. S. McAlpin, W. A. H Stafford and R. A. Welch; Larchmont: W. Wynn, L T. Duryea, Fred G. Moore, E. G Murphy and A. Marshall; Country Club: H. B. Gilbert; Riverton Gun Club: T. S. Dando; Philadelphia Gun Club: C. A. Macalester; New Utrecht Gun Club: C. M. Meyer. Scanning the above list, it will be noticed that outside of Knapp, of the Larchmont Club, and Leonard Emletter, of the Riverton Club, all the more prominent amateurs of clubdom were represented at Larchmont on Jan. 29-30.

CONDITIONS OF THE SHOOT.

The conditions of this year's shoot were materially altered from those that had governed the previous contests. In the first place, the boundary line was reduced to one of 21yds. in place of the 50yds. boundary that had governed the first two contests. Second, the conditions under which men were "called out" were changed, and this change was the cause of some slight difficulty. The clause read as follows: "At the end of the 50th round shooters with 10 misses are out if lower than 8th place; at the end of the 60th round shooters with 12 misses are out if lower than 8th place; at the end of the 75th round shooters with 15 misses are out if lower than 8th place. Thereafter the referee will retire shooters 'with a privilege' when advisable to hurry he finish." The wording of the above paragraph is plain enough, but the fact that some of those who were shooting had not read the conditions carefully caused some little dissatisfaction for a time. It had been supposed that those who were out under the above ruling would be eligible to shoot up provided they had any chance of getting in for money Such had been the custom in previous contests. This year, however, the shooting committee of the club decided to make the change as above in order to facilitate the shooting off of the event.

Under this clause C. A. Macalester, Fred Hoey, C. M. Meyer and W. A. H. Stafford were retired at the end of the 50th round—the first day's shoot Mr. Marshall retired voluntarily at the end of the 34th round. Edgar Murphy was dropped at the end of the 60th round, the other eight men still in being ahead of him, he being in ninth place with the total of 15 misses out of the 60 shot at. When it was seen that both Macalester, Hoey and Murphy would have stood a show to get at any rate part of second, third or fourth money, the three above named protested at not being allowed to shoot up. The shooting committee, however, decided to stick to the programme, a copy of the conditions having been furnished to each entry. It may seem a little arbitrary to make such a ruling, particularly as the event is one of two days' shooting, and a bad start may often be atoned for by a good piece of uphill shooting (for instance, Murphy's work on the second day in '96). Still there was nothing unfair in the matter; due notice had been given, and all entries shot under the conditions named. It was a case of "the same for all."

As a point of interest, it may be mentioned that Fred Hoey and Macalester would have had to score 45 out of 50 on the second day to get a portion of fourth money, while Edgar Murphy would have had to kill 37 out of the last 40 to get a portion of that same money. All three contracts would have been hard ones, judging from what the other shooters did and the way the birds were flying.

WEATHER AND THE BIRDS.

As stated above, the weather on the first day was all in favor of the birds. On the second day there was nothing like the wind of the first, but still the birds showed that the Gilberts, of Philadelphia, had done their part in fulfilling the contract for furnishing "Gilbert match birds." The pigeons were a marvelously good lot; all-blue, clean of wing, tail and feet; slim built, and with that racy air that makes a really good bluerock look the thoroughbred that he is. The way they left the traps on the second day, with a wind that quartered in from left to right, was something astonishing. A glance at the detailed score will show that right-quarterers (drivers and incomers) far outnumbered the left-quarterers each day. No. 5 trap was a deadly one; right quartering birds from that trap were too swift for the judicious use of the second barrel when the first had failed in its work. It was a case of pit-pat, and if the "pit" didn't do its duty "pat" had small chance to score the bird. For our part, we don't feel much warmth toward a 21yds. boundary, particularly under such weather conditions as existed on both days at Larchmont; the element of luck in the draw of traps and birds entering too largely into what should really be a contest of skill only as far as possible.

On Thursday, Jan. 28, it looked very much as if the Larchmont shooting committee had made an unlucky choice of dates. A 24-hours' snow, that did not stop falling until well on toward night on the 28th, had buried everything a foot deep. Friday morning broke cold and clear, with a temperature of about 15°, perhaps less, and with a strong wind from the northwest that drifted the fine snow before it in a way that made it take all sorts of curious shapes when it fell to leeward of any house, fence, rock, etc. By noon the force of the wind had reached somewhere in the neighborhood of 30 miles an hour, but toward evening the wind dropped with the sun. Saturday was as pleasant a day, barring the extremely frosty nature of the air, as one could wish. There was a wind, but it never reached the class of that which prevailed on Friday. In addition to this, it had veered several points more to the north, blowing directly into the left eye of the shooter as he stood at the score, the traps facing about nor'nor'east.

The energy of the management of the shoot was well shown by the expedition with which every particle of snow had been removed from the infield. On the arrival of the 9:03 train from New York over the N. Y., N. H. & H. R. R., Fred Knof, the club's manager of the shooting grounds, had everything in readiness, the ground inside the 21yds. boundary being entirely clear of snow, with the exception of a patch in the extreme left hand corner near the deadline. This clearing off of the snow did its work, and the birds were not bothered in the slightest by the conditions that usually prevail after a heavy snowfall. They did not find themselves suddenly released in a dazzling waste of snow; hence they left the traps with a readiness that could not have been obtained otherwise.

It is impossible to review the match in detail. Our trap score tells the story aptly, and each shot can be followed intelligently by noting the number of the trap and the flight of each bird The number of the trap is necessary in order that a proper conception of each bird's flight can be made. A circling incomer to the right from No. 1 trap is a totally different kind of a bird to shoot at to one that leaves No. 5 trap and follows the same direction A few comments on the shooting of each man will, however, not be out of place.

R. A. WELCH, THE WINNER.

With the solitary exception of the Elkwood Park inaugural shoot on Jan. 21, we have never seen Mr. Welch do any shooting to amount to much since the Pennsylvania State shoot at Altoona, Pa., in 1894. On that occasion he carried all before him, winning the State championship after a hard struggle, and scoring during the day a total of 81 out of 83 shot at. At Elkwood Park he won the Patten cup with 25 straight, and also won more than an average amount of the sweeps shot on the same day. At Larchmont he shot in as good form as ever, his excellent first barrel standing him in good stead on many a hard bird. It must not be supposed that Welch cannot use his second barrel; several magnificent kills were credited to him that were due entirely to a well and quickly placed second, after the first had been behind or under the bird. His "Ready" and "Pull" were given with an energy and earnestness that show his evident steadfastness of purpose to score the bird. His whole frame (not a large one by any means) is jarred when he gives the cautionary word and the signal to pull the trap. An impression is abroad that Welch was favored in the luck of the birds. It may be that he did have somewhat the best of it on the first day, but there was not one of his thirteen competitors who did not own up frankly that he won the cup and the title strictly on his own merits. His double figure runs were 18, 37 (20 at the end of the first day, and 17 at the commencement of the second day), 12 and 1[illegible]. He shot a Purdey hammer gun, 48grs. of Schultze, with $1^{3}/_{16}$oz. of No. 7½ and No 7

GEORGE S MCALPIN.

The winner of second honors was 8 birds behind Welch when it came to a finish. McAlpin's score of 84 was the direct result of some very good shooting. Many of his shots were of the phenomenal order, and showed that his present position in the amateur trap shooting world is not due to chance or luck. George McAlpin has, like everybody else, his peculiarities. As good a companion as one can wish for, full of life and always ready with a joke, and just as willing to take as to give one, when shooting pigeons and "down to business" he is somebody else, all seriousness and full of nerves. His keenness for the sport is shown by his promptitude at the score He followed Dr. Wynn, and as soon as the doctor left the club house to take his place at the score McAlpin was right after him, a yard behind. Taking his place at the head of the two steps that led down off the platform to the score, his back against the pulling house, he watched the doctor's performance silently. When his turn came he stepped down to the score with a delicacy of step that might make Loie Fuller envious. Without being irreverent, we might mention that he reminded us of the Amalekite Agag, who walked "delicately" when he came face to face with his Jewish captor. And at the score everything had to be just so; his mustache was stroked, his right hand rubbed on the outside of his black Norfolk jacket, and the stock of his gun given just the proper "outside edge" twist before being placed against his shoulder. Then came the cautionary signal, "Are you ready," in full As soon as Fred Knof had answered back "Ready," McAlpin's gun was put up to his cheek three or four times and then slightly dropped. A pause of five or six seconds ensued while he stood motionless in that attitude, and then came the word "Pull" loud and clear. The instant the trap opened his eye caught it, and up to his cheek went the gun, and as a rule down came the bird Notwithstanding his run of 19 straight in his first 25, we think he shot in really better form during the last 25, when he totaled 23 out of 25, with one dead out of bounds Both of the two lost birds may be attributed to his extra care, Dr. Wynn having dropped his birds in the same rounds, and McAlpin only needing a kill to make him a tie for second place. His 83th bird should have been scored, but his anxiety probably had much to do with his shooting behind it, as it came in to the left from No. 2 trap, as easy a shot as one could wish for. During his last 25 he was like himself, all mirth and full of chaff, joking all the time. His double figure runs were 19, 12 and 10 He shot a Purdey gun, with 48grs of Schultze and 1¼oz. of No. 7½ and 6.

WILLIAM WYNN.

Probably no one outside of Edgar Murphy did more to create fun at this shoot than Dr. W. Wynn, of Brooklyn, who, despite his sixty odd years (may we be pardoned for mentioning his age!) held his own in second place, and only yielded it late in the day to George McAlpin, who beat him out by 1 bird. The Larchmont grounds are favorites with Dr. Wynn, and it is on them that he has done his best shooting, running 50 straight on one occasion recently. In last year's contest he was well up at the end of the first day, but fell down in the last 50. His score of 83 on the present occasion was the result of some good work with the gun, his first barrel nearly always doing the work, the second being used "for safety." Naturally he had many rooters who "pulled" for him when he went to the score. Whenever a bird got away from him, which was not very often until the last string of 25, there was a small chorus of lamentations from his rooters, who were far more distressed than the doctor; he, after missing a bird, was more likely than not to look after it and sing "Good-by, Sweetheart," coming back from the score with a joke on his lips. His single double-figure run was one of 18. His gun was a Parker, loaded with 47grs. of Schultze and 1¼oz. of No. 7 in both barrels.

H. B. GILBERT.

H. B. Gilbert owed his position as fourth in the race to a steady piece of work on his last 25 birds. After losing the first 2 in that string, the 77th bird falling dead just over the boundary, he settled down and pounded out 23 straight, the longest run made on either of the two days He got a bad start in the race, scoring only 17 out of his first 25, and also seemed in danger of going to pieces between the 70th and 80th rounds of the match. He was plainly out of form in the earlier stages of the match, and complained of his health a good deal. On the second day a change of guns worked well, and his one regret was that he had not made the change to a longer stocked gun earlier. He stands very erect at the score, and one would think that he handicapped himself very seriously by placing the outside of his left foot from the heel to the toe tight up against the slat that marked the 30yds. score. Taking that position and placing our left foot in precisely the same way that he did, we found it decidedly hard to swing in the direction of No. 1 trap. Gilbert is really an excellent shot, and fully deserved the position he took in the race. His double-figure runs were 23 unfinished and 12. He shot a Purdey gun, with 48grs. of Schultze and $1^{3}/_{16}$oz. of No. 7.

LOUIS T. DURYEA.

For the past ten years there has not been a more consistent shooter in the amateur circles of New York than Louis Duryea. His record of third in 1895 and fourth in 1896, each time with a score of 89, shows that Duryea (or Davenport, as he usually calls himself when shooting) is strictly in it. This year he dropped out of the money on his 98th bird, and finished one behind Gilbert with 81. On the first day he shot steadily, scoring 20 and 21 respectively out of his two strings of 25 each On the second day he had the misfortune to break the gun he was shooting, and had to take his second gun, the change probably causing him the loss of some of the birds that got away from him between the 71st and 77th rounds inclusive. In those seven rounds he dropped five birds, three falling dead out of bounds. His 65th bird was lost owing to his neglect of a caution of the referee's. In the 66th round he could not pull the right trigger. The referee tried it, and found that it would not pull off, but that the left was all right. The gun was opened and an empty shell put in, but again the trigger would not work. After opening it once or twice again it seemed to be all right, but the referee warned him that the gun was defective and that he must abide by the consequences if he persisted in using the gun, and it went back on him again. He was allowed another bird under the club's rule (a very proper one) that a defect of the gun should be treated as a defect of a shell. He killed his 66th and 67th birds, but the gun failed again on the 68th, and he had to take a lost bird, which he did without a murmur, walking away from the score without even making a remark. His double-figure runs were 20 and 14. He shoots a Francotte gun, and 48grs. of Schultze with 1¼oz. of No. 7 shot.

GEORGE WORK.

The shooting capabilities of George Work are so well known that very little of interest can be added to that of which mention has been made so many times in the columns of FOREST AND STREAM. A finished shooter, with an easy style and a lightning second barrel, he is, when in form, as good as the best, amateur or professional. He made a name for himself when in England last year, and won more honors probably than any American who has ever shot on the grounds at Hurlingham or the Gun Club, Notting Hill. At present he is having an off time and doesn't seem to be able to pull himself together. His own words are: "I don't know where I'm shooting." At the start of the race he shot in his true form and ran 18 straight before losing a bird. He then finished his first string with 24, a great total on such birds and in such a wind. He looked all over a winner. Then came a break and he dropped 4 out of his next 5 birds, finishing with 19 out of the second 25 and a total of 43 out of the 50. On the second day he shot very raggedly, making inexplicable misses on easy birds, interspersing them with star kills that called forth rounds of applause. He finally retired at the end of the 96th round with 76 kills to his name. His two double figure runs were 18 and 11. He shot a Churchill hammer gun loaded with 51grs. of Schultze and 1¼oz. of Nos 8 and 7½.

T. S. DANDO.

The left-handed representative from the Riverton Gun Club made a fair start with 20 out of his first 25, but dropped down to 18 in the second string, just managing to tie for eighth place and thus earning the right to stay in the race on the second day. He shoots ordinarily with his gun well down from the shoulder when calling "Pull," and does not put it up until the bird is well on the wing. He thus handicapped himself 2 or 3yds. on the fast birds he drew on the first day, many of his lost birds being distinctly attributable to this habit of his. In his third 25 he ran 22, drawing several very hard birds, but killing them well. He held his gun to the shoulder and pinned his fast birds as easily as his slow ones. He asked permission to retire at the end of the 90th round, with a total of 70 out of the 90 to his credit. In his last 15 birds he drew some corkers, but made a bad mess of his 83d, an easy bird. He made a run of 13, his solitary double-figure run. He shot a Smith gun, 50grs. of Schultze and 1¼oz. of Nos. 7 and 6.

FRED G. MOORE.

Ill luck seems to pursue Fred Moore when shooting for Larchmont cups The grounds do not appear to suit him, and on this occasion he retired at the end of the 86th round with 22 misses out of 86 shot at. At the end of the first 50 he was in 6th place with 40 kills and several dead out of bounds. He scarcely seems able now to get into his old form, and it is only occasionally that he gets into one of his winning streaks. He shoots quickly and does not take long when he is at the score. Throwing his gun to his shoulder, he swings rapidly but rather stiffly from No. 5 to No. 1 trap and back to No. 3; then jogles his gun (we can't think of the proper word) once or twice up and down over No. 3 trap. Next comes a sharp "Are you ready?" with the word "Pull!" right on top of the puller's "ready" On both days he made several extra good kills, but never seemed to be favored with any "of the luck." He made one run of 15 straight between the 33d and 49th rounds. He shot a Purdey gun, 48grs. of Schultze and 1⅛oz. of No. 7.

EDGAR GIBBS MURPHY.

The life of the shoot was the "ex-champion," Edgar Gibbs Murphy. It seems a pity that a man of such shooting abilities as Edgar Murphy will not, does not or cannot always keep himself in practice. He is nearly always now an unknown quantity owing to lack of practice. He seems, too, to take less interest in his work than any other shooter. His "abandon," as he would probably term his behavior at the score, is refreshing, but a little more care for the matter in hand would frequently add another notch to his total. But Murphy shoots best when he is made to shoot and when he is in a real shooting match At Larchmont he was out of form and shot a gun that did not seem to suit him, while he was certainly using too small a charge of powder to be effective on the class of birds trapped for him. Time and again he filled the birds with shot, but he had not enough powder behind the shot to do sufficient damage. The natural result was "dead out of bounds" more times than once. With his title to defend, it is hard to realize how he could have come to the score voluntarily handicapped; pattern is not much good on fast driving birds unless you have penetration as well. He made one run of 11 straight in his second 25, and finished the 50 with 39 kills. At the start on the second day he lost 4 out of his first 10 and retired under the rules with 15 misses against him. He shot a Francotte with 44grs. of E. C. and 1¼oz of 7½ and 7.

CHARLES A. MACALESTER.

C. A. Macalester has been before the shooting public so long, and his shooting reputation is so firmly established, that he would not lack supporters in any match that he might enter into. As a match shooter, he has probably had no equal, in amateur circles at least. Last year he tied with Edgar Murphy on 92 out of 100 for the Larchmont cup, and lost on the shoot-off after a slice or two of hard luck. His start in this year's race was enough to dishearten anybody; his first bird, a fast right-quartering driver that towered as it rose from the traps, was closed up with both barrels, but fell stone dead a foot or two outside the 21yds boundary. This misfortune seemed to be a piece of bad luck in another way. He appeared to be so determined to watch Nos. 4 and 5 traps that he practically left Nos. 1, 2 and 3 to look after themselves; the birds from these traps thus gained somewhere in the neighborhood of 3yds. on him, with a result that was disastrous several times. In his second string he took in all the traps and scored 21 as against 16 for the first 25. Under the rules he was declared out at the end of the first 50. That he was not shooting in form is shown by his score, 9 being his highest consecutive effort. He shot a Purdey gun, 52grs. of E. C. and 1¼oz. of 7 and 6½.

FRED HOEY.

Fred Hoey was another of those who were declared out at the end of the 50th round. In Hoey's case it looked very much like a piece of hard luck, as he started very badly, losing 10 of his first 25 birds; after such a streak as that he might well have been excused had he gone to pieces, but he did not do so; on the contrary, he ran 22 out of his last 25, just landing below eighth place and being declared out. On the second day he shot in several miss-and-outs, and showed all his old-time skill, scoring 36 out of 39 shot at. As some explanation of his break on his first 25, it should be stated that he drew No. 5 trap 11 times and No. 4 trap 7 times out of the 25, a total of 18 out of 25. No 5 was the most dreaded trap of all, with No 4 a close second. The reason of this, with the wind as it was and with the short boundary, is obvious. Hoey made one run of 10. He shot a Churchill hammer gun, with 49grs. of Schultze and 1¼oz. of No. 7.

C. M. MEYER.

At times a most brilliant shot, C. M. Meyer, of the New Utrecht Gun Club, made his debut in the prominent amateur trap-shooting circles under unfavorable conditions on this occasion. The fast birds, short boundary, and perhaps the feeling that he was handicapped by both these things, brought about his downfall Those who know Chris Meyer, and those who have seen him shoot, know that 34 out of 50 is not his form, no matter how good the birds may be. After losing so many birds early on in the race, he seemed to lose interest and to be in need of some one to jog his elbow. He made several good stops with both first and second barrels, and showed that he could handle a gun with considerable ability. It is safe to prophesy that this will not be his last appearance in public. He shot a Greener, with 49grs. of Schultze, 1¼oz. of No. 7.

W. A. H. STAFFORD.

In pigeon shooting matters the fates are rarely favorable to W. A. H. Stafford. It makes no difference whether he is shooting in a match or in sweeps, if there is a good one "in the box" it will be dealt out to Stafford. He can shoot well, but a continued run of hard birds will tell, no matter how well a man shoots. Some are bound to get away, and on Jan. 28 there were several that did. During the past twelve months Stafford has improved very much in his form, and has learned a good deal that will be of use to him in future. On Friday he seemed to be shooting rather listlessly just as if it were a foregone conclusion that he wouldn't be in it. The 21yds. boundary seemed to bother him not a little, particularly when it came to a bird from No. 5 trap. No 2 trap was, however, the trap that seemed to come to him with a persistency that was remarkable. Out of 50 times at the score he drew No. 2 just 22 times, and No. 5 ten times. He shoots a Purdey gun, 48grs. of Schultze and 1¼oz. of No. 7.

ALFRED MARSHALL.

No man can work and shoot. Mr. Marshall's score is another proof of the truth of that saying. He retired early in the game, dropping out at the end of the 34th round. He had too much to do to permit of his paying strict attention to shooting, his position as chairman of the shooting committee placing all the responsibility for the successful running of the shoot upon his shoulders This was an especially hard task in view of the enforced absence of J. P. Knapp. Marshall is comparatively a beginner at the trap, and will unquestionably be heard from again. He shoots a Parker gun, 48grs. of Schultze and 1¼oz. of 7½ and 6.

HOW THE TRAPS FELL.

As stated above, the luck of the traps was a big factor in making or marring many a score. The following figures will therefore be perused with more than the ordinary amount of interest that is usually attached to such statistics. Nos. 5 and 4 traps were the worst to draw on Jan. 29-30.

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	Total.
Welch	24	20	16	21	19	100
McAlpin	19	24	19	17	21	100
Wynn	17	22	25	12	24	100
Gilbert	19	23	22	14	22	100
Duryea	16	22	24	19	19	100
Work	18	22	21	11	13	96
Dando	13	17	20	20	20	90
Moore	16	11	21	15	23	86
Murphy	10	17	12	11	10	60
Hoey	13	6	4	11	16	50
Macalester	14	8	9	6	13	50
Meyer	11	10	9	13	7	50
Stafford	7	22	9	2	10	50
Marshall	9	8	6	5	0	30
	206	232	218	177	233	1,066

From the above figures it will be seen that it took 1,066 birds to settle the match. Dividing 1,066 by 5, the average per trap would be 213 and a fraction; thus No. 3 was about an average, while Nos 5 and 2 were both slightly over the average, and Nos. 4 and 1 both under the average, No. 4 being a notable delinquent. Taking it altogether, the run of traps evened up very fairly, but individually there were

some instances where traps fell irregularly, notably in the cases of Hoey and Stafford.

THE OFFICIALS.

The officials to whom the shooting committee entrusted the running of this shoot were: Referee, Edward Banks; official scorer, Jacob Pentz; blackboard scorers, first day, L. H. Schortemeier and H. P. Fessenden; second day, W. W. Watrous; trap puller, Fred Knof. The Messrs. Gilbert, father and son, of Philadelphia, who provided the birds, were both on hand, Mr. Gilbert, Jr., personally superintending the catching, crating and handling of the birds. The retrieving was done by the club's setters, Don and Snipe. To Mr. Alfred Marshall, chairman of the shooting committee, the successful carrying out of all the plans of the committee is entirely due. Although he openly expressed himself as determined that he "wouldn't be caught in the same box again," the Larchmont Club cannot afford to allow him to stick to that resolution at its fourth annual championship shoot.

THE SCORE IN DETAIL.

Conditions: 100 live birds per man, $100 entrance, 30yds. rise, 21yds. boundary. Cup valued at $250 and 40 per cent. of the purse to the winner ($560), 25 per cent. ($350) to the second, 15 per cent. ($210) to the third, 10 per cent. ($140) to the fourth, and 10 per cent. to the club.

Marshall			0	10	220	0	220
Hooper				20	211112	20	

Two other sweeps, both miss-and-outs, were shot as follows:
No. 8—Gilbert and Hoey 5, Moore 4, Stafford 0.
No. 9—Gilbert, Hoey and Stafford 2, Moore and Marshall 1, Watrous 0. EDWARD BANKS.

Boston Gun Club.

BOSTON, Jan 29.—The Boston Gun Club inaugurated its winter prize series to-day at Wellington, Mass., with a most successful afternoon's shoot, an attendance of seventeen marking the event. Absence from the traps for several months had considerable effect on the scores, but the shooting was none the less enjoyable, and as the scheduled dates progress practice will insure a remedy in this direction. The new Boston Gun Club disappearing target was tested for the first time and aroused considerable interest as an aid to snap-shooting. The target appears for but an instant behind a screened aperture, and the card representation of bird in flight records the pattern of gun if quick and active sighting has been made. The cards make nice souvenirs, and for a first attempt some good results were obtained. It is intended to offset the stiffness and precise method of the average trap-shooter, whose gun must be placed to shoulder and cheek and everything ready for his "Pull," all of which prevents a successful day in the brush when his turn comes for field outing.

With gun below the elbow this practice for quick handling of gun is the best yet.

Entire shooting as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	5	6	5	10	10	5	6	10	5	5	6	6

Williams, Nichols, Benton and Horace withdrew. BOSTON.

Hastings Gun Club.

HASTINGS, Neb., Jan. 22.—Five members of the Hastings Gun Club competed to day for the Laflin & Rand Powder Company's silver trophy. After shooting off a couple of ties, Creeth became the owner of the trophy. Scores were as below:

	Trophy shoot.	Tie.
Creeth (10)	1011111000111111111111110111100—24	(5).1111110001011101—10
Holzworth (7)	1111011111111111111101111101111—27	(3) 1011110111111101—12
Bernhard (7)	1101110110101111111101111101111—24	(3).1101011011110010—10
Averill (16)	0100001110103010000011001011100—12	.....
McKinney (10)	1001110110101100000010011101110—16	.....

Creeth and Holzworth shot off their tie on 15 each, and Creeth won with 10 out of 15 and 5 added; Holzworth withdrew in the 13th round with 9 out of 13.

The following match at 15 singles, expert rules, and 10 pairs, was then shot:

Holzworth	1110'0111111111	10 11 11 11 11 11 11 10 11 11—31
Duer	1111101001101111	11 11 11 01 11 11 11 11 01 11—29

SECRETARY.

Answers to Correspondents.

No notice taken of anonymous communications

G. H. B., East Providence.—Will you be kind enough to inform me if wild rice will grow in a salt marsh? Ans. Yes.

A. P., N. Y. City.—Kindly answer through your valuable paper whether or no a dog without a pedigree can take a prize at a dog show. Ans. Yes. American Kennel Club rules say that for entry a dog must be listed or registered. Listing, 25 cents; registration, $1. Pedigree not required for listing.

S., Toronto.—Kindly inform me where is the most important field trial held for setters in America. Ans. There are three which rank about equal in importance—the Eastern Field Trial Club, the oldest in American, with grounds at Newton, N. C., S. C. Bradley, Secretary, Greenfield Hill, Conn.; the Continental Field Trials Club, W. S. Bell, Secretary, Pittsburg, Pa.; the U. S. F. T. Club, W. B. Stafford, Secretary, Trenton, Tenn.

C. H. M., Nantucket.—My six-months-old beagle has a place on her side like little spots in it. I take the FOREST AND STREAM after getting the dog, because of everything that I get hold of I like to know all. Ans. First scrape the spot with a blunt knife, then apply tincture of iodine every day till skin becomes sore; after this apply an ointment made of equal parts of zinc and tar ointments till the spot is quite healed. If you think it necessary you might treat the dog for worms.

LONG ISLANDER, Beliport, L. I.—Will you kindly let me know through your paper the best way to soften up a deer skin? Ans. The skin should be tanned. Soak first in four gallons of cold soft water to which has been added one-half pint of soft soap, one-half ounce of borax, one-half pint of salt, and three-quarters of an ounce of sulphuric acid—this latter being to set the hair. Leave the skin in the mixture three or four hours, and then take out and thoroughly clean the flesh side. Stretch and work over a pole when drying, and finish as described in answer to E. N.

E. R., Port Huron.—Please give me a few pointers on shooting with both eyes open. Ans. There is no essential difference between the manner of shooting with two eyes open and shooting with one. The manner of holding the gun and sighting are practically alike, and either can be learned only by practical experience. This on the assumption that both eyes are alike sound. If one eye has a different focus from the other, or one eye is much stronger than the other, or has an imperfect lens—all common infirmities—there may be such an aberration of vision in looking along the line of sight that shooting with both eyes open is impracticable.

A. E. P., St. Paul, Minn.—I have a fine Gordon setter bitch, now two and a half years old. Do you think she is too old to be broken to hunt? She is a very intelligent dog, and will mind me like a child. If I had the time I am sure I could teach her 'most anything, but I have not. Will it pay me to try her or would you advise getting a puppy and break it? She has not been spoiled in the field. Ans. Your bitch can be broken, not having been spoiled by bad handling. It may be a bit more difficult to accomplish her schooling, but with a dog of an obedient disposition there is no more trouble to train at two and a half years than at a year. You will find the whole matter fully covered in "Modern Training," price $2, or "Training vs. Breaking," price $1, both for sale by us.

E. N., Westchester, Pa.—Can you, through your columns, give me a simple and thorough method for tanning the skins of muskrats? Ans. Mix 1oz. of pulverized oxalic acid and half a pint of salt in two quarts of cold, soft water. Submerge the skin and let it soak for an hour. Then take it out of the liquor and scrape it clean of all pieces of flesh and fat that remained after it was stripped from the rat. Replace in the tan liquor for three hours more. Then wash in cold water, and when nearly dry stretch it and work over a smooth stick held between the knees until it is soft and pliable. To secure extra softness the skin may be treated by thoroughly rubbing in on the flesh side a mixture of one part soft soap, one part neat's-foot oil, and one-half part alcohol. When drying the skin should again be stretched and worked.

PUBLISHERS' DEPARTMENT.

Florida Travel.

FOR the last ten days the tide of travel has turned toward Florida, Aiken, Augusta and western North Carolina. The superb service offered to winter travel this season by the Southern Railway has induced many to visit the charming resorts of the South, which are so easily reached in such a short time. The New York and Florida Limited leaves New York daily except Sunday at 12:10 noon—a most magnificent Pullman vestibuled train of dining, stateroom and drawing room, compartment, sleeping, library and observation cars, reaching Jacksonville the following afternoon at 3:30, and St. Augustine one hour later, 4:30.

The schedules are so arranged this winter to give the Florida travel a "limited" train from the East to St. Augustine, reaching its destination before night, attached to the New York and Florida Limited, and a Pullman drawing room sleeping car, New York to Augusta, which arrives at latter point following morning at 11:20 after leaving New York. Connections are also made at Trenton for Aiken—a few minutes' ride. Two other fast trains are operated to Florida, Aiken, Augusta, New Orleans and the Pacific coast, with through sleeping car service. For information call on or address New York office, Southern Railway, 271 Broadway.—*Adv.*

Boats Wanted for the Nashville Exposition.

MR. WM. HAWKES, of the Chamber of Commerce, Nashville, Tenn., writes FOREST AND STREAM as follows:

"I have been a constant reader of your valuable paper for many years, and on this account have had mailed you a bird's-eye view of our approaching exposition. I am a lover of guns and boats—the latter we have some difficulty in getting down here, there being no one handling them in this country. When I refer to boats I mean canoes, light ducking boats, etc. I think if some of your builders could be induced to make a display, the result would prove to their advantage."—*Adv.*

Through Car Service—New York to Nashville, Tenn.

COMMENCING on Sunday, Jan. 24, 1897, the Pennsylvania and Southern inaugurate a through Pullman Sleeping Car Line between New York and Nashville, Tenn., via Washington, Asheville and Chattanooga. The new line passes through the scenic Western North Carolina, the "Land of the Sky," and gives the most excellent service between New York and Nashville. The through car will leave New York daily at 4:30 P. M. For further information call on or address New York office, 271 Broadway.—*Adv.*

Calendar.

THE Page Woven Wire Fence Co., Adrain, Mich., sends us a neat calendar illustrated by a half-tone reproduction from a photograph of a landscape in which the Page fencing figures in the foreground. The picture is a very attractive one, showing a smooth, rolling pasture bounded in the distance by a dim range of hills.

If we are not mistaken this is a part of Mr. Rutherfurd Stuyvesant's place, at Allamuchy, N. J.

According to the caption, there are "twenty miles of Page on this farm."—*Adv.*

Monitor Vapor Engine and Power Co.

THE Monitor Vapor Engine and Power Co., of Grand Rapids, Mich., have recently issued a new descriptive circular of "Monitor" and "Mogul" marine engines. These engines require no Government inspection, and are cleanly and easily cared for. They are built in various sizes from ¾ up to 16 horse power, single and double cylinder.

The Monitor Co. are also builders of launches.—*Adv.*

The American Boat Building Co.

THE American Boat Building Co., St. Louis, Mo., issues a catalogue descriptive of knock-down boats, launches, pleasure boats, etc. This company is prepared to furnish in the knock-down anything from a 10ft. canoe to a large launch or sailing yacht. H. W. Stone is superintendent and designer, and Fr. Siebert mechanical engineer.—*Adv.*

Fred Medart.

FRED MEDART, of St. Louis, Mo., sends us his catalogue descriptive of fine pleasure boats and power launches. Associated with him are Wm. C. Callan and C. C. Pittman. They turn out a full line of cruising and cabin launches, as well as sailing yachts, pleasure boats, canoes, etc.—*Adv.*

TENNESSEE'S CENTENNIAL EXPOSITION opens at Nashville, May 1, 1897. It will be another "White City" second only to the World's Fair at Chicago. It promises to be ahead of this in one respect, namely, that on the day of opening all the buildings will be complete and exhibits in place.

The shortest route to Nashville is via the Norfolk & Western Railway, which offers a choice of three routes, namely:

Route No. 1—By the famous and beautiful Shenandoah Valley route via Luray Caverns, Grottoes, Natural Bridge, Roanoke, Bristol, Knoxville, Chickamauga—Chattanooga National Military Park and Lookout Mountain.

Route No. 2—By steamer to Old Point Comfort or Norfolk, thence all rail via Petersburg, Lynchburg, Roanoke, Bristol, Knoxville, Chickamauga—Chattanooga National Military Park and Lookout Mountain.

Route No. 3—Going via Route No. 2 and returning via Route No. 1, or *vice versa*.

These routes offer the very best opportunity to visit Nashville and the best, most historic and picturesque part of the South at the same time.

For descriptive matter, excursion rates, further information or tickets, address L. J. Ellis, Eastern Passenger Agent, 387 Broadway, N. Y.—*Adv.*

WE would like a copy of FOREST AND STREAM of Nov. 5, 1891 (Vol. xxxvii, No. 16), for a contributor who has in it a story.

FOREST AND STREAM PUB. CO.

FOREST AND STREAM.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

Wherefore, let us be thankful that there are still thousands of cool, green nooks beside crystal springs, where the weary soul may hide for a time, away from debts, duns and deviltries, and a while commune with nature in her undress. Nessmuk.

MAJOR CHARLES BENDIRE.

MAJOR CHARLES BENDIRE died on Friday of last week in Jacksonville, Fla., whither he had gone from his home in Washington. His death was not unexpected, as he had long been ill with a malady known to be fatal.

Major Bendire was a native of Germany. His father was a forester, and it was amid the scenes and surroundings of his boyhood days that those tastes were imbibed for the study of natural history which were destined later to dominate his life. Coming to America in the fifties and entering the army, he was commissioned from the ranks in 1854; in 1864 he was breveted First Lieutenant for gallantry at Trevillian Station, Va., and more recently as major for bravery in action against the Indians of Cañon Creek, Montana, in 1877. He was retired from the cavalry in 1886 for disability in the line of duty, and from that time devoted himself to perfecting his great collection of the eggs and nests of North American birds. To this work his leisure hours on the frontier had been given for many years, and the fruit of his industry was the collection, unequaled for scope and quality, which he presented to the Smithsonian Institution, and which is now deposited in the National Museum. After his retirement from the service he held the position of curator of the collections of eggs and nests in the Smithsonian.

From 1886 to the time of his death his one absorbing ambition was to carry out to its conclusion the great task which he had set for himself as a genuine labor of love, the series of volumes of the "Life Histories of North American Birds, with Special Reference to their Breeding Habits and Eggs." To this he gave his enthusiastic and assiduous devotion. Of the work projected on such a large and comprehensive scale two volumes have come from the press as Special Bulletins of the Smithsonian Institution. That Major Bendire should not have lived to complete the undertaking will always be deplored by the scientific world. In that portion of the work accomplished he has left an enduring monument.

Major Bendire was of a simple and ingenuous nature, one which endeared him to his associates. With the frank bluntness of the man of the frontier he had the tender heart of a woman, and his unselfishness and thoughtful regard for others were the characteristics by which he was best known. It is told of him that when he was in a company where any one person either through bashfulness or for other reasons appeared to be neglected, it was to such a one that Major Bendire would devote himself; in such little things may we find the key to a man's life.

THE GENUINE AND THE IMITATION.

PROPINQUITY to nature often develops a love of it among men, each according to his individual bent of mind, as in the sportsman, the poet, the naturalist, the artist, the musical composer; or those who, feeling nature's grandeur and appreciating her bounty, though unable to give expression to their feelings, adore mutely and partake gratefully.

Many residents of cities and towns who are not favored with such direct association, yet who, the impulse being strong within them, catch their inspiration from those who have knowledge and experience of nature's great handiwork, never rest content till they too have delved deep into nature's bounties.

And though each one has learned his lesson apart from his fellows, he has learned it truly, for they all will have a common understanding and noble enthusiasm when they meet, distinct from the misunderstandings and lack of common purpose which are peculiar to the artificial lessons taught in the institutions of man's creation.

So many people there are who have a genuine love of the natural in recreation, of the wholesome sports of shooting and fishing, camping and sailing, touring through the wilderness seeking healthy adventure or studying nature's histories, that association with such sterling characters excites a desire in others, who are not sportsmen, to appear as such; for in every class of society there are those who are mentally or physically indolent, or, unfortunately, deficient in true perception of life, yet who are so vain that they wish to appear as being proficient in any interest which appears dominant with their class for the time being; yet any effort toward genuine accomplishment or enthusiasm is to them the least of considerations.

The veneered pretender is met with in every interest in life, particularly in art, literature and sport; but it is as pretension specially relates to the latter that we refer to it here.

With the genuine sportsman, the love of nature and nature's sports is not a fashion. His convictions and his loyalty change not from the beginning to the end. Infirmity of body, or the restrictions imposed by business cares, may prevent him from material enjoyment of his preference, but his enthusiasm and love never wane. And there is such a multitude of genuine sportsmen in society, whose accomplishments are so respected, and whose example is so approved, that the imitation article has come into being, for there is nothing of true worth but what has its imitation.

It is sufficient to the artificial sportsman that he will seem to be in the fashion, therefore his sporting character is largely made up of exteriors, manifested generally in elaborate paraphernalia and nicety and profusion of tailoring detail, and much theoretical talk; so that, as an inheritance from the artificial sportsman, if any one appear in garments of resplendent newness with equipments to match, there is ground therefrom for suspicion that a fashionable career of sportsmanship, ephemeral in its brevity, has just begun, though the suspicion is not always well founded.

The artificial sportsman soon wearies of manly, practical sportsmanship, as is to be expected of one whose interest is a sham. His interest is the interest of fashion, the interest of exteriors, not the genuine interest of the genuine sportsman. Sportsmanship being popular, the sham sportsman wished to be in the popularity. His efforts are to catch the eye of the multitude—to go out alone in pursuit of sport, as does the genuine sportsman, he cannot do and be happy. The creature of fashion reverses the tenets of true sportsmanship, for he assumes the appearance of a sportsman that he may gain such importance from it as may be.

The true sportsman preaches the doctrine of sport for the good of his fellows, with no thought of self in it. To him rod and gun, garments of beautiful make, and all the appliances of his art may be a delight to look upon, yet he always considers them as but a means to his pleasure and enjoyment, and they always have reference to their practical usefulness. Exterior appearances are to him neither the beginning nor the end.

And thus it comes that the sportsman who is so as a matter of fashion is soon discovered, is a su ild contempt, and has an ephemeral career, unless he be one of the rare few who, beginning as a matter of fashion and engaging in the practice of sport, develops into the genuine article.

A GOOD WORK.

THE address of President John P. Haines, delivered at the last annual meeting of the American Society for the Prevention of Cruelty to Animals, is filled with valuable information concerning the interests of the Society and its practical workings.

The statistics incorporated in his address give much specific data of the stupendous and beneficent work accomplished by the Society, though, as a matter of course, they afford but a faint idea of the vast routine, with its infinity of detail, inseparable from the duties of the Society. In 1896 there were prosecuted 709 cases in the courts, as against 952 in 1895; the fewer cases, as Mr. Haines explains, being a result of the increased vigilance of the officers of the Society, and not due to any laxity on their part, as might thoughtlessly be inferred. Their vigilance and activity resulted in the almost total suppression of cock fighting and dog fighting in certain sections where they once flourished, and this in turn materially reduced the number of prosecutions.

The disabled animals, temporarily retired from labor by the Society, numbered 3,207; and the horses, mules and other large animals which were permanently disabled and in consequence humanely destroyed, numbered 3,254.

The number of small animals which were homeless or disabled past recovery, and in consequence were humanely destroyed, was 73,197; and 583 disabled horses and other large animals were removed from the streets by the Society's ambulances. The cases investigated reached the large total of 37,035.

The dogs received at the shelter numbered 27,587, and of these 3,049 were returned to their owners and 654 were placed in desirable homes, thus disposing of them in the best manner permitted by the circumstances. Of the large total of 43,263 cats received at the shelter but 7 were returned to their owners, and 163 were placed in homes.

This made a total of 70,850 dogs and cats captured, cared for, provided with homes or humanely destroyed. It demonstrates the great and good work done by the Society and the necessity of its existence. The immense numbers of the common species of dogs and cats of little or no value, and their boundless fecundity, result in vast numbers of vagrant, predatory animals, which would soon become an intolerable nuisance to the public were there not a force in action to keep them in check. This work is done by the Society, and yet so silently and thoroughly done that the public at large knows but vaguely of it.

Of the shelter work of the Society, Mr. Haines states that no other part of its interests has been more appreciated, and that letters are received from all parts of this country and from abroad in respect to it. The shelter and its purposes have been thoroughly adopted and approved by the people of Brooklyn and New York. Other cities also have adopted it, though Mr. Haines looks forward to greater improvements with more time and experience for guidance.

The Society has purchased a site for permanent headquarters at the northwest corner of Madison avenue and Twenty-sixth street, and it will determine in the near future whether to build with a view to the future growth of the Society's needs or more economically to meet the needs of the next few years only.

SNAP SHOTS.

Boston now shares with Chicago the pride and privilege of the possession of a rare collection of books on angling. In 1892 Mr. John Bartlett, whose book of "Familiar Quotations" is so well known, gave to the Harvard College library his large and valuable collection of books on angling, numbering over 1,000 volumes, with nearly 300 pamphlets; the works are in several languages. The collection has just been catalogued and is now accessible to the public. It is a noble gift, and Mr. Bartlett is deserving of the gratitude of all anglers for having thus placed the collection where it will be kept intact for all time.

Washington has a new society, the District of Columbia Game and Fish Protective Association, with Com. R. D. Evans as president. One purpose of the movement is to secure a law to prevent the sale of game in Washington during the close seasons for neighboring States.

The Sportsman Tourist.

THE FLYING-FISH FLEET.

Far to the South, where the gentle northeast trades course over the heated water, lies the coral island of Barbadoes. It stands boldly to the eastward of all the Caribbean Islands, and is distant only a few hours' sailing from Martinique, St. Lucia, St. Vincent, Bequia and the Spanish main.

In certain seasons of the year drift carried out to sea by the powerful current of the Orinoco reaches this island and occasionally the remains of huge alligators, lizards and poisonous serpents, which live in Venezuela, are cast upon the shore.

The geological formation of Barbadoes is most interesting, it having in some ancient period consisted of a solitary submerged volcanic peak. The coral insects constructed a broad terrace entirely around this peak, and then came a gigantic convulsion of nature which upheaved the whole mass to a height of 60ft. Again the coral polyps builded; another terrace grew, and once more the mass was raised. But this was not the end, for another terrace was formed and upheaved, and at the present time a fourth is in process of construction by the same diligent little creatures. Upon approaching the island the spectator at once observes the symmetrical order of these terraces, though they are now much eroded and their lines distorted by the throes of nature.

Barbadoes is the most healthful of all the West Indies, and has one of the most equable climates in the world. To these hygienic virtues has been ascribed its popularity as a place of recuperation for the fever sufferers of less favored localities. It has always been a British colonial possession and two English regiments are garrisoned here. Being the most densely inhabited pastoral spot of land in the world, every acre of its surface is cultivated to the highest possible extent to support this immense population. Verdant fields of cane wave over its undulating terraces—immense patches of yams, eddoes and cassava flourish in its valley, while narrow roads of white coral lead to quaint old colonial mansions almost hidden among stately groves of mahogany and royal palm trees.

Its freedom from serpents and noxious insects, its perfect drainage and strict sanitary laws, its cool, balmy breezes and refreshing showers, make it a place of quiet, healthful rest to the invalid fleeing from the rigors of a northern winter; while its wealth of curious shells and beautiful corals, its strange fruits and flowers, its brilliant birds and queer animals, its busy plantation life and interesting character studies, are a never failing source of entertainment to northern visitors.

In the surrounding waters of this delightful region the flying-fish makes his home, the dolphin disports himself and huge sea birds sail majestically over the water, preying on both. Out on the coral reefs which guard the shore thunders the majestic surge of the constant trades, sending its milk-white spray across the mussem beds to lave the feet of the towering cocoanuts fringing the beach. The vicious barracuda, the sharp-toothed mackerel and the lumbering shark lurk among the coral caverns near shore, while schools of bonitos, sinnets and jacks play in the open water over the shallows.

The flying-fish loves deep water and is found throughout the length and breadth of tropical seas. He is fond of feeding near the gulf weed of the sargassos, and deposits his stringy, glutinous spawn on its yellow branches. Vessels bound from New York to the Caribbee Islands upon reaching the "horse latitudes" sometimes encounter vast quantities of drifting weed, strung out into long ribbon-like patches, about an eighth of a mile apart. Among this golden weed, with its delicate leaves and globular seeds, exists a curious family of cuttle fish, crabs, mollusks and small fishes. Upon these the flying-fish preys and they in turn devour its spawn. Every plunge of the steamer as she plows through the blue tropical waters frightens dozens of flying-fish into the air, where they scatter in all directions, with the sunlight glistening on their gauzy wings.

The flying-fish of the Atlantic attains a length of nearly 1ft., and a breadth between wing tips of 11in. He has a round, compact body, about 1in. in diameter near the pectoral fins or wings. There is also an auxiliary pair of ventral fins or wings, not nearly so large as the pectoral pair. The wings are formed by a thin, transparent membrane stretched over a delicate, bony framework, and are either black, white, or mottled with both. The upper half of the entire fish is a metallic blue in color, while the lower portion is a nacreous white. Black, prominent eyes, a small, prehensile mouth, forked tail, dorsal and anal fins, complete the picture of one of the most interesting little fishes in all nature's vast aquarium.

In flight he darts from the water to a height of 20ft., and goes scudding away before the wind, beating the air rapidly with both wings and tail. He sails straight away for 1,000ft. or even more, occasionally touching the crest of a wave, and seeming to gain a new impetus by the contact.

The flying-fish fleet of Barbadoes is the largest in the West Indies, and during the fishing season between December and June it takes an immense number of these fish, which furnish a cheap and abundant food supply for the Barbadians.

The boats are ungainly open craft, crudely built, with naked ribs of mahogany planked with yellow pine. Rigged with leg-of-mutton mainsail and large, flat jib, they are fairly good sailers, and are managed with no little skill and dexterity, notwithstanding their makeshift equipment of burnt out ropes, patched sails and unwieldy ballast. Every boat carries one or more heavy lines for large fish, some small flying-fish hooks, a shark hook, and two nets of ½in. mesh stretched over a round bamboo hoop 3ft. in diameter.

Down to the beach in the early dawn come the fishermen from their dilapidated huts amid the cane and cocoanut clumps. Great, brawny fellows they are as they stand ready to plunge into the boiling surf through which they must swim to reach their boats. Out over the reef through the intricate channel glides the boat. The red glint of the morning sun tinges its sails, the northeast trades fill the bellying canvas, and soon scores of boats are putting out into blue water from behind every palm-fringed bay and protecting headland. The trolling line is now trailed out astern, and its swivel-rigged hook spitted with a shining fish goes spinning around as an attraction for kingfish, gunnet, barracuda or Spanish mackerel.

The boat moves swiftly out over the submerged coral gardens, past the redfish shallows where live the snapper, blackjack, covalle, velvets and ningnings, old men, old wives, drummer-boys, chubs, pudding-fish, queen mullets, hinds, congerees, whip-rays, niggerheads, butterfish, soapfish, rainbows, cooks, barbers' grunts, inkfish, horse-eyes, parrot-fish and dozens of other interesting fishes most wonderfully made and brilliantly colored.

Sometimes a hawk-bill tortoise or a green turtle is seen lying asleep on the surface of the water. Then the skipper runs silently alongside, and before the unwieldy monster can dive beneath the wave his flipper is fast in a slip noose and he is hauled aboard.

The shore birds and lazy, croaking pelicans are left astern; the red-roofed houses, the green hills and valleys, the whirling windmills, are all merged in a hazy band of emerald on the horizon, while our crew begins to search the water for drift, weed seeds, spawn, sea birds and other signs of fish.

A group of whales are feeding under our lee, and the deep roar of their blowing reaches us over the heaving water. The little calves are sportively inclined and broach repeatedly into the air, while the old bull and his cows sound the bottom for insect life on the deep sea banks. Barbadoes has a whaling station, and many of these mammals are taken every winter and resolved into oil, whalebone and fertilizers. The flesh both of the whale and shark is eaten fresh and in a cured state by all the West Indian Islanders.

We are now approaching the flying-fish ground, and a few black and white Mother Carey's chickens suddenly descend upon us and dart to our outstretched hands for bits of food.

A bos'un bird makes an ineffectual attempt to carry off our spinning fish astern, while a "break" of flying-fish scatter in all directions as we plow through a long line of ocean weed. The command to lower away is sung out by the skipper, the tiller is jammed hard down, and as the

THE FLYING-FISH.

boat comes to the wind the halyards are run, stays cast off, jibboom inrigged, mast unstepped, and we lie rolling broadside on in the huge regular swells.

Some stale fish are now macerated and the "mash" hung over the side in a sieve-like basket. As the boat is drifting to leeward this "scent" goes out to windward, producing a calm or "slick" in which the flying-fish begin to gather in increasing numbers.

Two or three dart to the boat, then shoot away again at its slightest plunge, only to return with others and begin a closer inspection. They come nearer and nearer in growing numbers, until at last, as if deciding that this ungainly monster rolling on the deep is their natural protector, they nestle up to its sides and swim in droves around it. The fish are now "good" and ready to be "dipped." This is done at bow and stern by the net men, who scoop them gently into the boat two or three at a time. Hold a small bit of fish over the side and a dozen will immediately hover about your hand, swimming over and under your fingers in their eagerness to gain the tidbit.

Flying-fish are divided according to size into pinfish, weely-whistles, youngsters and patriarchs. Only the latter come to the boat, and are classed as spawn and milt fish. Guineamen are a large species of flying-fish, some three or four times heavier than the patriarchs, and cannot be lured into the net. They are very gamy when taken on the line and generally break into flight over the boat. The bewildered angler then finds that he has hooked a fish, but is playing a bird.

The fish now swarm around the boat like little chickens, and over 2,000 are lying in a glistening heap on the ballast.

An abandoned whale carcass is drifting up to us from leeward, sending out a broad slick or band of oil in all directions. A multitude of Mother Carey's chickens are hovering over its exposed surface, while a vicious throng of barracudas and sharks tear at the blubber underneath. As our boat drifts by the carcass these scavengers of the ocean make an attack on our school of flying-fish, sending them panic stricken into the air in all directions. Sharks thus gorged to repletion with whale blubber do not take the hook; but the fishermen are so imbued with the spirit of vengeance that they maim and injure them with the utmost ferocity. They lure them to the side of the boat by means of a flying-fish attached to a string, and thrust their keen blades up to the hilt in their sides, dyeing the water for yards around with a crimson flood. The savage brutes, excited by their own blood, tear each other in fury, but at last retire, leaving us to pursue our way in peace.

Sometimes the fishermen are seriously annoyed by a fleet of Portuguese men-o'-war. These curious gelatinous animals look like pinkish, transparent balloons floating on the surface of the water. Long, purple streamers trail behind them, and amid this "rigging," as the sailors call it, live a number of sailorfish or men-o'-warsmen, who accompany the man-o'-war on all its cruises. When the man-o'-war is cast ashore its crew of sailorfish become perfectly frantic and perish of starvation, unless shipped by another man-o'-war.

Woe to the fisherman who in the process of dipping comes in contact with these streamers or rigging. They seem to produce an almost instantaneous paralysis of the nervous ganglia by their contact. The muscles strain involuntarily, the parts touched burn intensely, the sufferer screams with agony, and it is several hours before he finds relief.

The flying-fish fisherman's dinner depends on his success as a netter, otherwise a dry crust or two is his sole refreshment. As the sun approaches the meridian a fire is started on the iron ballast in the bottom of the boat, a black pot slung amidships, and soon a fine chowder of flying-fish, yams, garlic and red peppers is sending its savory odor out over the water. How the skipper enjoys this part of the day as he sits in the stern, smoking a short black pipe. The netmen are bringing in the fish at every dip; the vertical sun is pouring his torrid rays down on their naked bodies. Their perspiring, oily limbs gleam like polished ebony as they sway back and forth over their work. Fleecy cumulus clouds float overhead and are mirrored in the seas beneath. Nothing disturbs the silence of this noonday calm but the splash of the boat as she rides the swell, or the harsh croak of sea birds as they circle in the air.

But a contrast is soon forthcoming to this picture of the skipper's masterly inactivity and enjoyment of his surroundings, for his trained eye has discovered two cobblers bearing down from windward. Now cobblers are huge sea birds, and by their actions indicate the presence of dolphin. If their flight be lofty and circling, they are said to be "searching;" but if they sail close to the water and dart repeatedly to its surface, dolphins are near at hand. The cobbler dashes at the exposed back of the dolphin when he appears at the surface and gashes out pieces of flesh, which he devours.

A sight like this arouses the crew into immediate activity, for a "cloud" of dolphin is encountered only once or twice in a whole season. Anxious glances are cast to windward at the approaching cobblers. The boat is cleared for action. Each man is assigned his station by the skipper, and all stand with quickened pulses eager for the fray.

The shark is the bull dog of the sea, but the dolphin is its hound. He is long and narrow, with blunt head, brilliant eyes, powerful tail and a leathery skin dotted with blue. He weighs from 20 to 40lbs. and can change color like a chameleon. Lithe and powerful, he scours the sea, the very personification of grace and activity. The frantic flying-fish darts into the air and skims like a flash light for a thousand feet, but the dolphin follows swiftly beneath like a dark shadow and rends his exhausted prey as it sinks on the crested wave.

The excitement is now at fever heat, the flying-fish begin to run wild, dark shadowy forms are seen to windward and the fishermen mumbles his "obeah" to give him luck; for on his success depend many necessities for wife and child, tobacco, rum and feast day money. Suddenly our flying-fish break from the water in a silvery shower. The cobblers and sea gulls pursue them in air, the dolphins surround them beneath the wave. At the first taste of blood the dolphins have turned to a bright orange yellow and are now said to be in their "biting colors."

Both ends of the big line are worked with all possible celerity. The bait scarcely touches the water ere a dolphin strikes and is drawn aboard, while the rest crowd around the boat in a dense pack as if eager for the hook. The dolphins in the boat keep up a ceaseless hammering with their tails, battering everything breakable into a shapeless mass and bruising the fishermen severely. They present a beautiful sight in their dying moments, changing color rapidly from blue to purple, orange and yellow; while overhead a noisy flock of sea birds look down on the scene and mingle their cries in the general hubbub. Over fifty dolphins are taken in ten minutes, when suddenly they become frightened and vanish to be seen no more, leaving a panting exhausted crew covered with blood from head to foot, but supremely happy.

There are other moments of happiness to the flying-fish fisherman, but none that he enjoys so much as when catching dolphin. Very rarely he meets with a "sea navy," or large congregations of all kinds of large fishes, including blackjack, kingfish, gunnet, barracuda, dolphin, shark, porpoise, bonito, billfish and albecore. For what reason these fishes assemble in such vast numbers is not known. They crowd together closely and churn the water into foam for an eighth of a mile in all directions. When a sea navy is "hailed" the fisherman endeavors to get his boat into the pack and then he can fill it, for at such times the fish are ravenous. A large albecore will weigh 300lbs., and it takes the whole crew to handle him. After an hour's hard playing he is drawn alongside, and if there are no sharks around the best diver on the boat goes overboard and puts a sling around its tail, thus assuring its capture. In a sea navy sharks often throng around the boat and nip off half of each fish as it is drawn aboard.

About the middle of the afternoon the boats commence to make sail for home, and hundreds of sails are soon seen dotting the water in all directions.

There exists great rivalry among them as to which shall put their fish ashore first; and many a victorious boat comes surging up to the wharf under sweeps, with dripping canvas and exhausted crew.

A ragged, unkempt crowd of women quickly transfer the catch to round baskets and start off in all directions through Bridgetown, with their burdens poised on their turbaned heads. Many of these women will trot off at a swinging gait, carrying a burden of 100lbs., and traversing a distance of fifteen miles or more before their last fish is sold and the last cry sounded of "Fe-e-sh he-e-e-r."

The Barbadian fisherman is very superstitious. All his goings and comings are governed by signs; all his ventures controlled by traditions brought from darkest Africa in old slavery days. He strictly observes all sacred days of whatever creed. His imagination pictures "duppies" walking upon the water and weird figures waving in the sky, which augur good or evil to his welfare. Strange sounds come to him over the water, and the waves eddy and swirl under the influence of submarine monsters. His real perils, however, are many, and the woman often waits in vain for his homecoming. The hurricanes of the summer season destroy many boats and engulf their crews. Waterspouts rise suddenly out of the sea and rend in fragments his frail craft.

He is obliged to pick his homeward way with the greatest nicety and precision, past hidden reefs, through intricate channels, in all kinds of weather, by day and by

night. Sometimes in the gloom of midnight he pilots his way through the home channel, guided only by the noise of the surf breaking against the reef on either side. Should he mistake the way by a few feet huge combers grasp his boat and hurl it with relentless force against the jagged coral.

But though his perils be many, and his hardships great, he loves his calling and enjoys his triumph with hook and net. Like all sailors, he drinks more grog than is good for him, and smokes an excessive quantity of vile tobacco. He is wont to gather at the wharf after the sun has gone to rest, and spin his yarn and dance a reel with the rest of his mates. Under the benign sky of the tropics, in a land of perpetual summer, he pursues his way, improvident, careless, untrammeled, save by the cares of a moment.

One who sailed these blue waters with him day by day during the tropical winter will store up in his memory many exciting experiences with shark and dolphin; innumerable pictures of mountainous waves, breaking surf and intricate channels.

He will recall the beautiful coral garden beneath the water where he peered into hidden caverns, with their wealth of curious shells, sponges and coral.

As he sits before the fireside of his northern home and the snow and sleet beat against the window, he will remember with pleasure the days spent with his friends, the flying-fishermen on the surface of the beautiful Caribbean.

Harry Higgins.

CHICAGO AND THE WEST.

Tramping and Camping in the Sandhills.

(Continued from page 103.)

Chicago, Ill., Jan. 29.—After leaving the wagon on the afternoon of our first day out, Patterson and I walked about five or six miles, as nearly as we could estimate it, before deciding to go into camp. It was at that time well on toward 4 o'clock in the afternoon, and as there was a keen wind blowing the night bid fair to be a cold one, so that we needed a sheltered place, with plenty of wood close at hand. As we were now out of the region of the small sandhill lakes, we knew that we should be obliged to get water from Lake Michigan. This meant that we would be forced to carry water in our tin cups from the beach up over the line of bluffs which skirted the shore—a continuous line of hills 100 to 150ft. in height, and covered on the lake side with a coating of frozen ice almost as slippery as glass. Finally we hit upon a depression in the line of bluffs, over which it was possible to make a way into the wooded hills beyond. We followed up this long ascent, and were gratified to find that on the landward side it broke sharp down from the summit, making a long, steep pitch of loose sand, which ran sheer down into a sheltered little hole of a valley. Moreover, we could see below us a vast log, which offered advantages as a back log, and could also see various little clumps of junipers and pines, which assured us of a good bed. Sliding down the face of the sandhill, which, being the side toward the sun, was thawed out and therefore yielding, we found ourselves some 75ft below the surrounding summits and quite sheltered from the wind, which we could hear roaring and whistling above us, sending long curling sand spits down the long white bank behind

We found that our back log was a big pine tree nearly 3ft. in diameter which had fallen half across our little valley. Unfortunately its stubby limbs still held it a foot or more above the ground, so that we feared that we should lose some of the heat of our fire We soon piled up the open space, however, with smaller logs in a way which satisfied us on that score, and then we set about pitching our tent. The latter, as I have stated, was a small affair, but still we had difficulty in finding a place large enough to offer us floor room, as our back log was unfortunately located on something of a side hill. But we went to work with our axes and hands and soon dug out a place large enough for the tent, and then we gave an imitation of two men putting up a tent in a hurry. In a jiffy we had two forked poles driven into the sand, each a little over 4ft. high and about 7ft. apart. Across these we threw another pole. At the back of the tent the little twine guy rope of the corner was tied to a convenient tree. The other corner having no tree handy, we drove down a stake for it and thus soon had the four corners of our tent supported, so that our little house in the woods began to take on the appearance of a home. The open front of the tent was only about 8ft distant from the fire and the roof sloped back cozily, although the lightness of the material gave it a good deal of a sag, which we sought to remedy by means of long boughs. Then we cut us some little logs, placing one at the back of the tent and one on each side, so holding the edges of the tent firmly to the ground without the necessity of any tent pins. After putting these logs in place, we scooped the sand over them from the inside of the tent and completed an air-tight joint all around the tent by heaping up the sand in a ridge about the tent outside We now had a structure wind proof, so far as this flimsy fabric could be. The fire was to be our front door As this fire would be apt to burn a hole in our tent, and as, moreover, it looked very much as though we might have a snowstorm, we proceeded to thatch our roof with green pine boughs. Then we hauled up some dead trunks of trees for firewood and had our tent all complete excepting the bed. While Patti now went to the lake after water I set out after juniper boughs for a bed. I found a clump of these wiry tttle trees growing in long, curved, fan like branches which spread out from a common center. By cutting off these branches close to the ground I got a complete feathered bed spring about 3ft. long and 1½ft. wide. Dragging down several bundles of these branches, I thatched the entire floor of the tent three layers deep with them, putting the convex side of the branches up.

This made a deep and springy bed, and quite took away the cold and clammy feeling which the wet sand had given to the interior of the tent up to that time. Later on Patti and I spent half an hour or so covering up this preliminary frame work of our bed with little tips of pine boughs cut from small trees which we dragged up to the tent, Thus by taking time and pains we got a very good and comfortable bough bed.

I noticed that it took Patti a long while to get the water at the lake, and when finally he came crawling gingerly down the hill with a cup in each hand he explained the reason of the delay. He had run against a whole lake full of water, but had found it almost impossible to get any of it. The breakers were running high, but by the time they had spread out into shallow wavelets high up the beach it was impossible to dip up a tin full of water, and such as could be obtained was mostly sand. Patti's ingenuity, however, was equal to the occasion. He lashed the quart cup to the end of his staff, and taking up a position on a high cake of ice waited for the waves to come in. Meeting each wave with his tin cup held as far as possible in front of him, he would grab off what water he could and then run back up the beach as fast as he could go ahead of the incoming wave, which even then sometimes overtook him and splashed halfway up to his knees. Thus, by great diplomacy and industry, he finally managed to get the two tins full of water. We had no water pail, having reduced everything to as light a basis as possible; but the absence of such a vessel under the circumstances put us in rather a ludicrous plight. We were both warm and thirsty from our exertions, and one quart of water apiece, to last for the entire evening, we found to be pretty short rations, including as it did the water for making coffee, with the incidental spillings and boilings over. Before lying down to sleep I was so thirsty that I thought I should not be able to rest though I could not relish the thought of going out in the cold wind over the sand ridge and wrestling Lake Michigan in the dark for the drinks. We found about a tablespoonful apiece left in one of the cups, and it tasted very good.

All these little operations required considerably more than an hour, and it was quite dark when we called the camp complete, and proceeded to build a fire. This Patti accomplished by striking a single match, which shows that he was something of a woodsman, as indeed he is. (We only used three matches on the trip.) As we wanted to cook supper first, we built only a very small fire, and before supper was ready we were both pretty well chilled through. One can very well keep warm in the winter time camping out so long as he is walking or engaged in continuous exercise, but as soon as he ceases to work and sits down he comes to realize that he is not in a steam-heated parlor. But we soon had our coffee boiled and our beefsteaks broiled. Meantime we had pulled on our sweaters and spread out our scanty store of blankets in the tent. We now heaped up the fire with brush

"PATTI," OF THE FOREST AND STREAM EXPEDITION.

and limbs of resinous pine and soon had a crackling, roaring fire, which lit up the dark little valley gloriously and warmed to the uttermost the little brown house in front of it. So Patti and I sat in the door of the house and fell upon our supper joyfully, soon feeling as warm and comfortable as we ever had at home. "This is not so bad," said Patti; "we'll sleep here all right to-night" So saying, he cut off another goodly slice of beef and wiped his knife on his leg. (Patti has a beautiful pair of canvas pants which show plenty of service. He values their grease and grime spots as much as an old smoker does the color on his meerschaum. Being a careful and methodical man myself, I always wipe my knife when eating on my left trouser leg, so that my own canvas unspeakables are a shade darker on that side than on the other)

We had a good supper that night, except that we did not have coffee enough—less than a quart for the two of us. There was not snow enough to melt, and we both dreaded the trip to the lake. We found that the half of a big apple each allayed our thirst somewhat. By 9 or 10 o'clock we were ready to go to bed, which was a very simple operation, as neither of us removed any of our clothing. We were both tired, and could have slept the night through without waking had it been possible to build a fire which would last all night. In this sort of camping it is simply a question of fire. If one has a lodge or tepee he needs only a small fire, but we could not carry so large a house as that, and of course in an open-front tent one would freeze to death without a big fire all the time. I went to sleep at about 11 o'clock, and the first thing I knew it was 2 o'clock in the morning; but meantime Patti had been up twice, so he told me, to build up the fire. From that time to 6 o'clock I tended fire two or three times. In sleeping out in this way it does not seem to cost one much sleep to get out and build up the fire, for as soon as he lies down again he falls asleep and stays asleep until the next cold chill runs up his back. Really we had a pretty good night of it all in all. We found the theory of our little tent all right, and once or twice in the night we congratulated ourselves on our comfort, as we lay and listened to the wind roaring high above us.

We had proved to ourselves that two men can go on a walking trip and carry on their backs all that they need to make them comfortable in zero weather. This is something which has been proved many times before, but, as I have remarked earlier, we felt ourselves in need of a trip, and so thought we would prove it over again.

In the morning we had a breakfast very much like the supper we had the night before. We did not hurry to get away, as we had no place in particular to go to and nothing to accomplish but to have a good time. Taking a trip into the hills about our camp, I paused at the top of a ridge and looked down upon our hidden valley. Rarely have I seen in any country a wilder bit of nature. The ragged sandhills have an indescribably wild look to them, and for all the look of the place had to do with it, we might as well have been 1,000 miles beyond the jumping-off place. The hills were here covered with a scattered growth of pine and oak, the country being a continuous succession of sharp ridges and valleys. It had the look of a good game country, and indeed there are a few remnants left of different species native to these hills. An inquisitive gray squirrel made us several visits during the morning, and as I stood high above the place and looked down at the smoke curling up from our rough looking little camp this same squirrel came sidling down the hill close up to the back of the tent. I called to Patti that he had a visitor, but at the shout the little fellow turned and scuttled up the almost perpendicular face of the sandhill at a gait which seemed well nigh impossible. I stood there on the hill for some time looking at our camp. Still higher up above me the wind was raging furiously. The sky was gray and snow was falling, adding to the light covering which had come down during the night. From beyond the rim of the sand bluffs came the boom of the surf of the inland sea. Inshore, along the top of the high bluff line, and not over 100yds. from our tent, there passed a long line of great gray gulls, flying slow and silent, like spirits of an impending storm. There is nothing cheerful or peaceful in this country. The whole scene is one of forbidding desolation. Rebellious and repellant indeed must be that hand which at the very gate of the city of Chicago has kept away the house of the settler and almost kept away the foot of man.

It was about 10 o'clock when we shouldered our packs for the continuance of our journey. Far down the beach we espied a tiny speck which in the course of an hour we made out to be a house, still some miles away. It was about noon when we came up to this house, and found it to be a fisher's cabin occupied by two boys, who told us that they made a sort of a living by their gill-net fishing throughout the year. The take, which consists mostly of lake herring and perch, they peddle out among the farmers back beyond the sandhills.

From these boys, who were the only human being we saw on our trip, we learned several interesting things. At this point a strong stream of water from the inland marshes has broken through the restraining rim of sandhills and empties directly into Lake Michigan, somewhat after the fashion of the Grand Calumet River. No member of the Calumet Heights Club had ever explored the country so far away as this from the Calumet club house, nor had we ever heard of this stream of water, which is not marked on any map. We learned that it was only about three or four miles to the head of the stream, which was near the town of Porter, on the Michigan Central Railroad. Our fishermen friends told us that there was once, long years ago, an attempt made to establish a village at the mouth of this creek, and that the place was called "City West," in distinction to the town of Michigan City, only about nine miles away. The creek had no other name except the general one of "City West Creek," so we thought it would be best to call it Patterson's River. We named our first camp Camp Calumet, it being the prerogative of all explorers to change the names of things as given by the people who were there ahead of them.

Upon receiving the information that Michigan City was only nine miles further on, Patti and I were very much surprised and annoyed, for it appeared that we would soon run out of country at this rate. We learned that we must have walked six or seven miles the first afternoon and about as far this morning. We resolved to walk more slowly, as we did not want to end our trip until the following day.

I presume the correct way to explore this sandhill country would be to plunge into the middle of it and walk across the hills, not taking advantage of the smooth and hard highway offered by the beach. This would certainly make the enterprise difficult enough, as a man with a pack would have trouble in traveling more than eight or ten miles a day in such a region. On the beach we found that we could travel at the rate of twenty miles or so a day with perfect ease, allowing plenty of time for morning and evening camping operations. As we had only limited time for our trip, and did not know much about the country, we stuck to the beach most of the way. On this day we found the character of the country changing very rapidly. From points on the high bluffs we could see that the sandhill region was narrowing down toward a point. The pine trees were disappearing, being replaced by thickets of scrub oak. The beach was much narrower, more covered with pebbles and fenced in by much higher and steeper bluffs. At times we would walk for half a mile without finding a place where it would be possible to make the ascent of these icy bluffs. A little after 1 o'clock, finding a depression where we could get through, we concluded to stop for lunch, as we were now getting dangerously close to Michigan City. Accordingly we searched out a sheltered nook under the lee of a big sandhill and made a transient camp, with a big log as a shelter. Again we carried water from the lake in diminutive supply, and again we made a meal much like those preceding, for appetite waits always on the winter tramper. As we had no logs at hand, we were at a loss to see how to cook on the sharp side hill, where our fire was built. There was no place to set a frying-pan or a coffee tin in such way that it would not spill its contents. Patti remedied this state of affairs by cutting a long crotch out of a green pine limb. Across the fork of this he put his frying-pan, and retaining hold on the end of the limb, he thus had a handle to his pan and a cooking range all in one. Thus we fried bacon without spilling or burning, and thus we made coffee; the green limb, placed flat down over the fire, not burning through before our cooking operations were concluded.

As we continued our walk along the beach that afternoon we noted again the great number of wrecks and hulks which line the edge of Lake Michigan at this part of its shore line. There were fairly dozens of them, or pieces of such, all nearly buried in the sand, which rapidly covers up anything left exposed to the wind. We supposed that most of these fragments came from lumber schooners or fishing boats, such as often come to grief on this stormy water. Obviously many of them had lain here for many years, the ends of the timbers in some cases being worn smooth by the cutting sand blast. All sorts of things are found on the beach, odds and ends of wreckage and objects which seem to come from the land side of the lake. Thus we saw many paving blocks which at first we thought were worn by the action of the wate, but which later we discovered to have been actually

used in some street pavement, probably in the city forty miles north of there, whence the waves had carried them by some process of their own.

As we could now begin to see unmistakable evidences of civilization in the shape of certain red-painted roofs close at the water's edge, and deemed this to be Michigan City, we were obliged to go into camp very early this day. It was before 4 o'clock when we began to look for a place to get through the hills into a locality suitable for camping. While Patti stayed down on the beach waiting for the signal to go after water, I went up on the ridges to prospect for a camping spot. I found an elegant little flat-bottomed valley, far down below the summits of the sandhills, but unfortunately could not discover any good back log in it, nor any pine trees for purposes of bedding. In fact we were now almost out of the pine country, and into an oak region, where camping was a more difficult matter. I left this valley and wandered on a quarter of a mile, finding several spots which had advantages, but which also had drawbacks. Incident upon this search, I found myself at the summit of the highest sand peak of that part of the hills, a veritable mountain, which we took to be the high peak our fisherman had told us was called Mt. Tom. Opposite to this, and beyond my little valley, I could see a second high peak; and this, later on, Patti thought it would be well to call Mt. Jerry. So we called them Mts. Tom and Jerry, and camped between them. For search as we might we could find no better spot than my valley, and it was late and getting extremely cold before we settled upon the spot.

We had a lovely camping spot here, the little valley being a flat glade which wound off picturesquely through the hills. At its back was a sharp and high sandhill of pure white sand, while on either side timbered hills sloped down more gently, the bottom of the valley, some 80 or 100yds. in width, being covered with scattered oaks of second growth about 6in. in diameter. On a side hill about 50yds. from our tenting spot was a great dead and seasoned oak, 18in. through, from which we determined to construct our back log. In order to do this we were forced to cut it in two, or rather in three, and for this work we found our camp axes quite too light and insignificant. I would advise anyone going on a winter trip to take a good long-handled axe along if he took nothing else, for on the axe all his comfort will depend It took me nearly three-quarters of an hour to gnaw that great trunk in two, for it was hard as iron; and I was forced to cut down into it with a "double chip" in order to drive the cut entirely through the log While I was at this annoying work, Patti was getting water and gathering boughs; and then we joined forces and lugged the monster log to place, and went on about putting up the tent.

This time we took a bit more care with our tent, for it looked like snow, and moreover we thought it would be warmer if the roof were stretched tighter so that the heat would be reflected down more evenly. So we put up a regular frame for the tent and stretched it over this frame, not "tacking it on with carpet tacks," but holding it down as before by side logs and sand. We got it up in very good shape, but our bed was not so good as it was the night before, since the pine trees were so few and so far from us We cut and hacked and broke down a vast amount of fuel, mostly of well-seasoned oak, accumulating a vast wood pile; for it was now very cold, and we knew we were in for a bitter night. How cold it really was I cannot say, but during the evening when one of us wanted a drink he discovered that the water in the tin cup at the corner of the tent was frozen nearly solid. This was within 8 or 10ft. of the fire, though not exposed to the direct rays of the fire. The surroundings being unfavorable here for a camp, we were a long time—over two hours—getting things into what seemed to us comfortable shape. We were not so tired as we had been the night before. Already the air and exercise were beginning to do their work for us, so we could see that a few days of this sort of thing would harden us up nicely.

It was an hour after dark by the time we got all our domestic arrangements concluded and had our smoking supper on the fire lit spot between the fire and the tent. To the light of the fire we were able to add further illumination, for during the day Patti had, by strange good fortune picked up on the beach a half length of stearine candle, which had come from no one knows where on the common carriage of the lake. This candle we placed at our table, making for it an excellent candle stick from a split pine bough, the sharpened end of which we stuck down in the sand that constituted the table cloth. In silence, but with great celerity and precision, we ate our evening meal of bacon beefsteak, brown bread and coffee, finishing it off with a fine red apple for dessert. Then we said it was good, wiped our knives each on that spot of his trousers leg as hereinbefore designated, and relapsed into ease and dignity for an hour or so before retiring for the night.

The wind had by this time risen to a gale, and, worst of all, it came twisting down a little side gully in such a way that it blew the smoke right into our tent instead of away from it. With a bit of the muslin of which the tent was made we put up a rude side wing, which broke part of the wind away, but at best this was insufficient, so we had rather a bad time of it after we lay down to sleep Patti was so big that as he lay flat on his back his nose just cleared the roof of the tent, and the smoke, following down the slanting roof, would stream directly into his eyes, so that he was glad to pull the blanket over his head. In the morning we found our throats full of smoke, so that our voices had a harsh, piratical sort of sound, in good keeping with our general make-up Of course neither of us washed his face or hands, and it does not occur to me whether or not the subject of a comb was mentioned. With water so hard to get as we found it in Lake Michigan, one isn't going to waste any of it in washing.

It was very cold that night, but strangely enough it grew warmer toward morning, the wind then lulling somewhat. We both were up often during the night building up the fire, and we found our great stack of dry wood none too large. By morning our big back log was burned entirely through, and we had to lap the ends to get a good reflector out of it. All the little solid trees which we had dragged up to camp were burned through again and again, and we were forced to go out for wood for the breakfast fire. When it comes to keeping a fire the size of ours going for twelve hours straight, it requires a lot of wood. Once in the night I felt Patti shivering in his sleep, and so got out and piled on some wood upon the fire. At another time I awoke with a good strong shiver running up my own back, and as I got out into the sharp night air to hustle up some wood for the fire I was seized with a vigorous chill which sent me howling back to the blankets. This, however, does not hurt any one, and teaches him not to be too lazy or to wait too long after the warning of the first creeping feeling up the back. In a camp such as this it is no good to curl up tighter in the blankets and try to get warm that way. We did not have blankets enough for that, but had to depend absolutely upon the fire. I should think a well made fire was good to last an hour or two hours, according to the kind of wood used. Of course if men would take turns standing fire watch it would be possible to sleep in perfect comfort until time to go on watch, but we were too sleepy to do this, and so let it average itself, which it did with something like approximate evenness, I suppose, each one getting up to fix the fire perhaps four or five times during the night, as nearly as he could remember, and not keeping track of the times he did so when asleep.

In the morning when we broke camp we marched to the top of "Mount Tom" and had a good look over the wide strip of rough country about us. The lake was quieter now and lay wide and blue below us. Almost at our feet, it seemed, we could see the buildings of Michigan City, about three miles away. Between us and the town there were the same long, deep gullies, the same white sand dunes and the same scrubby timber to which we had now become accustomed. Across this country we started for our last little march. To our surprise it was impossible to find a place on the lake side of the sand dunes where it would be possible to slide or scramble down to the beach without too serious a risk of injury. We kept along on top of the ridges until at last we found a shallower gully which led down to the beach. Then we pressed on toward the red roof of the life-saving station at the town.

All along the upper edge of the beach for a distance of more than half a mile at this part of the lake shore we found soft ground with water oozing up through it. This we discovered to be a series of the seeping springs peculiar to this sandhill region. Not far from this trickle of water we saw a high and regular bank of fine gravel, graded as regularly as though terraced for a lawn front, and running back some distance until swallowed up in the all-devouring sand, though leaving a perfectly flat surface large enough for the building of the finest residence. This odd eminence was some 30ft. above the level of the lake. The front of this gravel bank or bar was many hundreds of yards long where plainly visible, and it seemed even and flat-topped all along. Perhaps geologists could show how the big glacier which came down across this country at some distant day dropped here the fine pebbles it had been carrying. Then the sand blew all over the gravel bar and covered it up, no one knows for how many miles of its course, along what is now the lake shore Thus a dam was made between the spring waters of the country inland from the lake. Further up the lake, in the direction from which we had come, the spring waters and marsh waters were headed back by the wide sandhills and herded together into large streams, the Grand Calumet, or the little creek which we called Patterson's River. At this point, where the reach of sandhills was narrower, and where the gravel bar was least covered by the sands, this inland water had strained through the vast natural dam, trickling through the wide gravel bar and so seeping out at its foot upon the lake side of the ridges. At least this was good enough geology for us, and we wondered how long it would be before another river broke through the sandhills and give the perch and suckers a chance to run up into the grass lands in the spring. According to my own earlier explorations, made along the Little Calumet some years ago with Alex Loyd, and continued last summer with Dr. Hollenbeck, of Westville, Ind., we were now at a point about twelve miles north of the head of the Calumet River, the same distance from some fine bass fishing, and not any further than that from a lot of interesting little creeks, all of which pitch down the sharp front of the big dam the glacier left still further inland, to keep the Kankakee River from running into Lake Michigan, which it has for a long time been trying its best to do.

It was about 11 o'clock in the morning when we arrived in Michigan City, and were able at length definitely to confirm the unauthenticated rumor that this town is located on Lake Michigan. Of course, since we could lay claim to this, we felt as though we had really discovered the place, although we found there a Government lighthouse bearing the cut stone inscription "1858" There may have been a few people along through here at that time, but as a good many of them are probably dead or have moved away from the place it was time the place was being discovered again, so we discovered it.

As we went up the street of the sandy little city, people came to the windows and looked out at us, and on the street folks paused to stare at the tramps who wore axes and knives and carried packs and coffee cups. We sneaked into the depot waiting room as quickly as possible, but were hunted out there by the reporters of the two rival newspapers, who wanted to know if we were surveying a railroad, hunting for moonshiners, or what, anyhow. When we told them we were out for fun they shook their heads with doubt and apparently thought we were joking "What would you do that for in the winter time?" they asked. I'm sure I don't know what they said about it, but I don't believe they believed the truth.

A good many of our friends have asked us since what made us go out tramping around that way and lying out in the snow in the winter. 'What did you get?' they say, and then "What did you go for?" Yet others ask how much game we saw. We saw one rabbit, one grouse, one squirrel and a few tracks. Not a very big net result if that were all. But Patti and I figured it out that that wasn't quite all.

Shall the State Propagate Game?

We think that it is no more than fair that the State now make an appropriation for the establishment of a game hatchery for the purpose of propagating game. What might be done is only conjecture at present, because the propagation of game has never yet been well attempted in this State. The State could easily afford to appropriate $10,000 and go into the business of rearing game birds—the birds to be given to regularly organized and incorporated game clubs for purposes of stocking. As it is now, certain private individuals pay for the liberation of game birds in various localities. Why not the State? The State helps the fishing interests; why not the game interests? Pheasants can be propagated, quail can be, white hares can be, and perhaps other game and game birds. It is singular that the State has never attempted to restore moose to the Adirondack region.

All of these ideas are possibilities and would be interesting experiments for the State to undertake.—*Auburn (N. Y.) Advertiser.*

AMID FAMILIAR SCENES.

Editor Forest and Stream:

There is a charm in squirrel hunting that exists in no other kind of hunting. It takes one into the woods when nature is in her most pleasing mood, and it revives the enthusiasm of long-past boyhood. It has been said that squirrels are boys' game. It may be so; but what is the sportsman but an overgrown, dignified boy? His first lesson began with squirrel hunting, and, though he may have come to regard it as insignificant compared with his higher education, he looks back lovingly and longingly to the old days, and would return to them if he could.

And as the squirrel season is the first to arrive, it gives the sportsman an excuse to go into the woods with his gun. He has been so long "chained to business," and the fever has taken such a firm hold of him, that he is glad of any excuse that will bring relief and a day spent in the pursuit of his pet enjoyment.

And he will naturally seek his favorite haunt. Every sportsman has a favorite haunt, and that is the one he usually selects for his first day's outing. So when the 1st of last September ushered in the squirrel season I gladly took the morning train to spend the day among old familiar scenes, and an hour's ride brought me to the sleepy little village which, but for the barking of good-natured dogs that brings the women and children to the windows when a stranger passes through, would seem deserted. Where the "men folks" keep themselves I have never yet found out, for it is seldom that I see any, always, of course, excepting Uncle Lisha, as I have come to call him, the village shoemaker, who sits facing the door of his little shop, the better to see and greet passers-by. An honest and good-natured little old man is Uncle Lisha, who lives at the end of the town. I have not missed a September visit to this place in twelve years, and have come to anticipate the old shoemaker's greeting and chat as one of its pleasantest features. He sometimes wonders at my persistent returns after so many unsuccessful trips, but I have never tried to satisfy his curiosity. The axiom, "It is not all of hunting to hunt," would not do it and might cause a complication of ideas in the old man's mind that would be still harder to disentangle, so I evade the question and note the change, if any, that a year's time has made in his locks and wrinkled visage. The kindly beam in his eye never fades, though his stoop may be more noticeable than when I first saw him. Kind old man, I would not see him any older nor younger. In the vernacular of the present day, "He's all right."

The old covered wooden bridge which spans the romantic little stream just beyond is not the least of the many attractions of the place. One time it was painted red, and may have been considered a prettier bit of architecture than it is now, but the ravages of time and weather have left but few traces of its gaudy coat in the less exposed parts, and its lichened archways and weather-worn sides have for my eyes a greater picturesqueness than any modern structure. It echoes my footsteps with hollow but not unpleasant sound as I pass through it, and once did friendly service as a shelter when the raging storm came upon me. Some day the old bridge must be torn down and a modern one will replace it. If that occurs during my time I shall be sorry to see the change.

A beautiful stretch of winding road, hedged on either side by rail fences, intertwined and overgrown with briers, with here and there by way of variety a wild apple or crabapple tree, makes the journey a pleasant one. No fence is so picturesque to my eye as an old rail fence. They are associated with the memory of my boyhood days, when I vainly chased squirrels upon them, or played in the corners, and the days seemed brighter and longer than they do now, and no woods seems complete without its surrounding rail fence. Few country roads nowadays have the old time picturesqueness. One can hardly find one to expose a dry plate on without including in the view a row of telephone poles, or worse, a barbed wire fence.

The walk seems short—though it is a little more than a mile—when I reach the fork of the road where stands a moss-grown, vine-covered old house, the home of two elderly maiden sisters whose acquaintance I made on the occasion of my first visit, twelve years ago, when I stopped for a drink of water on my return from the woods. They call me "the city man," and are not surprised at seeing me when I stop now to inquire of their welfare, and, instead of water, I am welcome to a glass of cold, sweet milk or buttermilk, as I choose, by going to the spring house for it. It is as cozy a place to live as two such old ladies know how to make it, and one can readily imagine how much more pretty it may be earlier in the season, when the beds of flowers and vines of honeysuckle and hollyhocks are in full bloom. I wonder how many more times I shall greet them. They have both passed their sixtieth year, yet live alone and care for their little home better than most younger persons would. They are comfortably possessed of worldly goods, and in their simple, Christian life, with the aid of hired help when needed, keep the place as snug and trim as heart could wish. I am on such intimate terms now that I venture to banter them on their partnerless life, and with a good deal of old-time coquetry am assured that "they are fully able to take care of themselves a while yet," and I guess they are; but I hear there is a romance connected with their past, and I must find out what it is on my next visit. If they won't tell me, perhaps Uncle Lisha will. I wish them many more years of their simple, happy life.

It is here I turn from the road and cross a wide field to the woods that I know so well. Just inside I discover the new stump and fresh chips and brush pile of what last year was a noble oak tree, and looking further my eye is greeted by others, and I detect vacant spaces in every direction. The sound of a chopper's axe falls unpleasantly on my ears and a sense of gloom overtakes me. I feel as though I should not have my gun with me lest I do the chopper harm. I do not want to see the despoiler of my old friends, the trees, and I avoid his direction. I go on to the other side and reach my customary resting place. The old log against which I leaned my back the first time I came here and dozed into sleep while watching a hickory tree near by has flattened to a soft and spongy mound. I recline upon it now and retrospectively recall that beautiful September day as vividly as though it was yesterday. I do not know how long I had slept when a falling piece of bark struck my hat a sharp blow and awoke me. Overhead the hoarse *chirr-r-r* of a gray squirrel drew my attention, and

without thinking of my gun I sat quietly watching him. He sat on a branch close to the trunk, with his bushy tail curved over his back, cocking his head first to one side, then to the other, apparently listening for an answer. It soon came from a distance, and then I heard the patter of his approaching mate, who would advance a short distance and stop, but soon advance again, the one in the tree continuing to bark and *chir* while the other kept silent, but advanced cautiously until, with a bound almost directly over me, it struck the tree 6ft. from the ground and scampered upward. I reached carefully for my gun and placed it to my shoulder without rising, and almost lying on my back awaited an opportunity to shoot. I watched them come together and could have killed them both with one shot then, but they seemed so happy in their meeting that I relented and continued to watch their actions. Like two playful puppies they gamboled about each other, first one chasing, then the other, up to the top of the tree and then down, until they seemed to tire of their sport and crouched on the limb, facing each other not more than a foot apart. Now was my time, but the gun was carefully laid on the ground and they were safe. I know that I could not have boasted with a good conscience of killing two such pretty creatures so easily. It would seem like potting chickens in a barnyard. I lay quiet a while longer, but they did not seem inclined to move, and I got up and walked away. As I arose, watching them, they seemed surprised, but flattened out on the limb so closely that I could hardly see them.

I cross a field to another and larger woods, and tramp over the old route until late in the day, and see but little change since my last visit. The chopper has not been here. May he never come.

Walking along the edge of the woods, I hear a clatter in the leaves and see a mother quail struggle frantically along the ground, apparently wing-broken, and making desperate efforts to escape; but I know her trick, and watch her little brood glide under the leaves so rapidly and silently that it requires a quick eye to detect them, and then the mother rises like a flash, and is out of sight in a second. I have marked one of her darlings under a big leaf and gently pick it up. I stroke its pretty brown coat and it makes no effort to escape from my hand. I almost wonder how any one could be so heartless as to shoot anything so pretty, while I gloat over the prospect of a day in pursuit of them with my dog two months hence. How inconsistent is human nature. I put it down and watch it glide away and hide again, and am careful to avoid stepping where others may have hidden.

I turn now to go to the station, for it is getting late, and I want to reach there in good time. As I go down the hollow a ruffed grouse booms out from beneath an old log, and instinctively my gun comes to my shoulder, but I do not shoot. If it were a month later I would try very hard to get you, old fellow, though it is doubtful if I could the way you go, and there are so many trees in line of sight when my gun comes to my shoulder that you seem safe enough. I have no sympathy for a ruffed grouse. They are too tantalizing, and give me no show.

I strike the road above the fork and quicken my pace. I pass the home of the maiden ladies and receive a pleasant nod; the old bridge re-echoes my footsteps, and Uncle Lisha inquires of my luck.

I reach home refreshed and satisfied. The day has been beautiful, and the visit furnishes food for retrospection.

I shall go again next year perhaps before squirrel season opens, and I will make some shots, but they will be snap shots with the camera; the gun will remain at home, and I will have game that will never become stale—"Uncle Lisha's Shop," the old bridge and the maiden ladies' home.

About the squirrels? Oh, I didn't see any. J. H. B.

Natural History.

CURIOUS RATTLESNAKE POISONING.

A LOWELL, Mass., correspondent sent us a newspaper cutting the other day, remarking, "I see almost every week accounts of persons killing rattlesnakes for the skins and oil, but nothing of this kind It looks to me as though the snakes must have been through dogwood, ivy, or something of the kind." The report related that Mr. Louis B. Bailey, of San Mateo, Fla., had shot a rattlesnake and cut its rattles off. Not long afterward his face and hands began to swell, became inflamed and were very painful. The symptoms were in some respects like those of poisoning with ivy. After a time the pain ceased, the swelling went down, and the occurrence was almost forgotten. More recently Mr. Bailey shot a rattlesnake, which, however, he did not touch with his hands, but on the day following his face and wrists were again badly swollen.

We forwarded the report to Dr. De Witt Webb, of St. Augustine, who in turn communicated with Mr. Bailey and wrote: "I send you a letter from Mr. Bailey. He is known as a perfectly reliable man, and so it would seem as if there were some people who were so susceptible to the poison that they might be affected even by a dead snake, although it has generally been held impossible. In the cases referred to by Mr. Bailey it does not appear that there could have been any spitting of the snake, as sometimes happens. I was told last night of a case of a boy who cut off the rattles of a snake and suffered from it. Otherwise I never heard of anything like it.

"I will see Dr. Vedder, who knows more about rattlers than any man in Florida, I guess; who feeds them, so to speak, out of hand, as when those he keeps in captivity refuse to eat he takes them out of their cages, and holding them by the neck, gently stuffs the food down their throats. He has been twice bitten during this pleasing employment, but both times without serious injury, as he ligated the limb and bled out the wound at once."

Mr. Bailey writes: "The first snake killed was in March, 1896 It was about 7ft. long and had thirteen rattles. I handled it only enough to cut the rattles off, put them in my pocket and started home. At the time I experienced a little nausea. The following day my left eye was entirely closed, my right hand swollen, and there was a little eruption on both wrists. I was treated by Dr. D Eaton, of Palatka, and recovered in about five days from the effects of this poisoning.

"Again in August I came across another rattler, and having a short-handled axe in my hand, I struck and cut it in two parts As I struck the snake hissed and rattled. Within fifteen minutes afterward my left eye was swollen, also my cheek. My hands and wrists troubled me exceedingly with itching and stinging sensations, and were swollen as before.

"It is believed by some people that the poison was from the breath of the snake, and as I was perspiring very freely at the time it may account for the quicker absorption of the poison than before."

There is a belief among some persons that, in addition to the venom ejected by the rattlesnake through its fangs, these animals have the power to throw off a "dust" which is poisonous and affects people in their neighborhood. It is well known that at times snakes exhale a strong odor, to which some people are much more sensible than others. We know a person who is able to smell a rattlesnake if it is near him, and has often detected the presence of the reptile in this way. The whole subject is an odd one and worth investigation.

Robins Wintering in New Jersey.

SOME of your correspondents seem to think it strange that song birds should appear in this north latitude (40:30) at this season of the year. On Feb. 3 a song sparrow was seen and heard, while not 100yds. distant a robin was seemingly answering. On the 5th inst. in the woods south of Metuchen a downy woodpecker was seen circling the trunk of an old apple tree, while on top of a nearby white oak a bluejay was chattering away. There was an 8in. covering of snow upon the ground at the time.

Thousands of robins winter in the cedars and tangled underbrush adjoining the fresh-water lakes on Sandy Hook, and on warm days they can be seen flying in every direction, seeking a change in their menu of cedar berries.

Probably but few of your readers are aware of the existence of the fresh-water lakes on Sandy Hook. I inclose a view of Round Pond. These lakes extend north and south nearly two miles. The ocean surf breaks on the shore an eighth of a mile to the eastward, while Sandy Hook Bay is only a few hundred yards to the west. Many wild ducks seek the shelter of these lakes during storms, while thousands of song birds find sufficient food and good shelter in the dense mass of weeds that line the shores. WILD HONEY

MILHURST, N. J.—I saw four bluebirds here a few days ago. L.

White Coons.

Editor Forest and Stream:

Last September, while at Rosenbaum's Lake in the early morning watching for turkeys, I saw out on the dry bed of the lake a white object, which at first I thought a white crane sitting down with its neck stretched out. But after advancing nearer, and the sun just coming up, I discovered that it was a large white coon.

On returning, after running into a flock of nice turkeys and procuring a fine young gobbler, I met a local hunter, Andrew DAVIS, and told him the white coon story. He and a neighbor went the next morning to the place designated, and saw the white coon and another one with it. They watched until they got through feeding and went into their den, which was a large cypress tree near by. Then the men cut into the tree and captured both coons The creatures are as white as snow, all except the edges of their eyelids, which look as if wrapped with red flannel. C. R. SCHAER.

Woodpeckers and Bluebirds in Maryland.

ELLICOTT CITY, Md., Feb. 1.—*Editor Forest and Stream:* As a matter of interest to bird lovers is that a redheaded woodpecker has wintered in and about my house, making its headquarters in one or both of two holes or nests from which several broods of these woodpeckers have been hatched. Jan. 7 I noted the first bluebird, and as Pat would say, "That was a pair;" Jan. 10 two pair, and Jan. 20 three pair in a field somewhat remote from where I saw two pair ten days previous.

If I am not mistaken this is about the earliest date I have ever reported, and would seem that my "arrivals" may have been, like my woodpecker, "stay-overs."

SAMUEL J. FORT, M.D.

Birds in the Northwest.

LATONA, Wash., Jan. 22.—Have noted the following birds as wintering here: Robin, golden woodpecker, sapsucker, blackcaps, meadow lark, purple grackle, Canada jay, bluejay, crow, raven, several small birds of the chickadee family and the water ousel.

Grouse are very plentiful, both the ruffed and the blue varieties. Deer, bears and other large game holds its own and probably always will in these woods.

Yacht clubs on the Sound are looking forward to some interesting events for the coming racing season.

EL COMANCHO

A Horned Doe.

DR. J. D. USHER writes from Louisiana: "I read with interest the articles in regard to hornless stags. Did any of your people ever see a deer doe with horns? There was one killed near here a few years since which had horns with twenty-one points. The party who killed it was an old hunter and a reliable man"

There used to be in the FOREST AND STREAM office a doe's head with horns.

Camp-Fire Flickerings.

"That reminds me."

A Mountain Bear Hunt.

ONE morning when farmer Avery went to feed his hogs he found that a bear had broken into the sty during the night and scared out the pigs. Hastily apprising some of his neighbors of the fact, a company of seven were soon ready to go in pursuit of bruin, whose tracks led them to a deep cañon, down which they sent the dogs. The hunters then divided and went down the hillside on either side of the gulch.

Finally the dogs began a terrible fuss and the boys thought they had found found the bear, when their courage, which had been slowly ebbing as the hunt progressed, left them altogether, and every man made for a tree. "Long Hungry" Wilson, one of the braves, fastened on to the first tree he ran against (a 10ft. pine), and yelled to the others, "Climb a tree like me, boys," when the poor, scared fellow had merely thrown his arms around the tree and sat down on the ground!

And it wasn't a bear, either—just a little family row among the dogs. WALROD.

CALIFORNIA.

Game Bag and Gun.

A WINTER CAMP ON WADLEIGH BROOK.

[*Concluded.*]

Part III.—Bringing In the Game.

DEC. 5 was our last day in camp. We got an early start and went up the brook four miles to the spot where the buck killed near the upper dam (which was the fourth on the brook) was cached. Hoisington and Du Bois took the job of dragging him to camp on the ice, and Dr. Wright and I set out across country for our buck.

The night before we had come out on the brook two miles below this point, but snow had fallen since then and made it impossible to retrace our trail. It seemed like a hopeless task to try to find the deer miles back in a country full of hummocks—meaningless ridges—and absolutely devoid of any striking natural features to serve as landmarks, but neither of us would give up while there was a ghost of a chance of success.

Laying our course by instinct, we struck off in a northeasterly direction through a part of the burnt lands of which neither of us had any previous knowledge.

The general character of the burnt lands was the same here as elsewhere. The ground was broken into low, parallel ridges running for the most part northeast and southwest. These ridges are almost devoid of soil, and the slaty understratum is frequently exposed, its covering of bennes having been consumed by fire. Narrow strips of lowland between the broader ridges are frequently swampy and wet, and here the forest has escaped the fate that was its lot elsewhere. These belts of green timber furnish a retreat for scattering deer and moose during the day, though probably the larger portion of game at this time was in the main body of forest surrounding the burnt area.

Game trails invariably run along the ridges in the prevailing northeast and southwest directions, and the walking is, of course, easiest on these trails. Everywhere are fallen trees, but these are mostly branchless stubs and lie flat on the ground, making the traveling easier than it would otherwise be. As a general thing these trees have fallen parallel with the course of the ridges, which no doubt accounts for the uniform direction of the game trails.

A three-mile tramp brought us about noon to a spot that seemed familiar. The country had assumed a rougher and more irregular character, and the ridges had lost their uniformity and were disjointed and peaky. We stopped for a moment in a little hollow where the snow was deeper than was the rule on the open ridges, and a depression that the recent storm had failed to quite obliterate attracted our attention. Dr. Wright kicked the snow with his foot, and there under its white covering we saw a few crimson spots of blood, proving that the deer had passed that way.

A short distance beyond we crossed a little ridge, and there sure enough was the buck hanging up against a birch tree just as we had left him. It was like finding a needle in a hay stack to go to that deer, and we felt rather proud of our achievement.

The buck measured 8ft. 4in. as he hung, and he was very fat. We estimated that he would dress 220lbs., and probably we were well within the limit. He had a very pretty set of antlers with a spread of 18in.

It was dinner time when we reached the buck and we were hungry. Accordingly, Dr. Wright broiled sections of the buck's liver, while I skinned out the head and fore quarters.

Afterward I shouldered the hams, which, together with the skin, weighed 67lbs., and the doctor took the head, axe and my rifle, which was the only one we had along, and we set out for camp, six miles away by the shortest course we could take.

Caribou Curiosity.

Two miles from the spot where we killed the buck we came out on the isolated bog which lies northwest of the burnt mountain. We walked through this in a southwesterly direction to take advantage of the smoother traveling afforded, and when near the end of the bog spied two caribou forty or fifty rods away.

In a jiffy we had dropped our loads, and just about then the caribou sighted us and ran up a little nearer to investigate. We had their wind, and feeling confident that they would give us a better chance for a shot, waited, crouching down behind some low bushes, the only cover that offerred.

The doctor wore a red toboggan cap, which seemed to interest the caribou immensely. They trotted first to one side and then to the other to try and get a good view of this. Red caps evidently were a novelty in the burnt lands. The cap had not been intended to decoy caribou, but had rather been taken along to neutralize the effect of a leather hunting coat which was a good deal the color of a deer. Hunters are sometimes mistaken for game by their companions, with distressing results, so the doctor adopted the precaution of wearing the cap as a distinguishing feature, warning us not to shoot at "red-headed deer."

The caribou ran up within easy shooting distance, and at 80yds. I let drive at the biggest one, who immediately wheeled and ran. I rose to my feet and fired twice more, and at the last shot the caribou went down in a heap. All three shots had taken effect, but all had gone low, and when we examined the animal we found the only way I had gotten him was by actually shooting his legs off.

Subsequent tests proved that at 100yds. my rifle shot about 5in. low. I am ashamed to acknowledge this fact, but it is only justice to the gun to do so. Up to 100yds. the rifle would hit an animal the size of a deer, though not in any necessarily vital spot, but beyond that distance the error was so magnified that it was not possible to score. This fact explained two misses that had bothered me a good deal—one at a fox at 100yds. and the other at a deer at about 200yds.

At 40yds. the error was comparatively trifling, and this was the distance at which I killed the buck mentioned earlier in the narrative.

Of course, no hunter should go into the woods with an improperly sighted rifle, and excuses do not count for much.

It had taken me a month to get the sight I wanted on the gun, and not till an hour before leaving for the woods was the job completed.

It was understood that the rifle needed testing, and so no blame attaches to anyone else.

Arrived in the woods, it was found that most of our ammunition had gone astray with some lost baggage, and so the two .30-30 men had to share. This left so few rounds to the individual that I decided to rely on a comparison with the other rifle, which had been carefully sighted at various ranges; consequently the error.

With a bearing on the ranges at which game is killed in the woods, it is worth noting that in three out of five cases animals were hit and secured, shot with a rifle whose range for all practical purposes was limited to 100yds.

The caribou which I had killed was a large bull, but unfortunately his antlers had already been dropped.

Apparently he had but just lost them, as the scars on his head were fresh. The second caribou remained near the first after he had fallen, and at one time I was within 30yds. of it and could easily have killed it. By the time Dr. Wright reached the spot, however, he had gone.

Moose and Caribou Sign.

On our way back to camp we ran across a number of fresh moose tracks, including some very large ones. This was the third occasion that day when we had seen fresh moose tracks, and all were in or on the edge of green timber. One large track had passed near the spot where the first buck was cached.

Soon after striking the trail left by Du Bois and Hoisington when dragging their game down Wadleigh Brook on the snow-covered ice, we noted the tracks of two caribou which had come along more recently. These caribou had sniffed the depression left by the body of the deer, and with singular hardihood followed the trail down the brook. For a mile or more as we followed we saw where they had treaded its every turning, influenced no doubt by a morbid curiosity, but just before camp was reached they had turned aside and gone into the woods.

Later we learned that another band of caribou, numbering three or four, had crossed the road earlier in the day a hundred yards below the camp. There was no question then that caribou were present in numbers.

We left Trout Brook Farm for the outer world the following day, slipping along at a rapid pace over 6in. of newfallen snow. Though late in the season and time for them to be going into winter quarters, the deer were still moving about a great deal, and we were never long out of sight of fresh tracks.

Once while going down a hill, with the horses trotting for all they were worth to keep ahead of the coasting sled, we ran right into a herd of a deer, which scattered in all directions. A large doe stood within a few rods of the road, in plain sight as we passed, and she waited until Brown had pulled up the horses and some of the party drawn out their rifles and loaded. Then she wisely concluded she had seen enough, and made tracks after the others.

At Trout Brook Farm we said good-by to Jock and Natey, and also to Du Bois, who stayed behind a few days longer in hopes of getting a moose. In company with Natey he went over to Sebois Grand Lake, but the lumbering operations in that neighborhood had temporarily driven out all the moose and he came home without accomplishing his object. It was during this expedition, however, that he secured the odd burl that is illustrated.

A Remarkable Burl.

This burl grew on a cedar tree near Carry Brook, at the upper end of Sebois Grand Lake. It measures about 1ft. in diameter, and with the thin section of tree that accompanies it weighs 12lbs. Its chief peculiarity consists in its form, which resembles a product of the mineral kingdom rather than the vegetable, being distinctly crystalline. There are in all nineteen points clustered in concentric circles of six and twelve about a central point, suggesting in a general way a quartz crystal.

The points themselves seem to be largely composed of bark, and a knife can be pushed down a considerable part

A REMARKABLE BURL.

of their thickness without encountering much resistance. An interesting characteristic is the parallel ridges running around the points, which appear to be annular rings, and which would undoubtedly be pronounced such were it not for the fact that the annular rings have not heretofore been found in the bark of trees. None of the Maine lumbermen had ever seen anything like it, and this remarkable burl promises to prove interesting to scientists.

News.

On our way out we met Mr. D. M. Burley, of Newburyport, Mass., and B. F. Shattuck, of West Newton, Mass., going in on a hunting trip. When we saw them they were undecided whether to go to Sourdnahunk Lake or camp on Wadleigh Brook, but decided later to choose the latter. Under date of Jan. 11 Jock Darling writes regarding their movements and also mentions some woods news of interest. He says:

"The Burley party went to Wadleigh Brook and camped by the old camp near the burnt land. I stopped with them one night. I took a big bull moose track near the burnt mountain and followed it across the brook in sight of their tents. Their party saw several moose tracks that day in the eastern part of the burnt lands, but no one met with success. That night it snowed and the next morning I went back to Trout Brook. The Burley party did not get any moose, but got deer and caribou. I saw ten caribou run across the road in front of me. I shot once and my gun refused to work until they were out of sight.

"A large moose was killed near Dudley's camp below the lake (Sourdnahunk) a few days after you left, by a sport. He went in by way of Norcross, and followed the lakes and river up to Dudley's camp, and afterward came out by way of Patten. Mr. Dow and wife came out from Sourdnahunk with four deer and a moose. Mrs. Dow claimed the moose. Mr. Finch brought out a good moose head a few days after you left."

Mr. Finch, mentioned in Jock's letter, is the lumberman at whose camp on Webster Brook we stopped over night

SOME SOURDNAHUNK GAME.

on our way back from Sourdnahunk Lake. Mr. and Mrs. Dow were camped at Sourdnahunk Lake at the time of our visit there, and we had the pleasure of calling on them at their comfortable quarters in Dudley's old camp on Caribou Cove. The sportsman mentioned by Jock as having killed a large moose was Mr. W. B. Cabot, of Brookline, Mass., who, with his friend H. E. Janes, of New Rochelle, N. Y., dropped in at the FOREST AND STREAM office one day in the latter part of December.

Mr. Janes is also a successful moose hunter, and the graphic account of his scrap with a Milnocket moose, published in January, 1895, will be remembered by all who read it.

Mr. Cabot went in from Norcross early in December. He walked up North Twin and Pemadumcook lakes on the ice as far as the Ambejegis Carry to Milnocket, and then took the land following the old Sourdnahunk road. The first night he stopped with Chas. Hale, who has fitted up an old lumber camp near the carry. The next day he walked eighteen miles to Irving Hunt's camp, at the mouth of Sourdnahunk Stream, and the third day twelve more to Kimball's camp (Dudley & Currins) on the stream five miles below the lake. The traveling was good the entire distance. Most of his hunting was done from Kimball's camp, and his moose was killed on one of the foothills of Katahdin at a considerable elevation. This moose was a big fellow, and showed fight after being wounded. No doubt we shall have the story from Mr. Cabot himself.

Some Sourdnahunk Game.

Mr. John Jackman, who is an exceedingly good professional photographer, and also express agent at Patten, sends me the photograph of game which is reproduced herewith. This game—two moose, one caribou and two deer—was killed by the McLains in the neighborhood of their camp at Sourdnahunk Lake. The moose were killed two hours' walk from camp. Three were found in company, all bulls. Of the two killed the largest stood 6ft. 4in. to the top of the shoulder, and dressed a good 800lbs. This one had, however, the smaller antlers, the spread being but 47in. The other moose had a spread of 55in. by Mr. Jackman's measurement, and one palm was 29in. long. These moose have already been referred to in a previous article. Both were unusually fine specimens, and would hardly bear out the statement that Maine moose are degenerating. Including the bulls bagged by Mrs. Dow and Mr. Cabot, ten moose were killed in the immediate neighborhood of Sourdnahunk Lake during the hunting season just past.

A Book by Jock Darling.

When anyone inquires who is the best posted man on game and hunting in the State of Maine, the chances are that he will be told Jock Darling. For half a century Jock has been hunting and laying up a stock of knowledge concerning things of interest to all who love the woods that would be impossible to duplicate. Now he has determined to put down some of these things in a book, and it is safe to say that this book will be a valuable contribution to sportsmen's literature. It will also be good reading, for Jock never talks unless he has something to tell, and he has the ability to make what he writes interesting. The book will be something in the nature of an autobiography, but its keynote will be the art of woodcraft, and its foundation the life of the wild woods.

Roughing It.

In New York, as I write these lines, the thermometer stands at perhaps 12° above zero. Last night it went down to 5° above, which is the lowest temperature recorded for the winter. Every one is shivering and asking if it is cold enough to suit the other fellow, and no one is happy except the coal dealers. The newspapers devote columns of space to telling about the cold wave, and harrowing stories are printed of the sufferings of individuals exposed to the hyperborean blasts.

All this sounds well enough for people who live in New York, but 5° above is a long way from freezing the mercury, and is not very sensational when compared with the cold in the Pine Tree State.

On the 23d of November the thermometer registered 20° below zero at Sebois House, in Penobscot county, Maine, at 8 A. M. The day before McLain, Sr., had gone from his camp on Sourdnahunk Lake down to the dam in his canoe, but that night the lake, which is four miles long, froze over, and the next morning Mr. Goodwin walked the same distance on the ice. Hunters coming down Pemadumcook Lake in canoes were frozen in and had to go ashore on the ice, and one of the steamers on that lake was caught and icebound in a few hours' time.

From Nov. 23 to Dec. 5 we had a great deal of zero weather. Once at our camp on Wadleigh Brook the thermometer dropped to 22° below, and on another occasion to 18° below. The brook is a rapid trout stream, but it froze in places to the bottom, and one could walk its whole length on the ice. Sometimes the water running over the top of previously formed ice constructed artificial icebound channels for itself, and on Thissel Brook we walked on old ice a foot or more below the surface of the running stream.

Yet despite the cold we suffered no hardship in camp, and it was no uncommon thing to see the man who feared the cold most before starting come in glowing from a tramp in the cold air, and standing in the open front of the tent divest himself of the last stitch to put on dry underwear for the night. At night we put on all our surplus clothes to sleep in, reserving something especially warm to wrap our heads in, and nobody ever complained of the cold except the men who slept on the ends. When morning came and the rebuilt camp-fire warmed things up again with its cheerful glow, we would pile out, and sitting on the edge of the bed undress for breakfast, thus reversing the usual order of things.

It was a happy life and a healthy one; and there is not one of the party who does not feel physically benefited by the experience.

In all we killed five deer and two caribou. The caribou were both bulls and the majority of the deer were bucks. Each member of the party individually had secured his own game and was satisfied. J. B. BURNHAM.

QUEBEC HUNTING LEASES.

QUEBEC, February.—*Editor Forest and Stream:* I have read with great interest your editorial of Jan. 30 last respecting hunting in the Province of Quebec and the privileges which strangers may acquire therein.

AS FOREST AND STREAM stands in the first rank among American sporting papers and as those who wish to obtain fishing and hunting territories in our country apply to you for information, I consider your opinion of great value. I therefore take the liberty of correcting a mistake in your article of Jan 30 under the heading of 'Snap Shots." This mistake, due perhaps to want of clearness in the explanations I gave you when I had the pleasure of seeing you in New York, bears upon an inaccurate interpretation of our game and fishery laws. In that article you say: The non-resident license being abolished, etc.

This statement is exact only in part. Persons who, under the law permitting the Government to divide up the wild lands of our Province into hunting territories, lease a lot of 20, 50, 100 or 400 square miles, will be complete masters of their territory. They will, throughout the whole extent of the lots or sections so leased, have the exclusive right of hunting, and may invite their friends to go and hunt on their lots or sections without having to pay any other yearly sum than that exacted from them on the signing of the lease.

However, I must add that non-residents who have not leased a hunting territory, and who wish to hunt on Crown lands not under lease, will have to pay a license as in the past, the value of which is not fixed by law, but will be determined by the Lieutenant-Governor in Council.

In other words, Mr. Editor, if any person, whether he be a resident or a non-resident, leases a hunting territory in our Province, he will have the exclusive right to hunt throughout the duration of his lease. He will be at home for all hunting purposes, and may invite whomsoever he pleases to share his pleasure or his trade, without having to pay any other sum than the amount of his rent, and without his friends, partners or employees having to obtain a license.

This applies to fishing as well as to hunting. The same laws apply to clubs. All the members of such an association owning hunting territories, whether they be residents or non residents, will have the right to hunt on the club's hunting territory without the club or any of its members having to spend any other money than that required for the yearly rent.

Of course, and I take the liberty of repeating it, every non-resident who has not leased a territory, and who has no invitation to hunt on a leased territory, will have to obtain a permit, as required by law.

I hope I have expressed myself with sufficient clearness.

I am convinced that American sportsmen will take advantage of the opportunities offered them by the new game law, and will hasten to secure lots and sections so well adapted for the pleasure of hunting and for obtaining furs.

Applications are already coming in from all sides. Several hundreds of miles have already been leased to your fellow countrymen. We would be happy to see American sportsmen participate in the movement. We know and admire their aptitudes for hunting and fishing. We know their wonderful spirit of enterprise and the jealous care they exercise in the protection of fish and game.

Thus, as I said in Boston at the Megantic Club dinner, where I had the honor of representing the Minister of Lands, Forests and Fisheries, there are no more desirable tenants for us than American sportsmen. Our population, to whose

prosperity they so largely contribute, will give them a hearty welcome; and I am happy to be able to state again here that the Government of the Province of Quebec will grant them every facility and afford them every protection.

L. Z. Joncas,
Supt. Fisheries and Game, Province of Quebec.

FLORIDA GAME AND FISH.

Anthony, Fla.—The lands of Marion and adjoining counties afford as fine partridge or quail hunting as any that exist. Travelers new to the country are often surprised to see a covey run away from the road on the approach of a vehicle.

Ducks are in fair quantity, though not abundant.

Several small droves of wild geese have been reported in the small ponds in the "flat-woods," a few miles east of this place. S.

Gulf Hammock House, Levy County, Fla., Feb. 3.—The hunting and fishing in this section are now at their best. Yesterday two parties started from here on a hunting trip. No less than eleven deer were seen, and numerous wild turkeys. Anyone who knows how to hunt this wily game is sure of good sport. The regular hunters only go out when meat is wanted for the table or for local consumption, as the law recently passed prohibits market shipments beyond the county limits—a law that has had the best effect in preserving the game. Quail are so numerous as to be regarded as scarcely game birds.

After the severe weather the fish are ravenous. Two persons left the hotel on a fishing trip and came back with twenty-eight sheepshead, averaging 2lbs. apiece and some running as high as 4½lbs. In addition to these ten or twelve black bass were caught from 1½ to 5lbs. in weight.

No alligators have been killed during the last few days, but a day or two of warm weather will assuredly bring them out on the banks. The North Carolina wood duck has made its appearance, and several good bags of this beautiful fowl have been obtained. Gray ducks and mallards are thick, and the teal are just beginning to come in. Redfish and weakfish are abundant and are in splendid condition.

The big backs of the tarpon have been seen in the river, a sure sign that this king of fish will be here shortly in large numbers. Altogether the sporting outlook was never better than at present. C. B. Wingate.

Sarasota, Fla., Jan. 30.—Mr. C. B. Tyler, of Rhode Island, left the Hotel De Soto Tuesday, Jan. 26, drove twelve miles, camped out all night, and shot on Wednesday seven wild turkeys. One gobbler weighed 25lbs., the rest averaged 12lbs. each. Mr. Tyler also shot twenty-two quail and eleven jacksnipe, and returned Thursday at 4:30 P. M.

A good day out fishing was also done by Mr. C. H Atwood, of Rhode Island. He left the hotel at 8:30 Wednesday and sailed to the new pass, three miles distant, and caught one channel bass, 14½lbs.; four bluefish, average 3lbs. each; two redfish, 12lbs. each, and with rod and reel captured a shark that measured 7½ft. and weighed 232lbs. It took Mr. Atwood two hours to land the shark.

The weather is somewhat cold, but prospects are warmer. Geo. H. Mackie.

THE MAINE GUIDE LICENSE.

Boston, Feb. 6.—Fish and Game Commissioner Carlton's guide license bill now promises to pass both House and Senate at Augusta, Me., almost without opposition. The hearing on the matter came off on Tuesday, according to announcement, and though the railroads generally offered half fares, the guides did not turn out. But the people turned out and filled the hall, even to the galleries. The Rangeley guides, who all along have been reported much opposed to the measure, were scarcely represented at all at the hearing. Capt. Fred. C. Barker, the well-known proprietor of the Bemis and Birches camps, was there, but did not oppose the measure, though scarcely believing in it. Moosehead guides were represented by counsel, but made no showing of opposition to the measure. The guides' side of the matter went by neglect, in fact. Commissioner Carlton earnestly advocated his bill before the Committee on Fisheries and Game, involving the whole matter in the general cause of fish and game protection and its value to the State. He was followed by George D. Bisbee, who has so many times been a successful advocate of the cause of fish and game protection before the courts of that State. He dwelt at length upon the value of fish and game to the State, though not a sportsman himself. He was followed by others, each advocating the guide license measure and the appropriation of $40,000 per annum for two years for the carrying on of the work of the Commissioners. At the close of the hearing the committee reported the guide license measure with but one dissenting vote, that of the chairman from Rangeley, and the appropriation of $40,000. The next day the measure came up in the House and came very near to being rushed through that day. But a representative, from Rangeley I believe, asked for delay to allow consideration, suggesting that so good a measure could afford to wait a while. On his motion the matter was laid on the table.

Commissioner Carlton is greatly in earnest about the measure; thoroughly believes in it, evidently. So kindly is the feeling toward fish and game matters in the present Maine Legislature it is probable that almost any bill the Commission might ask for would be granted. The appropriation of $40,000 will be made, without a doubt, though it is only a few years ago when E. M. Stillwell and Henry O. Stanley were sat down upon for asking an appropriation of $10,000 when they were receiving but $7,000, and working without salary. Commissioner Stanley also thoroughly believes in the measure. He says it is the best move that has ever been made in fish and game legislation, and that with the $40,000 a year appropriation fish and game protection and propagation will be in grand shape in Maine. The other members of the Commission are much pleased with Commissioner Carlton and his energy.

Commissioner Stanley writes me that I am mistaken about ice fishing on Lake Auburn; that none has been allowed for years. But I have a complaint very direct from that locality that pickerel were being taken, and that if a salmon or trout "came along" it was received without informing either the commissioners or wardens. He also says that ice fishing has been stopped on the Winthrop ponds, except on Annabessecook.

Well, let the Maine Commissioners have the guide license measure if they so greatly desire it. If licensing guides will make them refuse to countenance summer shooting, then license them by all means. But will the making out of returns to the Commissioners—returns of the game shot and fish caught—show where the law has been broken? If a guide has suffered or encouraged a moose to be shot in close time, will it appear so on his returns? Will the real names and residences of the parties guided always appear in these returns? Honestly, will not the new law work this way: We who have been into the Maine woods for years, own camps there and never allow guns to be taken into the woods in close time, not even by our guests, will be subject to all the nuisance of being noted and returned? But will not the Bill Joneses, John Smiths and other aliases go down there the same as ever? Who does the illegal shooting in Maine? Do the regular visitors there, who are as much interested in the fish and game as the Commissioners themselves, shoot out of season? From the Boston end I know that the illegal shooting is done by the men who go down there under assumed titles, and who care nothing whatever for Maine or her game further than to kill a deer or moose to brag about at home.

One power the Commission has, or could have by asking the State for it, and the wonder to me is that so much of a power has never been taken possession of: Make a law forbidding the having in possession of guns and rifles in the game country in close time. Forbid, by law, the carrying of firearms into the woods in close time. The Maine Central Railway and the American Express Co. would undoubtedly refuse to transport guns in close time if enjoined to do so by the Legislature. Would not such a law be more likely to stop summer shooting than the mere making of guides take out a license at a cost of $1, wearing a badge and making out returns? Can game be killed without guns?

Special.

CHICAGO AND THE WEST.

Game Law Matters in the West.

Chicago, Ill., Feb. 6.—Rumors have gone out from the neighborhood of the Tolleston Club, where the sensational shooting affair took place, reported in Forest and Stream two weeks ago, that the Tolleston Club was about to give up the idea of holding its preserve any longer, as the opposition was becoming too strong There is absolutely no basis for any such rumor, as the club will do nothing of the sort, but will continue to hold its own and no more, as has been its custom in the past. A secret meeting of the Tolleston Club, some thirty members present, was held at the Sherman House, Chicago, this week, during which this and allied matters were discussed, and a statement of the condition of the wounded men was made to the members. There has not been, and will not be, any weakening on the part of the Tolleston men, who feel that they were invaded by lawless men determined upon trouble. The course of the courts will settle all the mooted questions pertaining to the affair. All the wounded men are reported doing as well as possible.

Mr. F. A. Howe, long time president of the Tolleston Club and always interested in its welfare, writes to this office and expresses the thanks of himself and other club members for "the precise story printed in Forest and Stream" about his shooting affray. He says: "I have read every line carefully, and note that you have only represented facts as they exist. This is all that we or the public should care for."

Illinois County Warden Bill.

There has been introduced into the Legislature of this State a game law measure known as the Game Warden Bill, this being quite aside from the general game law bill, which has also been introduced both in the House and in the Senate. The framers of this joint movement to improve the game laws of the State are Messrs. Baird and Bortree, of the National Association. The main feature of the first-named measure is the attempt to raise a protection fund by means of a system of county licenses. It is the purpose to levy a county license of $2 for each non-resident shooter, a man not needing any license to shoot in his own county. It would seem that the framers of the bill have for the time abandoned the notion of taxing the gun, and have taken ground just this side of that position, the gun license across the line from one's home county meaning practically the same thing as a gun tax. By means of this county license the believers in the bill think a fund can be raised which shall support a warden in each county. The latter may arrest without warrant when he detects violation of the law. Such wardens shall receive no salary (here again is departure from the salaried warden idea which lately obtained along with the gun tax project), but "shall receive fines, proceeds from the sale of game and money derived from licenses to hunt." The distribution of the latter moneys is made by the State Treasurer, who handles the license fund for the payment of the wardens according to the population of the respective counties. All this shows the modern movement toward better game protection, though it is highly improbable that the Legislature will move along lines within 100 miles of this bill.

N. G., B. and F. P. A. Annual Meeting.

The annual meeting of the National Game, Bird and Fish Protective Association will be held at Kalamazoo, Mich., Wednesday next, Feb. 10, to take up further the work it has laid out in game law matters for this and other States. A preliminary meeting for some of the Chicago members was held at the office of the president, Mr M. R. Bortree, on Monday last, or rather was called for that date, but did not attain a quorum. It was called again for last Thursday. Nothing except plans for the work were taken up. At the annual meeting there will be discussion among those present in regard to the best way to improve the game laws of those States whose conditions and interests are closely allied, as, for instance, those of Illinois, Wisconsin and Minnesota. The Wisconsin law as now proposed will be criticised as faulty in many regards. Again the question of duck egg destruction will be taken up, this time with added zeal. Mr. Bortree has discovered in Mr. Omer Maris, an intelligent Illinois gentleman, who has recently returned from the Alaskan gold country of the Yukon, a fund of information upon matters in the far north. Mr. Maris says that the Esquimaux do gather and sell and export duck eggs in considerable quantities, and also have a pleasant fashion of killing nesting birds. They prepare large amounts of smoked goose breasts, and as it injures a goose to cut off and smoke this part of its anatomy the loss of life among the wildfowl is great. Mr. Maris says the Esquimaux are docile and obedient people, and are quick to respect the mandates of the white men, so he thinks they will stop selling eggs and smoked fowl when told not to do so The extent of the interest in shipping and selling eggs is not stated by Mr. Maris, but it appears from his story that the wild ducks have a hard row to hoe, as it were. Mr. Maris is the author of a very interesting series of letters, which appeared in the Chicago *Record*, descriptive of the gold country of the far Northwest.

The following are among other topics which will be taken up at the annual meeting of the Association.

1. Uniform game and fish laws for the United States and Alaska, which shall be divided into four sections, with a uniform open season in each section.
2. Uniform license, the best thing for game protection, as well as for farmers in general.
3. The best method for procuring and enforcing good game and fish laws.
4. Can a general game and fish law be enforced in Alaska, and in what way?
5. Has the time come when the sale of all game should be prohibited throughout the United States? If so, how can it best be accomplished?
6. What can be done to the women of America to discourage the practice of wearing the dead bodies of American song birds on their hats?

The above would seem to offer room for discussion enough to fill up a day or two without trouble. It is hardly likely that the Association will have time enough left to take much action toward attaining, securing or enforcing any of these measures, the executive phase of such matters being ordinarily, I am advised, in the National Association left to providential supervision. There is much reason in the main purposes of this Association, though it makes the common mistake of beginning at the top and not at the bottom of its undertaking—in Alaska instead of Indiana. We have heathen a-plenty near at home. Among those present at the meeting at Kalamazoo will be the able hustler James Fullerton of Minnesota; Wisconsin's live warden, Mr. Ellarson, and the successful State warden of Michigan, Chase S Osborn. These are practical workingmen, and may get down to the executive part of the business, which is the only part that amounts to anything in game protection or anything else.

Against South Water Street.

The game law proposed by the framers of the county warden act will, among other new clauses, have one cutting down the selling season for the Chicago game markets to Jan. 1, instead of Feb. 1, as it now stands. The attempt is to make a shooting and selling season beginning at September and closing at Jan. 1; thus cutting off all spring shooting, and establishing dates easily understood and of wide enough range to afford sport for all. Of course Illinois game will not be sold at all. The Jan. 1 date will of course be fought by South Water street, whose merchants have tried to get the date extended to March 1, and have also undertaken to have the market thrown open for the entire year. Out of all these conflicting interests we shall perhaps get a bill somewhat similar to the one we have now. The truth is that the Illinois game is not worth making much fuss about, as it has nearly all been marketed; but if the men of Chicago and of Illinois would really do themselves and the sportsmen of America some actual and practical good, let them fire the first gun in the Illinois fight in favor of the abolishment of the sale of game in the great Chicago markets. When they have stopped that absolutely, they have solved the question at a stroke. Anything short of such a prohibitory measure has the disadvantage of leaving loopholes for evasions of the law. It is well known that the dealers constantly violate the law during the closed season; but if they could not legally at any time of the year buy a head of game, they would have no stock on hand to dispose of surreptitiously.

Investigation along South Water street on Feb. 2 showed little game left exposed for sale (although the dealers have till Feb. 5 to dispose of game that shall be on hand). The closing date is apparently well observed this year. There have been enough convictions here in Chicago to make the dealers afraid to be open and bold in their illicit transactions. They are all well educated. But the expression "apparently well observed" no doubt fits the case closely. About next July we shall see waddling down from the steps of some of the swell clubs of the city certain sleek and well-fed looking individuals who will confidentially advise their friends that the "owls" were very good. The word "apparently" is well chosen. The man of South Water street carrieth not his heart upon his sleeve.

Ducks and Cold Weather.

The extreme cold which prevailed last week over the greater part of the North drove all lingering fowl far down into the South. It is of course understood that many of the ducks, especially the mallards, have no definite winter range, but work up as far North all through the winter season as the local conditions make possible for them. Thus the cold snap last week drove all such birds from those portions of Missouri and Arkansas which had not frozen up already. In Louisiana the flight of fowl since the cold spell is reported to have been very great. I should expect to hear of very heavy shooting on the Texas Gulf coast.

Louisiana duck hunters have adopted the practice of baiting the pond holes and other feeding grounds from which the natural feed has been killed out. Mr. Robert Saucier, of New Orleans, is reported to have found oats a very good artificial food for wild ducks. Rice, corn, etc., have been the foods customarily used in that locality, but Mr. Saucier found the crops of many birds killed by himself to contain the oats, which accordingly he took to be good feed.

Members of the New Orleans Duck Hunters' Club, whose grounds are at Rigolets, have also found it necessary nowadays to bait their feeding grounds, and by this means have recently made fair bags.

Big Prosecutions in St. Louis.

The following interesting information is in the Associated Press dispatches of this evening:

"St. Louis, Mo., Feb. 6.—Game Warden Henry has instructed ex-Judge Claiborne to apply for warrants against 750 game dealers and restaurant keepers in this city, who, it alleged, have violated the law by selling game during the close season.

"The managers of ten of the principal restaurants and dealers in game in the city have been selected to bear the brunt of the first prosecution. They will be brought into court to-morrow. A similar prosecution in Illinois recently cost one dealer $30,000."

The last statement of the above is seriously incorrect. Allusion is no doubt made to the once famous Kewaunee case, in which action was brought against H. Clay Merritt, of Kewaunee In the lower courts some decisions were rendered favorable to the sportsmen, but all such cases were appealed, and the cases have never been passed upon as yet by the upper courts. Attorney Ladd, of local connection with the cases, has now ceased to answer letters of inquiry

regarding these cases, and has no doubt grown weary of the work of prosecuting for nothing, the sportsmen behind the first cases having long since ceased to produce any funds. These cases were mishandled from the start, and thus the cause of game protect on much injured. In spite of the wrong manner in which they were brought, however, they might still have won had there been any united action upon them among the city sportsmen who secured the first seizures of the freezer game. The men who began the action had not funds enough or patience enough to carry on the work for fun, and therefore, so nearly as can be at this writing determined, the cases are now left to take care of themselves. This means that they will in all probability be dismissed in due time. That means again that the sportsmen of Illinois have lost that best chance they ever had to deal an effective blow at the cold storage interests in this State. This case if won by the sportsmen would have been a precedent of inestimable value in later litigation of similar nature. Warden Blow, Attorney Baird, Attorney Ladd and Mr. Bortree, who were interested in the beginning of the cases, seem to have been able to start the ball rolling, but not to keep up the motion to the end of the alley. It is only the end of the alley that counts when it comes to fighting the whole cold storage interests of this State. Let us hope the St. Louis cases will be prosecuted more vigorously and persistently than the Kewaunee cases, which did not result in the actual fining of the guilty party to the value of $1, although it resulted in much talk. In the ordinary game law case there is a blinding flash, a deafening report and a dense and heavy volume of smoke. But there isn't any leaden messenger of death sent crashing through any game dealer's business system. Would this might be elsewise.

E. Hough.

TRAINING ADIRONDACK DEER DOGS.

[We print the following letter, which has come to us from an Adirondacks writer, not because we consider that it pictures a particularly enticing form of "sport," but because we believe that it describes accurately the mode there employed for teaching dogs to work on deer. It is the midwinter making ready for the midsummer tragedy of dogs, lake, boat, deer and Deer-slayer with his rope.]

* * * Those pups have got to be trained to run deer this year, and there is just one way to do it, but fortunately that way has more sport to the hour than any kind of doings we know of. When the snow gets good and deep, say along in late January, just after the thaw, we strap on our snowshoes, half a dozen of us, and with one rifle in the party and a couple of likely pups we go off up-stream somewhere in one of the big swamps in which the deer are yarded. It don't take long to have a buck going; though it is better to start a doe, because they blat louder when the dogs get hold of them. Then the best shot in the party draws down on the started deer as soon as he can and bores a hole in its pouch or breaks a leg—anything, so that the beast will still be able to run away and bleed well.

The pups are then put on the trail, and we never saw a pup that couldn't follow such a one as that It's more fun to see two pups on a trail like that, and to hear their joyful, far-reaching bay, than it ever is in the fall, because the cold air some way gives the bellow a clearer tone, and the leaves of the trees, since there aren't any, do not obstruct the traveling of the sound at all. I like to lean up against a tree at such a time and listen to the sounds about me—the cracking of the trees, the swaying sigh of the branches, the *chic-a-dee-dee-dee* of the birds and the eager shouts of my companions as they flounder along the trail behind the dogs. Then comes the deer's last effort; you hear it plunging through the bushes, hear the crust crack beneath it, and at last comes the sound that tells of the end of the race—the deer's blatting when the dogs seize it—that's a sound to make a fellow's heart bound, I tell you. One never hears it in the fall running, because then the dogs cannot get in their fine work, and the deer do not cry out when in the water, even hit with an oar.

When the deer yard has a lot of the animals in, half a dozen races or so are had in a day—not long ones, but enough to give the dogs a taste of it. Another day like that and the pups will run the deer without their being wounded first—at least that is the experience of all the Adirondack woodsmen I know.

Of course it is against the law to run deer in the winter, but how can we train our dogs if we don't? A dog trained in the fall on bare ground isn't true, nor will it hold the trail till the deer goes to water. It is all right that we should do so, to our minds, because the city chaps kick a bare ground trained dog out of camp and get the cruster, and pay the owner well.

Lem Lawson.

Seaberry Settlement, N. Y.

Forest-Fire Lanes and Fires.

Philadelphia, Pa., Jan. 30.—*Editor Forest and Stream:* Apropos of the recent article in your paper upon a bill which had been introduced in the Legislature of New York providing for the cutting of lanes through the woods to prevent the spreading of forest fires, I can only say that, in my humble opinion, your views are, as usual, entirely correct. Aside from the difficulty of disposing of the trash and light stuff which such a cutting would be sure to leave upon the ground, aside from the difficulty of keeping such a swath free from second growth, aside from the unsightly character of such a blot upon the face of nature, the whole scheme would not only entail enormous expense, but would be worse than useless. The framer of that bill had evidently not seen fire run through green land, where the pines and spruces grow thick. I have.

Last spring—which was an especially dry one in the Provinces—I was fishing a branch of the Tusket River, in Nova Scotia. Late in the afternoon a fire—which some idiot had started with the intention of a "new burnt" for moose hunting in the autumn, and which had, I think, exceeded his wildest expectations—came roaring down through a tongue of heavy pine timber which extended from the edge of the barren ridge which ran parallel with the river almost to the water's edge. About 200yds. back from the river, on the opposite side and across a bog, the pine and spruce timber began again. As my guide and I were in no danger, being some distance above the fire, and fearing that we might get into trouble if we left the water, we stood and watched it. The sight was one of the grandest I have ever seen, and the roar of the flames was something appalling. As we stood gazing a cloud like, dun-colored mass of vapor, which we took to be smoke, but which I suppose was a volume of gas generated by the intense heat, went sailing away across the river, and just before it reached the tops of the pines on the other side of the water, between 200 and 300yds. away, burst into flame with a loud roar, and in less time than it takes to write it the fire was raging in the tops of the trees on the east side of the river.

Now where, I ask, is there any merit in the lane theory if, in case of fire, large bodies of gas can travel through the air, and, bursting into flame, can ignite timber standing hundreds of yards away? The idea may look very well on paper, but in practice I feel sure it won't work. Wadleigh Brook.

In the Gatineau District.

I read with a great deal of interest the letter entitled "Camp Blair," by A., of Haddam, Conn., in Forest and Stream. To one who has lived for some years on the confines of the Laurentides and who each day looks from a distance of a few miles on the beautiful Chelsea Hills, and whose chief delight is a day or a week, as the case may be and circumstances permit, wandering among their lakes and streams and hills, gathering wild flowers, catching trout or bass, shooting ruffed grouse, or simply "just doing nothing," according as the time or season will permit, these experiences of others have a peculiar charm.

The natives and residents of this Gatineau district are not many of them as anxious for the observation of the fish and game laws as we would like to see them.

There are still too many of them who can see a good deal more sense in gaffing a barrel of trout off the spawning beds in October than in whipping a stream all day in May or June for a basketful, and they have other like playful pursuits, and that is the reason why we expect those who know better to set them a better example, and there was one reference in A.'s letter which I did not like.

He arrived in camp, from his own story, on the afternoon of Sept. 10, and "for four or five days * * * with trout and partridges enough to supply the table," etc. Now, is A. aware that in the Province of Quebec the close season for ruffed grouse extends to Sept. 15, and that he has been breaking the game laws, which I will do him the credit to say, from the general tone of his letter, I can hardly understand that he would willfully do.

St. Hubert.

[While we are slow to make excuse for law violations in the woods, we can in this instance say for A. that his offending was due to that ignorance which excuses no man.]

Game in Western Pennsylvania.

Greenville, Pa., Dec. 19.—*Editor Forest and Stream:* Game in this part of the State is becoming scarcer year by year, and it is high time that something is done to protect it while there is a little left. My own observations for the past eight years or more prove this fact to me. In the first place, the long woodcock season has played havoc with ruffed grouse, because hunters, under the pretext of woodcock shooting, kill the young grouse, and when the grouse season opens most of the grouse have already been killed off.

The woodcock which are bred in our covers on account of the long season are killed off, so that very few are left to return to their breeding grounds in the spring. I think that scarcely a dozen were killed south of town the last season.

Quail are becoming more common than a season ago. They were all frozen out four seasons ago, but if the winters are not to be too severe they will increase so that in few seasons they will be plenty.

Duck shooting is not what it should be; year by year the decrease of water fowl along the Shenango River and the marshes near Conneaut Lake is clearly to be seen. I think that the spring shooting is the fault of this and should be prohibited, not only in this State, but in every State, if we wish to have water fowl shooting.

Squirrels are scarce, in fact in some localities they are a thing of the past. Rabbits are not as plenty as they might be on account of the ferrets, which are used by many of the hunters.

I think that the hunting season should be shortened and the sale of game prohibited. It is better to have a brief season with an abundance of game than to have a long season and no game. H. P. B.

Shooting with Two Eyes.

Editor Forest and Stream:

Possibly my experience in learning to shoot with both eyes open will benefit E. R. I found that the muzzle attracted the attention of my left eye to such a degree that it was impossible for me to sight the gun properly with both eyes open.

To overcome this trouble I simply grasped the barrels with my left hand at such a place on the fore end that the hand acted as a blind, thus shutting out the muzzle from the left eye. This will bring the left hand where it properly belongs—well along the barrels.

After a little practice E. R. will find that both eyes are free to follow the game, but that only the right eye will be used in sighting the gun. Legality.

The Virginia Game Supply.

Pine View, Va.—The open season has closed with more rabbits left over than has been known since 1878, and with more wild turkeys and pheasants than usual. Bob White has also increased very much; the little fellow has one more year to increase in unmolested, by which time I think he will be again with us in his old-time plenty.

Fox hunting has been attended with but little success this season. Last summer's storm left so much fallen timber that sly reynard has things very much his own way.

Squirrels are very numerous along the Rappahannock.

W. L. C.

New York Seasons.

Cato, Feb. 6.—*Editor Forest and Stream:* In Forest and Stream to day, over the signature of the president of the New York State Association, is the proposed demand for the one open season for grouse, woodcock, rabbits and squirrels, Sept. 15 to Jan. 1. This is the best law we could have, as a great many grouse are killed by rabbit hunters in January and February. I think the increase of grouse in this section last fall was due to the short open season on rabbits in 1895.

J. K. R.

New Jersey Game.

The coming year's prospect for game in the section where I am now—several miles west of Freehold, N. J.—is very encouraging, as there are near us one large whole covey of quail and several quite large remnants of other coveys also. A greater number of rabbits has been left over than the local hunters were at first aware of; so, taking it all in all, the outlook is very bright. L.

Iowa Needs a Warden Force.

Nevada, Iowa, Jan. 22.—*Editor Forest and Stream:* In Forest and Stream of Jan. 23 your correspondent, who signs himself as One Who Observes the Law, gives a true statement of the condition of the game and game laws of Iowa. We have excellent laws for the preservation of game and fish, but the game laws are practically a dead letter. As E. H. S. states in the same issue, Mr. Delevan has done excellent work in enforcing the fish laws, but could do much more if he had more assistants and more liberal appropriations. What Iowa needs for the preservation of her game and fish is a fish and game warden for each county. Each county warden should then have the power to appoint a deputy in each township in his county. The deputy should be some farmer interested in field sports, and could be paid by giving him one-half the amount of fines collected for game law violations in his township.

If our sportsmen's clubs would take hold of this matter at once and all work together, something might be accomplished. Our member of the Legislature from this city, Representative J. F. Reed, is a great lover of field sports, and is a reader of Forest and Stream. If this letter should fall under his observation I hope he will give it more than a second thought. Nevada is the county seat of Story county, the home of both Representative J. F. Reed and Senator Boardman, both of the State Legislature; also the home of our county sheriff, Mr. A. K. Banks; and yet no respect whatever is paid to the game laws. Game, both in and out of season, has been exhibited in our meat markets and sold in open violation of the law.

J. C. Briggs.

Square Muzzle Gun.

Guns have been in use about 600 years, and in all that time manufacturers have not deviated from making them with a cylinder bore. About twenty-five years ago experimenters found by making the inside of the barrel a little smaller right at the muzzle (called a choke-bore), it increased the effectiveness of a gun's shooting very much.

A few days ago, Dr. A. S. Kennedy, of this city, thought he would try an experiment on his choke-bore Winchester repeating shotgun, by making the round barrel square at the muzzle. He had previously talked of the plan with a number of gun experts, and though none of them had ever heard of such an idea, they were all unanimous in the belief that a gun with a square muzzle would soak a load of shot all over a sap-brush.

Well, the very first shot was an immense surprise, for no round-muzzled gun had ever been known that gave such penetration, and made such a close, even pattern at the same distance, as did the gun with a square muzzle.

The whole secret lies in the fact that the four flat sides of the barrel, beveling inward toward the muzzle, simply shovel the load into a compact bunch, as it leaves the gun, without the tearing pressure made by a round choke.

The doctor has applied for a patent on square-muzzled shotguns, and though he has had no opportunity yet to test the same principle applied to round nozzles on hose pipes, he believes it would greatly increase the distance a stream of water could be thrown.—*Auburn (N. Y.) Advertiser.*

Winter Game Notes from Iowa.

Nevada, Ia., Jan. 28.—We have had a very mild winter up to the night of the 23d, when the thermometer indicated 22° below zero; last night the mercury reached 24° below. This will be pretty hard on the quail. On Jan. 5, while out rabbit hunting, I was very much surprised to see six mallard ducks arise from a small pool of open water. I have since heard others speak of seeing wild ducks in this vicinity. I do not remember of ever seeing or hearing of ducks staying here so late before this winter. Rabbits have been more numerous than ever before. There have been thousands of them killed in this county. One of my neighbors shot two out back of my house on some vacant lots one night, and a few days later shot another in the minister's garden, just across the road from my house. I have seen a good many rabbits in town this winter myself, but do not shoot them, as I think it dangerous to discharge firearms in the city.

There are a goodly number of prairie chickens left over from last season, and the prospect is good for very fair chicken (pinnated grouse) shooting next autumn.

J. C. Briggs.

The Winter in North Dakota.

Fort Ransom, N. D.—We are having a fearful winter out here. The last week of October we had a terrific snowstorm, consequently lots of small birds got caught; the meadowlark in particular, and hundreds of them perished. Grouse are all on the Shyenne River, feeding on the rosebuds and other berries, as there is no feed on the prairie for them—everything is covered with snow, even the haystacks.

How the jack rabbits live I do not know; but they took all my apple trees except the stumps. Prospects are good next year for grouse and chickens. They were strong and wild on Sept. 1, and not many were shot. H.

Vermont Deer.

Waterbury, Conn., Feb. 5.—*Editor Forest and Stream:* Some few weeks ago the writer saw an article in some paper stating that the Vermont Legislature were considering a bill to open the season on deer in that State for a short time next fall. Can you inform me if the bill passed, and if so what time was designated as such open season?

Charles E. Hall.

[The season will be the month of October; only deer having horns may be taken; one person may take only two deer; one carcass may be transported.]

Specimen Copies.

Any subscriber who would like to have a specimen copy of this paper sent to a friend will be accommodated by sending us, on a postal card, the name and address to which he would like the paper sent.

That article by Pellets in Forest and Stream of Jan. 16 gave me the kind of keen pleasure which is the best kind to have these hard times, namely, that kind which produces one hearty laugh after another. George Kennedy.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

ELKHORN.—I.

Editor Forest and Stream:

Within a short hour's ride of the State capital flows a stream—known little to the outside world of anglers or tourist travelers—that for gameness of its black bass, variety of scenery with which its alternating courses constantly delight and charm the eye, and for the days of memorable sport that have fallen to the lot of the eager angler is a veritable love stream to many Kentucky hearts. This is the famous Elkhorn Creek that, fed by the clear, cool springs of the Blue Grass region flows westwardly in its north and south branches till they unite at the Forks, and thence, with uncertain course, now this way, now that, after some miles of sinuous windings, finally enters the gorge of the Kentucky River, and mingles with the waters of that picturesque stream, twelve miles below Frankfort.

Where Elkhorn Creek got its name no one knows. Back along the line of pioneer days the first settlers on its banks, old enough to remember when deer and turkeys were seen on its hills and in its bottoms, knew it as the Elkhorn of still earlier pioneers. When Boone and Kenton ranged the canebrakes of its upper sources, or the rough hills near its mouth, they found plentiful evidences of the existence of elk; while the buffalo trace, as it is called, deep cut in the clay soil, ran straight away from Frankfort across its course to Big Bone Lick, showing the travel path of that now almost extinct denizen of the forest and prairie.

Perhaps some tragic incident in the early discovery of the stream, or some fertile fancy in the gossamer of frontier romance, or, more likely still, a profusion of the shed horns of the elk, relics of earlier abundance of that noble animal, attached to the stream a name that is full of reminder of a past that can never come again to bless and cheer the hunter.

Be that as it may, there is no more lovely stream in all Kentucky—a stream brimming with picturesque delights and with blessed memories of red-letter days. Its long reaches of quiet, deep water, formed by the dams on its upper branches, are full of silver perch, that most delicate of fish for the table, with black bass and rock bass in reasonable quantity. But below the famous Macklin Dam—a cemented, cut-stone structure arched against the current, and possessed apparently of an eternal stability—clear down the rugged defiles, and along the wider valleys to the Kentucky River, are the trysting places of the angler. Deep cut in the Silurian hills, the rocky channel of Elkhorn changes direction from sheer necessity at short intervals, the gentle valley sometimes abutting squarely against some towering, craggy cliff, beneath whose beetling brow the shadowy pools see little of the sun. In these tranquil waters, where the angry floods of the spring rises have swept out the loose stones and boulders, leaving only the greater rocks that have fallen from the hillsides and the concealed ledges, the bronzed warriors find lurking homes and cool retreats. Here they are safe from the seiner and the drag; but too often, alas! just such spots attract the attention and deadly explosives of the dynamiter.

At the foot of the deeper pools, which recur at short distances, are shoals and ripples, where the water splashes and sings merrily and musically in its swift gliding over the gravel and boulders, over the broken limestone shelves and around the jugged corners, until it finds rest in calmer depths, whose surface mayhap be freckled with sunshine sprinkled through the overhanging tree tops of some wooded dell. At the head of the pools in spring, and at their foot in the fall, the bass are wont to lurk and feed Yet when the trees are in scarlet scarcely a submerged rock or projecting shelf but has its hidden supply of the finny tribe ever on the alert.

Here and there are gravelly banks, sloping to the water, shadowed by thick-foliaged forest trees and edged with a carpet of green, velvety grass, making the most delightful picnic grounds for a day's outing. Then there are more extensive flats, near bubbling springs, for campers of longer stay.

The bed of Elkhorn Creek is formed largely of the flat layers of bird-eye limestone that outcrop everywhere along the valley of the Kentucky. These layers or ledges project along the sides or far into the pools—either o'erhanging the ledge beneath, or the soft clay between has washed out, producing deep recesses where the fish lie secure from attack in summer and free from the dangers of floods in winter. These secret dens are where the blue and mud-cat invariably stay, coming out at nightfall to hunt their prey in shallower water. Here they rest reasonably secure from all enemies until the two-legged "assassin," stick in hand, prowls along their rock home, stoops down till sometimes a battered hat over a pair of fierce eyes alone shows above the surface, prods with the stick carefully under the ledge till it touches something that moves, reverses the stick, feels again and then sends the sharp, barbed steel hook deep into the fish, drags him out and "puts him in de bag."

Sometimes this style of "assassination" is carried on with the naked hand, in which case the owner not infrequently finds himself in touch with snake or turtle.

The rocky shallows, full of pebbles, gravel and fragmentary stones, afford splendid breeding spots for the smallmouth black bass, found here in all the strength and beauty of his active nature He has exclusive possession as against his large-mouth relative. This fact, with the abundance of food supply—minnows, crayfish, helgramites, etc.—prevented the ceaseless, skilled efforts of hundreds of anglers in all the years back from making the fishing of Elkhorn Creek a memory only. True, the number of the fish has diminished much and the average size has sadly lessened in the thirty years since first I cast a hook in its attractive waters; but during the past year many fine strings have been taken and there is sport yet for the angler who loves his art and knows how to apply it. A red letter day in this particular we shall note later on.

To the intrepid, artful, gallant warrior bass of Elkhorn Creek—the gamest of game fish according to its size—fighters while strength lasts, full of expedients and daring—is due, as we honestly believe, the raising of a crop—or two generations, if you please—of as fine anglers within daily reach of its waters as ever cast a hook or wet a line. Educated with the best of tackle—a Milam reel and a Kentucky cane rod, with lines slender and strong—they waded among the boulders on the smooth, slippery ledges, patiently and gently drew the minnow about and across the retreats of the bass, and as coolly fought the battle out with the hooked fish as if his escape would not add another beat to the heart that was throbbing quickly enough within the breast

When one of these old veterans took a bee line for the creek or was seen standing about its pools there was a grim certainty that there would be ultimate need for the frying-pan at home. The novice, the water splasher and the minnow killer could only look on and grow green with envy or despise himself for his lack of knowledge. How often has the hungry imitator watched one of these veterans—fixed his bait on the hook just as he had it, got the same kind and size of minnow from the bucket, edged up close, let out the same quantity of line, fooled around the same spot, and then—with a ghastly grin and on all-overish-mean feeling watched the "old man" yank 'em out, while his own bait was haunted with neglect, and his line lay limp and listless. No use, mere wishing doesn't catch fish any more than it controls men; it is knowledge, experience, patience, skill, that does the work in one case as in the other.

Among the famous fishermen of Elkhorn Creek—"men I have fished with," or most of them—was Gen Geo. B. Crittenden. He seemed intuitively to know just where the bass ought to be and just what kind of food would tempt an appetite when not specially edged. He never seemed so contented as when wading the waters of Elkhorn in his angles for bass, often standing for hours solitary and alone—his minnow, free of cork or sinker, led gently about the bottom, or left at will to search, apparently, for some finny monster with an appetite Even in winter, when some clear day warmer than usual would come, he would sometimes walk out to Benson, a tributary of the Kentucky near Frankfort, break the fringe of ice along the edge and wade in to fish.

Silent, thoughtful, reserved except to the few friends he cared to talk with, the last days of his life after the wreck of the Confederacy were spent mainly on Elkhorn in sympathy with nature, following his favorite pastime and at peace apparently with all the world. He never ate fish, and despised to catch a catfish.

He was the best creek fisherman I ever knew, and always insisted there were at least two days in the week when fish would bite His knowledge of fish and their habits, his extended travels and experiences of army life, and his close observation of nature in all its varying moods, made his talks ever delightful.

Another noted fisherman was Dr. Wm. Morris—a country physician—who was always after the biggest bass, and generally got them. A genial gentleman of the old school, hospitable and kindly, he sandwiched many a trip to the creek between visits to the bedsides of his patients. He fished without sinker generally, but moulded a bit of conical lead on the bottom of his cork to give weight for the throw-out. In the fall, long after frost came, he caught many big bass by fishing on the bottom. The odd days he would spend in his shop, hammering out steel tips for his friends or mending and oiling his tackle. He constructed his own minnow seines, and was an expert in giving them the proper length, depth, bag and lead line.

The hero of the "big bite," as heretofore told in FOREST AND STREAM, when a "shite poke" walked out from the grass, ascended his set pole with awkward balances and flew away unnoticed except for the nodding of the pole, causing him to exclaim "Thar's a bite!" was one of the best fishermen of his day. To Uncle Lee Watkins the creek was an open book, with rock and boulder and ledge and crevice and step-off plainly marked on the page. Selecting a spot for the day's sport, he would bait his hook with great care, and after a trial or two would land his minnow or "soft craw" at the proper place, ejaculate a satisfactory "just right!" plant his pole, fill his pipe with tobacco and begin a smoke of contentment as he watched the tremulous motion of his line. His waiting habit often brought a success in the size of his fish that more active anglers could only equal in numbers. Nor did he care for fish—he said his stomach "couldn't bear 'em."

There are those who were trained under the guidance of Uncle Lee Watkins who will swear to-day "he was the best fisherman that ever took the creek" And they are no mean judges of the Waltonian art—capable, in fact, were the old man alive to-day, to make him "hustle" to hold his own.

Then there was Thad Sullivan, who was said to know by name the fish of the creek from Knight's Bridge to below Peak's Mill. It is certain at least that when he saddled his horse, took his minnow bucket and started for the creek, the fish were sure to respond to his call to "come out of the wet." His favorite fishing grounds were about the Cow Pond in Gault's Bend, the head and foot of the Gar Hole, the long pool above Jackson's and the Meeting House Hole above Peak's Mill. And he had much of the hunter's instinct, for he was one of the first to know when the "blue-wings" were on the creek and the first to get 'em He enjoyed fishing as a woman enjoys shopping—with infinite zest—and no fish protector ever bore a more cordial hatred of the ways of the dynamiter and fish hog than he. He was sturdy in his defense of the rights of the honest fisherman and an earnest advocate of fish protection and propagation.

Dr. Ben Duvall grew up by the creek in earlier life and was ever eager to renew the angles of his youth. His skill in landing the bronze-backers was only less than his natural gifts in the diagnosis and cure of disease Removed to the city in later life, he seemed to yearn for the restful periods when he could break away from the rhythm of the pulse to the rhythm of the waters; from splints and bandages to the bend of the rod and the click of the reel. In his fading strength the presence of the creek gave balm to his spirit, and a sense of healing was wafted on the wings of the soft winds that came to him over the meadows.

In his last hours, when the end was only a matter of time, the subject of fishing was mentioned, and with sudden strength he rose halfway in bed, his eyes full of light and his cheeks aglow, and eagerly exclaimed: "Oh, Sam, we'll have one more good fish together yet!"

A near neighbor to Dr. Duvall in the early days was another splendid fisherman, Hillory Bedford, whose home crowned the hill top above the creek. A forceful mind and intelligent observation gave to his knowledge of the art more than ordinary value. His discriminative talks on the habits of fish, the freaks and foibles with which the art of catching the black bass was attended, the eager relish he showed in their capture, gave to his companionship a pleasure zealously sought.

Then there were Jeff Jones and Wick French, whose prowess on the Main Fork have long ago made their names household words with anglers and the synonyms for success.

Uncle Llewellyn Holton, now past the three score and ten, was long the "king bee" of the Forks as to all matters relating to why fish bite, when they will bite, where they stay, how they grow, how to induce them to come out of the water responsive to the call of a good angler, and why ignorant and presumptuous people can't catch fish.

We doubt not he has taken more fine fish out of the rocky pool at the confluence of the main and south branches than would fill a fair-sized corn crib.

When his success supplied more fish than the needs of his table and friends, he deposited the remainder in the large basin of his spring, where they swam in the pure waters till needed—some of them occasionally remaining all winter.

The basin was full of fine fish one winter, partly preserved for Christmas, when the night before Christmas a party of young fellows visited the spring during the quiet hours, when Uncle Llewellyn was asleep, and stole eighteen fine bass that weighed over 2lbs. each. They were taken to Ellis's famous restaurant in town, a choice company gathered, and a genuine "Christmas wake" was held, with fish as the center att action, till breaking day caused the company to scatter. To this day Uncle Llewellyn doesn't know who robbed him, though he carried a cigar, found at the spring, for weeks to find who smoked cigars like that.

Many years ago, when Judge Nutter (famous as the judge who adjourned court to see the elephant swim the Kentucky River) presided in the Franklin Circuit, Uncle Llewellyn Holton was summoned on the jury This was unfortunate, as he had just arranged with a party for a deer hunt in the Owen Hills. Coming to town on Saturday (court met the Monday following), he went to see Judge Nutter and laid the case before him, asking to be excused from jury service.

"Well, Llewellyn," said Judge Nutter, "I haven't eaten a real good fish for a long time—see if you can't find some and bring 'em to town Monday, and we'll see what we can do"

It is doubtful if Holton observed sacredly the Sunday following, but at any rate he was in town early Monday morning with a fine string of 2 and 3lb. bass, which were duly consigned to Judge Nutter.

Before court opened Holton edged up to the judge and remarked, "I reckon you'll let me off, judge—them was fine fish."

"Now, look here, Llewellyn," replied Judge Nutter, "if I were to let you go now it would look too much like bribery—I guess you'll have to serve."

All day long Holton served on the jury—but his heart was not in it. The matter didn't seem right to his square way of looking at things.

Just before court adjourned Judge Nutter beckoned Holton to him. "Llewellyn," said he, "I reckon we can get along without you—you can go"

Most of the older fishermen mentioned have crossed to the shade beyond the great river. Their footsteps no longer tramp the windings of the creek.

Then—"there are others"—disciples of the older class, apt scholars too, and full of the spirit of the fathers. No grass grows under their feet when the time comes to "go a-fishin'." Many of them are "past graduates" of Elkhorn and masters of the art of bait fishing—for the dainty, deceitful "fraud of the fly" has seldom dropped upon the crystal waters of that charming stream

The Elkhorn bass decline to feed upon such unsubstantial viands. They hold their noses as they pass by on the other side. They know well the juicy minnow, sucker, doe-belly, shiners, forked-tail and delicious steelback—soft and hard craws, angle-worms, grubs, crickets, grasshoppers and helgramites or "go-devils"—but these new fangled bugs, unlike anything on earth below or in heaven above, they will have them not.

Of the host of the present generation of anglers, some of whom can always be found upon the creek in the fishing season, there are those who could teach the "daddies" a few points in the art of angling Jimmie Gibbens, with his No. 8 Clark O N. T. thread line, playing a 3 pounder in his wild dashes for liberty, and finally landing him safely upon the bank, a gasping, exhausted captive, exhibits a skill that borders on the marvelous Sewing thread of the caliber mentioned is largely used by Frankfort fishermen in silver perch, bream and bass fishing but the awkward or inattentive will find it most reliable in the parting.

Dick Church takes front rank in the line of expert fishermen, and Henry Duvall knows every rock and ledge and water gap, from the mouth of the creek to Jones's Dam or Scott's Crossing.

Dick Morris grew up on the creek under the teachings of two generations of anglers, and the fish he has caught are like the sands for multitude. He is a member of the Kingfishers, as are Chas. C. Furr and Geo. L Payne, who find the bass of Elkhorn the "gamest of the game," agile acrobats and vicious fighters, if less weighty than their brethren of Carp, Echo, Manistique or Hubbard lakes of the North.

Dick Crutcher handles a rod and reel with that exquisite ease of action that denotes long and careful experience, a keen eye, and a certainty of doing the right thing at the right time. He is tireless and persistent in his angling outings, companionable and liberal in fishing amenities; and seldom is it that he returns homeward with a light creel—never an empty one.

No less successful and skillful is genial Ned Church, who lives near the Barbecue Spring, famous for its "fish fries" of the olden time. Ned is a whole acre of sunshine when he is on the creek—full of jokes, and with a keen appreciation of the humorous lines of a good fish story And withal he handles a rod to perfection. When Ned don't catch fish, they don't bite and won't bite.

In gathering numbers are other expert anglers, who handle line and reel and rod with infinite grace and skill—as Junie Todd, Jim Hawkins, Dr. Thompson, Oby Morgan, Lewis Craig, James Withraw, Will Culter, Jno. W Rodman, Geo. Darsie, (Red) Will Saffell and, we may almost add, the half of Frankfort's male population, to which class belong such resident fishermen of the creek as Joe Holton, Frank French, Nels Alley and Geo. Bacon.

The story of the expert fishermen of Elkhorn is not yet fully told, for what old Jim Butcher was to the Kentucky River, Jesse Hocker is to the creek—the king of colored anglers. With lunch bag over shoulder, and rod and minnow bucket in hand, he silently steals away to some spot where the fish stay and "yanks 'em in" with certainty and ease. Able to drop his bait in a tin cup at thirty steps, he finds no place too difficult to reach with his seductive hook. In the season it is doubtful which gets the most of his time, the creek or his shop.

Close up with Jessie, and sometimes disputing the front, is Andy Dennison, another expert colored angler. He supplies those who haven't time to get it with bait minnows and "craws." And withal he is a cook of no mean pretensions at fish fries and picnic parties.

Glorious old Elkhorn! Its memories grow sweeter as the years go by and the music of its rippling, sparkling waters as they plash and sing over the shallows, or move placidly through the deep pools in their onward course from the Blue Grass Meadows down to the junction at the Forks, thence by the wrecked dam at Steadmantown, on by the Barbecue Spring, by Indian Rock, by Knight's Bridge, through the sweep of Gault's Bend, on by the Meeting House Hole and Peak's Mill, till they mingle with the waters of the Kentucky—this music will ever linger as the most enchanting of strains in memory when the limbs no longer answer the call to wade their waters and when the tackle box is a victim of neglect. Possibly by that time, to most of us, the dear old creek will have felt the cold hand of utilitarian necessities, aided by the fish hog, the seiner and the dynamiter, and be in reality as in memory a dream of days that are done. Old Sam.

ANGLING NOTES.

American Trout in Europe.

For years past, in fact almost since their introduction abroad, the habits and characteristics of American trout, *fontinalis* and *irideus*, have been discussed in the angling papers of Europe. This discussion has been intermittent, and recently it has received a fresh impetus, judging from what I have read, principally in the *Fishing Gazette*. It is safe to say that neither of the trout, brook trout nor rainbow, is regarded as highly in England as is the common brook trout of Europe, the fish that we know as brown or Von Behr trout. Of our two fish, the preponderance of evidence in England seems to place the rainbow trout above the brook trout. In Germany also the rainbow is, I believe, considered the better fish as a game fish. In this country, when the rainbow is brought from the Pacific slope and planted in Atlantic streams it is quite apt to disappear after the second year; and in Europe it is almost a universal complaint that our brook trout will do the same thing, a habit which is not true of the fish as a rule in home waters.

Herr Jaffé is to day perhaps the foremost fish breeder in Germany, and he has sent me some notes in regard to our American trout in German waters, the results of his personal observations:

"Rainbow trout: They do well here up to the fifth and sixth year; they decay then rapidly.

"Plantings of yearlings in the lower deep levels of big sluggish streams have turned out well. Also those of two-year-olds in highland lakes; fish of 2 to 5lbs. have been taken after two years in both cases.

"Rearing: In the yearling and two-year-old stages blindness is rather frequent; the fish gets black and thick; next to no cases of blindness in the older stages.

"It is a frequent occurrence that the rainbows spawn here in *ponds* with just a small intermittent water supply, say a small trickle, and that their numbers increase in such cases.

"The great difficulty with the rainbow is the uncertainty of the egg crop. I have had cases of 10, 15 and up to 50 per cent. loss among perfectly good looking ova, and I know of the same from others. Cases of glassy (hard, clear) ova on extrusion are not rare.

"Char (*fontinalis*): Rather subject to intestinal inflammation at spawning time, but the great difficulty is still the rearing of the fry. A rapid fall of temperature puts them off the feed dangerously quickly. Egg loss as with the rainbow; not impregnated."

On a good many occasions I have, so far as was in my power, discouraged the planting of rainbow trout fry in the trout brooks of New York, simply because they disappeared from the streams, as a rule, after the second year; but during the past few years my opinion of the fish has changed materially, or rather I have concluded that the failures were more owing to the manner of planting the fish than to the fish themselves; for there can be no question about the game and table qualities of the fish, for they rise well to the fly, and jump above the water when hooked, after the manner of the black bass, which our common brook trout do not, in spite of the pictures showing them in the air with fly in mouth Perhaps we do not fully understand the rainbow trout yet, but I am satisfied that when we do, and the fish is properly planted in suitable waters, we will have in New York a most desirable addition to our game fishes.

The late Col. Marshall McDonald, U. S. Commissioner of Fisheries, told me that he had planted thousands of rainbow fry in the stream on which the Wytheville, Va., hatching station was situated, and they all promptly disappeared the second year; but when he planted yearlings of the same species in the same stream they remained. Now, it is entirely beyond my comprehension why yearlings should remain and propagate and the fry should disappear when they reached the age of two years. In some few streams the fish have remained when planted in the fry stage, and that is evidence that if the waters suit them and food conditions are right for them they will remain. Of one thing I am satisfied, that they are not the fish for small mountain brooks. In one stream in Saratoga county a few big rainbows have been caught in the lower part of a stream where the water is deepest and of good volume. That they are not trout for small streams anywhere one will be convinced by looking at the fish at the Bath hatchery which were caught when running up the hatching streams from the lake to spawn, for there are fish in the lot that weigh 10lbs. What Herr Jaffé says will be of interest and is evidence that if the rainbow trout are planted in the deep, still portion of a stream there is reasonable hope of their remaining if they find food in abundance:

"I can assure you that there is no gamer fish, nor any that will rise freer to the fly, than the rainbow The fish is in no way a competitor of the brook trout, and to plant it where the brook trout thrives would be doing the rainbow harm" ("brook trout," as used by Herr Jaffé, means the brook trout of Europe, or brown trout as we know the fish on this side of the Atlantic). "We have planted many thousands of them for trial in the upper shallow reaches of streams, and have always found the rainbow to slip down to the deep, slow reaches of the bigger streams, and to water generally too warm for brook trout. Here they stay and grow, and we now only plant them in similar waters or in lakes and reservoirs, which latter quarters they seem to like best. I have had them brought to me this autumn ('96)—a 3½lb. fish planted as a yearling in the spring of 1894, caught from the Ems, a river very much of the character of the Thames below London, but rather cleaner.

"Rainbow trout, as a glance at the mouth of a full-grown fish will lead one to expect, are nothing like as cannibalistic as *fontinalis* or *Levenensis*" (the Loch Leven trout, which in this country cannot be distinguished from the brown trout [*fario*], and which Dr. Day believed to be identical with it), "but they require a deal of food and should not be turned out into barren waters. I have found them do best in deep, warmish reservoirs, with plenty of shellfish food and sticklebacks, and here their growth is really good, ¼ to ½lb. as two-year-olds, 2 to 3lbs. as three-year-olds, and 3 to 7lbs. as four year-olds. At four years of age the rainbow seems to be fully matured, the growth afterward being small, although I have raised five-year-olds of 12lbs The peculiar thing about the rainbow is the extraordinary push they make between the second and third years, jumping often from ⅛lb. to 3 and 4lbs. in nine months; and what is more, the males do not grow at anything like such a rate as the females.

"Rainbows, on the whole, are very well behaved fish and quarrel decidedly less than brook trout, but when closely confined in big numbers and not carefully sorted they will of course develop cannibalistic tendencies.

"In one of my breeding ponds, of about one acre surface, I keep three and four generations of rainbows together without any thought of cannibalism developing, a thing I would not venture on with *fontinalis;* but they have much room and plenty of food."

During the past year several waters in the State have been planted with yearling rainbow trout, acting upon the principle advocated by Herr Jaffé, although his letter had not then been received; but experience seemed to point to lakes and the lower portions of big streams as the proper waters for this fish, but it will be a few years before the results will be known positively. If the rainbow can be established in waters easily accessible, where they take the fly readily, the territory for sporting fish can be doubled. Superintendent James Annin, of the Fisheries, Game and Forests Commission, is a firm believer in these fish, and as he is an accomplished fly fisherman he knows a game fish as well as any one in the State.

Fish Planting.

A letter came to me early in January which I put aside to quote from in this column, as it shows more than ordinary interest in the work of stocking waters with food fish, and an earnestness in the work which can be followed with profit by others who desire to establish the salmon family in fished out streams. The letter is written from Middletown, N. Y.:

"I made an effort last year to stock the Wallkill River with wall-eyed pike, planting 50,000. I think with a little effort we can make a success of it, as I now have quite a number of our local sportsmen interested in the undertaking. One of our local fishermen brought me for identification about Nov. 1 a couple of wall-eyed pike caught while taking bait fish, which were about 6in. long. This makes me feel that the planting will be a success.

"I have tried for four years to stock the Little Shawangunk with brown trout, and have, I feel confident, at last succeeded. Last spring for the first time I kept my fry in a small spring pond, and this fall I had trout 4in. long, which I turned loose into the stream in November—about 4,000, I think. I am convinced that no fry should be turned loose to shift for themselves until they are big enough to hustle for their own food.

"I think all streams could be more successfully stocked were this method adopted by the State; plant nothing but yearlings, and I don't believe the cost would be any more, if so much."

No one will dispute that streams can be more successfully stocked with yearling fish than with fry, but when my correspondent says the cost would not be any more, if as much, provided the State adopted this method, I fear he does not understand the situation. During the past fiscal year the State distributed 144,985 trout between the ages of eight months and eighteen months, and that certainly is a beginning in the right direction, and on Sept. 30 there were nearly 200,000 fingerling trout at the different hatching stations being reared to yearlings; so I can safely say the State has adopted this method so far as it can at present, for I find from looking at the reports of the old Fish Commission, previous to the organization of the consolidated Commission of Fisheries, Game and Forests, that no yearling fish were reared for planting in public water, except 150 sea salmon. If any one thinks that 100,000 yearling trout can be reared as cheaply as 100,000 fry they forget that fry are planted as soon as they are ready to feed, and that the rearing of yearlings practically dates from that time, and thereafter for twelve months the young trout must be fed and cared for daily. But it is not the cost of the food nor wages of the attendants that are the chief obstacles to overcome in rearing yearling trout; it is room and water. Only a portion of the hatching stations can rear yearling fish, and at these stations all the space and all the water is being utilized as rapidly as the means of the Commission will permit to this end. A certain amount of the water supply must be devoted to the stock fish, or there would be no fry or fingerlings; and the space and water that will accommodate and support a given number of fingerlings (fish of eight months) will not accommodate and support half that number of yearlings, so that there is a limit at each station to the number that can be received to become vigorous, healthy fish. Overcrowding will be fatal to the whole crop. If yearlings cannot be reared in perfect health, it is far better to plant the fry Anyone who will visit one of the hatching stations of the State, and observe the space required and the water necessary to raise a few thousands of yearlings in health, will not wonder that all the millions of trout hatched by the State are not reared to yearlings, and will see that it would be a physical impossibility at present. For instance, at the Pleasant Valley hatchery every gallon of water is utilized, and the capacity of the hatchery—stock ponds, hatching trough and rearing boxes—would not be as great as it is if it were not that the water is thoroughly aerated by artificial means. The plan mentioned by the correspondent can be followed to advantage by applicants for trout fry, and the fry reared in a small pond on the food found in the water if it is not overstocked. Such a pond should be constructed on a tributary stream to the stream to be stocked, and screened to prevent the escape of the fish. The trout will have many enemies (one snake was killed at Caledonia with sixty-four young trout inside of it) and there will be loss of fry under most favorable circumstances, but those remaining in the fall will more than repay the care and expense, particularly if the pond is used as a rearing pond each year. A friend in Vermont was most successful with a pond of this description, and his contributions to the main stream from his rearing ponds were important factors in restocking it. The question of food for the fish in any stream must not be overlooked, as it will be useless to rear yearlings or fingerlings if the food supply in the planted water is inadequate. A. N. Cheney.

AS TO CARP AND OTHER THINGS.

St. Louis, Jan. 30.—I have noted at various times articles in Forest and Stream and in other papers telling of the destructive habits of the buffalo and of the carp with reference to the spawn of other fishes There has been in the Chicago *Tribune* a number of communications telling how these fish have prevented the increase in game fish through the destruction of spawn.

Very likely the writer himself has made just such objections to the introduction of the carp, but on thinking the matter over he has about concluded that the carp and buffalo are scapegoats for other criminals. I am informed by the old settlers in this section that when they first came here the abundance of the buffalo was something enormous, and stocks at the present day do not compare at all with those of that period. They also state that the quantity of game fish existing in the same water with the buffalo was immensely larger than at present, and that no one ever imagined that the presence of the buffalo was destructive to the existence of game fish The characteristics of the carp and buffalo are so closely related and their habits are so similar that one may well doubt whether these fish are the cause of extinction of the game fishes; may it not be that they are the effect and not the cause; that they multiply and occupy the waters formerly occupied by the game fish which have been destroyed by the persistent and everlasting fishing of the market fisherman and his twin brother, the city fish hog.

This naturally brings up the subject of game protection, and I am pleased to note that an effort will be made at the present session of our Legislature to have the game laws so amended as to be really effective in the way of protection. A bill has been introduced which provides for an annual license of $1 to all parties who fish or hunt The fund thus collected is to go to defray the expenses of fish wardens. An appropriation from the State will also be asked for to enforce the law.

The present extreme cold weather will also do something toward preserving the fish supply, as all the rivers, lakes and sloughs are firmly frozen over. The extremely warm weather up to last week had enabled the net fishermen to pursue their business without any hindrance except from high water. It is a good thing nature does her share toward the protection of our fish, or the supply would soon become exhausted. Aberdeen.

A PICKEREL STOCKING EXPEDITION.

Far up on the summit of one of the roughest and most jagged peaks of the Bearfort range of mountains, in the northern part of Passaic county, N. J., 1,400ft. above sea level, stands the handsome and commodious club house of the Orean Park Association, with 33,000 acres of adjoining club land peculiarly adapted to a fish and game preserve. Here, four miles from the nearest habitation, four game wardens of the State of New Jersey held forth during the third week in November. Their mission was to net the Clinton and Oak Ridge reservoirs to obtain pickerel with which to restock Greenwood Lake, and thus infuse new blood in the much inbred and deteriorated fish of that beautiful lake. The wardens were known to one another as Handy Shot, Riley Water, Kersey and Nantuck They were accompanied by the commodore of a large two-horse truck, whose business was to navigate the steep mountain roads, transporting the nets and fish cans from one point to another, and who was dubbed Lay Low Punk.

The first day's work at the Clinton reservoir amounted to little, only a few yellow perch, suckers and several thousand chub being captured; these fish being deposited in Cedar or Orean Lake, a pretty expanse of water several hundred acres in extent in front of the association's club house.

When the day's catch had been deposited in the lake, a good, warm supper, prepared under the skillful direction of Mrs. Post, the lady of the house, was enjoyed, and the wardens gathered around the huge fireplace, where blazing white birch logs gave forth both light and heat.

The gray light of the new morn was just showing in the eastern sky when a yell that would have done credit to a Comanche Indian awoke the sleeping wardens. A peep through the window showed the form of Riley Water standing on the great rock in front of the house, waving his arms and shouting that the lake was covered with wild geese. The yell had the effect of bringing all the male inhabitants to the spot, but the only evidence of geese was Riley Water's word. Lay Low Punk made a tour of inspection along the dam, but upon his return tapped his head and, pointing to Riley Water, said "Daft."

When the morning meal of wild honey and buckwheat cakes had been stored away, the start was made for Oak Ridge reservoir, eight miles distant. A stop was made at Clinton reservoir to pick up the nets used the day before, and a flat-bottom boat, the only one in the neighborhood, was placed on Corneel's wagon and properly lashed for the ride over the steep mountain roads.

Upon arrival at the Oak Ridge reservoir and a suitable shore being found, the nets were unloaded and a haul was made, with only one little pickerel and several sunfish for the result. It was decided that the fish had taken to deep water, and the big State net, designed to fish in 15ft. of water, was got in readiness. The net was cast and both ends had been landed, and bets were being made upon the number of fish that would be caught, when the cork line began to sink, indicating that the net had caught in some obstruction.

Corneel declared that the bottom was formerly cleared farm land and he could not understand what held the net unless it was an old line fence.

Soundings were taken and it was learned that the net was held by the roots of a stump in 12ft. of water. Corneel then remembered the existence of an old apple orchard in that vicinity, but supposed that the old roots had been removed.

The wardens, wet to the skin, labored until the middle of the afternoon in a vain attempt to release the net, and then abandoned it, hoping that on the morrow, with the aid of chisels attached to poles, the roots might be cut away and the net saved intact.

The detection of Handy Shot waving his handkerchief at a short, stubby cedar tree in a distant field, which he had mistaken for a buxom female, caused a little merriment and somewhat lightened the feelings which had become gloomy on account of the ill luck of the day.

Dry clothes and a warm supper greatly raised the spirits of the boys, and the programme, arranged before the big fireplace after a pipeful of tobacco, was early to bed and early to rise for the morrow's work.

And bright and early it was that work was commenced

the next morning. In vain was the attempt to release the net by use of the chisels attached to the poles, and the net was finally cut from the cork line toward the bottom as far as one could reach, and then torn by main strength—fortunately all of the net was recovered.

A smaller net was then used at the head of the reservoir, and millions of chub and other small fish were captured and sent to their different destinations. The attempt to capture larger fish was then abandoned till a better season of the year. The nets were gathered together the following morning and the start made for the Newfoundland depot.

Thus ended the first attempt to capture pickerel from Oak Ridge and Clinton reservoirs for stocking purposes.

WILD HONEY.

Good Work by the New Jersey Commission.

THE New Jersey Fish and Game Commission have been very successful in obtaining game fish from the Delaware & Raritan Canal for restocking some of the depleted lakes and ponds of that State. The waters of the canal were recently drawn off, leaving many deep holes or basins filled with fish. These places have been netted and thousands of pounds of black bass, Oswego bass, pickerel and yellow perch have been captured. The pickerel, some measuring 20in. in length, went to Greenwood Lake. The bass were sent to Lake Hopatcong and the South Branch of the Raritan, at Clinton. The yellow perch went to New Egypt Pond, Ocean county, and also to Hartshorne's Pond at Freehold, N. J.

There still remains a large number of fish which the Commission will order captured and sent to lakes or streams most needing them. The present cold weather has greatly hindered the work.

Steelhead Enthusiasts.

SAN FRANCISCO, Cal.—Humboldt county, in this State, is the home of that king of game fish, the steelhead trout. During my last vacation I met two old gentlemen—one an Englishman, the other an Irishman—who have fished throughout Great Britain and the United States, and they pronounced the steelhead equal to any trout they had ever caught, for its game and table qualities In proof of this statement, these gentlemen undergo the inconveniences of a rough sea trip of 250 miles and the crossing of one of the roughest bars on the coast every year in order that they may indulge in their favorite pastime. T.

Three Fish on a Hook.

LAST week we noted the fact that Van Meigs caught two fish on one hook. Tuesday morning he repeated the act, this time a 12lb. pickerel swallowing a 1½lb pike which had been hooked. If we count the minnow which was used for bait we suppose we could truthfully say that Van had three fish on one hook.—*Fox Lake (Wis.) Representative.*

The New York Commission Report.

THE demand for the report of the New York Commission of Fisheries, Game and Forests for 1895 has largely exceeded the supply. The edition has been exhausted, and we understand that there are on file the names of several thousands of applicants for whom there were no books left. A second edition may be issued.

The Fishes near New York.

BEFORE the New York Linnæan Society, at the American Museum of Natural History, on Feb. 23, Mr. Eugene Smith will read a paper on "The Fishes of the Fresh and Brackish Waters of the Vicinity of New York City," illustrated with specimens.

Dr. J. A. Henshall.

DR. J. A. HENSHALL has taken charge of the newly-established United States fish hatchery at Bozeman, Mont.

"Men I Have Fished With.

THE continuance of Mr. Mather's series of chapters "Men I Have Fished With" will be given in our next issue.

The Natchaug Line and Reel.

MR. A. D. CHAFFEE, manufacturer of the famous Natchaug line, has hit upon the device of a winding reel, wound upon which, when it comes from the factory, the line is ready for transferring to the reel proper with the least possible trouble. The illustration in the Natchaug adv. shows what a happy trick it is. It deserves to make a hit. —*Adv.*

April 7-10.—STOCKTON.—Stockton Kennel Club.
April 14-17.—LOS ANGELES.—Southern California Kennel Club.

BRUNSWICK FUR CLUB.

Echoes of the Annual Meet.

DR. A. C. HEFFENGER, of Portsmouth, N. H., president of the Brunswick Fur Club, is eminently the right man in the right place. He can not only wield the gavel and bring a meeting to order in double-quick time, as well as furnish a good song or two with a rollicking chorus, but he also possesses the requisite qualities of generalship that go to make up an ideal president. Torment and Joe Forester, the two hounds that the president had along with him, are both good-lookers, but I had no chance to see them work.

The conditions under which the annual meet of the Brunswick, Me., Fur Club was held this year made it utterly hopeless to criticise hound work with any degree of fairness and accuracy. It was just such weather as is liable to make the best of hounds loafers. What was the use of trying to drive a fox without a particle of snow on the ground, the thermometer hovering around the zero mark and with a strong northwest wind blowing that made it feel even colder than it was. That hounds could do anything in such weather and under such conditions was what astonished me.

Mr. C. J. Gilman, a resident of Brunswick, did not brave the rigors of the wintry weather on a runway, but he nightly braved the atmosphere of the Green Room of the Tontine Hotel and killed more foxes and coons over the round table than anybody else. He made a bold bid for the meerschaum pipe, but failed to touch Fred Wilson's score. In the matter of hunting, fishing and the procuring of various articles of sea food Mr. Gilman is never "out of soundings" (as the commander of the Brunswick navy, Capt. E. B. Nickerson, would nautically put it). In fact, what Mr. Gilman doesn't know about Casco Bay, its clams, lobsters, inlets and outlets, is not worth knowing. Though Mr. Gilman publicly stumped me with many of his questions and theories, I bear him no malice; my hat is off to the gentleman.

Rich Hunnewell, of Lewiston (or rather South Danville), Me., is one of the sort of men whom one calls "Rich" on first acquaintance, no matter if his full name is Richard. Rich was present on the first two days of the meet, and on the second day I stuck to him because he wasn't everlastingly piling off after the hounds. He hunted foxes just as I like to hunt them when on foot. He'd sooner sit still and listen to the music than pound up and down in hopes of cutting off the fox; not but what Rich can run when he thinks he can beat the fox. He is the owner of a foxhound that is quite a wonder in its way, according to Noel Money, who has seen it work. And, by the way, Mr. Hunnewell told me a good story about Noel Money that runs somewhat as follows: Last October Noel was stopping for a few days among the foxes and ruffed grouse around Lewiston and was the guest of Mr. Hunnewell—I mean Rich. It happened that Rich had met with an accident that made him rather crippled in his movements, but he wanted to show Noel some sport. They drove out one morning with Rich's hound and three Welsh foxhound pups of Noel's, Meddler, Minstrel and Madcap. These four hounds had hardly been in the cover a couple of minutes before they struck a hot trail, and had the fox going in no time. Rich says the first thing he saw

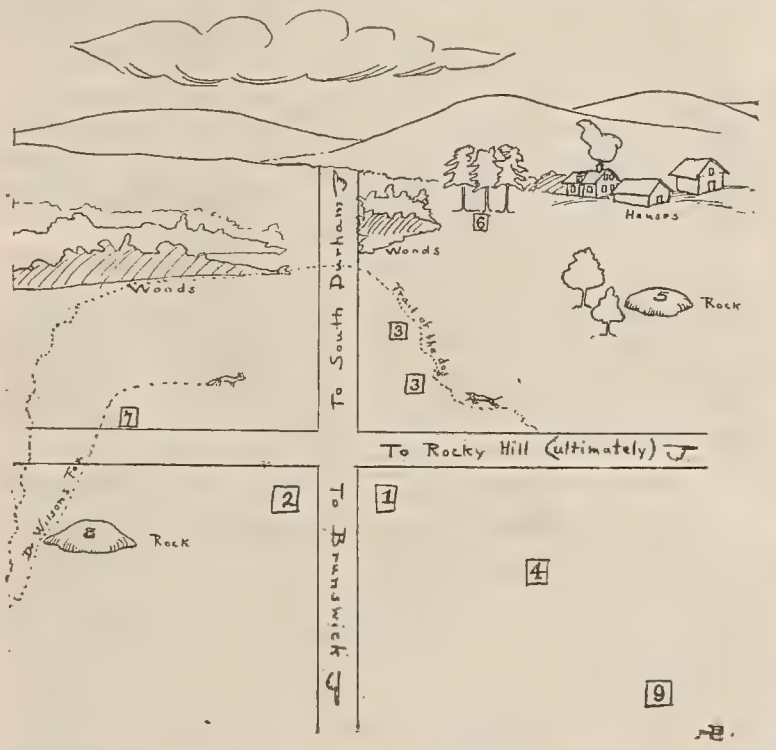

DIAGRAM OF THE BOB-TAILED DOG INCIDENT.

was the hounds streaming away over a hill with Noel Money just behind them. They soon ran out of hearing, but gradually he began to hear them coming round again, as the fox swung back for his original berth. At last he caught sight of the fox coming down a field pointing slightly to one side of him, so he hobbled away to cut him off if he could. Meanwhile he saw the hounds only a few rods behind the fox running like mad, and only one rod behind them, running as if he was tied to them, came Noel in practically the same position in relation to the hounds that he was at the commencement of the three-mile ring. Rich said to me, in speaking about it: "I thought I had a pretty fast hound until Noel came to hunt with me!" (N.B.—Rich killed the fox, and he and Noel got two more that day.)

Bob Perry, the M. F. H., can apparently walk all day and every day. He is here, there and everywhere, turning up at the most unexpected moments, and yet I never saw him move out of his fast walk on either of the days I was out with him and the hounds.

Noel Money went to New Brunswick from Oakland, N. J., to see what his fifteen-months-old Welsh foxhound pups would do with a Maine fox at this time of the year. The bad weather was a great disappointment to him, as it did away with all chance of good hound work. He also had another disappointment, one of the puppies, Minstrel, having been taken ill with distemper. Madcap and Meddler went out with the pack on Tuesday, Jan. 12, and Madcap never showed up at Brunswick again. Meddler, however, a fine-looking hound indeed, and one that bids fair to be as good as his father, Marquis, stayed by us and sang bass in great style whenever he got a chance to help drive a fox along. In regard to Madcap Noel Money has written me as follows: "Madcap, my bitch Welsh hound pup that you didn't see at Brunswick, as she and three other hounds that were with her on the last fox on Tuesday, Jan. 12, did not return for some days, has been found. She did not come back to Brunswick at all, but turned up on Sunday night at Rich Hunnewell's, at South Danville, where I had her last October. Rich heard a noise at the door in the middle of the night and went down to see what it was, and was awfully pleased to find Madcap trying to get in. He says she was not very hungry and looked well. Pretty smart for a pup to find her way there when I only had her there a week last October." Since getting the above letter I have had a talk with Noel, and he tells me that Minstrel, the flower of the flock, is dead, and that he has given Madcap to Louis Berry, who lives near Poland, Me., and who has been looking after the three pups. Meddler has come back to Oakland and will try to teach New Jersey foxes something under the tutorship of Marquis, Melody, etc.

N. Q. Pope's hounds, Clay and Samson, showed to great advantage each day I was out, and were indefatigable workers all the time. I can only speak of the hounds as I saw them work. On Wednesday morning the fox must have slipped by me in the brush within 50yds. of where I was standing on Rocky Hill watching the hounds carry the line over a piece of plowed ground. After getting the line straightened out the pack of seven hounds came along by me, the three leaders being Clay, Samson and Clinker, the latter Bob Perry's black hound; the others were, as I made them out, Meddler, Goss, Sport and Scot. Badge and Sancho had something going in the woods to the left of the road over Rocky Hill and paid no attention to the pack as it passed by them. I have an idea, but it is possibly wrong, as several foxes were on foot, that these two had nicked in ahead of a fox started by Billy and Dot, and that in a check later Clinker joined issues with that fox and helped to drive it past C. L. Higgins, of Bar Harbor, who achieved the distinction of capturing the only pelt of the meet. I cannot think that the fox killed was the one that was driven past Rich and myself, as two hours later Clay and Samson came back with a fox over practically the same ground as in the first run, only this time the fox swung to the right before entering the woods on Rocky Hill, and went to the woods on the banks of the Androscoggin River, giving us a pretty bit of hound work before the hounds were finally run out of scent or holed their fox.

J. H. Gaffney, of Petersham, Mass., has a couple of nice-looking hounds in Goss and Sport. Had the weather been more favorable and more encouraging for the hounds, Goss and Sport would have been able to do more toward decreasing the supply of foxes around Brunswick than the zero temperature permitted.

Billy and Dot, hounds owned respectively by Marshall Parks, of Bradford, Vt., and C. L. Wellington, of Waltham, Mass., were two old standbys on every day of the meet. On the third day, Thursday, Jan. 14, Billy got off a good joke on Will Stetson, of Brunswick. It happened this way—and here it is necessary to refer to our chart of the day's hunt (not drawn to scale): As nearly as I can remember, there were seven of us sitting in the sun eating our lunch to leeward of some pine trees at the spot maked 6 on the plan. Will Stetson had been sitting on a big rock on top of a knoll, marked 5 on the plan. No hounds were within hearing, and Stetson retired into one of the houses marked on the plan in rear of the rock, presumably to warm up a bit. While in the house he must have heard Billy giving tongue on a trail down the hill on the far side of the big rock, for we saw him (although he didn't know it) run out toward the rock with his gun at the "ready" and take his stand behind the first tree. Making up his mind that he would do better to be at the lower tree, he ran down there, and just as he got to the tree Billy appeared on top of the rock behind him, and took in the situation before baying to let Stetson know that he "saw him first."

The story of how we hunted a bobtailed black dog on this day is an incident worthy of note. The seven referred to above (Nickerson, Nason, Knight, Given, Toothaker, Turpin and self) were on our way along the road marked on the plan "To Rocky Hill ultimately," but were walking toward the point marked 1. Suddenly to our right we saw making off across the bottom of the meadow a small, dark object that we took to be a fox. It ran as marked in the plan, and stopped a moment behind an apple tree near the little houses marked 3; it then ran past the houses and turned to the left, sitting on its haunches as if listening for the hounds a moment or two before jumping over the two fences that line the road to South Durham, and then kept on through the woods. We prayed for some hounds to come, and blew a horn or two, but none came. Shortly afterward we saw two hounds running a trail of something away up the valley. Knight and Turpin, both of whom were a little skeptical as to the vulpine nature of the animal seen, sat down just below the house marked 4; Given ran off to get the hounds to lift them on to the "fox's" trail; Nickerson, Toothaker and Nason went over the bottom to the houses marked 3, while I went to the left to a rocky ledge to cut off the "fox" if it tried to make its original point (as we had reasoned it out). Whatever trail the hounds were then on (the hounds were Fred Wilson's Wanda and the Thompson boys' dog), it was a cold one, and Given had no difficulty, out of breath as he was, in taking them to the trail of the "other fox." As they refused to enthuse over the trail, we began to realize that something was wrong about our "fox," and gave it up.

Later we learned something more about our "fox." Noel Money and Bob Perry joined us at the point marked 1 on the plan. From them we heard that Dr. Wilson had been standing near the big rock marked 8, and that a fox had run within 10yds. of him, but that he had not seen it until too late. His hounds and the "Thompson boys' dog" had come up twenty minutes after the fox had passed, and were slowly puzzling out the trail when Money and Perry came along with a hound or two that paid no attention to the said trail, for good and sufficient reasons best known to themselves. Anyway, Dr. Wilson said something when he thought that Perry and Money were "bothering" his hounds. Just previously to this both of them had seen a little black bobtailed dog run through the woods, coming from the direction in which we had seen our "fox" depart. A few minutes later Dr. Wilson said something more when he saw "some blamed idiot" calling his hounds off the trail and taking them away to some other point. (Given was the "blamed idiot," innocent of all wrongdoing.) The whole made a delightful episode in the day's hunt, and furnished us with a hearty laugh or two while eating apples and having our photographs taken as we sat on the bank below the house marked 1 on the plan. The cross roads marked at that point is the place where we started in in the morning. What the name of the place is I can't say; the "boy in the red stockings" who lives there applied an opprobrious epithet to it.

W. A. Bragdon has a fine hound in Sancho, the only one of his four he had with him that came specially under my notice. Two of the four were out with Madcap, I think, and did not show up while I was at Brunswick, or if they did I didn't see them; Gypsy I know was missing at roll call. Mr. Bragdon is an amateur photographer of great skill; his photographs of hounds at work are, I am told by those who have seen them, works of special merit. I wonder how that photograph of the hunting group taken Thursday afternoon turned out.

This is what Rich Hunnewell says (Jan. 26) in a letter to Noel Money: "We have a foot of snow, with a crust on it that will bear a man nearly all the time, while the light

snow on top makes fine running for fox dogs, and foxes are plenty. The snow has blown off some of the hills, but more is liable to come at any time. The sleighing is fine. I would like you to take old Marquis and come on here for a week or so. I can go out with you now and we will have a bang-up time." By way of explanation, I would say that Marquis is a Welshman of blue blood, and the daddy of Meddler, Madcap and the late lamented Minstrel.

Capt. E. B. Nickerson carries a double-barreled 8-gauge gun on his hunting trips. The gun weighs about 17lbs., and each of the huge brass shells in the chamber is loaded with 10drs. of black powder and 3oz. of BB shot, or something like that. When the commander lets the gun off everybody for miles around is aware of the fact. On Thursday I was away off by myself, doing just as everybody else was doing—sitting on a rock enjoying the music of the hounds, who were driving a fox around in a piece of woods to my left. Suddenly I heard the report of Nickerson's gun, and waited for the signal that told of a kill. None came, and I realized that the old story would come up again, "Too far off." It did, and this is how it was told to most of us: "I was standing still listening to the dogs," said Capt. Nickerson, "when I heard a partridge getting up behind me. Then I heard a couple more jump, and two or three more got up after them. Wondering what made them jump, I turned around and saw a fox making for the woods across a bottom. He was 'too far off,' but I shot well ahead of him in the hopes of turning him, but he kept straight on. No hounds were after him; at least, none came up while I stood there waiting for them to come." Later a report was started, based upon hearsay evidence alone, that the fox was only 35yds. from Capt. Nickerson when his gun went off. This is barely credible, as it was with this gun that he made his record bag of "thirty-seven small birds and three geese" at one shot! (The point marked 9 on the plan shows where Nickerson shot at the fox.)

Edward Banks.

[Since writing the above I have learned that Messrs. N. Q. Pope and McGregor have lost Clay. On Jan. 24 Mr. Pope's hounds, kenneled at Portland, Me., under the care of McGregor, got started fighting in the yard, and before Mac could get to them Clay had been choked to death. Mac's feelings can be better imagined than described. For my part I look upon the death of Clay as a loss to the Brunswick Fur Club, for he was just about the "best o' the bunch." The following is a short review of the hound and his capabilities, furnished me by a friend who has seen the dog work and who knows what he is talking about: "Clay was a Goodman hound and was bought in Kentucky by N. Q. Pope. In every respect he was a grand hound; would generally lead any pack and had a beautiful voice. He tried out far and wide for a trail, and when he struck one always worked very quickly up to his fox. On the bench he won many honors, and but for his death would have been at the New York show. He was nicely marked, black, white and tan, with rather a white face; and although about nine years old did not show his age at all."]

THE BOSTON SHOW.

The thirteenth annual show of the New England Kennel Club, held in Mechanics Building on Feb. 2 to 4, will be a memorable one in the annals of the club, in that it is the most successful show it ever held. Good weather favored the show from first to last, and so good was the attendance that at the close of the second day financial success was almost a certainty, and at the close of the show the balance on the right side of the accounts was said to be better than that of any other show in the club's history, and the number of visitors which attended the show on the first day was greater than that of any other one of the club's show days. The wisdom of selecting an earlier date, one free from entanglement with those of the spring outdoor amusements, was demonstrated by the success of this show. Last year on the dog show dates the base ball season opened, there was a people's holiday also, and the balmy, fine weather of the springtime enhanced the outdoor attractions to such a degree that the dog show suffered an undeserved neglect. Good winter weather favored the show this year, but it was bad weather for country picnics and base ball games.

The poultry show occupied the hall on the week preceding. In consequence, the dog show benching, which this year was done skillfully and well by Spratt Patent, was delayed. The erection of the benches was not begun till Monday night, and the finishing touches on Tuesday morning delayed the commencement of the judging. The judging of the regular classes was not finished till Wednesday evening. As to the awards, they were on the whole quite well received, though there was a little dissatisfaction here and there in particular cases, as there has been and will be to the end of shows; but in one instance, that of the foxhound judging, the dissatisfaction was well grounded. The judge probably could have done better had he stopped thinking and started guessing. However, his knowledge seemed to be greater and more uniform in respect to the poorer hounds, or rather his best fancy seemed to be opposed to the best dogs. In justice to him it may be said that he never posed as a judge of hounds, and the club is not free from blame in making its arrangements for the foxhound judging. A number of foxhound entries were withheld in consequence of the unsatisfactory arrangements, and of this the club knew, so that it merits rebuke for giving such shabby judging talent in return for the support bestowed. The Boston show is the greatest foxhound rallying point in the East, it being a center of foxhound interests, as Kentucky is in the West. A cheeseparing policy or a makesnift arrangement in respect to judging the New England foxhounds is not treating them with the consideration they deserve, nor is the club thereby doing justice to itself.

Mr. Chas. H. Mason judged bloodhounds, mastiffs, St. Bernards, Great Danes, beagles, bull dogs, bull terriers, poodles, Scottish terriers, Skye terriers, whippets and miscellaneous class.

Mr. James Mortimer judged Boston terriers, collies, Old English sheep dogs, deer hounds, wolfhounds, Newfoundlands, Irish terriers, dachshunde, bassets, French bull dogs, Bedlington terriers and Dandie Dinmont terriers.

Mr John Davidson judged pointers, setters, greyhounds and Chesapeake Bay dogs

Mr. German Hopkins judged fox terriers, black and tan terriers and foxhounds.

Mr. T. Farrar Rackham judged all toys.

Spratts Patent benched and fed the dogs in a most satisfactory manner.

The members of the committee were indefatigable in their efforts to perform the infinity of duties assigned to them. Mr. E. M. Oldham superintended the show and did it well. The lunch given to the exhibitors on Tuesday surpassed any of like generous attentions given by the club in past years. The room was large, the tables long and every seat was filled. On Wednesday night the club gave an entertainment to some invited guests

The quality of the entries was excellent, taken as a whole, and the total, which, of course, included some re-entries, was 942.

"The Club Cup," a special for the best dog or bitch in the show, all first prize winners to compete, the competition for it to be judged by all the judges on Wednesday, excited intense interest It was won by Messrs. L. & W. Rutherford's fox terrier Warren Sentence.

Col. Magnus Shult's trained Great Danes performed some heavy capers each day, which served to entertain the visitors.

Foxhounds were a fairly good lot, though in numbers they were much less than they might have been. They were very unskillfully judged Songster had a walkover in the class for English dogs and bitches. American foxhounds, puppy class for dogs and bitches, had three entries. Stormer, first, was coarse, lacking in symmetry, and was hardly deserving of a mention. Second went to Song Maid, excellent in legs, feet, neck and good symmetry; though a bit lathy, by far the best hound in the class. The novice class, for dogs and bitches, had four entries. First went to Rawleigh, plain in head and a fair hound otherwise. Second went to Flash, a strong bitch, good in quarters, back, shoulders, neck, but lacking in general symmetry. In the field trial class, three competed. Big Strive, a well known winner, was rightly placed first. Rock, second, is coarse in head, good in body and stands pigeon-toed. Flash the reserve, is coarse in head. There were seven entries in the open dog class, one absent. Duke, a former winner, took first. Joe Blackburn took second, and Rawleigh, first in novice class took third. The reserve went to Rock. There were five in the open bitch class Fashion, first, is ordinary and lacking in character. Flirt, second, is an excellent hound, though showing a trace of English; and Flash, third, is a superior hound, of good muscular development, symmetrical and having good hound character. The reserve went to Song Maid. In the challenge class for dogs and bitches, Femur, slack in build, was placed over Big Strive, which was as wrong as it could be, and Femur had no competitor in the champion's class.

Chesapeake Bay dogs had nearly all their support from the Oak Grove Kennels. Judy and Dimple, the only competitors in the open bitch class, were first and second in the order mentioned. Bret, a light built dog of fair quality, had no competitor in the dog class. Deacon, in excellent condition, had no competition in the challenge class.

Pointers were a fairly good lot as a whole, though mixed as to quality, as is commonly the case. Duke of Kent III., a small, weedy puppy, was lucky to receive first without competition in the puppy dog class, a single letter being more than he merited. In the corresponding bitch class Zella Strideaway took first without competition. She is light in muzzle, plain in head, but a fairly good bitch otherwise. There were six which competed in the novice class for dogs and bitches. Kent's Kate, first, is straight in stifles; good body, neck, shoulders and symmetry. Furlough Bloom, second, is slightly open in feet, rather heavy in shoulders and skull; still she is a good bitch. Third went to Betty M., light muzzle, heavy shoulders and too round in formation. Queen of Monocacy, reserve, is out at elbows and plain in head. Ightfield Diana had a walkover in the field trial class. There were eight in the open class for dogs, 55lbs. and over. Roswell, first, has a coarse head and is slightly coarse generally, rather long cast and a trifle cowhocked. Furlough Mike, second, was shown in good condition, and beats Roswell in head, neck, shoulders, legs, feet and general symmetry. He was protested after the judging on the ground of under weight, but the protest was disallowed. Dusty Way, third, was too thin in flesh; ears set too high; skull heavy; toes turn out; quite a good dog nevertheless King of Lynn, reserve, carries a lot of lumber. In bitches, 50lbs and over, six competed. Urada, first, is quite a good bitch, though open in feet, shoulders too heavy and head not clean cut Second went to Furlough Bloom, second in novice class; and third went to Ightfield Diana, a very sound bitch. Kissaway, the reserve, is light in muzzle, heavy in shoulders and back. Molton Banner had a walkover in the heavy weight challenge class, and Josie Bracket won over Alice Leslie in the corresponding class for bitches The open bitch class light weights had six entries. Brighton Flossie, first, is heavy in flews, but is quite a good all-round bitch. Kent's Kate, already mentioned, won second; and third went to Cyrene, light in bone and muzzle; she is symmetrical. Lady Bang II., reserve, is heavy in shoulders, but possessed much merit. There were six competitors in the class for dogs under 55lbs. First went to Straightaway, a trim-built, symmetrical dog, sound in legs and feet, body well shaped, and good quarters. Ned, second, is light in body, ordinary in head, and was shown too thin in flesh. Furlough Druid was third, and Chaucer, a coarse dog, was reserve In challenge bitches, light weight, Lady Gay Spanker won over Miss Rumor; and in challenge dogs Shotaway beat Ridgeview Comet. The champions' class had two entries, Lady Gay Spanker and Molton Banner, the former winning easily.

English setters were a fairly good lot. There were two dog puppies, Lem Bondhu and Roger Bondhu, first and second, both ordinary; Constance had no competition in the bitch puppy class. There were five competitors in the novice class for dogs and bitches. Ruby D. III., a pretty, symmetrical bitch, excellent in legs, feet, body, neck, carriage of tail, but rather narrow in skull, took first easily, Knight Templar, second, stands perceptibly out at elbows, is light in bone, is symmetrical, and has excellent setter character. Robins Cora, reserve, has a light body, is under-sized and about average in merit. Montell had no competitor in the field trial class. There were six in the open dog class. Count Dick, first, is a good, large dog, though he is marred by throatiness and might be better in short ribs. Robin Goch, second, is coarse in head, though a passably good dog otherwise; and third went to Knight Templar. Freckled Monk, the reserve, stands in at elbows, is flat in ribs, and is generally slackly built. There were six competitors in the open bitch class. Ruby D. III. won first easily. Robins Juno, quite a good bitch, took second; and Monk's Nun, both former winners, took third. Cactus and Maid Marion were without competition in their respective challenge classes, and Albert's Ranger was alone in the champions' class.

Irish setters were not strong in numbers, and in respect to quality they were only fair. One puppy was shown. In the open dog class Rockwood II. took first. He is a little long cast and light in body, fairly good in head, color, legs, feet, neck and general symmetry Garnet, second, is short in muzzle, but otherwise is well built, and was very close to first in merit. St. Elmo, third, was thin, flat in ribs, and ordinary in quality. Robert, reserve, was ordinary. There were but two bitches in the open class: Duchess, a good, muscular bitch, quite well made, and Lady Rockwood, second, light in build and leggy. Kildare and Queen Vic took the honors without competition in their respective challenge classes.

Gordon setters were fairly well represented both in numbers and they were of fair quality. An ordinary puppy took first without competition in the dog puppy class, and Pinemont took first over Fannie R. in bitch puppies. The latter was the superior of Pinemont in every way save color. There were nine dogs in the open class. King B., not in first rate condition, took first. Second went to Dwight Grouse, head heavy, color good. Grouse W., third, has a short, heavy head and is lacking in symmetry He is only average in merit. The remainder of the class was ordinary. There were eight in the open bitch class. Dwight Bee, first, is narrow in muzzle and ordinary in symmetry Queen B., second, has a light muzzle, light head, is thick through shoulders, short in neck Monk, third, carries ears badly, is heavy in shoulders, light in muzzle and has a smudgy tan. The class was of middling quality at best. Heather Lad won over Count Noble in the challenge class and the challenge bitch class had no entry. Heather Lad had a walkover in the champions' class.

Spaniels were a rare good lot, and the entry was a large one, numbering with re-entries about eighty-six.

Beagles also were strong both in numbers and quality, numbering seventy-five. There were eleven in the dog puppy class. Thornwood, an excellent puppy, though a shade too long cast, won first with something to spare. There were four bitch puppies. Nine competed in the novice class Thornwood won first easily; second to Truman, light in hips and waist, a trifle out at elbows and light in bone, yet a good beagle. Third went to Thelma, wide in shoulders, out a bit at elbows; good beagle character. There were five in the field trial class, first going to a good beagle, Francis; second going to Nell R., a good beagle, though too full sprung in ribs There were ten in the class for dogs over 13in. Trump It, first, a good beagle, light in waist, and in pasterns he might be better. Florist, second, is not first-rate in front; and Ringwood, third, is better in legs than first and second winners, and is more symmetrical, though a bit light in chest. These three were very close in merit. There were seven in the bitch class over 13in. Nell R. won first, and Lady Glenwood, wide in front, took second; Thelma third. Little Wonder, in dogs, 13in. and under, took first. He is light in quarters. Roving Mike, second, and Leader, third, were fairly good beagles. Laick's Roy, reserve, is heavy in shoulders Bitches, 13in. and under, had nine entries. Frances, first in field trial class, won, and Marjory, wide in ribs, took second. Dotsey, third, is light in body, but far inferior to Marjory in beagle character. Challenge classes for dogs and bitches, 13in. and under, had each but one entry, Razzle and Evangeline. In challenge dogs, over 13in., Ringleader won over Sherry, and Lonely won over Daisy Corbett in the corresponding class for bitches. In the champions' class Ringleader was defeated by Lonely. She shows age and is hardly equal to Ringleader in merit.

LIST OF AWARDS.

FOXHOUNDS.—English 1st, Bragdon & McGregor's Songster.—American—*Puppies:* 1st and 2d, N. Q. Pope's Stormer and Song Maid. Res., Blue Mount Forest Kennels' Wantige.—Novice 1st and 2d, Walker & Hagan's Rawleigh and Flash. Res., Dr. H. T. Thurber's Neida.—Field Trials Class—1st and res., Walker & Hagan's Big Strive and Flash; 2d, G. E Carr's Rock.—Open *Dogs:* 1st, N. Q. Pope's Duke; 2d and 3d, Walker & Hagan's Joe Blackburn and Rawleigh. Res., G. E. Carr's Rock. *Bitches:* 1st and 3d, Walker & Hagan's Fashion and Flash; 2d and res., N. Q. Pope's Flirt and Song Maid. Challenge—1st, Dr. H. T. Thurber's Femur.—Champion—1st, Dr. H. T. Thurber's Femur.

NEWFOUNDLANDS.—1st, H. Wachendorf's Lola.

CHESAPEAKE BAY DOGS.—Open—*Bitches:* 1st and 2d, Oak Grove Kennels' Judy and Dimple. *Dogs:* 1st, H. McAllister's Bret.—Challenge—1st, Oak Grove Kennels' Deacon.

POINTERS.—Puppies—*Dogs:* 1st, G. H. Boothby's Duke of Kent III. *Bitches.* 1st, F. S. Eaton's Zilla Strideaway.—Novice—1st, F. J. Lenoir's Kent's Kate; 2d, G. J. Gould's Furlough Bloom; 3d, R. C. McQuillen's Betty M. Res., Monocacy Valley Kennels' Queen of Monocacy.—Field Trials Class 1st, G J Gould's Ightfield Diana.—Open—*Dogs* (55lbs. and over): 1st, C. Heath's Roswell; 2d, G. J. Gould's Furlough Mike; 3d, F. E Clark's Dusty Way. Res., E. W. Foot's King of Lynn. *Bitches* (50lbs and over): 1st, F. J. Lenoir's Urada; 2d and 3d, G. J. Gould's Furlough Bloom and Ightfield Diana. Res., H H. Graves's Kissaway.—Challenge *Dogs* (55lbs. and over): 1st, Glen Rock Kennels' Molton Banner. *Bitches* (50lbs. and over): 1st, G. J. Gould's Josie Bracket. Res., E. M. Beale's Alice Leslie.—Open—*Bitches* (under 50lbs): 1st, Mrs. A. K. Armstrong's Brighton Flossie; 2d, F. J. Lenoir's Kent's Kate; 3d, G. W. Lovell's Cyrene. Res., A. Lavery's Lady Bang II. *Dogs* (under 55lbs.): 1st, A. Burlingame's Straightaway; 2d, Glen Rock Kennels' Ned; 3d, G J. Gould's Furlough Druid. Res., E. P. Mason's Chaucer.—Challenge—*Bitches* (under 50lbs): 1st and res., G. J Gould's Lady Gay Spanker and Miss Rumor. *Dogs* (under 50lbs): 1st, G. W. Lovell's Shotaway. Res., G. J Gould's Ridgeview Comet.—Champion—1st, G. J. Gould's Lady Gay Spanker.

ENGLISH SETTERS.—Puppies—*Dogs:* 1st, H. A. Belcher's Lem Bondhu; 2d, D. Belcher's Roger Bondhu. *Bitches:* 1st, Warwick Kennels' Constance.—Novice 1st, J. E Borden's Ruby D III; 2d, R. W. Cunningham's Knight Templar. Res., D. J. Peters's Robins Cora.—Field Trials Class—1st, H. L. Keyes's Montell. Open—*Dogs:* 1st, Oak Grove Kennels' Count Dick; 2d, D. J. Peters's Robin Goch; 3d, R W Cunningham's Knight Templar. Res., C R. Hickox, Jr.'s, Freckled Monk. *Bitches:* 1st, J. E. Borden's Ruby D. III; 2d, D J. Peters's Robins Juno; 3d, Oak Grove Kennels' Monk's Nun Res., H. L. Keyes's Blue Mist. Challenge *Dogs:* 1st, J. Brett's Cactus. *Bitches:* 1st, H. Pape's Maid Marion.—Champion—1st, Warwick Kennels' Alberts Ranger.

IRISH SETTERS.—Puppies—*Dogs:* 1st, F. C. Whiting's Rex.—Open *Dogs:* 1st, Woodbury Kennels' Rockwood II.; 2d, G. A. Tenney's Garnet; 3d, S. Coulson's St. Elmo. Res., R. W Ropes's Robert. *Bitches:* 1st, Oak Grove Kennels' Duchess; 2d, Woodbury Kennels' Lady Rockwood. Challenge *Dogs:* 1st, Oak Grove Kennels' Kildare. *Bitches:* 1st, Oak Grove Kennels' Queen Vic

GORDON SETTERS.—Puppies—*Dogs:* 1st, Wanoosnoc Kennels' Ranger W. *Bitches:* 1st, E. H. Morris's Pinemont; 2d, C. T. Brownell's Fannie B Open *Dogs:* 1st, C. T. Brownell's King B.; 2d, J. R. Oughton's Dwight Grouse; 3d and res., Wanoosnoc Kennels' Grouse W. and Wanoosnoc Prince. *Bitches:* 1st and res., J. R. Oughton's Dwight Bee and Dwight Sarah; 2d, C T. Brownell's Queen B.; 3d, Woodbury Kennels' Monk Challenge—*Dogs:* 1st, J. R. Oughton's Heather Lad. Res., Miss S. A. Nickerson's Count Noble.—Champion—1st, J. R. Oughton's Heather Lad.

SPANIELS.—(American Spaniel Club Classification No. 1, Field Spaniels, over 28lbs.)—Challenge. *Dogs:* 1st, Dr. S. J. Bradbury's Drayton Warwick Res., H. P. Mullens's Woolton Baron. *Bitches:* 1st, R. P. Keasbey's Moonlight Belle. Res., M. A. Viti's Scandal.—All Breeds (over 28lbs.)—Champion 1st, Miss A. Green's Dennis.—Field Spaniels, Black (over 28 lbs.)—Open—*Dogs:* 1st, Toon & Thomas's Endcliffe Bishop; 2d, M A. Viti's Royd Monarch Res., Miss A. Green's Wardlesworth Sweep *Bitches:* 1st, Toon & Thomas's Endcliffe Myrtle; 2d, Miss A. Green's Zulu.—Any other Color (over 28lbs.) *Dogs:* 1st, H. P Mullens's Woolton Wonder. *Bitches:* 1st, R. P. Keasbey's Gypsey Belle Cocker Spaniels, Black or Liver (not over 28lbs.—Challenge—*Dogs:* 1st, J. H. Herbertson's Pickpania; 2d, Swiss Mountain Kennels' Middy. Res., Mepal Kennels' Commodore. *Bitches:* 1st and Res., Swiss Mountain Kennels' Dart and

Gabrielle; 2d, Mepal Kennels' Woodland Princess.—ANY OTHER COLOR—1st, Belle Isle Kennels' Gaiety Girl; 2d and Res., Swiss Mountain Kennels' Ruth S. and Goldie S.—CHAMPION (all Cockers)—1st, Swiss Mountain Kennels' Miss Waggles.—BLACK (not over 28lbs.)—OPEN—*Dogs:* 1st, G. Douglas's Havoc; 2d, J. P. Willey's Paro; 3d, Brookside Kennels' Figi. Res., Dr. C. D. Hinmon's Jimmy. *Bitches:* 1st, Brookside Kennels' Brookside Miss Phyllis; 2d, Mepal Kennels' Miss Jerry; 3d, C. C. Moulton's Ida B. Res., J. P. Willey's Lady Jumie.—RED OR LIVER (not over 28lbs)—*Dogs:* 1st, Swiss Mountain Kennels' Raven R; 2d, Brookside Kennels' Brookside King. *Bitches:* 1st, Brookside Kennels' Red Dollie; 2d, Swiss Mountain Kennels' Miss Squeers; 3d, Bayview Kennels' Bayview Meig. Res., S. W. Mallory's Lady Buff.—ANY OTHER COLOR—*Dogs:* 1st, A. P. Ricketts's Lortan; 2d, Swiss Mountain Kennels' Pepper; 3d, S. W. Mallory's Robert Bruce. Res., W. T. Payne's Wyo. *Bitches:* 1st and 2d, W. T. Payne's Tansy and Elska. Res., Brookside Kennels' Woodland Trilby.—PUPPIES—*Dogs:* 1st, Swiss Mountain Kennels' Cupid S.; 2d, Brookside Kennels' Figi; 3d, G. Douglas's Parron Res., S. W. Mallory's Robert Bruce. *Bitches:* 1st, G. Douglas's Woodland Countess.—CLUMBER SPANIELS *Dogs:* 1st, H. Jarrett's Major Gilfeather. *Bitches:* 1st, H. Jarrett's Susie.—CHALLENGE—1st, H. Jarrett's Glenwood Greeting.—IRISH WATER SPANIELS—CHALLENGE—1st, Miss A Green's Dennis.

BEAGLES.—PUPPIES—*Dogs:* 1st, J. Lewis's Thornwood; 2d, Waldingfield Beagles' Bachelor; 3d, J. Caswell's Titus *Bitches:* 1st, Waldingfield Beagles' Havoc; 2d, J Caswell's Melody. Res., Glenwood Beagle Kennels' Rhoda Glenwood.—NOVICE—1st, J. Lewis's Thornwood. 2d, Hempstead Beagles' Truman; 3d, C. S. Wixom's Thelma.—FIELD TRIALS—1st, Glenwood Beagle Kennels' Francis; 2d and res., G. F. Reed's Nell R. and Mag R.—OPEN—*Dogs* (over 13in.): 1st, C. S. Wixom's Trump II; 2d and res., Hempstead Beagles' Florist and Truman; 3d, J Lewis's Ringwood. *Bitches:* 1st and res., G. F. Reed's Nell R. and Mag R.; 2d, Glenwood Beagle Kennels' Lady Glenwood; 3d, C. S. Wixom's Thelma. *Dogs* (13in. and under): 1st, C. S. Wixom's Little Wonder; 2d, Weeks & Turner's Roving Mike; 3d, Hempstead Beagles' Leader. Res., Protection Beagle Kennels' Laick's Roy. *Bitches:* 1st, Glenwood Beagle Kennels' Frances; 2d, Waldingfield Beagles' Marjory; 3d, T. Shallcross's Dotsey. Res., G. F. Reed's Snifter.—CHALLENGE—*Dogs* (13in. or under): 1st, C. S. Wixom's Razzle. *Bitches:* 1st, C. S. Wixom's Evangeline. *Dogs* (over 13in.): 1st, J. Lewis's Ringleader Res., C. S. Wixom's Sherry. *Bitches:* 1st, J. Lewis's Lonely. Res., C. S. Wixom's Daisy Corbett.—CHAMPION—1st and res., J. Lewis's Lonely and Ringleader.

DACHSHUNDE.—PUPPIES—1st, Venlo Farm Kennels' Senator Puck.—NOVICE—1st, Worth Kennels' Choc'let; 2d, James L. Little, Jr.'s, Zigzag.—OPEN—RED—*Dogs:* 1st, Worth Kennels' Ray K.; 2d, Joseph Lythgoe's Janty. *Bitches:* 1st, Worth Kennels' Cocoa; 2d, Joseph Lythgoe's Jeanne.—ANY OTHER VARIETY—*Dogs:* 1st, J. L. Little, Jr.'s, Zigzag. *Bitches:* Worth Kennels' Choc'let.

BASSET HOUNDS.—1st, Weeks & Turner's Turk.

POINTS AND FLUSHES.

At a meeting of the Kentucky Kennel Club last week several changes were made in the list of officers, some of the original being unable to accept on account of business not permitting them to give the club's affairs the proper attention. The revised list of officers is: Gen. John B. Castleman, President; Roger D. Williams, First Vice-President; Henry J. Cary-Curr, Second Vice-President; Francis J. Hagan, Secretary; Luke O. Cox, Treasurer; Bench Show Committee—W. S Applegate, chairman; Francis J Hagan, Lewis Barret, St. Marc M. Mundy and Al. F. German; Directors—Gen. John B. Castleman, R D. Williams, H. J. Cary Curr, L. O. Cox, Francis J. Hagan, Dr. Alex. Harthill, M. M Mitchell, J. A Reaves, Morris Belknap, C. W. Depauw, Arthur G. Langham, L. Barret, W. S. Applegate, St. M. M Mundy, Al. F. German.

A meeting of the executive committee of the Canadian Kennel Club will be held at the Queen's Hotel, Toronto, on Saturday, Feb. 13, at 8 P M. Business to come before the meeting: 1. Reading of minutes. 2. Discussion of our relations with the A. K. C and appointing of delegates to their annual meeting. 3. Non-payment of prize money at the late Montreal show. 4. Other business.

A local show will be held in New Haven next week.

Mr. Caldwell informs us that a sweepstake, $25 entrance, was arranged at Boston between himself and Messrs. Ritchie, Hunnewell, Rutherfurd, Carnochan and Foote. Of the three wire haired bitches which constitute the entry of each, the produce of this year is eligible to compete in the sweepstake which will be decided in 1898.

The Manitoba Field Trials Club will hold its annual meeting this week, and will arrange in all probability for a field trial this year. If trials are held in Manitoba this year the Northwestern Field Trials Club will give a diploma (costing $25) similar to the one won by Jingo; entry fee or entry and starter fees to be divided.

The annual meeting of the Gordon Setter Club of America will be held at Madison Square Garden on Monday evening, Feb. 22, at 7:30 o'clock, for the election of officers and the transaction of such other business as may then come up. Mr. L. A. Van Zandt, the secretary, requests members to send to him their annual dues ($5) and the names of those to be proposed for membership.

The annual meeting of the St. Bernard Club of America will be held at Madison Square Garden, New York, at 8 o'clock, P. M., Feb. 22.

The annual general meeting of the Irish Terrier Club of America will be held in Madison Square Garden, at 3 P. M., Feb. 23.

The Alabama Field Trials Club has issued a circular announcing the postponement of its field trials till Feb 15, and the closing of entries till Feb. 14 The M. & C. R. R. will make a rate of one fare for the round trip to and from the trials, and the L. & N. the same, or one and one third fare. The club extends a cordial invitation to sportsmen to attend.

The premium list of the Kentucky Kennel Club can be obtained of the secretary, Francis J. Hagan, 317 Fourth avenue, Louisville, Ky.

The annual meeting of the A. K. C. will be held in the Madison Square Garden, Feb. 24, at 2 o'clock P. M.

A number of cash specials have recently been added to the Mascoutah Kennel Club's premium list, for Gordon setters, mastiffs, pointers, poodles and dachshunde. Additional classes have been made for poodles as follows: 143A, challenge curly dogs; 143B, challenge curly bitches. Class 144 is changed to challenge corded dogs and bitches. The prize for challenge Italian greyhounds, class 272, is $10. Beagles will be judged by Major J. M. Taylor.

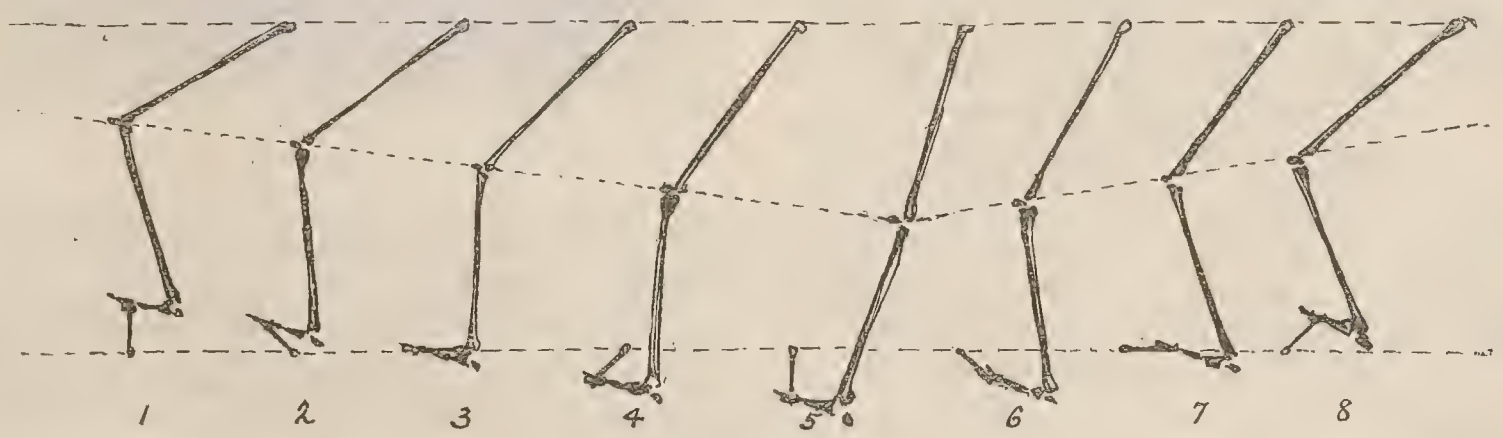
The election of officers of the Associate Members of the A K. C resulted as follows: President, H. H. Hunnewell, Jr.; Vice President, H. G. Trevor; Secretary, Fred E. Lewis. Delegates: A. C. Wilmerding, H. K. Bloodgood and G W. H. Ritchie. At the committee meeting, held recently, Mr. T. J. Farley, of Albany, was disqualified. The Pacific Kennel Club has disbanded, and turned over its assets to the Olympic Gun Club, and the latter has applied for admission to the A. K. C.

At the Pittsburg show a valuable silver cup will be offered for the best dog in the show, besides a number of cash and other special prizes.

Wheeling.

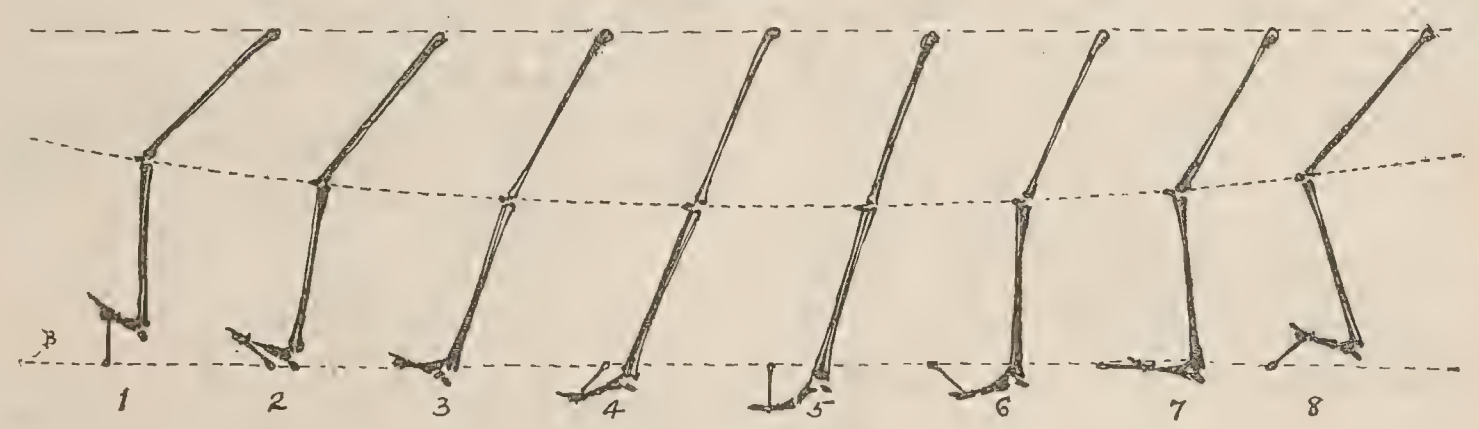
Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

THE ART OF PEDALING.



A NOVICE wonders why it is that some riders go up hill without apparent exertion, while he is straining every muscle in his body to accomplish the ascent, and even then perhaps fails to reach the top without dismounting. His bicycle wabbles from side to side of the road and there can be no question but that he is exerting a much greater muscular effort than the other men; and yet, as if by magic, they slip by him, riding smoothly and easily.

Similarly, against head winds, and even under favorable conditions, the novice finds that the experienced riders have an advantage over him in ease of riding and freedom from fatigue that he cannot explain on ordinary grounds.



Of course a portion of this superiority lies in the hardened muscles and better judgment of the experienced rider, but much the greater part is due to skill in pedaling.

Good ankle motion is the secret of all good riding, and it is indispensable for hill climbing or conditions where the exertion is great and continuous.

The accompanying diagrams are intended to show the difference between good pedaling and bad, and to demonstrate the way in which power is gained by proper ankle motion. The first shows the incorrect way—characteristic of unskilled wheelmen—in which the rider propels his machine by a series of flat-footed thrusts. The other diagram shows the proper style, in which, through the medium of ankle motion, the propelling power of the rider's legs is exerted continuously instead of by fits and starts.

I. THE WRONG WAY.

II. ANKLE ACTION.

In order to clearly appreciate the point at issue, we must consider for a moment the principles of crank-driven mechanisms Take for example a grindstone which is fitted with a handle of the type usual in such machines. Turn the handle slowly and it becomes evident that the power exerted to do this may be divided into a series of direct forces. Suppose you are standing behind and a little above the grindstone, with the handle at its highest point. First thrust the handle away from you, and the force expended is, roughly speaking, a forward horizontal one. Then press it down, and you have a downward vertical force. Then before it quite reaches its lowest point draw the handle toward yourself, and the force is a backward horizontal one. Lastly, lift it over the relative dead center, and you exercise an upward vertical force.

Thus, to turn the grindstone properly we see that the force must be expended in four directions: first forward, then downward, then backward, then upward.

The same principle exactly, viz., of keeping up the application of power all around, should be adopted as far as possible when riding a bicycle.

It is not possible of course to copy it in full, as the upward pull is impracticable, but three of the four motions may be duplicated. A monkey has the entire series at his command, and should make a good bicycle rider.

Lacking his foot grip, man has to make up for it by intelligent cultivation of the use of the ankle joint, the object being to exert throughout as great a part of the revolution of the pedal as possible, a force which shall tend to propel the bicycle. As the author of the volume on cycling in the Badmington Library remarks, "Good ankle work even in its least developed stage prevents the rider from holding down when the lowest point is reached, a trick which very often has much to do with the notable slowness of a promising looking rider."

Referring to the diagrams, it will be noted that in both the positions of the hip of the rider and of the crank axle are always in the same horizontal lines.

This is essential, as the distance from saddle to crank axle is fixed. It will also be noted that in each case the suppositious saddles are adjusted at the greatest height consistent with the different styles of riding. In all other respects, however, the diagrams differ.

In the first, the knee follows a jerky and ungraceful course, which can best be represented by a succession of angles, and at the height of the stroke it reaches a point several inches above the position of the knee in the second diagram.

This jerky and excessive knee action alone would condemn the first method as compared with the second were other reasons lacking. The main fault, however, is to be found in the position of the foot and ankle, which is directly responsible for the other fault just noted. Here in the first diagram we see that in all positions of the stroke the foot occupies practically the same position relative to the horizontal dotted lines, since planes passing through the sole are parallel. The only force for propulsion that can be exerted is downward and is limited to positions from 1 to 4 inclusive, while the stroke is really effective through 2 and 3, or only one-quarter the entire revolution of the pedal.

It will also be noted that, as the leg is further from a straight line here than in the corresponding positions in Fig. 2, the thrust of the leg, even at its most effective points, must be less powerful than where the second style of riding has been adopted.

As most wheelmen have two legs, and as the force for propulsion of each leg by the flat footed method is extended in some degree through one-half of the revolution of the pedal, it is perfectly possible for the rider to get along under ordinary conditions without ever acquiring a knowledge of scientific pedaling On smooth, level surfaces the lack of this accomplishment is not seriously felt but bring the rider up against a hill or a head wind and at once he finds himself heavily handicapped. The bicycle loses the momentum imparted to it by the effective part of one stroke (positions 2 and 3) before the opposite pedal can be brought into position for the following stroke. The rider strains every muscle to overcome the dead points and exerts a force greatly in excess of that which is actually required, and as a result either fails in his effort or is unnecessarily exhausted.

Now turn to the second diagram and note the great advantage the wheelman has when, instead of riding flat footed, he acquires a proper control of his ankle action. Here by simply raising and lowering the heel a "kicking" and "clawing" control of the pedal is obtained that extends the stroke through nearly three quarters the revolution of the crank. This is a tremendous increase of power, and effectually obviates dead centers The resultant motion of the knee is easy and graceful, and readily falls in with the curve suggestive of a wave line, as indicated by the dotted line, while nowhere is the leg greatly bent or its most effective muscular power sacrificed.

As an actual matter of measurement the knee rises and falls 50 per cent. less with proper ankle motion than when one is pedaling flat-footed.

In the second diagram the stroke may be made effective from positions 1 to 6 inclusive, though as an actual matter of fact few riders possess so great a scope. As the pedal begins to rise at the latter part of the stroke (positions 7 and 8) the heel is sharply dropped, so that it is ready at 1 for an effective forward kick. Then follows a simultaneous straightening of the ankle and knee joints that is the essence of power in 2, 3 and 4

At position 5 a backward "clawing" motion begins, which helps to lengthen the stroke, and which is continued through 6. Finally at 7 the heel is quickly dropped to prepare for the following stroke.

The greatest power is of course available in positions from 1 to 4 inclusive, and this is the part of the stroke that tells most effectively in hill climbing. With a firm grasp on the handle bars, which greatly increases the force of the thrust, the full strength of the rider is effectively expended for the propulsion of the wheel, while dead points are obviated by the subsequent clawing action.

AN EASY ROAD TO RIDING.

AN old sea captain, who wants to learn to ride a bicycle, but who is somewhat timid about beginning, as the result of a two-minutes' trial on his son's wheel some time since, has devised a plan that he intends shortly putting into operation, which he believes will rob cycling of its terrors to the beginner.

At the Sportsmen's Exposition two years ago this old gentleman saw in operation a "home trainer," made by placing three wooden rollers in such a position that they support the wheels of a bicycle. These rollers are pivoted so as to turn easily, and when an expert rider mounts the bicycle he can pedal away at a great rate, and get all the exercise he wants while staying in one place, as

the rollers take up all the motion imparted to his driving-wheel.

The bicycle on the rollers is of course influenced by the same laws that govern it on firm ground, and will only stand up as long as pedaling is continued.

The home trainer made a deep impression upon the captain's mind, and he believes that in connection with the "breeches buoy," used for bringing shipwrecked sailors to land, the device will afford an easy road to the art of bicycle riding. He intends rigging such a machine in the cellar of his house in Brooklyn, and will support himself by a rope from the ceiling directly above his bicycle, which will be placed upon the rollers. The rope will be just long enough to permit his resting on the bicycle saddle, but when the wheel slues sideways or develops any of the numerous idiosyncrasies peculiar to it, he will be held aloft by a firm hand, as it were, and preserved from the unpleasant consequences of a fall. The length of rope will be just sufficient to enable him to sit on the bicycle when it is in a strictly orthodox position, and as long as all goes well he can pedal as correctly as any one.

The moment anything goes wrong, however, his weight is thrown on the breeches buoy and the fractious bicycle is brought up with a short turn. It is pleasant to contemplate the old gentleman's enthusiasm in the matter, and no doubt we will soon meet him on the Coney Island Path or on the Boulevard, a finished wheelman.

Bicycle Postal Route.

Before the days of the first transcontinental railroad important mail used to be carried by pony express Relays of horses were in waiting along the 1,900-mile trail from St. Joseph, Mo , to Sacramento, Cal., and mail went through in about eight days. The charge was $5 per letter.

In Australia to-day under similar conditions bicycles do the work of horses. A bicycle postal route has been established between Coolgardie, in the center of the gold fields, and Dundas, its port of entry, a distance of 280 miles. Letters and telegrams are carried backward and forward in small letter boxes strapped to the back of the machines at a charge of one shilling and five shillings respectively, the rider making one trip a week each way. The country is arid and infested by highwaymen, and a water bottle and weapons are essential to the wheelman's outfit.

RICH IN PROMISE.

There is rich promise of good things for Forest and Stream readers in the weeks that are to follow. Here is a partial list of some of them: In our next number will be given the second of two papers descriptive of

The Elkhorn,

the black bass stream frequented by the anglers of Frankfort, Ky. The writer is "Old Sam," of the Kingfishers; and his chapters deal both with the fishing which has made the Elkhorn famous for generations, and with the fishermen who have done their part in making it renowned.

In subsequent issues will be given, among others, the following:

The House by the Lake.

Some winter pictures of a boyhood home in the far-away woods of a Northern State. By Frederic Irland.

Canoeing in South America.

Adventures on the Parana River, one of the largest in the world. By J. G. King.

Hunting on the Spanish Main.

A naturalist-sportsman on the line of the Nicaragua Canal. By J. F. Le Baron, late engineer in charge.

Mud Turtle.

A day in camp with Uncle Lisha, Sam Lovel, Joseph and Antoine. By Rowland E. Robinson. This is to be enjoyed best by those who have read in these columns or in book form Mr. Robinson's "Uncle Lisha's Shop," "Sam Lovel's Camp" and "Danvis Folks."

The Florida Everglades.

Describing a visit to a Seminole village on the occasion of the celebration of the Hunting Dance. By J. W. Stranahan.

Where to Hunt in Florida.

Detroit, Mich., Dec. 21.—*Editor Forest and Stream:* If you have any friends who purpose going to hunt this winter in Florida, I shall be glad to recommend to them a guide with whom I have always had the best of sport. In addition to being able to show plenty of the feathered game of his section, he is a noted deer hunter, and he now writes me that he has some fine dogs. Florida.

(Our correspondent is a reliable man, and speaks very highly of the guide he refers to. Anybody who contemplates a trip to Florida can obtain the name and address of the guide by writing to F. S., care of Forest and Stream Pub. Co., 346 Broadway, New York.)

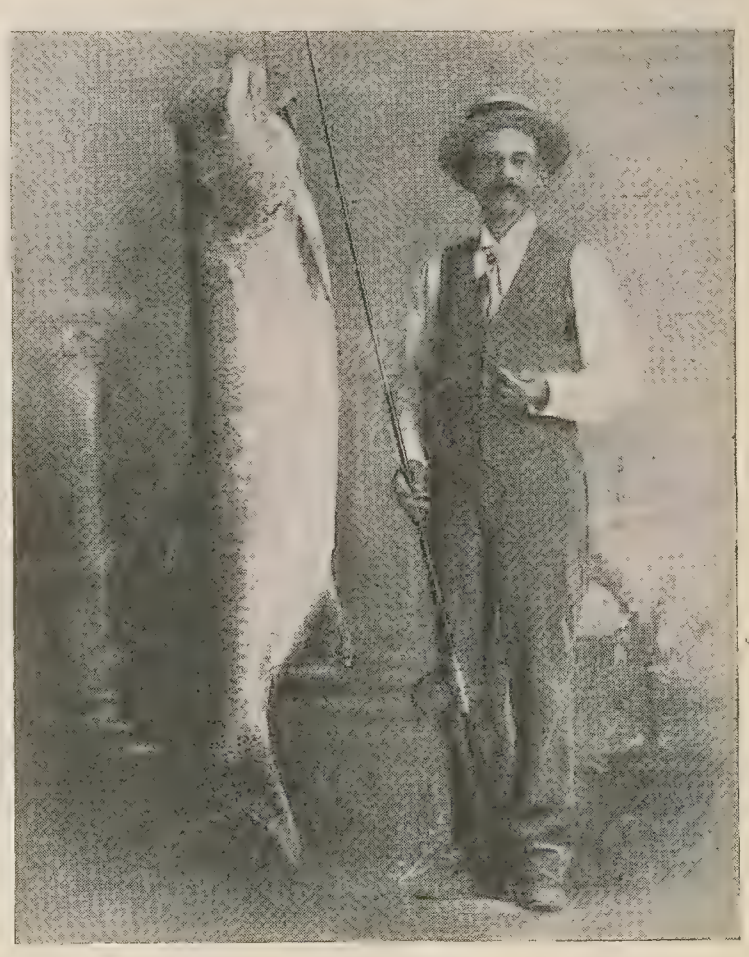
Weights of Moose.

Editor Forest and Stream:

I have bought and read your paper for many years. Recently a discussion has sprung up among my friends as to the weight of moose. They have killed them all the way from 200 to 2,000lbs. Will you give us some record weights in your Answers to Correspondents? S. H. S.

Skis and their Use.

Editor Forest and Stream:



On the subject of *skis* and their management—can some of your readers explain a few things to show how this *ski* coasting act is done?

Is a pole necessary, and to what use is it put?

Is it possible, with a pole or any other means, to steer a *ski*, or change its course, or brake it in any degree when coasting a hill?

How are two *skis* on two feet, and influenced only by a toe strap, to be induced to hold true, to not toe in and clash, or not toe out and separate indefinitely?

If, in coasting, the start is on soft snow and there shows up a strip of hard, smooth crust, what prevents the *skis* doing the balance of the trip riderless? And *per contra*, if

A TEXAS TARPON.

railroad speed is attained on hard snow and soft snow is encountered, why shouldn't there result a distance record-breaker as a header?

Readers are led to think from published accounts that cross country trips are taken, even in mountainous districts, and great hills coasted with no previous knowledge of the locality or the particular hill, amid flying snow and with a gasp for breath, and after a moment of extreme exhilaration and suspense, lo! the safe arrival.

The interjection here is: What of the trees standing or fallen, the big rocks, or even the patches of sweet brier or blackberry, that might have been there directly in front?

It wasn't luck that saved him every time, we suppose; so who will tell of the science that makes this hazard a pleasure, with not too many grim smiles over recollections of close calls that might have sent the coaster off a flying *ski* on to a never-stopping toboggan? Novice.

Yachting.

As the yachting journal of America, the Forest and Stream *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its column continuously for years.*

YACHT DESIGNING.—XIV.

BY W. P. STEPHENS.

[*Continued from page 93.*]

Thus far, as in Plate I., we have considered the three plans in the relation in which they originally stood to each other, as adjoining parts of the box surrounding our model. This arrangement is not a convenient one, and in actual practice a different one is followed. It is always easier to draw a line which is concave with respect to the draftsman than one which is convex; and for this reason the half-breadth plan is reversed from the position shown in Plate I., the middle or base line being placed on the side toward the draftsman, the lower edge of the paper, and the deck line and level lines being further from him, as in Plate II. In all drawing the draftsman's body may be considered as the center of a circle, and his arm as the radius, swinging freely in a circular sweep. In marine drafting, where so many of the lines are curves, it is easier and more natural to draw them in this way than in the reverse; and it is also more natural to stand as it were at the center rather than outside the circle to scan and inspect them. The half-breadth plan then is commonly placed near the lower edge of the paper, with its base line next to the draftsman.

It is often desirable to draw in a full deck plan, showing both sides instead of one; the full breadth giving to the eye a more correct idea of the true proportions of the deck. When this is done the right hand side of the deck is shown on the near side of the middle line, its outlines being of course convex to the draftsman; and the left hand side, with the level lines, is shown as in Plate II. The right hand half may be finished up to show either the arrangement of hatches, skylights and other deck fittings, or the construction of the deck frame.

Between the half-breadth and the sheer plans a space is usually left for the diagonals (expanded), the inclined waterlines, and any similar lines. If the curve of areas is plotted, it is also placed here.

The body plan, which in Plate I. was shown in two parts, is in actual practice always drawn in one, the two halves on opposite sides of a common middle line, the bow half on the right hand side. It is always located at the same height on the drawing as the sheer plan, in order that a T square may be used to transfer the heights from one to the other.

A common plan, and a very good one, is to make the body plan a part of the sheer plan, Station 6 of the latter being taken as the middle line of the body plan. This lessens the length of the drawing and makes it more compact, and at the same time diminishes the chances of error through imperfections of the T square and the edge of the board. It is less confusing to the beginner to keep the two entirely separate, but the practiced hand finds it easier to have the body plan at the center of the sheer plan, both directly under his eye and hand.

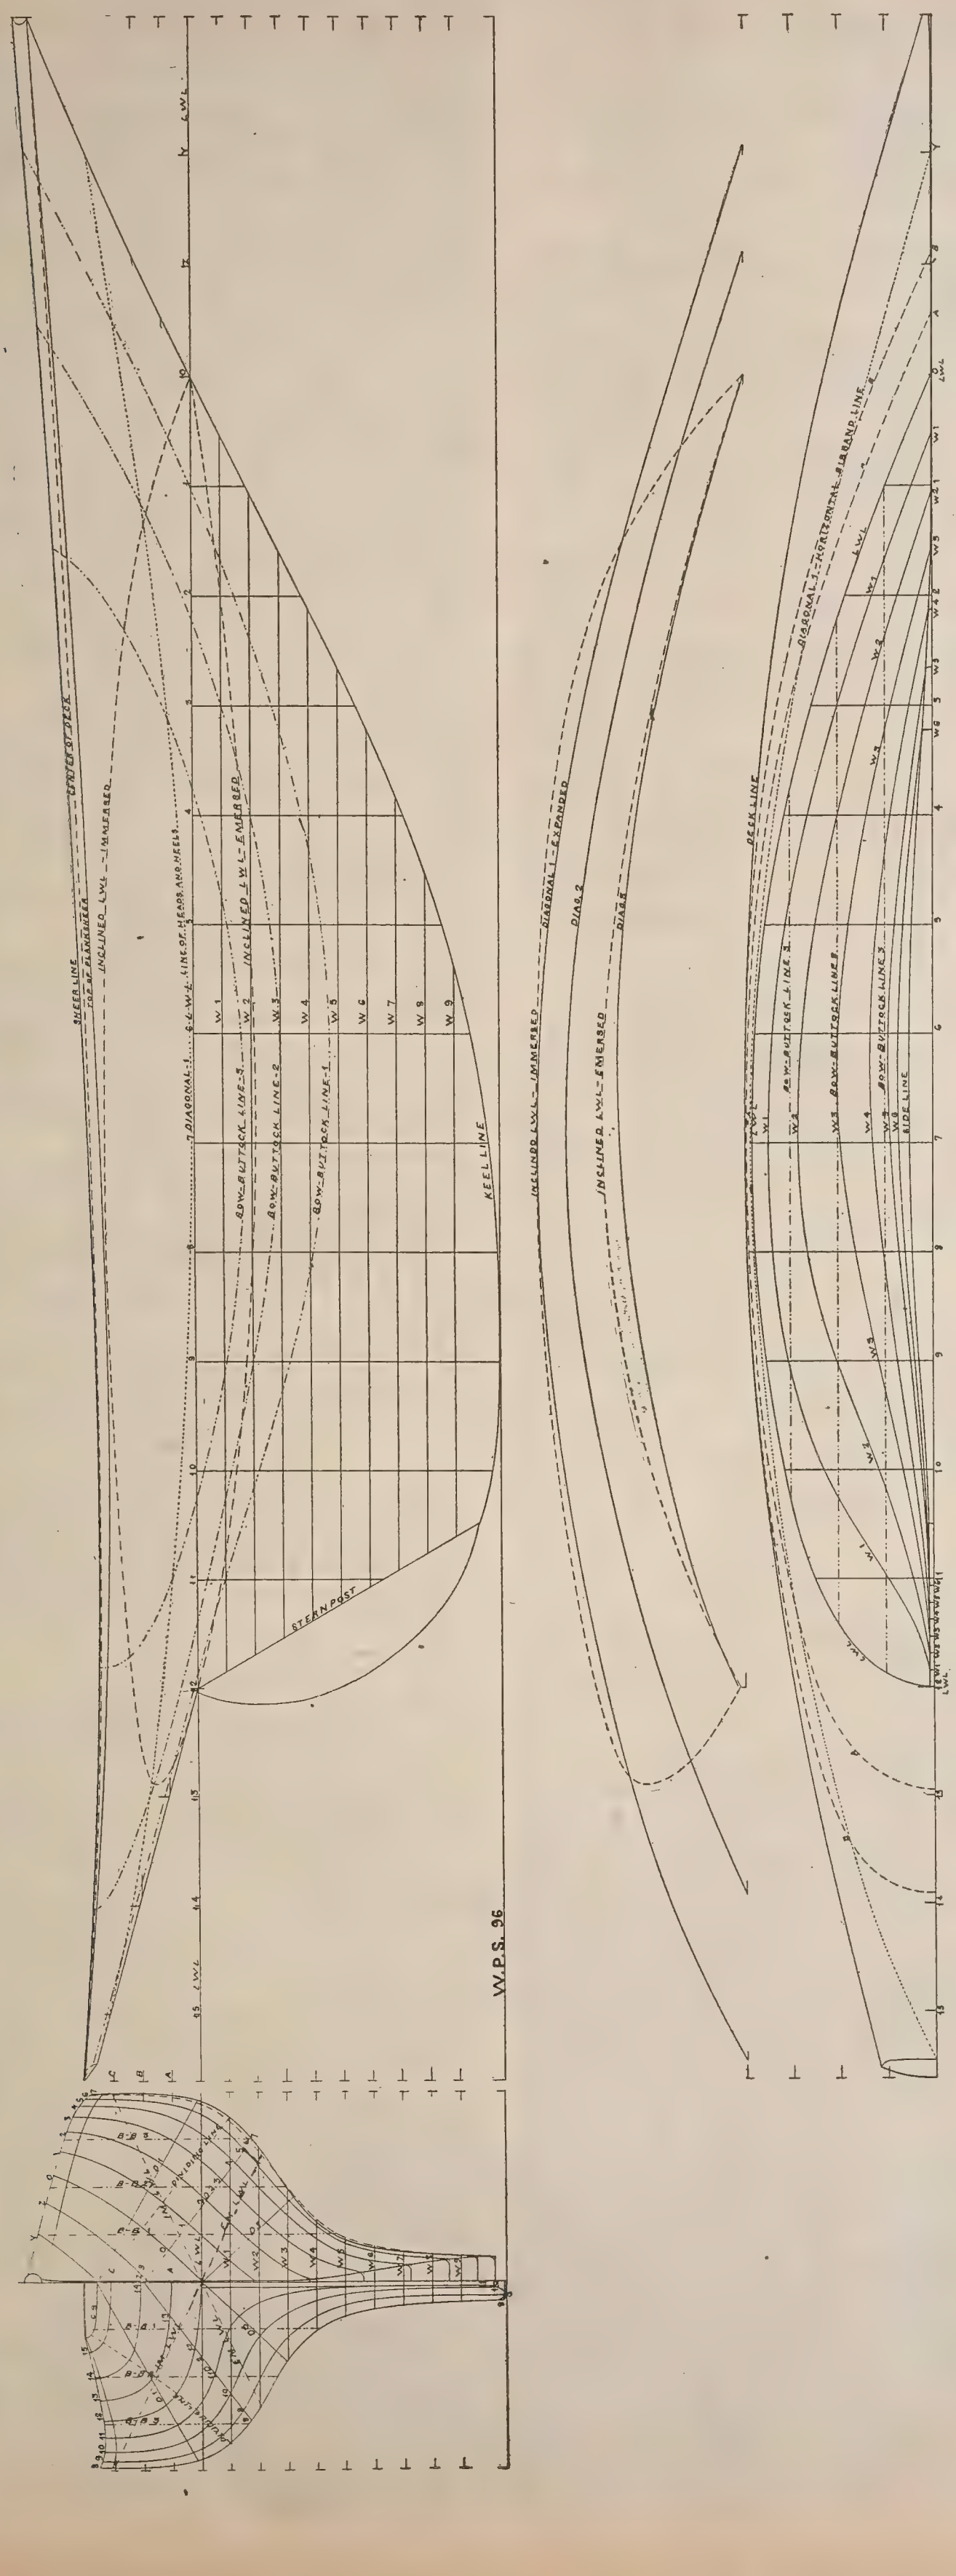
It must be admitted that a complete set of lines is complicated, even to the expert, and simply bewildering to the novice. In Plate I. the eye fails to catch the really essential curves of the vessel, being distracted by the rectangles formed by the numerous auxiliary lines. In order to bring out in the necessary relief the principal lines, it is customary to use inks of different colors, and much may be done in this way to lessen the apparent complication of the drawing. There is no common standard for such coloring, but each designer follows his own fancy to a great extent. In the course of practice we have worked out a method which seems to answer the purpose, but which we will only mention briefly here, leaving it to be described in detail in its proper place later on.

The framework of the drawing (the base lines of the three plans), the stations in the sheer and half-breadth plans, the level lines in the sheer and body plans, the diagonals in the body plan, are drawn lightly in red ink; these lines being laid off very accurately as soon as the dimensions of the yacht are finally decided on. Five of these lines, it must be stated, are drawn in blue instead of red: the l.w.l., the middle line of the body plan, and the stations at 0, 6 and 12 in the sheer and half-breadth plans. In this way the eye can locate instantly the most important lines, the l.w.l. and the stations at each of its ends and its middle. It will be found a great help, both in sketching in and fairing, to have these lines in blue standing boldly out from the red. The bow-buttock lines in the body and half-bredth plans are drawn in green. This framework being completed in ink at the outset, it is not destroyed in the necessary erasure of many parts of the design in the succeeding processes, as would be the case if it were left in pencil until all the lines were completed. When this latter stage is reached and the final inking in begins, the deck line, sheer line, side line, etc., are drawn in black, the level lines in the half-breadth plan in blue, the l.w.l. and all below it being solid lines and the upper level lines being *broken*. The stations at 0, 6 and 12 in the body plan are drawn in blue, the others in black; the bow-buttock lines in the sheer plan are drawn in green, the expanded diagonals in green, and the inclined l.w.l. in blue. By this method, the fine red lines being less conspicuous than the other colors, the numerous straight lines of the drawing do not dominate everything else, as is the case in Plate I.; but the keel line, sheer line and deck line stand out boldly in black, the l.w.l. is clearly seen as the upper one of the solid blue lines in the half-breadth plan, and the diagonals, bows, buttock lines, etc., appeal to the eye without the distorting effect of the many straight lines.

Of course it is impossible to follow this system in a paper or book other than by costly supplemental plates; but we have endeavored to obtain a similar effect in the numerous designs published in this paper. The arrangement followed to that end is shown in Plate II., precisely the same plans and lines as Plate I., but arranged in a different way. In this drawing nearly all of the straight lines are omitted, but in every case the positions are plainly indicated, so that they may be drawn in if needed. The upper level lines in the sheer plan are merely indicated at the extreme sides of the drawing, thus throwing the topsides out in relief. The lower level lines are shown only within the limits of the hull; as few straight lines as possible are shown in the body plan, and in the half breadth plan only portions of the stations and the bow-buttock lines are used, to show the under-water as distinct from the out-of-water body. The upper level lines in this plan are *broken*, the l.w.l. and the lower level lines being *solid*. The bow-buttock lines in all three plans are a combination of dashes and dots. The No. 6 station in the body plan is a broken line, to distinguish it from No. 7, which is of very similar contour and liable to be confused with it, the two crossing.

Three new lines are shown in the drawing: a *dividing line*, a *horizontal ribband line*, and *a line of heads and heels of timbers*. The former encircles the vessel at the *turn of the bilge*, and is *normal* to or at right angles with each of the stations in the body plan. Its other projections, expanded or on the sheer and half-breadth plans, are not shown. The *horizontal ribband line* is the true projection on the half-breadth plan of the upper diagonal, No. 1. The *line of heads and heels of timbers* is the true projection of the same diagonal on the sheer plan (in the previous paper it was incorrectly stated that this line and the *expanded diagonal* were identical). Similar lines may be drawn in the sheer and half-breadth plans for each of the other diagonals.

The expanded diagonals and the inclined waterlines are laid off from the line representing the greatest half breadth of the vessel as a base line; this line not being drawn in full in the plate, but only indicated by its extremities.



There are two very important lines which have not yet been mentioned, the *rabbet line* and the *bearding line*. Where the design is made to the *inside* of the plank, both of these are essential from the start; and in vessels of the old type, with a keel and deadwoods distinct from the hull, the rabbet line is quite as important as any in the vessel. In the modern yacht, however, the rabbet line is properly a part of the *construction* and not of the *form;* and, as we have started out to deal only with the form of the exterior surface of the vessel for the present, both of these lines may be left to a later consideration, as their introduction here would only be confusing.

The various lines thus far enumerated include all that are of material use in yacht designing, but it is necessary that the student should become thoroughly familiar with the nature and use of each.

A comparison of plates I. and II. will show the superiority of the latter in displaying prominently and clearly the really important lines of the hull.

[To be continued.]

On Jan. 28 the steam yacht Argo was sunk in collision with the fruit steamer Albert Dumois, her bows being stove in. Two guests on the yacht were drowned: Messrs. H. P. Herter and F. Blassini.

YACHTING NEWS NOTES.

The report that Will Fife, Jr., was to design and build a large racing cutter for A. B. Walker is officially contradicted.

The fine steam yacht Eugenia, which was recently built by Messrs. Hawthorne & Co., Leith, to the order of Mr. J. Gardner Cassatt, of Philadelphia, underwent her official trials in the Firth of Forth on Jan. 6. The new boat proved herself to be not only a fine vessel, but also an excellent sea ship. She is luxuriously fitted up, and is provided with all the latest appliances for a vessel of her description. Eugenia has been fitted out for a Mediterranean cruise, at the conclusion of which she will proceed to New York.—*Yachting World.*

On Feb. 1 the New Rochelle Y. C. held its annual meeting, electing the following officers: Com., Henry Doscher, cutter Banshee; Vice-Com., Eugene Lambden, slp. Twilight; Rear-Com., Joseph Fallert, slp. Wanita; Sec'y, O. W. Meyrowitz Treas., B. B. Strong; Meas., E. H. Kingsland. Trustees: W. P. Montague and W. N. Bavier (three years), Henry Andruss (two years). Regatta Committee: Charles P. Tower, P. A. Meyrowitz, J. R. Thomas, A. P. Weston and J. C. Lippencott. Membership Committee: H. H. Todd, A. S. Cross and Philip J. Krackehl. Law Committee: C. W. Voltz and J. F. Lambden. Com. Henry Andruss, who has held the office for so long, positively declined a renomination.

The Staten Island Y. C. held its annual meeting on Feb. 1, electing the following officers: Com., Chas. F. Hicks; Vice Com., William E. Horn; Treas., E. S. Simonson; Sec'y, Edward S. Seguine; Meas., Adolph Panick. Trustees: Charles Winsch, Matthew Taylor, Jr., and Howard Hitchcock.

On Jan. 19 the cutter Britannia sailed from the Solent for the Mediterranean, Ailsa following the next day. Ailsa, after her experience of last season with the Riffian pirates, carries a complete armament of Martini-Henry rifles and revolvers, and some 2,000 rounds of ammunition.

Fra Diavolo, steam yacht, owned by the late Prof. Hermann, in winter quarters at Greenport, N. Y., has been seized by United States Marshal Henry I. Hayden, for a claim of $604.50 made by Samuel P. Hedges, for supplies and services rendered.

The Gravesend Bay Y. C. has elected the following officers: Com., Robt. H. Sherwood; Vice-Com., Edmund J. Bates; Rear-Com., Herman Heidelberger; Meas., Richard W. Rummel; Pres., Cornelius Furgueson, Jr.; Vice-Pres., Thomas Cleary; Treas., Lawrence F. Wilson; Rec. Sec'y, James W. Wakelee; Fin. Sec'y, Charles W. Kennedy. Trustees: Chas. W. Morgan, Constantine Schubert, Walter L. Bryn, Frank A. Bolles, William E. Johnson, Henry W. Pfalzgraf, Albert A. Ehrlich, William Morgan, J. Hudson Riley, Edward Lohman, and Messrs. Morse and Hamilton. The club now has 136 members; a movement is under way to build a suitable club house before the season opens.

H. M. Crane, brother of C. H. Crane, of El Heirie fame, has placed an order with Lawley for a fin-keel for the Seawanhaka 20ft. class. It is understood that she will be tried against the centerboard which has already been ordered by C. H. Crane, and that the faster of the two will be the one to compete in the Seawanhaka trial races, or if the previous trials are not satisfactory both will enter the contests for the selection of a challenger. The Crane brothers thus show themselves wise in not putting their eggs in one basket and in having a fair trial at the vexed question of fin vs. centerboard. Both boats are sure to be interesting ones, and will be closely watched in their performances.—*Boston Globe.*

The Stamford Y. C. has elected the following officers: Com., Howard C. Smith, steam yacht Halcyon; Vice-Com., Frederick M. Hoyt, cutter Syce; Rear-Com., Walton Ferguson, steam yacht Ava; Treas., Charles H. Leeds; Sec'y, A. H. Smith; Fleet Surgeon, Samuel Pierson, M. D.; Meas., I. Franklin Wardwell; Chaplain, Richard P. H. Vail, D. D. Directors: Henry K. McHarg, Schuyler Merrit, Albert C. Hall, Edward C. Hoyt, Malcolm R. Pitt, James D. Smith, E. E. Bruggerhoff, Stewart W. Smith, Alfred S. Pitt and Frederick W. Lockwood.

The annual meeting of the New York Y. C. will be held on Feb. 11.

Mr. Thomas Fleming Day, who has the unique faculty of writing technically correct sea poetry, is about to issue under the title of "Songs of Sea and Sail" a collection of his verse. An extra fine edition, to be sold by subscription only, will be printed. The price is $2; orders may be sent to Mr. Day at 155 Broadway, New York.

The Philadelphia Y. C. held its twenty-second annual meeting on Feb. 3, the following officers being elected: Com., Francis Shunk Brown; Vice-Com., M. R. Muckle; Rear-Com., J. J. de Kinder; Secy., A. L. English; Meas., P. H. Johnson; Harbor Master, Sylvester Bookhammer; Surgeon, W. Joseph Hearn, M. D. Trustees: Samuel F. Givin, J. Lewis Good, William Annear and Robert P. Thompson. Regatta Committee: George T. Whitaker, George D. Gideon and George W. Fite. The annual regatta will be sailed on June 12.

A yacht club under the name of the Wollaston Y. C. has been formed at Wollaston, Mass., the officers being: Com., Frank Burgess; Vice-Com., A. T. Barstow; Rear-Com., E. Hardy; Fleet Captain, Henry Nelson; Treas., Chas. F. Marr; Sec'y, S. L. Willis; Fin. Sec'y, C. W. Page; Meas., F. W. Green.

Mr. J. C. Meyers, American Model Y. C., has submitted to the club a model for a 20-footer for the contest already mentioned. The dimensions are: Over all, 32ft.; l.w.l., 19ft.; beam, 7ft. 6in.; centerboard, 270lbs. The model is to a scale of 1in. The club will make an extensive exhibit of model yachts at the Sportsmen's Exhibition.

The annual meeting of the Atlantic Y. C. was held on Feb. 8, the following officers being elected: Com., Geo. J. Gould, steam yacht Atalanta; Vice-Com., Frederick T. Adams, schr. Sachem; Rear-Com., Benjamin H. Whitlock, auxiliary schooner Hildegarde; Sec'y, David E. Austen; Treas., Geo. H. Church; Meas., George Hill; Trustees—J. Rogers Maxwell, Philip G. Sanford, Alexander P. Ketchum, Newbury D. Lawton, Thomas L. Watson and Henry B. Howell; Regatta Committee—Newbury D. Lawton, David E. Austen and George W. McNulty; Committee on Membership—Louis F. Jackson, Spencer Swain and Henry W. Banks, Jr.

The annual meeting of the New York Y. R. A. was held on Feb. 3 at O'Neill's, in New York. The following officers were elected: Pres., A. J. Prime, Yonkers Corinthian Y. C.; Vice-Pres., E. Langerfeld, Hudson River Y. C.; Sec'y, George Parkhill, Columbia Y. C.; Treas., Robert K. Murray, New York Athletic Club. Executive Committee: Alex. F. Roe, Jersey City Y. C.; Joseph Ellsworth, Bayonne City Y. C.; John Kursteimer, Audubon Y. C.; Thomas G. Roach, Pavonia Y. C., and J. A. Styles, Tappan Zee Y. C. The Association now includes the following clubs: Columbia, Hudson River, Jersey City, Newark, Pavonia, Tappan Zee, Yonkers Cor., Kill von Kull, Greenville, Bayonne City, Audubon, Tower Ridge, New York Athletic, Ossining, Gravesend Bay and Yonkers. The following resolution was adopted: Resolved, That Com. A. J. Prime, of the Yonkers Cor. Y. C.; Com. E. Langerfeld, of the Hudson River Y. C., and George Parkhill, of the Columbia Y. C., are hereby appointed a committee to confer with the committees of other yacht racing associations, with full power to act as they may deem best in the matter of forming a national yacht racing association, for the purpose of establishing uni form rules and regulations.

The Seven Seas.*

THE latest of Mr. Kipling's volumes has brought up anew two questions that have already been discussed in connection with his earlier works: Is Mr. Kipling a poet? and are his rhymes poetry? These are very important questions, to the author at least, and possibly to the whole world of letters; but for ourselves we are well content to leave their decision to posterity, to accept the talented writer for what he most certainly is—a keen, close observer of the world at large and a master of word painting in the English language—and to cruise with him over "The Seven Seas":

"Coastwise—cross-seas—round the world and back again,
Whither the flaw shall fail us or the Trades drive down."

The new book is a collection of some forty poems, many of them connected with the sea, while some belong to our old friends, the "Barrack Room Ballads." All are good, but the sea unquestionably has the precedence over the land, and the best in every sense are those relating to it.

The first and the most pretentious of the collection, the "Song of the English," is a powerful piece of writing in varying measure, made up of several songs, the "Coastwise Lights," "The Song of the Dead," and others. While from its nature it appeals directly to the subjects of the Queen, no one can read it without appreciating its spirit.

The "Last Chantey" is verily a song of the sea, with a swing and vigor that goes straight to the heart of the sailorman. It is the prayer of all the millions who have followed the sea since the beginning of time, for its preservation through all eternity:

"Loud sang the souls of the jolly, jolly mariners,
Crying: 'Under heaven there is neither land nor lea!
Must we sing forevermore
On the windless, glassy floor?
Take back your golden fiddles, and we'll beat to open sea.'"

* * * * * *

"Sun, wind and cloud shall fail not from the face of it,
Stinging, ringing spindrift, nor the fulmar flying free;
And the ships shall go abroad
To the glory of the Lord,
Who heard the silly sailor folk and gave them back their sea."

There is nothing here of the smooth and flowing qualities of Byron and Barry Cornwall, nothing that lends itself more than readily to the declamation of the schoolboy; but the measure is strong, rough and vigorous, as befits the theme, and the result is a new song of the sea that is likely to find a permanent place beside others that have become classic.

"The Merchantmen" is a fine poem in similar plain and salty strain, the song of humble merchant ships of all classes and ages through their long lives of peril, work and disaster:

"By sport of bitter weather
We're waltry, strained and scarred
From the kentledge on the keelson
To the slings upon the yard.
Six oceans had their will of us,
To carry all away—
Our galley's in the Baltic,
And our boom's in Mossel Bay.

* * * * * * * * *

"Let go, let go the anchors!
Now shamed at heart are we
To bring so poor a cargo home,
That had for gift the sea?
Let go the great bow-anchors—
Ah! fools were we, and blind—
The worst we baled with utter toil,
The rest we left behind.

"Coastwise—cross-seas—round the world and back again,
Whither the flaw shall fail us or the Trades drive down;
Plain sail—storm sail lay your board and tack again—
And all to bring a cargo up to London Town."

In "McAndrew's Hymn" Mr. Kipling ventures into a comparatively new field, and one in which, from the nature of things, he can have spent but a brief time in the course of his busy life. That he should handle familiarly and accurately the bewildering technicalities of steam engineering, old and new, is wonderful enough, but that is a small part of it all; he has gone far deeper and imbibed the whole spirit, as though he had spent all his days in the shop or the engine room. The old Scotch engineer is indeed a wonderful character creation: a mixture of technical skill, religious fanaticism, dry humor and kindliness of heart, thinly veneered with a skin of misanthrophy; and his soliloquy is perhaps one of the cleverest things that Mr. Kipling has yet produced. One must not only read it, but study it through and through, to come at a full appreciation of its merits; stray quotations can in no way do it justice, but there are many odd parts that can well stand alone:

"Lord, thou hast made this world below the shadow of a dream,
An', taught by time, I take it so—exceptin' always steam.
From coupler-flange to spindle-guide I see Thy hand, O God—
Predestinati n in the stride of yon connectin' rod.
John Calvin might ha' forged the same—enormous, certain, slow."

* * * * * * * * *

'My engines, after ninety days o' race and rack an' strain
Through all the seas of all Thy world, slam-bangin' home again,
Slam-bang too much—they knock a wee—the crosshead-gibs are loose.
But thirty thousand mile o' sea has gied them fair excuse."

* * * * * * * * *

"—the auld Fleet Engineer,
That started as a boiler whelp—when steam and he were low,
I mind the time we used to serve a broken pipe wi' tow.
Ten pound was all the pressure then—eh! eh!—a man wad drive;
An' here our workin' gauges show one hunder' fifty five."

* * * * * * * * *

"We'll tak' one stretch—three weeks an' odd by any road ye steer—
Fra' Cape Town east to Wellington—ye need an engineer.
Fail there—ye've time to weld your shaft—ay, eat it, ere ye're spoke,
Or make Kerguelen under sail—three jiggers burned wi' smoke;
An' home again, the Rio run: it's no child's play to go
Steamin' to bell for fourteen days o' snow and floe and blow—
The bergs, like kelpies overside that grin an' turn an' shift,
Whaur, grindin' like the mills o' God, goes by the big south drift.
(Hail, snow and ice that, praise the Lord, I've met them at their work,
An' wished we had anither route, or they anither kirk.)"

* * * * * * * * *

"An' now the main eccentrics start their quarrel on the sheaves;
Her time, her own appointed time, the rocking link-head bides,
Till—hear that note?—the rod's return whings glimmerin' through the guides.
They're all awa'! True beat, full power, the clangin' chorus goes,
Clear to the tuner where they sit, my purrin' dynamos.
Interdependence absolute, foreseen, ordained, decreed,
To work, ye'll note, at any tilt an' every rate o' speed.
Fra' skylight lift to furnace-bars, backed, bo ted, braced an' stayed,
An' singin' like the Mornin' Stars for joy that they are made;
While, out o' touch o' vanity, the sweatin' thrust-block says:
'Not unto us the praise, or man—not unto us the pr ise!'
Now, a' together, hear them lift their lesson—theirs an' mine:
'Law, Order, Duty an' Restraint, Obedience, Discipline!'"

* * * * * * * * *

"Oh, for a man to weld it then, in one trip hammer strain,
Till even first-class passengers could tell the meanin' plain!
But no one cares except mysel' that serve an' understand
My seven thousand horse-power here. Eh, Lord! They're grand—
they're grand!"

It goes without saying that such a poem as this is entirely too technical for the average reader, whose enjoyment and appreciation of it are limited to odd parts, but to the engineer who can appreciate it as a whole it is a wonderful exposition of the intricacies of his science. Any industrious writer might learn from books to handle the terms with fair accuracy, but there is nothing in the books that teaches a man to understand and appreciate the wonderful music of a great ship, or to love his engines as sentient beings.

We all know the Bolivar, of evil memory,

"Just a heap o' broken plates
Puttied up with tar."

* * * * * * * *

"Over loaded, under-manned,
Built to founder."

In "The Mary Gloster" Mr Kipling introduces us to the "merchant prince" who built and owned the Bolivar and others of her kind; and who on his deathbed reviews his long career from 'prentice boy to the owner of shipyards, ships and titles. A pleasant retrospect it is:

"Lord, what boats I've handled—rotten and leaky and old;
Ran 'em or—opened the bilge-cock, precisely as I was told
Grub that 'ud bind you crazy, and crews that 'ud turn you gray,
And a big, fat lump of insurance to cover the risk on the way.
And the others, they duren't do it; they said they valued their life
(They've served me since as skippers). I went—and I took my wife."

The last dying vision of the man makes a fitting ending to such a life:

"Down by the head an' sinkin'. Her fires are drawn and cold,
And the water's splashin' hollow on the skin of the empty hold—
Churning and choking and chuckling, quiet and scummy and dark—
Full to her lower hatches, and risin' steady. Hark!
That was the after bulkhead—she's flooded from stem to stern—
Never seen death yet, Dickie? Well, now is your time to learn."

Many of the poems have the truly musical quality for which others of the writer's works are already noted, a swing and a rhythm which suggests a good chorus. The military portion of the work is introduced by a quaint and comical bit of verse, "When 'Omer smote 'is bloomin' lyre," and then we meet our old friend Thomas Atkins, "Back to the Army Again." This poem, the "Bird of Prey," "Sappers," "Cholera in Camp," and others, are in a familiar strain, most of them with a chorus. There is, however, no lack of variety throughout the book; the tragic and comic, the grave and gay, the idle chorus and the tale with a moral are there to charm the reader by their contrasts.

*The Seven Seas." By Rudyard Kipling. D. Appleton & Co., New York. Price $1.50.

The 30ft. Special Class.

APROPOS of the statements made of late in several papers that Vaquero held the record in the 30ft. special class for last season, it is but fair to state that the first honors in the class go to Asahi, her record being fifty starts, twenty-four firsts, thirteen seconds and five thirds. Asahi is owned by Bayard Thayer, and was sailed in all of her races by Capt. Nat Watson, who had previously raced Pappoose, Sayonara and Constellation for Mr. Thayer.

Canoeing.

PADDLING CANOES.

Editor Forest and Stream:

I was very pleased to notice in your last number that Mr. Scott had brought up the vexed question of racing canoe regulations. This is a subject that should be thoroughly discussed, because I believe there is to be a revision of the present unsatisfactory A. C. A. rules.

Mr. Scott proposes to use one class of canoe for all the races, and he thinks that the number of entries and the interest in the paddling races will be increased thereby. In my opinion he has not presented his arguments quite fairly, nor drawn his conclusions correctly.

The four paddling events mentioned by Mr. Scott require at the most three canoes, because the only difference between the single open canoe and the tandem open canoe is a weight of 5lbs., so that the canoe can be built to the lower weight (50) and ballast carried for the tandem race.

The idea that one man must bring a fleet of canoes is misleading. Suppose our one man wishes to enter all the races; he cannot enter the tandem with any hope of success without a partner, who, let us hope, will pay half the expense on the canoe. Neither will he do well in the fours race without three companions, each of whom will pay one-quarter of the expense on the canoe. He will have to pay the whole expense on the canoe for the trophy, but he can use the tandem canoe for the singles. Then, to sum up, he would have to pay the expense on what would equal one and three-quarter canoes if he wished to enter all the races under the present rules.

Mr. Scott's plan would involve paddling the fours in a 16ft. canoe, and no one ought to know better than himself that this is quite unreasonable. Surely he has not forgotten the fours race at the meet of 1895, when the Northern Division canoe filled and sank on the last half of the course, and he and I had to swim to shore for a canoe with which to pick up the remainder of our crew. A four crew should go faster than a tandem, that anyone will admit, yet it cannot do so in a 16ft canoe. Again, if a 16ft. canoe is to be used for a fours man crew the men in the crew must all be light, so light that a man of 150lbs is barred out if success is to be attained. In the vicinity of Montreal 16ft. canoes are used for the fours. The rule reads: 'Canoes must not be less than 12in. deep,' etc., the result being that canoes are built 14 or 15in. deep, and special contrivances are used to keep out the water, so that in fact one canoe cannot be used with advantage for tandem and fours even there. Besides it is not unusual for several of the crews to sink in spite of all the precautions. A year ago the A. C. A. rules were made to allow a 20ft. canoe for the fours. The Toronto C. C. had two built to that length They have given every satisfaction. They are very fast, seaworthy, and little more expensive than a 16ft canoe.

Mr. Scott is strongly of the opinion that the trophy paddling race should be paddled in his "standard" canoe, and he considers that this would be a fair test of a paddler's ability However, before the present rules are changed a very thorough expression of opinion should be obtained from men who have paddled in the trophy race in former years. I for one do not believe that it is advisable to use a larger and heavier canoe for this event, because in so doing an immense advantage would be given to a man of great strength and little skill. At the same time the speed would be very much reduced, and although some may not consider this an argument, yet it is universally seen that in all kinds of racing there is a tendency to make use of anything that will give greater speed, and this tendency does not entirely arise from a desire to get the better of a competitor, but also from the love of going fast, which everyone possesses.

There has certainly been a lack of entries for the trophy paddling in the last two years, especially in 1895, when there were only two, but in that year the race was paddled in canoes of the size advocated by Mr. Scott.

Several years ago, when entries for the trophy paddling race were plentiful, racing canoes were used, and not longer ago than 1894 there were five of these canoes on Toronto Bay. I do not think, therefore, that the regulation for the canoe used in the trophy paddling race has had anything to do with the lack of interest in that race. The interest in any kind of sport rises and falls from time to time, and I feel sure that the interest in the A. C. A. trophy paddling race is now rising Last summer there were several entries, and next summer there will probably be more.

After attending the Muskoka Lakes Association and the A. C A meets last summer, and talking over the subject of canoe regulations with several paddlers, Mr. D. H MacDougall and I drew up a set of rules, which appeared to meet the requirements very well, and which did not conflict greatly with the rules in force at present in several localities

The canoes are divided into three classes, and each race commonly in use is assigned to its proper class.

The proposed regulations are as follows:

Class I.—The canoe must not be more than 16ft. long, less than 28in. beam, nor less than 9in deep.

Race for the class: Trophy paddling

Class II.—The canoe must not be more than 16ft long, less than 30in beam, less than 12in deep, and must weigh at least 50lbs.

Races for the class: Single paddling, tandem paddling, hurry-scurry, ladies' paddling, ladies' tandem, mixed tandem, novice paddling, tail-end race, upset race, tilting, gunwale race.

Class III.—The canoe must not be more than 20ft. long, less than 12in. deep, less than 30in. wide, and must weigh not less than 75lbs.

Races for the class: Club fours, tug-of-war.

From a glance at these rules it is seen that the Class II. canoe is the all-round canoe, such as any canoeist possesses, and this canoe is suitable for most of the races.

We have been careful to classify the minor races which are left in doubt in the A. C. A. Year Book, and which caused some trouble last summer. The class III. canoe is good for cruising, as well as fast, and suitable for either three or four men. Three men with this canoe can easily distance a tandem.

There is one more thing I would suggest, that some official A. C. A. hurry-scurry race be devised. This race is generally defined as a run, swim and paddle. At most places where canoe races are held it is very inconvenient, if not impossible, to hold the race in this form. This has led us at Toronto to adopt the following for the hurry-scurry: Competitors start kneeling in ordinary position; on the firing of a gun they must stand up and paddle; on second gun they jump out and swim, towing their canoes; on third gun they climb in and finish paddling on the gunwale. This form of hurry-scurry has been found very satisfactory wherever it has been tried, and we think it should be officially adopted.

I may mention that we sent copies of the above rules to the commodores of both the A. C. A. and the M. L. A. last October.

R. O. KING.

CAMBRIDGE, Mass.

Canoeing in New Zealand.

THE following letter recently found its way to the secretary-treasurer of the American Canoe Association from the other side of the world, as the result of a magazine article by Mr. D'Arcy Scott, of Ottawa:

CHRISTCHURCH, New Zealand, Dec. 10, 1896.—*Secretary, American Canoe Association:* In the August number of the *Massey Magazine* I notice an article on the objects of your Association. Being an ardent canoeist, I shall take it as a favor if you can give me some information regarding your club, especially the camp rules and the dimensions of your canoes. We have no canoe club here, but there are a great many canoes on the rivers about Christchurch, mostly of the Rob Roy pattern. A few have been built after the style of the birchbark, but these are noticeable chiefly for their scarcity. We have some rivers eminently fitted for canoes, but few seem to avail themselves of the opportunities afforded by nature.

My brother and a friend are about to take a long trip, and I understand that they will be the first white men over the route. They will go up the Wanganui River to its source, then by portage to Lake Taupo, and then down the Waikato River to a point near the sea, where they will pick up the railway and proceed to Auckland. For the greater part of the distance they will be traveling through the Maori King country. The canoe they are taking is a canvas one, built after the birchbark pattern. These canvas canoes seem to be the best for most of our rivers, as rapids and snags abound. Wooden canoes seem to break up too rapidly, and they will not stand the knocking about that they are necessarily subjected to in these rivers.

Mr. Scott's article has inspired me with a hope of forming a canoe club here, and any information will be most acceptable.

E. H. T.

American Canoe Association.

THE annual meeting of the executive committee of the Atlantic Division, A. C. A., will be held at the Astor House, New York city, on Friday evening next, Feb. 12, at 8 o'clock sharp.

The important question of holding the annual division camp as a four days' cruise upon the Delaware River from Easton to Delanco, and a camp upon the beautiful site at the latter place for the remaining three days of the week, will be taken up and disposed of. All the Division members are most cordially invited to be present.

JOSEPH E. MURRAY, Vice-Com. Atlantic Division.

The Trophy Paddling Race.

Editor Forest and Stream:

Having read with interest the letters in the late issues of your paper on this subject, I beg to add my quota to the discussion.

The suggestions made by Mr. Scott I believe are in the right direction, and would meet with hearty approval in many quarters were he to except the club fours, as suggested by Vice-Com. Burns.

To more fully meet the object aimed at by these changes, I would suggest that the regatta committee be instructed to make the race with a turn.

This would prevent the building of fin-keel boats, such as have sometimes passed muster as paddling canoes. The following reasons occur to me as to why the change in dimensions and making the race with a turn should be tried:

1. Ability to turn easily is an essential of a good paddling canoe and canoeist.

2. The interest in the race would be greatly increased to the spectators, who will be able to see the start, turn and finish.

3 The number of contestants would probably be increased, as a well-finished ordinary canoe would not be seriously handicapped by competing against one specially built for the race.

4. Starting and finishing from the same point would be more convenient for the contestants, as they would not be compelled to paddle a mile away from the camp and wait for some one who paddles slowly to the starting buoy. The waiting would be done on shore.

CLUB 4

Rifle Range and Gallery.

Small Calibers at the Sportsmen's Exposition.

THE Sportsmen's Association, as already announced in these columns, has appointed a committee to carry out its plans for championship contests for .22 short caliber rifle during the week of the Exposition at Madison Square Garden, March 13-20 This committee consists at present of H. D. Muller, Chairman: Edward Banks, Secretary; B. Walthers, Gus Zimmerman, C G. Zettler, G. W Plaisted and R. Busse.

The committee has met a few times and has adopted a programme which it believes will meet the views of riflemen. Before finally adopting the same it will be submitted to a meeting of the captains of the various rifle clubs in this vicinity. This meeting will be held on Feb. 16 at the rooms of the Association, room 1,009, Nos 377-379 Broadway, at 8 P. M. It should be remembered that the championships provided for in the programme do not conflict with any similar titles, but are "Sportsmen's Association's championships, 189 ".

The entrance fee for the "Individual Championship" is $5, which sum includes a season ticket of admission to the Garden during the Exposition The proposed programme is as follows:

Sportsmen's Exposition, Madison Square Garden, New York city, March 13-20, 189 . Open competition for .22 short caliber rifles.

PROGRAMME.

Individual Championship match, open to all, 100 shots, off-hand, 25-ring target, to be shot in strings of 10 shots, only one entry allowed each competitor. Any .22 short caliber rifle allowed. Entrance $5, including season ticket of admission to the Sportsmen's Exposition. Competitors can shoot their 100 targets during the week as they desire. Distance, 100ft. exact

Prizes: First, trophy and $20; second, $25; third, $20; fourth, $15; fifth $12; sixth, $10; seventh, $10; eighth, $9 ninth, $3; tenth, $5. Each winner can take either his cash prize or its value in a trophy.

Individual match, open to all; entrance for tickets of three shots each, 50 cents; off hand. Re-entries unlimited, but only one prize obtainable by any one competitor. Two best tickets to count To be shot on 5-ring target. Any .22 short caliber rifle allowed. Distance, 100ft. exact.

Prizes: First, $40; second, $30; third, $25; fourth, $20; fifth, $15; sixth, $12; seventh, $10; eighth, $10; ninth, $9; tenth, $8; eleventh, $8; twelfth, $8; thirteenth, $7; fourteenth, $7; fifteenth, $7; sixteenth, $6; seventeenth, $6; eighteenth, $6; nineteenth, $5; twentieth, $5; twenty-first, $5; twenty-second, $4; twenty-third, $4; twenty-fourth, $4; twenty-fifth, $3; twenty-sixth, $3; twenty-seventh, $3; twenty eighth, $2; twenty-ninth, $2; thirtieth, $2

Premiums: For the best five tickets, $5; for the second best five tickets, $4; for the third best five tickets, $3

Zimmerman trophy: Mr. Gus Zimmerman will donate a special trophy, to be competed for on the Zimmerman target, and under special conditions that will be announced later.

RULES.

All targets will be counted and entered by the official scorer as soon as shot, and will be returned to the shooter. The referee committee will decide all matters pertaining to any doubtful score.

A shot must cut the ring to count.

Suitable rifles and ammunition will be furnished free to all competitors by the Zettler Bros., who will have charge of the ranges.

The referee committee is as follows: Chairman, Gus Zimmerman; C G. Zettler and R. Busse; Official Scorer, Geo. W. Plaisted; Sec'y Tournament Committee, Edward Banks; Chairman Tournament Committee, H. D Muller.

The call for the meeting on Feb. 16, above referred to, is worded as follows, the circular being addressed to the captains of as many of the local rifle clubs as possible:

NEW YORK, Feb. 8 — Dear Sir: The Sportsmen's Association has decided to promote a series of contests for .22cal. rifles, to take place at Madison Square Garden during the week of the Sportsmen's Exposition, March 13-20, 189 ; and has appointed the following committee to carry out its objects: Chairman, H D Muller; Secretary, Edward Banks; Gus Zimmerman, C G. Zettler and B. Walthers

This committee at a meeting held on Jan. 22 named you as delegate for your club, and now asks your earnest co-operation in its efforts. For this purpose it requests that you will attend a meeting of the committee, to be held Feb. 16, 189 , at 8 P M., in the rooms of the Sportsmen's Association, room 1,009, No. 377 Broadway.

The special object of this meeting will be to adopt a programme for the above tournament. Yours truly,

HENRY D. MULLER, Chairman.
EDWARD BANKS, Secretary.

P. S —If you are unable to attend in person, send a duly accredited representative for your club.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Cal., Jan. 24.—The Columbia Pistol and Rifle Club held its regular semi-monthly contest, open to all comers, to-day on Shell Mound Range. The records made were as below:

Rifle, 200yds., re-entry matches, F. H. Bushnell medal, three shots to a score: A. H. Pape 9, 10, 11; Dr. L. O. Rodgers 10, 10, 12; F. O. Young 10, 11, 13

William Gildemann military medal, 10 shots; military count: F. O Young 49, J. E. Gorman 48, E. Hovey 46, E. Jacobsen 43, H. J. Wicker 39.

Young rifle record medal, 10 shots: Dr. L. O. Rodgers 50, H. J. Wicker 60

Cash prizes for most flags during the month: A. H. Pape 5, F. O. Young 3, Dr L. O. Rodgers 2.

Pistol, re-entry matches, 50yds., Gordon Blanding medal, 3-shot scores: F. O. Young 5, 9; C. M. Daiss 7, 9, 9; J. E. Gorman 9; A. B. Dorrell 10, 13.

Howard Carr medal, for any revolver, 6-shot scores: J. E. Gorman 30, 33, 37; F O. Young 35, 36, 37, 33, 40, 44; S. Roberts 40, 41, 41; M. J. White 53, 53; Dr. J. J. Giusti 99.

Diamond pistol record medal, 10-shot scores: J. E. Gorman 38, 40; C. M Daiss 41, A. B. Dorrell 42, F O. Young 44.

Achille Roos .22cal medal, 5 shots: Ed Hovey 11, 12, 12; S. Ingalls 12, 13; A. B. Dorrell 12, 13; H. J. Wicker 13, 20, Mrs. L. J. Crane 17, 19; Mrs. M. J. White 19.

ROBEL.

West Newburgh Gun and Rifle Association.

NEWBURGH, N. Y., Jan. 31.—The following scores were made to-day by members of the West Newburgh Gun and Rifle Association in the contest for the Mascroft rifle. Sneed, with a score of 69, wins the second heat as below:

Sneed	6	8	8	7	7	4	8	8	7	6—69
Harrison	8	5	5	9	6	5	9	6	8	4—65
Scott	8	5	10	5	4	4	8	9	7	5—60
Dickson	5	6	6	6	5	4	6	4	5	5—52
Brown	2	5	4	5	6	4	2	6	4	6—45
Shaw	0	0	4	2	0	0	3	2	0	0—11

W. A. KIDD, Sec'y.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in these columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Feb. 12.—HACKENSACK, N. J.—100-target handicap event, unknown angles, $2 entrance, targets extra at 1 cent each. Shoot commences at 10 A. M. C. O. Gardner, Sec'y.

Feb. 12.—NEWARK N. J. All-day shoot of the Forester Gun Club. Targets. H. E. Winans, Sec'y.

Feb. 22.—NEW HAVEN, Conn.—All-day shoot of the New Haven Gun Club. Targets. Wm. H Hazel, Sec'y.

Feb. 22. WISSINOMING STATION, P. R. R., Pa.—All-day shoot of the Florists Gun Club, of Philadelphia. Targets.

Feb 2. PARKERSBURG, W. Va.—All-day shoot of the Mountain State Gun Club Targets. Leo Epstein, Sec'y.

Feb. 22.—NEWARK N. J.—All-day shoot of the Forester Gun Club. Targets H. E. Winans, Sec'y.

Feb. 27. HACKENSACK, N. J Contest for the E C. cup, on the grounds of the Bergen County Gun Club. C. O. Gardner, Sec'y.

March 4.—YARDVILLE, N J.—Inaugural handicap, 20 birds, $15, birds included, at 25 cents each; handicaps 28 to 33yds. Open to all.

March 16-19.—BAYCHESTER, N Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed. Open to all. Nobody barred.

March 23-25.—NEW YORK.—Interstate Association's fifth annual Grand American Handicap (live birds), at Elkwood Park, $1,000 guaranteed in the main event, all surplus added. Entries close March 20

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open to-all tournament.

April 14-16.—BALTIMORE, Md.—Tournament of the Interstate Association, under the auspices of the Baltimore Shooting Association.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

April 22-23.—SAN ANTONIO, Tex.—Second annual meeting and tournament of the Texas State Sportsmen's Association. O. C. Guessaz, Sec'y.

April 28-29.—RICHMOND, Va.—Tournament of the Interstate Association, under the auspices of the West End Gun Club.

May 5-7.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 11-13. PEEKSKILL, N. Y Annual tournament of the Peekskill Gun Club. First two days, targets; last day, live birds.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

May 27-29.—EAST ST. LOUIS, Ill.—Annual tournament of the King's Smokeless Gun Club.

June 3-4.—SPRINGFIELD, O.—Annual tournament of the Ohio Trap-Shooters' League, under the auspices of the Springfield Gun Club

June 8-11.—AUBURN, N. Y New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 16-17.—FARGO, N D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H C. Reeser, Sec'y, Oil City, Pa.

July 14-15. NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Oct. 6-8.—NEWBURGH, N Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Fred Gilbert won the first contest for the Du Pont trophy and chose to defend his title to it on Watson's grounds. Claridge won the trophy last August, and Malone and Roll had to meet him on the Baltimore Shooting Association's grounds. Roll took the trophy from Baltimore, and Winston tackled him and won the trophy on Watson's grounds Winston in turn made George Mosher come down to Zwirlein's grounds, Yardville, N J., to shoot for the cup on Jan. 16 last. Winston then said openly that any Western man who challenges will have to come to Zwirlein's or Phil Daly's, and that any Eastern man will have to go to Chicago with him He made the announcement so that there need be nothing said after any challenge had been made. The conditions made by the E. I du Pont de Nemours & Co. regulating the holding of the trophy very properly give the holder the right to name his own grounds. Where is there anything unfair in Mr. Winston's statement as announced? As the matter stands, we can see no earthly reason for the following wail from a Western contemporary: "If this pronunciamento is allowed to stand, it really means that Winston will receive no more challenges for the emblem, and therefore will be able to hold it until it is redeemed by the Du Pont company for their next tournament, and will virtually bury all interest in the trophy for the next four or six months We hope the Du Pont Company will take a positive stand in this matter and insist that Mr Winston play fair with those who may wish to compete for the trophy. If an Eastern man should challenge him for it, there would be no sense in or good reason for Winston taking the race to Chicago, and he should not be permitted to do so as long as there are so many good shooting grounds in the East If a Western man challenges Mr. Winston for the trophy, and the holder is making his home in the East, he would have a perfect right to require the challenger to come to some Eastern shooting grounds to shoot the match; but if, on the other hand, Winston should be located in the West at the time he received the challenge, he should be required to shoot the match on some convenient Western ground. The Du Pont Company, when they gave the holder the right to name date, grounds and number of birds in a match—if in excess of 50—never for a moment, we are positive, expected that the holder of the trophy would take any unfair advantage of a would-be competitor, and they should at once give Mr. Winston and all others to understand that schemes of the kind mentioned, to hold the cup, will not be permitted."

The programme for the Cobweb Gun Club's tournament during the week of the Sportsmen's Exposition is now well under way and will soon be made public. The main event is, of course, the live bird handicap, the "Cobweb handicap," 15 birds, $15, birds extra, $500 guaranteed. As a means to entertain its guests, the club proposes to hold a ball on the night of the day when the above event is shot (Friday, March 19), to which all visiting shooters will be made welcome by the club. In guaranteeing $500 in one purse the club is making a big bid for the attendance of all local shooters as well as those from a distance. Handicaps will range from 26 to 33yds. The handicap committee chosen by the club is as follows: J. M. Taylor, Jacob Pentz, Will K Park and the trap editor of FOREST AND STREAM. The tournament will be managed by Neaf Apgar, who will have full charge of making things hum on both target and live-bird days. Average moneys for best aggregates in all target events will be distributed daily, while the club will deduct only 2 cents a target from the purses. This fact shows as plainly as possible that the club is not after the shooters' money.

Mr. E. A. Wadsworth, secretary of the Catchpole Gun Club, of Wolcott, N. Y., writes as follows: "A gun club was recently organized in this place with fifteen charter members. The veteran, Uncle Ben Catchpole, was elected president of the club, a fact that augurs success for the organization. This club will commence work immediately and will hold regular weekly shoots."

The Salem (N. Y.) *Review-Press* of Jan. 22 contains the following item in regard to the new gun club organized in that city: "Salem is to have a shooting club. A number of sportsmen gathered in the Ondawa House on Wednesday evening, and the subject was discussed thoroughly. Dr J H Maguire was elected chairman of the meeting and J Gibson, Jr., secretary, and after the enrolling of members the following permanent officers were elected: J. M. Williams, Pres.; H. Lant, Vice-Pres.; Wm. L Campbell, Sec'y; M. Johnson, Treas. Committees were appointed as follows: by-laws and constitution—W. L. Campbell, Rev J F. Donahue, C. Whitcomb; buildings, grounds and traps M. Roberts, H. Robertson, A Baker; birds—Dr. H. S. Blackfan, Dr. J. H Maguire, Dr. Madison, B Austin, J. A McDowell, S Burgess, H Lant, G. Robertson, D. Connor; entertainment—H B Cruikshank, Wm. M. Dundon, J Gibson, Jr. The field back of the railroad track above the Main street crossing will be used, and the committee on buildings, etc., have already made arrangements with W J. Cruikshank for the erection of a field house. The name of the club and the by-laws will be adopted at the next meeting. It is expected that there will be a shoot here within a few weeks."

A Minneapolis daily of Feb 1 has the following item: "The Watertown (S. D.) Gun Club held a meeting recently at the office of French & Slawson. By-laws had previously been adopted, and this meeting was for the purpose of electing officers and perfecting the organization. The following officers were chosen: President, Lee Stover; Vice-President, J. A. Gilchrist; Secretary, Lew French; Treasurer, W. O Fraser. A committee, consisting of John Ogg, Charles Berner and Will Warner, was appointed to solicit membership The fees for admission to membership were fixed at $1.50 This covers the total cost of membership, no provisions having been made for assessments. Trap-shooting with clay pigeons will become a feature of the club's work.

The Brooklyn Gun Club's opening day is Saturday next, Feb. 13. The Brooklyn Club is a new organization that has arisen from the ashes of the Vernon Rod and Gun Club, of Brooklyn, N. Y. The Brooklyn Gun Club occupies the same grounds over which the Vernons used to shoot, and it would be hard to find any grounds more conveniently located in the city limits than those of the club at Liberty avenue and Enfield street; they are within five minutes' walk of the terminus of the Kings County Elevated R. R. On Feb. 13 the club will lay itself out to give its guests a good time and plenty of shooting. Lunch will be served on the grounds, and shooting will commence at 10:30 A. M.

An interesting match was scheduled for Thursday, Feb. 4, on the grounds of the Westminster Kennel Club, Babylon, L I The contestants were W. A. H Stafford, of Carteret, and C. M. Meyer, of the New Utrecht Gun Club. Mr. Meyer missed connections with the 10:50 train at Thirty fourth street ferry, thus blocking the match. Stafford, accompanied by W. W Watrous, was on hand and shot a few birds. The form that he displayed showed that Meyer would have had a big contract on hand to win the match. Out of the 20 or more birds shot at by him, he scored all but one, and that one fell dead just over the 30yds. boundary, but within the 50yds. fence.

We stated in "Drivers and Twisters" last week that Miss Annie Oakley would shoot a match at 50 live birds with Frank Kleinz on Feb 22 at Yardville, N J. We also stated that Miss Oakley had met Kleinz on two previous occasions, being defeated once and tieing on 45 each the other time. Our authority for the above statements was Frank Butler. That there was an error somewhere is made plain by the following letter from Mr Butler, dated Nutley, N. J., Feb. 5: "Kindly correct and save a fight. Annie Oakley and Frank Kleinz only shot one match, and that was at Reading, Pa., in March, 1889, before about 5,000 people. They tied on 45 each, and as she sailed for Paris two days later there was no chance to decide the tie."

The Florists' Gun Club, of Philadelphia, Pa., has gotten out a programme for its all-day shoot, Feb 22, consisting of ten 10-target events and two 15-target events; the entrance fees in the 10-target events range from 50 cents to $, and in the 15 target events are $1.50. The Rose system will be used in dividing purses. Targets thrown at 1½ cents each. To get to the grounds at Wissanoming take Frankford trolleys on Third or Fifth streets, with exchange to Wissanoming line; these cars carry the shooters to the grounds Trains over the P. R R. land shooters at Wissanoming station. Shooting commences at 10 A. M. The grounds have a sky background.

Monday of this week, Feb. 8, was "preparation day" at Hot Springs. A 10 bird race, $5 entrance, and a miss-and out, $2, were the two events on the programme. To day, Tuesday, Feb 9, the Arlington Hotel handicap, 25 birds, $10, birds extra, $100 added, is the main attraction. On Thursday, Feb. 11, 15 live birds, $10, five high guns, is scheduled; and on Friday, Feb 12, the Eastman Hotel handicap, 25 birds, $15, birds extra, $100 added, occupies the programme. The main event of the meeting, the *Arkansaw Traveler's* handicap, 25 birds, $25, birds extra, $500 added, is set for a week from to-day, Tuesday, Feb. 16.

A club for the protection of fish and game and for the promotion of trap-shooting has been organized at Butler, Pa., under the name of the Butler Gun Club. The following officers have been elected for the next twelve months: President, Harry Colbert; Vice-President, I. E Starr; Secretary Treasurer, Ed E Gumpper; Captain, Joseph Weisentine; the above, together with J. L. Colbert and C. H. Miller, will form a board of directors. The club has a membership of 39.

We learn that there is little likelihood of the Work-Macalester versus Murphy-McAlpin match taking place. There is, however, a good prospect of a match in the near future between Edgar Murphy and G. S. McAlpin, 200 birds per man, 30yds. rise, 30yds. boundary, for a substantial stake. This match would be of more than passing interest, as McAlpin has met and defeated pretty nearly all the best men in this section. It may be noted also that Philadelphians are willing to make a match between R. A. Welch and McAlpin.

Charlie Zwirlein writes that he will shoot a return match with Lee Helgans at the Yardville, N J., grounds on March 4. On the same day there will be a handicap sweepstake, 20 birds, $15, birds included at 25 cents each, handicaps ranging from 28 to 33yds. This handicap will be known as the Inauguration handicap.

The attraction at Elkwood Park Feb. 12, Lincoln's Birthday, will be the Lincoln handicap, 10 birds, $10, handicaps 25 to 33rds. High guns. Shooting will commence at 12.30. On Saturday, Feb. 13, the Asbury handicap will be started at noon. The conditions will be 15 birds, $15, handicaps from 26 to 31yds.; high guns.

The Yantacaw Gun Club, of Nutley, N J., has a field day on Saturday of this week, Feb. 13. Mr Frank Butler and his wife, the latter perhaps better known as Miss Annie Oakley, are both members of the Yantacaw Gun Club. Miss Oakley will take part in the events on the programme. As announced last week, she will shoot a 50-bird race with Frank Kleintz on Zwirlein's grounds, Yardville, N. J., Feb. 22.

The newly organized gun club at St. Johnsbury, Vt., is getting well under way, and will have everything running smoothly by the time spring is here. Some of the members will probably be heard from at the Interstate shoot at Montpelier, Aug. 25-26

Frank Coleman, a member of the Rockaway Point Rod and Gun Club, an organization that holds its monthly shoots at Rockaway Park during the winter months, did some good shooting at the last shoot of the club, held Feb. 1. In three individual matches with R. Woods he was the winner each time. The contests were at 25 targets per man.

The shooters of Pottstown, Pa., have organized a gun club under the title of the Oak Leaf Rod and Gun Club. The club has a membership of 32 to start with, and has elected the following officers: Pres., M. Swavely; Vice-Pres., H. Y. Wolf; Sec'y, H. F. Rhoads; Treas., H. L Minter; Financial Sec'y, A. R. Dillecker.

The New Haven, Conn., Gun Club has gotten out a nice little programme for its Washington's Birthday shoot. Six 10 target events, five 15 target and one 20-target events go to make up that programme All purses will be divided into four moneys under the Rose system. Refreshments will be served free to shooters; $10 in gold will be given away to the four best averages. Shooting commences at 9.30 A. M.

At a recent meeting of the Hamilton, Ont., Gun Club it was resolved that the next annual tournament of the club, to be held in December, shall be open to the world, with the object in view of securing the attendance of several of the crack American wing shots. An attractive programme will be arranged for the occasion, with cash prizes offered aggregating not less than $1,500.

The Hazelwood Gun Club, of Pittsburg, Pa., holds open shoots on the second and fourth Saturdays of each month, shooting commencing at 2 P. M. each day sharp. To get to the grounds, take Second avenue cars to Johnson avenue. Everybody is invited to attend these gatherings of the club.

At the annual meeting of the Yanticaw Gun Club, of Nutley, N J., the following were elected officers for the ensuing year: Robert H. Deakin, President; A Orhtman, Vice President; Ed. Macy, Treasurer; John Hopkinson, Secretary; Dr. De Wolf, Field Captain.

The Peekskill, N. Y., Gun Club claims the dates of May 11-18 for its annual spring tournament. This tournament will follow right after the Newburgh, N. Y., shoot, and will be managed by Neaf Apgar; both these facts should signify a good attendance.

The Forest Gun Club, of Philadelphia, held its annual meeting on Friday evening, Jan. 15. The following list of officers for 1897 was elected: President, Stephen J. Holmersall; Vice-President, Arthur Baum; Secretary-Treasurer, Wm. Morison; Field Captain, Thomas Rowcroft; Official Scorer, Chas. Riotte.

Saturday last was about as bad a day for shooting in this part of the country as one ever meets with, even at this season of the year. The northeast wind blew a gale, while the rain—a cold rain, too—came down in torrents. Coming from the northeast, it was naturally right in the face of the shooter. Those who wear spectacles, and we know of some who do, labored under a handicap unknown to their more fortunate brethren.

J. S. S. Remsen, of Brooklyn, N. Y., the winner of the first contest for the *Recreation* cup at Hackensack, N. J., last December, leaves for Florida on the 11th. He remains North just long enough to try for the cup on the 10th, and will do his best to make it "two straight." He will, however, meet some warm company, judging from the list of entries already received by the management of the club.

Frank Class, of Morristown, N. J., and John Rehrig, of Allentown, Pa., will shoot a 50-bird race on the Duck Farm Hotel grounds, Allentown, on Feb. 15. The John F. Weiler Gun Club, of Allentown, will also hold its merchandise shoot on the same grounds on Feb. 22.

While paying close attention to the doings of the cracks at Hot Springs, Ark., and to the near approach of the Grand American Handicap, shooters should not lose sight of the Cobweb Gun Club's tournament, held at Baychester, N. Y., March 16-19. A purse of $500 is not guaranteed every day, particularly in an event of "15 birds, $15, birds extra."

A figure 9 in the place of a figure 7 makes a big difference. The pigeons in the Larchmont Amateur Championship were 70 cents a pair, not 90 cents, as it was made to appear in last week's Drivers and Twisters.

The Ohio Trap-Shooters' League will hold its annual tournament at Springfield, Ohio, June 2-4. The annual meeting of the League will be held at the Arcade Hotel on the evening of June 1.

The Boiling Springs Gun Club, of Rutherford, N. J., will have an invitation live-bird shoot on Feb. 22. The club is going to make this shoot specially attractive.

The Missouri State Game and Fish Protective Association has decided to use magautraps at its annual shoot, Kansas City, Mo., May 17-22.

There will be live-bird sweeps at Dexter Park, L. I., on Friday next, Feb. 12. All sweeps open to the world. Shooting commences at 10 A. M.

The Interstate Association will give a tournament at Portsmouth, N. H., Sept. 15-16, under the auspices of the Portsmouth Gun Club.

The East Pittsburg, Pa., Gun Club will hold an all-day shoot at targets on Feb. 16. All purses will be divided on the Rose system.

Feb. 9. Edward Banks.

Chicago Clubs.

Chicago, Ill., Feb. 6.—The Cook County League held a special meeting last Saturday night; present, members of five clubs; President A. W. Adams in the chair. Vice-President J. H. Amberg having resigned, Mr. H. Levi, of Garden City Club, was elected to that office in his stead. It was decided to pay the secretary $25 a year for his labors, and to pay a scorekeeper $2.50 for each half day's work in the league contests. It was voted that no individual or club should be eligible to more than one prize during the season, except in case where an individual wins the highest class average prize for the season. Two amendments to the by-laws were adopted, these having been earlier stated when offered for consideration. As amended the articles read as below:

Art. I, Sec. 1. All contests for trophies shall be between teams of six men who are members of the same club, in their respective classes. One or more teams may be entered by the same club in either class.

Sec. 2. Class A to consist of members whose individual average in their club shoots for the past season shall have been 80 per cent. or better.

Sec. 3. Class B to consist of members whose individual average in their club shoots for the past season shall have been 70 and up to 80 per cent.

Sec. 4. Class C to consist of members whose individual average in their club shoots for the past season shall have been 60 and up to 70 per cent.

Sec. 5. Class D to consist of members whose individual average in their club shoots for the past season shall have been below 60 per cent.

Sec. 6. If a club has not sufficient men of one class to form a regular team it may combine its men as follows: Three class A men and three class C men to form a class A team; four class A men and two class D men to form a class B team; three class B men and three class D men to form a class C team, or any combination of class men to form a team; providing the grand average of any team shall not be above the limit average of the class entered.

Sec. 7. Each team shall pay an entrance fee at each shoot of $1.50 to the treasurer of the league, to be used for the purchase of suitable prizes.

Art. II. The contests for the prizes shall be held monthly from April to December, inclusive, on the grounds of the clubs composing the league, each club drawing for its turn. Any club, however, may exchange with another club with the consent of the governing committee. All contests shall be held on a Saturday and commence at 1 P. M. sharp.

Directors of the Eureka Gun Club, of Chicago, met Friday to take preliminary steps for the annual meeting, which will be held Feb. 22.

E. Hough.

How they do it at Carleton, Mich.

The boys at Carleton, Mich., have many ways of getting a crowd together for a day's sport with a shotgun or rifle. There are many devotees of both weapons in that city, and both contestants and spectators congregate in good numbers when a tournament is on hand. The turkey shoots held last December were remarkably well attended, notwithstanding the bad weather. There were several ways in which a man might win a turkey:

First, by shooting at an 8in. bullseye at 200yds. off-hand and making 10 points, or 12 points at a rest, in one shot with a rifle.

Second, by going into a team of ten or fifteen members, shooting once each and making the highest number of points in one shot with a rifle.

Third—By shooting with a shotgun in a team at a mark, and putting the greatest number of shot into it.

Fourth—By going into a team and shooting live pigeons, the one killing most taking the prize.

Fifth—By forming a team of eight or ten, and shooting at bluerocks thrown from a trap, etc. In all events the shooter had to pay 10 cents to enter.

With such a varied programme it is not hard to imagine that the scorers were kept busy from the time the shoot commenced until it was too dark to see a stationary target or a flying bluerock, animate or inanimate. The reports of the shoot furnished us by our correspondent show that the ventures were entirely successful.

Poughkeepsie Gun Club.

Poughkeepsie, N. Y., Feb. 4.—The regular weekly shoot of the Poughkeepsie Gun Club was held this afternoon. Ed Williams won the club shoot with 20 out of 25. In a sweep at 30 targets per man H. Perkins was ahead with 25 out of 30. Scores were:

E Williams	1111011100111111011110111—20
W Perkins	0100111101111010111111111—19

Secretary.

Team Race at Rochester.

Rochester, N. Y., Feb. 3.—The only shooting of interest this week was a two-men team race between Borst and Byer against Norton and Foley. The shooting was very hard on account of the high wind. Foley's team should have won by about 10 targets. Scores:

Borst's Team.

L V Byer	1111011111111111101111011111101111111111101111101101—43

De Witt.

Championships and Championships.

In our issue of Jan. 23 we published a communication from C. M. Grimm, dated from Clear Lake, Ia., Jan. 16. In a personal letter that accompanied the communication referred to Mr. Grimm asks us to make some comments thereon. That request must be our apology for thrusting upon the notice of a long-suffering public a few remarks on the cast iron championship and other emblems of a similar character and purpose. In making our comments, it would perhaps be best to go back a bit and remind our readers of the circumstances that gave birth to the badge known as "the cast iron championship."

On Monday, Nov. 12, 1894, there was a small gathering of "champions" in Chicago. Among the number were J. L. Brewer, Dr. Carver, J. A. R. Elliott, C. W. Budd, C. M. Grimm, etc. On the date mentioned these gentlemen, none of whom could get hitched up as they wanted to in individual matches, acting, we believe, on a suggestion of Dr. Carver's, put their heads together and agreed to purchase a badge of no intrinsic value other than the great title attached to it; to put up $50 apiece, and to shoot for this badge, its title, and the purse, everything to belong to the winner. This arrangement was arrived at on Monday, and the date set for the decision of this championship battle was Thursday, Nov. 15, three days later. The grounds, of course, were the Watson's Park grounds. Jim Elliott at first refused to go into such an arrangement, but was talked over, and shot along with the rest when the day came. Geo. Kleinman, R. S. Mott and Eddie Bingham were the other contestants for these championship honors. It will not be forgotten that Geo. Kleinman came out of the rut and won with 91 kills, Brewer being second with 89. Later Dr. Carver challenged Kleinman and won the badge on a forfeit, owing to Kleinman's health giving way. The next and only other contest for this badge was shot on Dec. 23, 1896, when Charlie Grimm defeated Dr. Carver in a race that was remarkable for the high scores made. Such, as we understand it, is the history of this little badge

After making the above comments it is scarcely likely that we would have thought it worth while to add anything further, except to reiterate our suggestions to Elliott and Grimm that they go to work and make one trophy out of the cast iron badge and the Kansas City *Star* cup, a trophy that has actually as much claim to championship honors as its rival. It may be that its claims are even greater, as the contest for this cup was thrown wide open and plenty of notice was given to the shooters of this country—something that was entirely lacking in the conditions under which the cast iron badge was shot for. In one respect both badge and cup are alike, so far as we are aware: There is no string to either of them. In both instances it is only a case of put up your $100 and challenge for one or the other. It is now necessary, however, to run to greater length. The following, clipped from a cotemporary, is our excuse:

"A cotemporary suggests that Charlie Grimm and J. A. R. Elliott shoot a series of three races for the cast iron medal emblematic of the American championship on live birds, and the Kansas City *Star* cup, and whichever wins to rivet the cast iron medal to the cup, thus making one emblem. And then, in the same issue, speaking of the Schmelzer & Son's inanimate target cup, which is sometimes spoken of as a championship emblem, says there is only one champion at inanimate targets, and only one inanimate target championship trophy; that Rolla Heikes, of Dayton, O., is that champion and the E. C. cup the trophy. Why not as well suggest that the holder of the Schmelzer cup and Mr. Heikes shoot a race for the target championship and the winner join the two trophies together and make one trophy; as is suggested to do with the cup held by Mr. Elliott and the American championship medal held by Mr. Grimm? If the E. C. cup is the only inanimate target championship emblem of America and Rolla Heikes is the champion—a proposition that we readily accede to—then is the cast iron medal the only live-bird championship emblem of America and Charlie Grimm, of Iowa, the champion live-bird shot of this country, so long as he holds it. A trophy with a string tied to it cannot be a national trophy, and as the cast iron medal and the E. C. cup are the only trophies untrammeled by special conditions they are the only American championship emblems now open for competition."

We are not to blame if our cotemporary sees an analogy between the claims of the rival live-bird championship emblems and the claims of the E. C. championship cup and the Schmelzer trophy The conditions of the E. C. cup are 50 singles, unknown angles; 50 singles, expert rule, one man up; and 25 pairs. The conditions of the Schmelzer trophy are 100 targets, reversed order. The conditions of the cast iron badge and the *Star* cup are precisely the same: 100 live birds, $100 a side. The E. C. cup is emblematic of the championship of the United States at targets, the conditions embracing the three styles of shooting most generally adopted. The Schmelzer trophy is stated to be emblematic of the championship of the United States (or the world, we forget which) at targets thrown at known angles from traps pulled in reversed order. The cast iron badge and the *Star* cup *both* claim to be emblematic of the championship of the United States at live birds

The modest suggestion that we made to Elliott and Grimm, and which has brought down the above rebuke, was made with a view to clearing the live-bird championship atmosphere a little. We now make that suggestion for a second time, and urge a careful consideration of its merits upon both the gentlemen concerned.

Trap Around Pittsburg.

CROSSLAND DEFEATS M'PHERSON.

Pittsburg, Pa., Jan. 28.—J. N. Crossland, of the Hazelwood Gun Club, and S. McPherson, of the Herron Hill Gun Club, shot a race to-day on the grounds of the Hazelwood Gun Club. The match was at 50 birds per man, and was won with ease by Crossland, his opponent retiring in the 40th round, hopelessly defeated. The birds were a rattling good lot, and were aided by a strong wind. The temperature was about zero. Considering everything, Crossland shot a great race. Scores were:

Crossland	2202222202202202202202—19
	2222222202222222222202222—23—42

	2202022020202w —9—23

John McNeil, Pres't.

EAST PITTSBURG GUN CLUB.

Jan. 30.—The January shoot of the East Pittsburg Gun Club was held to-day. The contest is a 100-target handicap race for a cup presented by the E. C. Powder Co. Peters, with a handicap allowance of 10 extra targets to shoot at, was the winner with 88 breaks. Mack, one of the scratch men, was next with 85, Uncle John being third with 82 out of 100. Scores were:

Peters	1011111111001111111111100111111111111111111111011—44

Meyer Defeats Bradley.

New York, Feb. 5.—C. M. Meyer, of the New Utrecht Gun Club, shot a 100-bird race to-day with D. I. Bradley, a member of the Larchmont Gun Club, on the grounds of the latter club. The conditions as to rise and boundary were 29yds. rise, 21yds. boundary. Bradley started well with 23 out of 25 to Meyer's 21, but the score was a tie at the end of the 46th round, Bradley leading by 1 at the end of the first half owing to Meyer losing his 50th bird. The score was a tie again in the 70th and 96th rounds. From this point Meyer walked away, winning by 1 bird after losing 3 out of his last 5, viz., 96th, 99th and 100th. Scores were:

D I Bradley	2222221222222211121121?•1—23

IN NEW JERSEY.

ELKWOOD PARK'S SATURDAY.

Jan. 30.—Eleven events in all were decided to day on the Elkwood Park traps. No. 11 was the contest for the W. A trophy, W. Patten being the winner in the 10th round, the contest being shot in series of 5 birds. At the end of the first series five out of the seven entries had killed all their birds. In the second series Hank White chased Patten right home, losing his 10th bird after a long string of one-barrel kills. Nos. 1, 2, 3, 7, 8 and 9 were miss-and-outs; Nos. 4, 5 and 6, "Jersey sweeps," viz., 4 birds, $3; No. 10 was a private 5 bird match. Dr. Knowlton also shot at 25 birds for practice, scoring 19 out of the 25. Cannon shot at 7 practice birds and Daly at 5, both men scoring all. The scores in the sweeps were:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	No. 6.	No. 7.	No. 8.

Feb. 3.—The Central Gun Club, of Long Branch, N. J., now holds its live-bird shoots at Daly's grounds, Elkwood Park. To-day was its first shoot on these grounds. In the competition (event No. 1) for the Elkwood medal, E. W. Price was the winner with 10 straight, nobody else being even close up. In the three miss-and-outs the handicaps were: Price 30yds., Daly 29, Van Dyke, Cubberly and Seymour 28. Scores were:

	No. 1.	No. 2.	No. 3.	No. 8.

ARLINGTON SHOOTING ASSOCIATION.

Feb. 3.—The regular monthly shoot of the Arlington Shooting Association was held to-day under unfavorable conditions, a strong gale from the northeast making the shooting very hard. Mr. Walters's low score is due in a measure to the strong wind, but is also partly due to the fact that he was trying a new gun. Scores:

M Herrington	1111011110011001111111001—18
A Schuler	1101011011010001001111011—15

A Stratton	1000000110000100310000110— 7

H. Frapwell, Sec'y.

AT ZWIRLEIN'S.

Feb. 4.—The following scores were made to-day at Zwirlein's grounds, Yardville, on targets:

No. 1, match at 50 targets a side, losing side to pay far all:

C Allen	1111101111011101110111111—?0
W Taylor	1101110111100301010011103 1—15—35
T Harrison	1101110111111111111100110—20
G Cubberly	1111110111111111101110101—21—41

No. 2, match at 100 targets a side, losing side pays for all:

G Giberson	1111101110110101111110011110011101101010100101110—31
H Wycoff	1110111110110111111111111101111011111111111101—43—77
G Cubberly	1111111111011110011111101111111101111111111111101—44
T Harrison	1111011111111110111101101110110110111111111111111—43—87

In a sweep at 12 targets, 50 cents entrance, the following scores were made: Harrison and Allen 11, Taylor and Francis 9, Williams 8, Thomas 7.

C. Allen and T. Harrison then shot a match at 25 targets for the price of the targets, Allen winning with 23 to 21.

Live-bird scores were shot as below:

Match: J. Duble vs. T. Harrison, 25 live birds, $25 a side, 28yds. rise, 50yds. boundary:

Duble	?020022222021202222222?0—19
Harrison	0102222022220220232220222—19

Tie will be shot off later. C.

At Watson's Park.

Chicago, Ill.—Both targets and live birds were shot at to-day. In a 100-target match Wright beat Chas. Antoine by 92 to 91. In a 25-target match Goodrich beat Glover by 23 to 15.

Bennett and Wallace shot a live-bird match, 50 birds per man, Bennett winning easily by 43 to 30. Scores:

Wallace	1102120001122011020•11100—15
	1022?021220001111001001110—15—3

Ravelrigg.

ON LONG ISLAND.

ZWIRLEIN DEFEATS HELGANS.

Feb. 5.—Chas. Zwirlein, of Yardville, N. J., shot a 50-bird race today with Lee Helgans, of Brooklyn, N. Y., on the grounds of the Parkway Gun Club. J. Bennett was referee. At the end of the 50th round the men were tied on 45 each. The tie was shot off at 10 birds, Zwirlein winning with 10 to Helgans's 9. Scores:

Zwirlein	2111202221111211111110223—23
	1211222122021222202112202—22—45

	2201222022221222221121222 1—23—45

Tie:

Zwirlein	2122122212—10	Helgans	1220111222—

The Second Midwinter.

SAN ANTONIO, Tex., Jan. 31.—The first big target tournament of the season of 1897 closed yesterday after a week of the most villainous weather experienced in this part of Texas in years It has become a proverb here that it never rains except there is to be a shooting tournament, a baseball game or horse racing, or any other outdoor sport, which is likely to bring to the city a number of visitors. The visitors who came here the past week evidently are not very much impressed with the climate, and are loath to believe that they ever have anything else at Santone but rain and mud in the winter time. Had these parties attended last year's tournament they would have formed a different opinion.

That the success of the second midwinter did not exceed that of the first is no fault of the projectors, but is entirely due to the elements, and when these are taken into consideration it is a wonder that it did not prove a failure. But it was very far from being such, the visitors outnumbering those of last year, and with favorable weather it would have been a brilliant success Everything had been done, as the management supposed, to insure the comfort of the visitors, but the weather upset all calculations and was the cause of no little adverse and unjust criticism. Such a protracted spell of bad weather occurs only occasionally, and we of the South are never prepared for it. Had the conditions been anything like those of last year the preparations would have been amply sufficient, and the skeptical few would not have had any cause for complaint. As it was, the management spared no pains to make it pleasant and agreeable for the visitors, and anything that would add to their comfort was provided. Great fires were built at the score to enable shooters to keep warm, while a good fire was always kept roaring in the stove that furnished warmth for the shooters in the building that was also the restaurant, where good meals were served to order at all times of the day. This building was not of the substantial kind that they have in the North, so that during extreme cold spells it is difficult to keep it warm.

THE GROUNDS

The tournament was held at San Pedro Springs, a pleasure resort just within the city limits; the buildings are such as are generally found at such resorts in the South. The grounds are easy of access, as electric cars run right to them. Here again a circumstance arose that was no fault of the management and could in no way be overcome by them: The electric line that runs to the park has a double track all the way, but the city was improving the street that led to the grounds, and the car people were only permitted to use one track, as the other was torn up for the present, and the cars had to meet at a given point; this made them few and far between. No such complications existed when the management made arrangements for the use of the grounds, so it could not be censured for this.

Two magautraps were in position, and these furnished ample shooting for all, as it is an easy matter to throw 10,000 targets a day from two of these traps. There was also a set of five expert bluerock traps, which were only used in the Schmelzer trophy event. The building where the shooters congregated was situated some distance from the score, and this made the duties of the squad hustler a little more arduous. The screens were painted green, and artistically decorated with hunting scenes, which were much admired by the shooters; the dogs and birds that appeared on them were well executed. Fulford was very much taken with them, and requested permission to take one of them back to Utica, a request that was readily granted; but Fulford left rather suddenly the night the shoot closed, and doubtless forgot his intentions. He at first informed me that he would attend the Hot Springs shoot, but changed his mind at the last minute. The background was extremely difficult and deceptive. Straight ahead was a heavy growth of low bushes about the usual height a target is thrown, while to the right was a long row of big trees that extended for quite a distance. Then again the traps faced southwest, and if the sun shone it was right in the shooters' eyes from about 2 o'clock until it disappeared. As previously stated, magautraps were used, and taking into consideration all the difficulties that had to be overcome, they worked very well, and threw plenty of targets, many more than could have been thrown from any set of five traps. Paul North looked after them, of course.

Unfortunately Albert Steves was sick, as were also several of his children, and for this reason he was unable to be at the shoot all the time. Thus the management of the tournament devolved on Joe George and Oscar Guessaz, and it is needless to say that they had their hands full, and were kept busy answering questions and seeing that everything was kept moving smoothly They were ever on hand, the first in the morning and the last to leave the grounds, while at night they were at the hotels mingling with the shooters.

Robert Tendick was squad hustler, and despite his 289lbs. of avoirdupois performed his duty well, though along toward the close of the week he complained of his feet being tired. Leo Ferlet filled the arduous position of cashier in a very acceptable manner; his experience of the previous year stood him in good stead. His assistant, a gentleman whose name I have forgotten, was both capable and courteous; he, too, saw service a year ago.

The daily papers published a very concise and authentic report of the tournament, something that is rarely the case with dailies. Mr. Hank Dyer, who did the work for the *Express*, is thoroughly familiar with the sport, being a shooter himself and a writer of considerable ability.

TRADE REPRESENTATIVES.

The Winchester Repeating Arms Co. had a number of representatives present. They were Rolla O. Heikes, Dayton, O.; J. A. R Elliott, Kansas City, Mo.; B A. Bartlett, Buffalo, N. Y.; Ferd. V. Van Dyke, Dayton, N. J.; J Hildreth, Jr., New Haven, Conn.; Wallace Miller, Austin, Tex. The Peters Cartridge Co. and the King Powder Co. were represented by T. H. Keller, Plainfield, N J.; Jack Parker, Detroit, Mich.; J. H. Mackie, Cincinnati, O. The Du Pont and the Hazard Powder companies had Herbert Taylor, St. Louis, Mo ; Ralph Trimble, Covington, Ky., and Fred Gilbert, Spirit Lake, Ia , present. Parker Bros.' interests were taken care of by A. W. du Bray, Dayton, Ky., and O. R. Dickey, Boston, Mass. Harvey McMurchy, Syracuse, N. Y., was furnishing information about the L. C. Smith gun, representing the Hunter Arms Co.; C. E. Willard, Hartford, Conn., was there to represent the Colt's Patent Fire Arms Co.; E. D. Fulford took care of Von Lengerke & Detmold and Schultze Powder; U. M. C. Thomas, Bridgeport, Conn., looked out for the U M. C. Co.'s shells and ammunition; J. L. Winston, Washington, Ind , said a good many things about Austin Powder; Paul North, Cleveland, O., explained the merits of the magautraps to those who were interested

OTHERS.

Richard Merrill, Milwaukee, Wis.; Chan. Powers, Decatur, Ill.; W. W. Peabody, Jr. (Wirt), Cincinnati, O.; Col. Bill Settle (Little Sure Shot), of Madisonville, O.; W. G. Sergeant, Joplin, Mo.; T. F. Norton and J. J. Cornett, Kansas City, Mo.; George C. Beck, Jno. Cooper, Royal Robinson, E. H. Tripp and Dr. O. H. Britton, Indianapolis, Ind.; John J. Sumpter, Jr , Hot Springs, Ark. (the Original Arkansaw Traveler); J. H. Fletcher, Little Rock, Ark.; F. S. Parmelee, G. W. Loomis, Plumber Read, G. E. Brucker, Wm. Krug, Omaha, Neb.; C. D. Linderman, Adams, Neb.; R. D. Leach, Tripp, S. Dak.; C. L. Funk and L. G. Morse, Pueblo.; A. D. Mermod, Cañon City, Col.; Capt. J. S. Sedam, Denver, Col.; C. A. Young, Springfield, O ; J. W. Sexton, Leavenworth, Kan ; A. H. Barlow and Geo. Stevenson, Waterville, Kan ; C. H. Calhoun, Weir City, Kan.; C. M. Sumner, Galena, Kan.; Miles Miller and J. A. Jackson, Austin, Tex ; Dr. A. A Forsythe, Monroe, La ; John Conner, Knoxville, Tenn.; Dr. J. L. Weller and Sim Glover, Rochester, N. Y.; W. F. Norman, Greenville, Tex.; K. M. Moore, Farmersville, Tex.; F. M. Faurote, Dallas, Tex ; J. J. Hallowell, Tucson, Ariz.; C. M. Grimm, Clear Lake, Ia.; C. W. Budd, Des Moines, Ia.; P. L. Murphy, Philadelphia, Pa.; Cecil Kennard, Isle of Skye, Scotland; J. B. Kennard, Gonzales, Tex.; G. W. Gish, Dennison, Tex.; H. P. Dens l (Pete), Marshallton, Ia ; M. L. Evans, Emerson, Ia.; A. F. Wilson, Hearn, Tex.; John Ellis and Hutchings, Jr., Galveston, Tex.; Dr. W. F. Carver, Chicago, Ill.

GENERAL AVERAGES.

There were no average prizes, but it might be of interest to some to know in what order their respective idols finished. Only those who shot through the entire programme are included in the list given below. This is an exceedingly small one—just 18 The Schmelzer trophy contest played havoc with the percentage of several, though with none so much as with Bartlett, who only scored 60 in this event. This brought his general average down to 81.4, while had this event been omitted he would have an average of 84.1. Ralph Trimble did not shoot in this event, and, of course, his name is not on the list; his general average though is about 90 for all events he participated in. The standing of the 18 who shot through the programme is as below. Heikes, as usual, heads the list, with Fulford second and Parmelee third:

	Shot.	Broke.	Ave.		Shot.	Broke.	Ave.
Heikes	890	821	92.2	Young	890	758	85.1
Fulford	890	809	89.8	Dickey	890	751	84.3
Parmelee	890	794	89.2	Sexton	890	745	83.9
Glover	890	781	87.8	Elliott	890	739	83
Grimm	890	776	87.1	Loomis	890	739	83
Gilbert	890	776	87.1	Calhoun	890	735	82.5
Sergeant	890	765	85.6	Parker	890	735	82.3
Van Dyke	890	761	85.4	Jackson	890	731	82.1
Merrill	890	760	85.3	Bartlett	890	725	81.4

First Day, Jan. 26.

There was nothing gained by postponing the shoot, in so far as the weather conditions were concerned, only that it made all of the shooters willing and anxious to shoot, regardless of the fact that the ground was covered with ice and sleet, and quite a little of the latter fell during the early part of the day. The raw wind that blew from the north only added to the discomfort of the shooter and made the shooting harder. Blowing directly from the score, it caused the target to dip, and to this factor alone not a few of the ciphers are to be attributed. The cold, too, necessitated plenty of warm clothing, and this naturally hampers the shooter. It was late before a start was made, and there not being any protection for the shooters at the score, the shoot dragged, for just as soon as the shooter finished his score he would make a run for the building that stood in the rear some distance away to get by the fire. This made it difficult to get the squads to the score in proper time, and the large number of entries also made it impossible to finish the day's programme. Only six events were shot out. The other two were begun, but only about eight squads shot out

When the eight 20-target events that constituted the day's programme were finished Rolla Heikes showed up in front with an average of 94.3, just two birds ahead of Parmelee, whose average was 93.1. Then came Trimble with 5 birds less, having just 90 per cent. Dickey and Bartlett were fourth, while Sergeant, Elliott and Fulford were tied for fifth position. Winston was the fortunate shooter of the day, as it fell to his lot to make the only straight in event No. 3

The table below shows the position each shooter finished in, and in addition to the names that appear in it Fletcher, Lee, Ed Steves, Krug, Kennard, Sedam and Lucas shot in one event, making in all seventy-seven shooters that participated during the day. The largest number of entries in any event was seventy-four. The programme consisted of eight 20 bird events.

FIRST DAY'S SCORES.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av

Second Day, Jan. 27.

When day dawned the sky was overcast, but later on the sun came out and it remained clear the rest of the day. The wind still blew strongly from the north, and was cold and penetrating. The thermometer was down to 17° above zero, while under foot it was damp and disagreeable from the sleet that fell the day previous. Under these circumstances it was a hard matter to get the shooters out early; therefore it was again impossible to finish the day's programme. The two unfinished events of the day previous were first shot out, and then the day's programme proper was begun. This consisted of five 20-target events with $50 added to each, and the Schmelzer trophy contest, a 100-target race at reverse order, entrance $10. The total purse, less the price of the targets, went to the winner of the previous contest, J. W. Sexton, of Leavenworth, Kan. There being 27 entries, this netted him the neat sum of $189. The management also added $75 in this event, which was divided 40, 30, 20 and 10 per cent.; none of this went with the trophy, however In this event five expert traps were used—bluerocks, of course. These were set to throw a very hard, low bird and with the assistance of the wind frequently flew 90yds. and over. To this more than anything else the low scores are to be attributed.

In the first string of 25 Fulford and Young led with 22; when each had shot at 50 Fulford was still in the lead with 43 In the next string of 25 he again scored 21, and led Sergeant, his nearest competitor, by 2 targets. Young and Van Dyke were next, 3 targets behind Fulford. At this stage of the game it looked a good deal like a cinch for Fulford. Heikes had only scored 58 out of his first 75, and was generally considered out of the race.

It was nearly sundown when the first squad started to shoot their last string of 25, but even in this uncertain light Heikes pounded out 24, and went out with a total of 82. Sergeant only scored 17, and finished with 79, as did Sexton, the former winner. It had now become too dark to go on with the contest. So some one suggested that the scores made by the squad just finished should be rubbed out and shot over again the next morning; naturally Heikes protested, and justly so Then an effort was made to have the next squad shoot out their score, but Fulford had left the grounds, and operations were suspended until the next day.

The first thing the next morning the contest was resumed, and it was only necessary for Fulford to score 19 to win; but this he was unable to do, as 17 was the best he could do, and this made his total 81. Van Dyke and Young both scored 21 in their final string, and tied with Heikes for the cup on 82. Fulford and Elliott divided first money on 81. The tie for the cup was not shot off, but will be at some future tournament. Heikes, Young and Van Dyke each own a third interest in it now.

In the sweeps Heikes again made the best average, scoring 97 out of 100; Sergeant, Robinson and Fulford were next with 92. Then came Powers and Bartlett with 91. The others followed in the order shown in the table. The first five rows of figures are the scores made in the sweeps; while the four last ones are the scores made in each string of 25 in the trophy contest, with the total scored last. In all seventy shooters took part in the events of to day.

SECOND DAY'S SCORES.

Third Day, Jan. 28.

Notwithstanding that it was cloudy, this really proved to be the best day of the week. The wind had abated, and the cold had moderated considerably. This made everybody feel better, and more shooting was done, though it was impossible to finish the programme, which consisted of eight 20 target events and the unfinished events of the previous day.

Parmelee was at the head of the list to-day with an average of 93.7, while Heikes had to be content with second place, with 92.5; then came Glover, Young and Merrill in the order named. The entries held up very well, as sixty-nine shooters participated during the day. The table below only shows sixty-five names, but Gish, McCormack, Hildreth and Kennard also took part, though only shooting in one event, or failing to make an average of 60 per cent. Fifty dollars was added in each event.

THIRD DAY'S SCORES.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.

Fifth Day, Jan. 30.

After six days of bad weather one would naturally suppose that the weather man would take some compassion on the shooters and at least give them one fair day. But those who entertained any such anticipations had them speedily blasted, for of all the bad weather the shooters experienced this was the worst. About 10 o'clock it began to drizzle, and this soon turned into a steady rain that afterward became drenching. In a very short time all those who were exposed to the weather were soaked to the skin, there not being any protection at the score.

The programme consisted of ten 20-target races, with several unfinished events carried over from the day before. This made a big day's shooting, but one that could be accomplished if an early start was made and the weather did not interfere. Owing to the heavy rain it was decided to discontinue for the day after 7 events had been shot, but here again a contentious few objected, claiming that they had not come all the way to Texas to sit around and watch it rain. Still none of the kickers shot it out, but very prudently stayed under the shelter of the building. The shoot continued, and as the entries kept falling off it was possible to finish by dark. The last event had only 31 entries.

The water had submerged the wires of the battery and they became short circuited. Hence it became necessary for Paul North to mount his iron horse himself and trip the birds by hand when the shooters called "Pull." Oscar Guessaz performed a like duty at the other trap, and these two looked more like two drowned rats than human beings when the shoot was finally over. In addition some of the help employed by the management rebelled on account of the rain and refused to continue work, so Joe George was forced to act as scorer, while Albert Steves performed the duties of referee, and some of the more compassionate shooters also rendered their assistance in various capacities. The events were finished at last and the management heaved a sigh of relief. They had kept all their promises and fulfilled all their obligations to the shooters, but were unable to overcome the elements.

The averages show Heikes first with 93, Fulford second with 91 McMurchy and Glover next with 90.5. McMurchy shot in something like his old-time form, but it was very imprudent to shoot in such weather, especially after being as sick as he was two days ago. The added money to-day amounted to $530, $50 in each event.

Despite the disagreeable weather fifty-nine shooters took part in the events of the day. Settle, Krug and Hildreth failed to make an average of 60 per cent., and their names are not in the table below.

FIFTH DAY'S SCORES

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Heikes	20	19	19	18	20	19	16	17	19	19	200	186	93

ITEMS OF INTEREST.

Never have we seen so many sick shooters at a tournament! Charley Budd and Dr. Carver fared the worst. Charley arrived on Friday and was able to practice a little, but was taken down Sunday and was never able to shoot a gun during the tournament. He left for home on Feb. 1 still very sick; Grimm accompanied him, and under his care he should be able to make the trip. Charley hopes to be well enough to return to Hot Springs in time for the big handicap.

Dr. Carver had to go to bed immediately and was never able to visit the grounds. We saw the Doctor Monday at the Government Hill Club's shoot and he appeared rather thin. He intended to depart for Chicago the next day and had given up the idea of going to Hot Springs.

Tom Norton also belonged to the hard luck crowd; he was sick all the time the shoot was in progress, but managed to shoot in one event, the E. C. cup race.

Grimm, McMurchy, Dr. Britton and several others were also on the sick list part of the time. McMurchy very imprudently shot on several days when he should have remained at the hotel.

John J Sumpter, Jr., was on hand with a supply of programmes and a few of the souvenir badges that he proposes to give to those who attend his shoot. Of course he was telling what a good game he had prepared for the boys. Some people don't eat turkey, and that's why the programme did not please everybody, so all of them will not be at the feast, especially the sure thing crowd.

On Saturday at preliminary practice Gilbert broke 9 targets out of 100.

Chan Powers wore a nice new shooting suit especially designed for the occasion, and also shot a brand new Parker gun.

U M C., as is habitual with him, wasn't saying much, but he knew just how many were shooting U. M. C. goods, and then to vary the monotony he went out and broke a straight.

Paul North shot like a novice for several days. Then he changed guns, using Fulford's single barrel Francotte, and with it he managed to keep in the money right along, and finally made a straight.

There we two Kennards at the shoot, neither of whom knew the other was in existence. The one was from England and the other a Texan. To designate one from the other they were dubbed English Kennard and Texas Kennard respectively.

Wirt was unfortunate in scoring 15s; he scored this number oftener than any other shooter, and as the 15s only got in for money twice, it was not a very remunerative hole. On the fourth day he developed quite a streak, however, getting two straights together and making a run of 51 straight.

On the fourth day of the shoot a very singular occurrence took place. A flock of sandhill cranes flew high over the shooting grounds, and as soon as the shooters perceived them they opened fire on them, though they appeared to be far out of reach of any shotgun. Capt. Bartlett, as soon as he saw them, cut a shell so that it would act as a concentrator, as did Glover. After a number of shots had been fired at them the crowd was amazed to see one of the birds begin to totter, collapse and fall to the ground dead. The distance this bird was killed was variously estimated at 150 up to 250yds. Such a shot seems incredible, but this was witnessed by more than a hundred people. The charge of shot had struck it just at the base of the neck and had severed the jugular vein and the wind pipe, but had not broken the neck; a large ragged hole was torn in the skin. As soon as the bird fell considerable contention arose as to who had fired the fatal shot. Glover proclaimed very loudly that he had performed the wonderful feat, while Capt. Bartlett was equally convinced that he had fired the fatal shot, and to substantiate his statement one individual avers that he saw the shell in its flight, and also saw it strike the bird. Furthermore, the color of the shell was red, and everybody knows the color of a Leader shell, while that of a Trap (the kind that Glover was using) is green. Be this as it may, the skin of the crane is now stretched over a dummy in Critzer Bros.' store.

It will be a surprise to a great many to see that John Conner only shot on the first day. He was called home by telegram, and his case was not one of gunshyness, as lack of form never causes him to quit.

In the future Frank Parmelee will be known as Li Hung Chang. This is the result of having his hair cut and wearing a crusher.

Van Dyke missed a good chance to make a killing; on the last day in the second event he ran 19 straight and then dropped his last one. It eventually turned out that this bird was worth about $50, for no one made a straight.

Ralph Trimble was the lucky man at the shoot, notwithstanding that Heikes outshot him by at least 4 per cent. Ralph quit about $50 ahead of Roll.

The Government Hill Club, an organization composed of the officers stationed at Fort Sam Houston, got up an informal little shoot Monday afternoon for the entertainment of the shooters who were yet in the city. It being a beautiful day, all those who remained accepted the invitation. The following were present: Heikes, Bartlett, Elliott, Trimble, Dr. Weller, Glover, Taylor, Dyer, Mackie, Keller, Robinson, Tripp, Beck, Cooper, Winston, Dr. Carver, Tendick, Stone, George and myself. Capt. Foster and Lieut. Whitworth seem to be the moving spirits in the club, and all those who attended spent a very pleasant afternoon.

We are authorized to state that so far as the Big Three are concerned there will be no more midwinter shoots at San Antonio. They claim not to have developed any bristles, but know when they have enough.

If the bird that has been producing the single standard eggs in Texas has been stifled, there is no one to blame but a few narrow-minded, contentious shooters whose kicking propensities have thoroughly disgusted the Big Three. Financially the shoot was not a success, and in addition to their time and labor they will have to make up a deficiency. This they do not object to, but they do not believe in being censured for things they could not overcome.

After the tournament quite a number of the shooters went down to the coast to shoot ducks. Mr. W. W. Peabody, Jr., took down in his special car Richard Merrill, Chan. Powers, William Settle, Frank Parmelee and Oscar Guessaz.

Hildreth, of the Winchester Arms Co., did not get into the money very often, but this gave him little concern. What interested him most was the number of pumps in use at this shoot.

PAUL R. LITZKE.

John F. Weiler Gun Club.

ALLENTOWN, Pa., Feb. 2.—The John F Weiler Gun Club, of this city, held its regular shoot to-day on the grounds of the Duck Farm Hotel. The scores made in the different events were shot under unfavorable conditions, snow falling all the time. Below are the results in to-day's events:

S Weiler	1111110111111011111011101110101111110001111101011101—38
H A Acker	0101101110100101111111101110111011111101101000000—31
L G Grammis	1111010010000001011110010010111101001111010111000—27
O Griesemer	1010000100110001001011010001110111110000001010101101—22

A. GRIESEMER.

Boston Gun Club.

WELLINGTON, Mass., Feb. 3.—The inclemency of the weather to-day prevented the usual attendance at the Boston Gun Club's grounds. A terrific wind blew the entire afternoon and the shooters present were kept tolerably busy endeavoring to do three things at once: retaining their equilibrium, their head gear and pointing their gun in presumably the right direction. That a successful combination was not effected the following scores will bear testimony to, yet all consoled themselves with the fact that some of the misses were excusable. All are anxious to try again and only wait for a fine day to prove that the expected improvement, like Christmas, is coming. It only required a snow accompaniment to recall two occasions of a year ago, when the shoots were held in out-and-out blizzards. Hence there was something to be thankful for. Shooting as follows:

Events:	1	2	3	4	5	6	7	8	9
Targets:	5	5	10	5	6	10	5	6	6
Harris (15)	4	1	7	4	3	5	4	0	..

Williams (15)	0001000100—2	11011—4	00 10 00—1—7

Greener withdrew.

Audubon Gun Club.

BUFFALO, N. Y., Jan. 30.—The regular weekly shoot of the Buffalo Audubon Club was held to-day under perfect weather conditions for target shooting. The attendance felt the effects of the favorable weather and was exceedingly good. The scores in all the events ruled high, and in the medal shoot L. W. Bennett made a clean score of 25, winning the Class A medal for the third time and adding another notch to his score of wins for the "straight-score" trophy.

F. N. Alderman won B Class badge, and W. H. Woodbury won C Class. The feature event was the monthly cup shoot, which is a handicap affair, hand caps ranging from 8 targets to 3 targets, of which no shooter can be credited with more than 25. There were five ties in this event—Forrester, Ald. Zoeller, L. Fries, E. Reinecke and Wm. Hines, Jr. In the shoot-off Ald. Zoeller won, making a clean score of 16 straight.

Scores were as follows:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	25	0 s	15	15	10	20
E C Burkhardt	9	14	23	24	12	13	8	17
Norris	7	15	21	23	10	13	10	16
C S Burkhardt	7	13	20	22	10	13	8	..
Forrester	7	13	16	25	12	10	..	..

Cobweb Gun Club.

NEW YORK, Feb. 4.—Below are the scores of our monthly live-bird shoot. The day was bright and clear, with a light breeze blowing. Owing to the ground being covered with snow white birds were very hard to see. In the tie for the class C medal, the tie being shot off at 3 birds, Mr. Barker won with 2 to President Bage's 1. Scores were:

	Medal Shoot.	No. 1.	No. 2.	Tie.
Gus Greiff (A, 30)	12221—5	21122—5	13•22—4	1211•—4
C Zorn (A, 30)	20121—4	12222—5	.....	.....
E Miller (A, 30)	21001—3	.....	.....	.....
P F McKeon (A, 30)	0•201—2	11210—4	•1121—4	11112—5
C Donnelly (B, 28)	22222—5	01110—3	.....	.....
A Elliott (B, 23)	12022—4	11210—4	.....	.....
G Barker (C, 27)	01010—2	00211—3	.....	.....
A C Bage (C, 25)	20200—2	.....	.....	.....
G W Thompson (Z, 25)	20011—3	.....	.....	.....

*J M Baker (30)		21220—4	21121—5	.....

* Guests.

Two matches for the price of the birds were shot as follows, McKeon settling in the first match and Baker in the second:

First match:			
Cashan	1111000211—7	McKeon	10•1•0122w—
Second match:			
Greiff	1112212221—10	Baker	2121202122—9

G. W. THOMPSON, JR., Sec'y.

Carleton Rifle Club.

CARLETON, Mich., Feb. 1.—The Carleton Rifle Club holds bi-monthly shoots at its range in this city. These shoots are held on the first and third Tuesdays in every month. At our last shoot, held under superb weather conditions, with the exception of an irregular wind that bothered the shooters a little, some fine scores were made. J. Orion and L Richards each made 20 consecutive bullseyes on the American standard target, 8in. bull, 200yds. Scores were:

Members' record, rest match:											
J Orion	10	9	12	10	9	12	10	9	12	12	—105
	12	11	9	8	9	9	8	9	12	9	—96
L Richards	9	11	9	9	12	10	9	9	11	10	—99
	8	12	8	8	12	9	9	12	9	11	—98
Jas Osborn	7	6	9	7	10	8	10	9	8	8	—82
	7	6	8	9	7	11	7	7	11	7	—79
All-comers' off-hand match:											
Joe Foye	2	9	5	8	7	5	3	7	7	7	—58
John Smith	9	7	8	4	8	6	5	7	4	4	—57
Frank Ross	7	4	6	9	5	5	6	3	6	5	—56

Answers to Correspondents.

No notice taken of anonymous communications.

L. B. M., Canada.—The import duty on firearms brought into the United States is 30 per cent., *ad valorem*.

W. S. L.—The record tarpon is probably Senator Quay's fish of 263lbs. We shall print the others very shortly in our angling columns.

ANTOKEE, Toledo, O.—From time to time much interesting information has appeared in your columns in regard to venomous reptiles. Not knowing much about these creatures, though sometimes hunting in their domains, I would like very much to know how heavy a legging or bootleg should be to resist the fangs of a rattler or cottonmouth. Will some brother of the field and woods having knowledge on this subject kindly inform me through these columns? Ans. Ordinary leather or canvas leggings will be a protection.

PUBLISHERS' DEPARTMENT.

The Acme Engine.

THE Rochester Machine Tool Works are noted not only for their marine engines, but also for general utility engines of various types. The *Independent* of Jan. 28 has the following to say with regard to Acme Engines:

"There are thousands of readers of the *Independent* who need and can make excellent use of the Acme Automatic Engine. For a thousand and one things it is essential; the pumping of water, for small boats and yachts, for use by farmers in cutting and steaming feed, sawing wood, for churning and running separators; for printers for driving presses, etc., for gentlemen owning country places where it is necessary to draw and raise water into tanks to supply houses and grounds and for almost any number of businesses the Acme Engine is essential. They are built in all sizes, from one-half to six horse power. They do not require a skilled engineer to run them, and they are adapted for either kerosene, wood or coal. They are small, compact and very effective. They have been sold in nearly every country of the world, and the manufacturers, the Rochester Machine Tool Works, of Rochester, N. Y., are continually receiving the highest testimonials from persons who have used them, but whom they have never seen. The Rochester Machine Tool Works will send to any one, upon application, their illustrated catalogue and price list."—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR 10 CTS A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, FEBRUARY 20, 1897.

VOL. XLVIII.—No. 8. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page iii.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

I trust indeed that the day will ere long arrive when all true sportsmen will set their faces steadily toward game protection, and as steadily against those false brothers of the gun who, crying out "protect, protect," yet lose themselves no opportunity, when unsuspected or unseen, of slaughtering for the bag and for the brag, at all risks, in all manners, and at all seasons. Frank Forester.

AUDUBON BIRD PLATES.

IN our issue of next week, Feb. 27, will be given the fifth in the series of half-tone reproductions of Audubon's famous bird portraits, from the rare first edition. It will be of the American golden plover. The list of plates already printed and to come includes:

THE BLACK DUCK, Sept. 26, 1896.
THE PRAIRIE CHICKEN, Oct. 24.
THE CANVASBACK DUCK, Nov. 21.
THE WILLOW PTARMIGAN, Dec. 19.
THE AMERICAN GOLDEN PLOVER, Feb. 27, 1897.
THE SHOVELLER DUCK.
THE REDHEAD DUCK.
THE PURPLE SANDPIPER.

PENNSYLVANIA AND THE PLATFORM.

THE State Game Commissioners of Pennsylvania have proposed to the Legislature a new game code, one provision of which makes unlawful the taking of game for sale, its sale within the State or export out of the State. This is a righteous measure, and it should have the warm support of every sportsman in the State. The market-shooter is out of his place in history. He has had his day. Game is no longer, in sound public economy, an article of traffic. We shall rejoice to see Pennsylvania by the adoption of such a law make good the ending of the professional hunter's industry within her borders.

NOCTURNAL PROTECTIVE COLORING IN ANIMALS.

To the *American Journal of Science* for February Prof. A. E. Verrill contributes an article on "Nocturnal Protective Coloration in Mammals, Birds, Fishes, Insects, etc., as Developed by Natural Selection." The paper is full of interest and suggestion, and is likely to lead other observers to contribute facts bearing on this question.

Very much has been written concerning imitative and protective coloring in these various groups as seen by daylight, but little or no attention had been given to their colors as seen at night until the subject was brought up some time ago in a paper read before the American Morphological Society by Prof. Verrill, of which the present article is an abstract. Prof. Verrill shows that many of the colors which are protective by day are still more so under moonlight or starlight. It is evident that in the case of all nocturnal animals protection is much more needed at night than it is by day. Such animals as rats, mice of various sorts, moles, shrews, some herbivorous animals, and other creatures belonging to many different orders, lie hidden during the day, and only venture forth to seek their food during the night. Such animals require protective coloring in order that they may escape the notice of other animals that prey upon them. In the same way many of the animals that capture those just mentioned need protective coloring in order that they may escape the notice of the creatures that they prey on, and may succeed in capturing them.

So it is that many small nocturnal mammals belonging to many groups are gray or brownish-gray in color, and so are protected at night, when they are abroad, although this coloring would be a positive disadvantage were they to be abroad during the day, for it would be in sharp contrast to the grass in which they live and on which they feed. The common meadow mice, which are very dark gray, can hardly be seen even in a bright moonlight and in localities where they are very abundant, and when the numbers close at hand are so large that the sound made by their teeth in eating can be distinctly heard. Many of the nocturnal carnivorous animals are black or very dark in color, and so are extremely inconspicuous at night, although they would be readily seen in daylight.

The same principle will apply to many birds, reptiles, fishes and insects, many of which are very active at night, and by day conceal themselves in holes, or hide in thickets or in the grass. But it is not only nocturnal creatures that need protection at night, for many which are active during the day rest at night in exposed situations, where, if observed, they might be destroyed by enemies. Small birds roost in trees, bushes or reeds. Small fishes rest at night on the bottom, or among sea weeds, grass or stones. Both are thus exposed to the attack of nocturnal predaceous species.

Often it is true that the same color is equally protective at night and by day. Examples of this are found in the green plumage of birds that live among foliage, and in the gray and brown colors of birds and mammals that live on the ground, among rocks or dead leaves and on the trunks of trees. The white colors of some birds and mammals in winter, and in arctic or alpine regions, are other familiar examples. Some colors, however, which are not at all protective by day are eminently so at night. Black and brown are colors protective by night and not by day, since in the black shadow cast by the moonlight a dark animal becomes invisible. This invisibility is often increased by the presence of stripes of light color on a dark ground, which look like patches of moonlight falling across a dark shadow, and thus serve to break up the outline of the body of a bird or beast which otherwise might be recognized. Transverse bands of black or dark brown on fishes, and black fins and tails, have the same effect of weakening and confusing the outline of the body. Where fishes rest among eel grass or seaweed these dark marks look like the shadows and shaded surfaces of the weeds. The striped colors of the tiger and the spotted patterns of the leopard, jaguar and panther, which live in thickets and jungles among straight canes or twisted shrubbery, have the same effect of making indistinct the outline of the animal's body even by day, and the effect would be still greater by moonlight or starlight.

Among insects numerous examples of coloring, evidently protective at night, might be cited, and these can be explained only on the basis of natural selection. Such coloring may, or may not, be more or less protective by day. Often it appears to be the reverse of protective. Many butterflies, for example, are brightly colored and in no way match the objects among which they live. Species that are black or dark blue, striped or blotched with light yellow or orange, and those that are spotted or striped with red, orange and black on the upper surface of the wing, are conspicuous whether flying or at rest. Their active habits and acute senses no doubt give these species a measure of protection by day. When resting at night, with wings folded, the colors of the under surface of the wings usually harmonize very perfectly with that of the flowers on which they rest. Certain butterflies have silvery spots on the under surface of their wings, which, when they are resting at night, look like the dew drops which surround them.

Many nocturnal insects that live on the ground have colors that are protective only at night. Many of these hide themselves during the day, so that no protection is then needed. Other insects, which are abroad during both day and night, have acquired green or yellowish colors, which are protective at all times to such as live among grass or foliage. Examples of this are seen in katydids, green grasshoppers and others.

As a rule, patches, stripes or spots of strongly contrasting light or dark colors are more likely to be protective by moonlight than by day, whether on birds or fishes. We know less about reptiles, but among the nocturnal amphibians protective coloring certainly occurs. Some of our native black salamanders are conspicuously blotched or spotted with white or light yellow.

The whole subject is one of very great interest, and it is remarkable how little is known about it.

SNAP SHOTS.

THE results of the last trials of poachers in the Yellow stone Park are very satisfactory—as much so as some of the earlier ones were discouraging. Of the two men arrested, one named Decker was shown to have had no gun and was in the Park only as an assistant to help the real criminals pack out their meat. He was therefore acquitted, and properly enough, since though he was an accomplice, it was hardly worth while to treat him with the severity which his offense merits. It is wiser to work up the punishments gradually on these offenders rather than to enlist sympathy in their behalf. The other man arrested, George Scott by name, is an old offender, who claims to be a hardened and desperate man, but is not. Scott was sentenced to six months in jail and to pay a fine of $200—an eminently fitting punishment. He may perhaps take the pauper's oath and so escape the fine, but he will have to suffer the imprisonment, which will undoubtedly do him a great deal of good and will make his friends and neighbors do a large amount of thinking. This is likely to make them and others pause before killing Park game again. There is little doubt that this same Scott has killed buffalo in the Park, and in any event he is entitled to no sympathy.

At a book sale in New York last week a copy of Walton and Cotton's "Angler," in two volumes, extended to four by the insertion of six hundred and fifteen illustrations, was sold for $460. Walton is a book which readily lends itself to extra illustrating, and it has often been devoted to this purpose. The illustrations suitable are practically endless. In portraits one might begin with Walton and Cotton themselves, their friends and contemporaries, and follow with all the famous anglers down to the "Men I Have Fished With." Of fishing localities which might be pictured, from waters frequented by Walton to those of our own country, there would be no end. Pictures of fishes make up another branch; and then the field of angling sketches, engravings, prints and drawings, stretches out illimitably. Once the extra illustrating mania takes possession of the possessor of a two-volume Walton, he has a life work before him. It is the first step that counts.

The scheme of imposing a license tax for the privileges of shooting and fishing is constantly gaining ground as a game protective expedient. It has reached its most advanced stage in Maine, where the plan of imposing a stiff tax on sportsmen's guides is now under discussion by the Legislature. In other States it takes the form of a heavy fee exacted from non-residents, while citizens go free or are taxed in a nominal sum only. The principle underlying the system is that those who profit most directly by the shooting and fishing resources of a country should contribute toward the maintenance of the supply. Tax the sportsman, say the license advocates, and devote the funds so provided to warden and protector services. Another impelling motive is to keep the foreigner, the non-resident, out of the State. This rule holds more especially in the Canadian Northwest, although in the Province of Quebec there is no desire to exclude sportsmen from the United States, but, on the contrary, inducements are held out to bring them in. The various license systems already prevailing in some of the Western States have not been in practice long enough yet to afford a sound basis for determining their utility. It may be said that everything which diminishes the number of shooters decreases also the amount of game destroyed; and yet this wholesome result may be entirely offset by unrestrained slaughter on the part of native shooters.

The National Game, Bird and Fish Protective Association convened in annual session in Kalamazoo, Mich., last week, twelve members present, and adopted the customary regular annual resolutions respecting wildfowl eggs in Alaska. They appear to be hopelessly daft on duck eggs.

The Sportsman Tourist.

HUNTING ON THE SPANISH MAIN.

A Naturalist-Sportsman on the Line of the Nicaragua Canal.

BY J. F. LE BARON, C. E.,

Late Engineer in Charge of the Nicaragua Canal.

The Nicaragua Canal, as laid out and commenced, crosses the American Isthmus through the southern part of the Republic of Nicaragua, and on the boundary line between that country and Costa Rica.

The country through which it passes is necessarily the lowest between Cape Horn, on the south, and the northern limits of Alaska. The canal line is located through swamps, lagoons, river beds and lakes; but immediately adjacent thereto the volcanoes and rocky spurs of the Cordilleras rise to heights of over 5,000ft. Commencing on the eastern side, the canal passes through the coast swamps and up the valley of a small stream called Deseado; crosses a spur of the Cordilleras into the valley of the San Francisco River, a small stream, from which it passes into the San Juan River, which it follows to Lake Nicaragua. The San Juan River is a large stream, averaging over a quarter of a mile in width; and Lake Nicaragua is an inland sea, seventy-five miles long by thirty wide, and with a depth of over 100ft., and it is elevated 102ft. above the level of the sea.

The most impressive fact in connection with this canal is that a vessel of 900 tons has steamed out of New York Harbor, passed down the coast to Nicaragua, ascended the San Juan River, crossed Lake Nicaragua and anchored on the western side at the proposed canal entrance; and from the mast-head the smoke of steamers on the Pacific, only thirteen miles away, could be plainly seen, and the greatest elevation of land intervening was only 45ft.! This shows how near nature has come to making a canal between the two oceans, and how little remains for man to do.

The writer lived for over two years on this strip of land between the two oceans, in charge of the surveys and work of the canal, and is familiar with every foot of it, and with its fauna and flora, its climate and seasons.

The width of the Isthmus between the Caribbean Sea and the Pacific Ocean at this point is 120 miles, but the line of the canal is diagonal, and the distance by the located line is 169 miles in round numbers.

The climate of the two sides of the Isthmus is essentially different. On the east side the northeast trade winds blow almost incessantly from the Atlantic, laden with moisture which is condensed and precipitated upon striking land, and the result is a hygrometric condition which is not exceeded for moisture by any country on the globe, with perhaps the exception of parts of India. Rain gauges were set up and carefully kept under my direction, while I was on the Isthmus, at various places on the line, the result showing that at Greytown, the eastern terminus of the canal, there was an annual rainfall of 296in.

On the west coast, between Lake Nicaragua and the Pacific Ocean, the climate is entirely different. The rainfall is only about 57in. a year and there are regular rainy and dry seasons, whereas on the east coast there is no regularity in this respect. As they say at Greytown, "It rains every day and every other day it pours." The reporter of the N. Y. *Herald*, who accompanied the party, wrote to his paper in January that it had rained so far every day, but the old inhabitants of the place assured him that there would not be as much rain next month, presumably, as he thought, because February had fewer days.

The eastern slope of the Isthmus between the Caribbean Sea and Lake Nicaragua is covered with an almost impenetrable tropical forest as dense and unexplored as the forests of the Congo in Africa, so graphically described by Stanley. Between the sea and the lake there are no settlements whatever except a few straggling huts of Indians and negroes on the immediate banks of the San Juan River, and the small village of Castillo, clustered around the old Spanish fort, where the Nicaraguan Government maintains a custom house, or *resguarda*, with a small company of soldiers.

All the rest of that immense territory, 100 miles in width and extending northeast and southwest for 700 or 800 miles, is an unbroken and unexplored wilderness, without a road or even a cattle trail, and inhabited only by a few scattered tribes of Carib Indians and direct descendants of the Aztecs. In this great forest the wild game roams undisturbed and unmolested except by a few India rubber hunters, who penetrate it in search of rubber, which they pack on their backs.

The narrow strip, however, between the great lake and the Pacific is covered with farms or haciendas and dotted with groves of cocoa, mangoes and oranges, and numerous villages and all the large cities of the Republic are situated on this strip.

The line of the canal was divided into sections, and a surveying party of twenty men assigned to each section of about four to six miles. On the eastern side every foot of the line had to be hewed out of the virgin forest, which was so dense that the sun could not be seen at midday, and the vines and thorny palms and tree ferns grew so thick that a person could not penetrate it at all without a machete, or what the Jamaicans call a cutlass, in one hand to clear the way. Only on the tops of the highest ridges and hills would the vegetation permit a sight of an object 25ft. away as large as a man. In most places a man was as completely lost to view if he stepped 10ft. off of the picket line as if he had been swallowed up in the ocean.

In this forest, the foliage of which was never dry, but always dripping with water from the almost incessant rains, we established our surveying and later our construction camps, and where the surveyors worked like moles tunneling through the green walls and arches of vegetation, and in which they were wet to the skin in five minutes after entering by the water dripping from the leaves shaken by their passage. Transportation to the camp was by canoe up the river and its affluents, as near as possible to the camp, and the rest of the way on foot. No mules or horses could be used, owing to the depth of the swamps and the steepness of the slippery red clay hills.

At first we had five camps distributed on the line and later twenty-eight. It was the duty of the writer to visit each of these camps as occasion demanded and lay out and supervise the work. Besides this he was constantly engaged in making explorations to discover new and better routes in all directions. This duty gave him most excellent opportunities for discovering and securing all the kinds of game that abounded in the region, and he always went accompanied by a chosen and trusty Indian guide and two or three macheteros, or men with machetes, to carry the provisions and guns. The last always consisted of a Winchester .45-90 and a double-barrel Remington breechloader, No. 12 gauge.

The animals met with on these excursions consisted of the tapir (*Elasmotherium bairdi*) or American elephant, called by the Nicaraguans the "dauta;" the peccary (*Saginо*) or jobili (wild hog), called by the Nicaraguans chauchas and by the Caribs warri (two varieties); the puma or South American lion (*Felis concolor*); the tiger or North American panther (*Felis onca*); the ocelot or spotted leopard (*Felis pordalis*); the sloth; three varieties of monkeys: viz., the great black Congo monkey, the red or gray monkey (most common), and the white-faced monkey.

In the rivers and lagoons were great numbers of manatee or sea cows, but being so thoroughly aquatic in their nature they were rarely seen. Also occasionally an armadillo, large gray rabbits, a small gray squirrel, not much larger than our Northern red squirrel; a species of marsupial resembling an opossum, but as large as four or five of our Southern opossums; the pisote (*Nasua socialis*), an animal resembling a raccoon, but larger; and a small antelope, of a species unknown by name to the writer, probably *Cervus rufus*, which was found, very rarely in pairs, in the dense woods.

The rivers and lagoons abounded in immense crocodiles differing in a marked degree from the Florida alligator, and often growing to a length of 20 to 25ft., and very savage.

On the plains north of Lake Monagua and on the west coast are large herds of deer, but few are found on the immediate line of the canal. I found also some otter, called "water dogs."

Of birds there were great variety. The first in importance as a game bird is the wild turkey. Of these there are three varieties, all called turkeys by the natives. The largest is the curassow, called "pavon" and oco (*Penelope hocco*) by the natives—a noble bird, the male a glossy blue-black and the female a chocolate brown, each often weighing 20 to 25lbs. Then there is the tree turkey (*Penelope cristata*), very common, and excellent eating, called "pavo" by the natives; and there is also a smaller but similar species, not so numerous, called "chochalaca."

The mountain hen, a species of grouse or pheasant (*Perdix Mexicana*), was very abundant, and the pretty little California quail, also was very numerous.

In the lagoons near the coast I found a large duck—as large as a brant goose—called there the royal duck, which is shot there the year round, and in the interior the long-legged or stilt duck, a kind of teal. In the fall and winter I shot in the lagoons and in the harbor of Greytown blue-wing and green-wing teal and gadwalls; also sickle-bill curlews, peeps or least sandpipers, and brownbacks or grass birds. On the Tipitapa River and Lake Monagua I found great numbers of water turkeys or darters, and white and blue herons, and egrets; and the woods are fairly alive—especially near the San Juan River—with green parrots, paroquets, and the gorgeous red and green mocacus, called by the natives lapas (*Psittacus mocao mocrocercus*); also toucans and banana birds, which last build great hanging nests as large as a half-bushel basket. They build in colonies, and a tree on the borders of the river is often seen with one or two dozen of their great nests hanging from the topmost branches like a crop of crook-neck squashes or gourds. The small songbirds, fly-catchers, vireos and hummingbirds are a legion.

The tapir or "dauta" is semi-aquatic in its habits and is generally found in the swamps or wallowing in the water. Those of Central America are larger than those of South America that I have seen, and they are of a uniform mouse color, without the white bands of the East Indian variety. They belong to the order *Pacherdemota*, having a very thick skin that lies in folds over the body. On the back of the neck the skin is fully 1¼in. thick, and like that of the elephant and rhinoceros is nearly bare, having only a few scattering hairs. The adult animal will weigh as much as 1,200 to 1,500lbs. They swim and dive with great facility, going long distances under water, and when pursued utter a trumpeting cry like an elephant. Although so clumsy in appearance, they can climb the steepest hills and run with remarkable swiftness, like the rhinoceros. I shot three of these immense animals while on the Isthmus, and in each case from my boat while traveling from one camp to another through the labyrinth of creeks and rivers.

Our camps were generally located on the bank of a river or creek, in order to be convenient for supplies and communication, and when I went on a tour of inspection I traveled in a steel canoe, of which the company furnished twenty-two, made to order in New York and brought out with us. These canoes were propelled by paddling, as the natives are more expert with a paddle than an oar, and I always had a crew of five canoemen—four paddlers and one steerer. I sat in the center of the boat, with my gun on one side and rifle on the other, ready for use in an instant.

The first tapir I shot as he was swimming the San Juan River near our headquarters camp. I had been down the river about six miles all day, making a sextant survey of a part of the river, and was returning to camp just before dark. The men were paddling up against the strong current, when they saw the animal swimming in the river and making for the little island on which our headquarters was established. He was quite near the island when we first saw him and we were slowly creeping up the river close under the island. He saw us and turned to recross the river, the current of which was rapidly bearing him down upon us.

One of our physicians, Dr. Salinas, a native of Nicaragua, was with me, and we both had our Winchesters. The Doctor had a new rifle, which he had just ordered from the States and had never used, but in his hurry and excitement he got a cartridge jammed in the mechanism and could neither open nor shut it, and was obliged to be an unwilling looker-on.

As the animal turned and was swimming powerfully for the other shore I fired at about 200yds. distance and struck him on the nose, only his head being visible above the water. He dove under water at once, but the strong current swept him down on to us, and when he rose he was not more than 100yds. away. I immediately fired again, without hitting him, in the gathering gloom. He turned and made for the island. I immediately threw in another shell, and this time I hit him square in the head, he being about 75yds. off. He sunk at once close to the shore, and the bubbles showed that he had lodged in the branches of a tree that had fallen into the stream. We brought the boat over the spot, where the water was about 9ft. deep.

My trusty Indian guide, Leocardio Ruiz, who always accompanied me, was equal to the emergency, however. Quickly stripping off his clothes, he took our sounding line, cut off the lead, and with one end of it in his hand he dove overboard and attempted to fasten it around one of the animal's legs. The first time he was unsuccessful, but he came up and reported that he had found him. The next time he went down he succeeded in putting a half hitch around one of the hindlegs, when we all took hold and hauled the creature to the surface.

It was now quite dark, and we were unable to propel the boat against the current with the carcass dragging astern. We therefore run the boat ashore, and the men jumped out and pulled him up to the bank. We then cut down two small trees and rolled them into the water, placing the ends on the boat, so that at last, by the united efforts of seven men, we rolled him into the boat. The weight sank the boat nearly to the gunwales, but we only had about 300yds. to go to our camp. The water being low in the river, the banks were fully 12ft. high, and we had to rig a block and tackle to an overhanging tree to raise the huge beast up to the top of the bank.

All hands lived on tapir steak for the next few days, and we distributed the meat to all the camps, where it proved a welcome change from canned meats and salt junk. The flesh of the tapir is coarse in texture, but is sweet and juicy, and was much relished by all.

The Doctor never heard the last of the unfortunate trick his new rifle played him on this occasion. He got the cartridge out of his rifle before the game was hauled ashore, but too late to get a shot.

There were forty young men in the expedition, who had all provided themselves with various kinds of rifles, and there was a constant fusillade of shots for practice around the headquarters, the favorite mark being an empty salmon can set on a convenient stump.

My chief clerk and commissary was an old paymaster's clerk from the navy, and the shooting annoyed him so much that he frequently complained to me about it. I never joined in these target practices, as I and my rifle were well acquainted through years of use in the swamps of Florida.

"Well," said the grizzled old veteran, "the captain ain't much for shooting tin cans, but when he wants meat he gets it."

The capture of my next "dauta" or tapir was a very commonplace affair. I was returning in my canoe from an inspection of a camp on the Dauta River, and we were silently paddling down the narrow stream, when just as we rounded a low point, covered with tall grass and cane, I caught a glimpse of the mouse-colored back of a "dauta" in the grass. The next second the boat shot round the point, bringing the beast in full view, which started with a tremendous rush for the thick woods. My rifle was at my shoulder in an instant, and I gave him a shot behind the foreshoulder. The next moment the boat shot up into the grass on the shore and the men jumped out with a rush, and there lay the quarry breathing his last, not 20yds. away. We skinned and quartered him and took the meat to camp.

A few weeks later, when coming down the San Francisco River, I discovered a tapir swimming down in midstream. He trumpeted and dove. The men plied their paddles with a vim that made us gain on him rapidly, and when he rose he was not over 100yds. off. He made directly for the shore and I fired at his broad back twice as he was climbing out on the bank. We immediately landed and followed the trail about 50yds. up the bank, finding him dead. As it was late, we left him there for the night, sending a party after him the next morning, who cut him up and brought him to camp. It proved to be a big bull and the meat much stronger and tougher than the female's.

One dog I had had an exciting encounter with two of these animals at the same place. I had been up the river inspecting the line, and had been joined by the chief engineer, who had come out from New York for a two weeks' visit to the work.

I had left my boat and entered the boat with the chief engineer to return to headquarters, leaving my gun and rifle in my boat with my men. We had started in our boat in advance of the other boat, which was waiting for some of the men, when as we floated quietly down the stream we espied two tapirs enjoying a bath in the river under an overhanging tree. The water was low and the banks were high and steep, and the two animals started as soon as they saw us, swimming and diving down stream, searching for a low place in the banks by which to escape. They uttered their shrill trumpeting and swam with great rapidity, but we rapidly gained on them. We had no firearms aboard, our only weapons being machetes. On such expeditions, in that country, I always carried a sharp-pointed machete, or short sword, in my belt. The animals kept ahead of us for fully a half mile, sometimes not two boat lengths away, when they found a depression in the left bank, where a small creek entered, and both made for it. Our men redoubled their exertions, and we arrived there not 5ft. behind them. As one of them dove under the boat to reach the little creek on the other side, I plunged my sword into his back. The water was tinged with blood, but they escaped up the creek and disappeared in the tall grass of the savanna, nearly overturning the boat as they passed under it.

These animals are very powerful and very ferocious when brought to bay or when accompanied with their young ones. They make tremendous rushes at an enemy and seize him with their mouth and flexible proboscis and stamp him to death with their heavy, pillar-like forefeet, which have hoofs like a bull, two hoofs on each forefoot and three on the hindfeet.

I once surprised one in a deep arroya in the hills, but he climbed up the almost perpendicular sides and disappeared before I could cock my rifle and get aim on him. How

ch a heavy, massive, clumsy-looking animal could do it ould never understand, for the banks were fully 30ft. gh and I had to pull myself up by the bushes to get out d found it no easy job. The tapir seized hold of the pling with his proboscis and pulled himself up and went like a whirlwind, crashing through the underbrush and eaking down saplings as thick as a man's fist. These imals resemble in some respects the elephant, the rhiceros and the hippopotamus. They live on grass and uatic plants. It is said by the natives of Central Amerto conquer the puma and tiger, who often seize their ng ones. The female tapir, at such times, rushes ford and seizes the puma with her proboscis and tramples o death under her massive forefeet.

The wild hog or peccary (*Dicotyles labiatus*) is very numerin this part of the Isthmus. They are about 3 to 3½ft. g and weigh about 75lbs. They go in large droves of eral hundred and are very savage. The old boars have y formidable tusks, and do not seem to fear anything. ey often surprise the lone hunter and oblige him to nb a tree for safety. So dangerous are they that orders re issued to the surveying parties never to go away m camp without a gun. The company furnished a gun l ammunition to each party. One day one of the par- disobeyed these instructions and went off to work hout taking any firearms with them. They encountered rove of these animals, which charged on them, and they re all obliged to drop their instruments and climb trees, ere they were forced to stay for several hours, all the e watched by the drove, who rushed squealing around foot of the trees, mad with rage.

ortunately another surveying party, returning to camp before dark, found their comrades in this unpleasant dicament. Being well supplied with guns and revolvthey opened fire on the herd, and killed fourteen before y could be driven off and the men in the trees could ne down.

hey emit a strong musky odor, and the location of a ve can often be determined by the scent long before y can be seen in the thick woods.

ne day I was making an extended exploration for the ation of a dam, accompanied only by my Indian guide, en we scattered a drove of "warri" or peccaries. I was ed with my Winchester and my guide carried my Remton breechloader. We cautiously advanced toward n and soon came up with them in some thick underwth. By standing perfectly still, each behind a large about a dozen or two paces apart, and peering carey into the bushes, we soon saw them advancing toward

When I first saw them the foremost were not more than ds. away. Waiting for a good opportunity, I fired and nded one, which immediately began to squeal loudly. s brought all the herd grunting and squealing up to the nded one, and I kept pumping in shells and firing, cking over a hog at about every shot. The Indian ned up to me, much excited, and said we must climb a , as the drove was advancing on us.

ure enough on they came, the old boars in front, snapg their tusks like castanets and grunting savagely. could see their long front, as much as 50yds. wide, all ds on toward us. They seemed to be puzzled to know ere the deadly volleys came from, for they could not us, as we kept out of sight behind the trunk of the ge tree from which I had begun firing. They would ne forward a few steps, stop, snap their tusks and mp their feet, then glare all around in search of the my. We had full belts of ammunition and kept up a dy fire. When within about 50ft. of us they sheered to the right, giving us good broadside shots. The ods seemed to be full of them, to judge by the noise y made. As fast as one fell another from behind would ply his place.

he situation was beginning to look ominous, when denly, without any warning, they took to their heels, hing off through the forest with a great squealing and nting and crashing of brush.

hen we sallied out and counted up the slain—thirtyen dead and dying. It was a close call for us, for if y had once seen us they would have charged us, and if ammunition had given out we would have had to ded on our machete swords, and I was assured by the lian and others that they would rush up and tumble r each other to get at you, the smell of the blood of se killed apparently making them ten times more cious. We took one hog to the boat and went to p, and I at once sent a boat back which brought them loaded to the gunwales. They have a musk gland on top of the back in front of where the root of the tail ht to be, which must be cut out, or it renders the whole cass rank and strong. They are excellent eating after ing this precaution. They have no tail whatever. like the tame hog, they do not have fat all over the y, but the meat is more like venison in appearance and e than anything else.

When we commenced firing there was a large company monkeys on the trees overhead, which fled chattering ay at the first shot. They were the red and gray iety. These monkeys—the red monkey—are exceedly numerous and very bold, often swinging by one d or tail directly over your head and breaking off gs and branches and throwing them at the intruder, ttering and scolding all the while at a great rate.

he men often shot them (the red and gray ones) to eat, he Jamaica negroes, of which we had many in our par- as boatmen and oxmen, were very fond of them for d.

he mother monkey carries her young one on her back il it is about half grown, and the men often shot the ther in order to secure the young one for a camp pet.

was once witness of a very pathetic scene, which wed the strong maternal instincts of the mother mon-, and an intelligence almost equaling a human being: e of the assistant engineers shot at a female monkey rying a large young one on her back, but, his aim being d, he shot the baby instead. The mother felt the baby's ns, that were clasping her around the neck, relax, and mediately stopped and took the baby in her arms ctly as a human mother would do. She looked inquirly in its face and stroked its head. She pressed it in arms and fondled it to her bosom, and with one hand for the wound made by the rifle ball. When she nd it she tried to stop the flow of blood by picking off ves and bits of moss and trying to press them into the und. But the struggles of the poor dying baby grew weaker and weaker. In vain did the poor distracted mother hug the little form and pat it with her hand, then start and run along the branches and leap from tree to tree to overtake the herd that had gone chattering away in fright. Then she would stop again, look down reproachfully at us, who were following along on the ground; then take the now dead and limp baby and look inquiringly in its little face, then with one arm clasping it to her breast start off again, then stop and hold her hand on the wound and look wildly around.

It was the most pathetic pantomime—there in the deep shade and solemn stillness of those primeval woods—that I ever witnessed. She would chatter and "talk" to the baby like a human being, and the wild, frightened, yet reproachful manner in which she looked around her seemed so natural and so much like a human mother that it only wanted words from her that we could understand to complete the resemblance.

Suddenly a shot rang out. One of our men following us some distance behind had fired at a turkey. The shot so startled the monkey that she dropped her dead baby and leaped off over the branches and was soon out of sight on the way to her companions. The scene produced such an impression on us both that we turned back feeling as if we had committed a murder, and both of us took an oath never to shoot any monkeys of this so human-like variety.

The great black Congo or howling monkey (*Nycetes*) is quite a different creature, being more like the baboons; and while the red monkey is sprightly and intelligent, and makes an interesting pet, the Congo is sluggish and stupid, and the white-faced monkey is vicious and hard to tame.

The latter come down to the ground very often, but it was remarked by all that the red monkey was never seen on the ground in a wild state, and it was an open question how they ever obtained water to drink. The Congo or howling monkey also always stays in the tops of the highest trees, and will often be noticed from the river lying apparently asleep on the topmost branches, looking at a little distance like some peculiar fruit in the tree.

They get their name of howling monkey from their habit of howling at sunset and just after, and it is truly astonishing how so comparatively small an animal can make such a terrific roar, resembling a lion in a small way.

I have often had newcomers who had just arrived and joined the expedition come in alarm to my tent to know what animal it could be that made such a frightful roaring; and one party of new men barricaded their camp with provision boxes and logs, expecting to be attacked by some unknown but hideous monster during the night. They are quite harmless, however.

While passing in our boats up and down the narrow streams, where the branches meet overhead in an arboreal arch, we often espied numerous turkeys on the trees overhanging the stream, and shot numbers of them. They were generally the "pavo" or tree turkey, and excellent eating. When picked they are nearly as large as the "povon" or curassow, but the body and neck is longer in proportion. I never saw them on the ground; but the curassow, on the contrary, is more often found on the ground, but when alarmed they take refuge in the trees and are easily approached.

The mountain hens and quail are very numerous, and fine sport could be had with a good dog. Their meat is white, and they are very plump and fine eating.

One day my dog, which was a long-bodied, short-legged Dutch hound, treed four pisotes, an animal resembling somewhat a raccoon, but larger and longer-bodied. They have the rings of dark fur on the tail like a raccoon. They were very tame, and I shot them all and took them to camp, where they proved to be good eating.

The great tree lizard, the iguana, abounds on the Isthmus, and I have often shot them measuring 8ft. in length. They have an alarming habit of dropping suddenly from an overhanging limb into the water directly alongside a boat which might happen to be passing beneath them. Such a large creature falling from a height of perhaps 20 or 30ft., without any warning, into the water, often barely grazing the sides of the boat and throwing the water in a shower all over the occupants, has a startling effect. They never are seen again after striking the water, and must be able to swim under water for long distances. We often shot them and found them delicious eating, and their eggs are a great delicacy. They are a truly hideous and ferocious-looking creature, but harmless.

Pumas, tigers and leopards are very numerous in these forests, and are much dreaded by the natives.

I was once sitting down resting after a long tramp, with my back against a large tree at the crossing of two picket lines, and my rifle lying across my knees, when suddenly a beautiful ocelot, or spotted leopard, stepped noiselessly into the path, about 50yds. in front of me, and stood still. To bring my rifle to my shoulder and fire was the act of an instant, and simultaneously with the shot the leopard bounded 5 or 6ft. into the air and fell with a terrific snarling and roaring into the bushes by the side of the path. I fired again twice at the animal as it lay writhing and snarling on the ground, and soon had the satisfaction to see it stretch itself out and lie still. I did not venture to approach it for some little time, but contented myself with watching it closely, with my rifle ready for another shot. At last I cautiously approached and found it quite dead. It measured 7½ft. from the nose to the tip of the tail, and was splendidly marked with small black spots on a white ground. The skin now adorns my study.

Some of the pumas are as large as a half-grown African lion.

In a future article I will speak of the fishing on the coast and in the fresh-water lakes and streams of the interior.

Goshawk in Michigan.

NORVELL, Mich., Jan. 22.—*Editor Forest and Stream:* On the morning of Jan. 3 I shot and killed a fine specimen of the American goshawk or black-cap hawk. My natural history book says this bird is rare and scarce in north and east North America. It came to the poultry yards and pounced down on a Plymouth Rock rooster, having him in its talons when shot. The fowl escaped the charge of No. 6 shot and ran away. I have taken the bird to Kief, the noted taxidermist, and had it mounted in fine shape. It weighed 3lbs. when shot. H. H. R.

[The goshawk is nowhere very common, yet it is not especially rare. It is distributed over northern North America at least to the Rocky Mountains. It is one of the most audacious and fierce of our hawks—one of the few that is not regarded as useful.]

IN IDAHO MOUNTAINS.

ONE morning late in August the Major and I stepped out into the deep, hot dust of an Idaho town. We looked out on what can be seen in a hundred other frontier towns. Straight away stretched the broad village street, beginning in the prairies and losing itself again in the prairies. On either side scattered, square-faced buildings. Here and there a loitering man, red or white, a stray pony or two, and a few swine were the only assurance of life, excepting of course the saddled ponies which stood at the railing before the two or three houses where by such token roulette, faro and whisky might safely be inferred. The scent of sage was in the air, and a pair of wheeling plover, questioning with sharp cry the intruding train, made buoyant our hearts for the day of freedom ahead. We were on the threshold of a trip into the mountains for big game, and here we were to meet our guide and a prearranged outfit; and John Hall, trapper, Indian fighter, deputy sheriff and guide, stepped forward to greet us even as our eyes were noting what is already told.

Typical of the characters developed in our Western country before railroads and immigration, Hall stood before us, a man of forty-five years, his medium height cut down a trifle by rheumatism; a restless, clear blue eye; grizzled, stiff mustache; shiftless, easy speech, which had hardly outgrown a Yankee drawl; a pair of legs which were shambling whether carrying him afoot, and equally when loosely flung about his pony, toes straight out; a grin which seldom subsided and often became a laugh, but never failed to disclose the absence of front teeth. This man commended himself at once as the survivor of rough experiences; and he was. As a boy of twenty, emigrant from the East, he started freighting to the Black Hills. Shortly promoted to the shoes of a massacred predecessor in the mail service between army posts in the Sioux country, those amiable stoics scarred him for life with their arrows. Next and ever since a trapper and nomad, following the retreating frontier, the outer edge of civilization has at length caught him and harnessed him to her service as an officer of law, where a gun is still as good as a court precept in sustaining the law's majesty. But behind this man were two entities, important as a true part of Hall himself and because of the part they later took in our adventures—two dogs, mother and son: Nell, a mongrel collie, mature, demure, with knotted muscles and a quiet air of experience which showed instantly the dog drilled to any experience likely to come to a frontier dog; Jack, her son, a bold, courageous young dog, spoiling for novelty and excitement. "Jack," thought I, "you have not yet had your baptism of porcupine quills."

In twenty-four hours our small caravan was headed for the hills—eight ponies, two wagons, a teamster, a cook, Hall, the Major and myself. The first camp was pitched in the pines by a little pond, already possessed for the night by great numbers of sprigtail and mallard. From their numbers we levied toll enough to put off the day of salt pork famine. Early the following morning we struck up the shoulder of the first foothill, sending the team to a rendezvous agreed on, and by noon were in the heights, where blacktail and elk roam and fatten. Alas! we read the story of roaming Indian hunters in the numerous tracks of unshod ponies, in the smouldering camp-fires and burning forest, and in the scattered game. Clearly we must pass through and beyond their desolating path.

For four days we drove and an added day we packed, until on the evening of the fifth day we laid our burdens down at the confluence of two streams, assured that the ruthless red men had not yet worked their annual havoc in the country about, although they came fast on our heels, as the future disclosed.

During the few days just passed Hall showed us a trick in the use of a collie dog which deserves commemoration. Moving as we did along the ridges, there were often disclosed on the hillsides and in the narrow draws below us patches of poplar and other cover, promising harborage for game. Digressions through such cover were impossible, and Hall was not a man to do unnecessary work. Out of just such necessity, often before presented in his trips, John had evolved an effective labor-saving plan, and his dogs were part thereof, as you shall hear. He first found a dislodged rock and summoned his eager dogs to his side. They were persuaded easily, for they had come to look on what was to follow as a rare sport. Tipping the 50 or 100lbs. of stone over the hill's edge, the dogs were cried on to the novel chase. Off they went, yelping in full chase at the heels of the revolving meteor. Fast and faster rushed the wild, amazing chase, the stone bounding like a frightened deer, loosening other stones in its career, and dogs and stones beclouding with dust the hillside in the mad flight; Jack especially snapping and yelping so close to the deadly missile that one's blood curdled in fear for his life. Finally all would disappear into the "poples" and their course thereafter be traceable only by the path the stone cut in the mowed trees. My astonishment at this unheard of method of "hounding" deer so overcame me that at first I hardly stopped to consider how effective a "beater up" the combination made, until at one trial there bounded out away from the pursuing bedlam four blacktails, one of them carrying as fine a head as ever sat on a mule deer stag. Thereafter until poor Jack got caught under this car of Juggernaut, I restrained my mirth at the dusty comedy to save my strength and profit by Hall's wit.

When camp was shaped for the night I slipped off to the water's edge, partly for the company, partly to see the rich sunset reflections on its surface as the stream hurried on toward the rainbow west, but shadowy forms in the still water of a deep pool sent me hurrying for the hollow steel rod which the Major had brought with him. At the first cast of brown-hackle and miller I was fast to a trout. In the next thirty minutes I had stretched out on the sand five fish, only one of which fell short of an even 2lbs. in weight. I confess with shame—and at times since with longing—that I did not once again wet a line during our week's stay in the camp.

On the next evening Hall and I sat ourselves at sunset by a spring hole where ample evidence was of recent use by deer and elk. The spot afforded full view of long stretches of mountainside. Our horses grazed in the rich pasture at the brow of a ridge a mile away. The sun was down, twilight was not yet dim, and a quarter-full moon hung free from the hill toward which we faced. My attention was caught by one of the horses which was separated from its companion and was feeding across the stream from the others and high up on the mountain. As we watched it work slowly down the hillside, its lowered head and curious gait led to closer scrutiny. After puzzling a little we turned the glass on it and discovered that our horse was bear and

big bear too, headed down hill toward the beaver swale along the river.

We started with coat tails flying to intercept our "horse" short of the willow thicket. It was a mile and a quarter to traverse. Now, John had rheumatism, as I have related, but he had besides incipient asthma. His creaking back and gaspings for breath grew fainter to my ears as we raced along. I missed them more and more as I drew near the point where we hoped to renew the shaggy vision. There seemed a lessening honor in "breasting the tape" first against so badly handicapped a competitor. My chivalry conquered, and I tarried, permitting my appreciated friend John to overtake me on its further shore.

Together with faithful Nell we passed along a game trail in the willows to an opening which again gave us full view ahead. A quick survey showed that the bear had just dragged his or her dripping body over the stones on the bank, and into the willow jungle. Nell, reluctantly obedient, followed in, but came hurrying back to refuge with us.

I closed the episode then and there by declining to disturb a bear big enough to be a horse, and a grizzly bear, as it later proved, which was within the shelter of a dense jungle, and protected as well by the partial moonlight; and I now frankly say that my head was leveler than yours, my bold reader, who would have fought it out at close quarters for the sake of glory.

In another paper I will introduce other bears, and a story of how the Indian hunts elk—perhaps. TWINKLE.

QUAIL AT SEA.

SANTA CATALINA ISLAND, Jan. 10.—Southern California is indulging in self-congratulations, and with good reason. Last winter the rain was much below the average, resulting in a late and short season; but this year nature has smiled broadly on the land. The first good rain came pouring down early in November—nearly 3in. in some localities; sufficient to clear the atmosphere, lay the dust and penetrate the ground for 1ft. or more. A few days later it cleared, leaving the lofty peaks white with snow, the lower range with freshened verdure.

In what seemed a few days indications of green appeared along the by-ways and unused streets; groves that had not been ploughed for years took on a verdant look, the hills caught the infection, and old barley fields volunteered and sent up delicate green sprouts. Each day the color grew and when the warm sun poured down after the clearing off the alfilaria made such rapid strides that soon the land, like magic, had put on its winter coat of green.

In two weeks another drenching rain came, and, for the first time in several years, the Californians claim, a typical winter—a winter when by the 5th of December the country presented the appearance of a beautiful green lawn.

The beauty of this early winter is perhaps better appreciated at sea among the islands, especially at Santa Catalina. Here the mountains rise like points of emeralds in a setting of azure, the water that ripples against their base being a rich and indescribable blue.

Approaching the island from the mainland, it is seen to be a mountain chain twenty-two miles in length cut by myriads of cañons that wind down to the sea, outlined in darker greens by the deep shadows that seem to lie restless under the constantly changing sunlight. There are no forests, and few large trees; but the eastern slope is covered with low trees and shrubs, wild lilac, various oaks, wild cherry, sumac, manzanita and others.

Santa Catalina is a natural game preserve, and when stocked with deer and elk will present ideal conditions for the sportsman. At present it abounds in quail, doves and wild goats, which afford good sport. The little town of Avalon, which lies on the southeastern shore on a placid bay, is the headquarters of sportsmen. Here are the hotels and cottages of the winter and summer visitors, the natural conditions calling to mind San Remo.

At one of the hotels a score of sportsmen are discussing quail shooting. Several have just returned from a goat hunt, and relate wonderful stories of game shot across deep cañons, and venturesome climbs along the precipitous western shores. They tell the newcomers that to find the best quail country the upper island must be climbed, and the following morning the horses are brought out and the hunt begins.

The trail leads directly back of Avalon, winding up the sides of the cañon, every turn revealing new attractions. In and out, facing deep cañons where the descent is several hundred feet sheer; now facing the sea or the distant and interminable hills and mountains, the climb is slowly made, finally ending at the summit, a broad, undulating plateau. The horsemen walk to the edge and look away over the sea. To the east lie the distant mountains of the Southern Sierras, the loftiest peaks capped with snow and seemingly hanging in the air, while to the west is the limitless ocean, with the flat-topped island of San Nicolas twenty miles away.

Plunging down a little cañon the riders go; pushing through patches of wild rose; now in the bed of a brook beneath an arbor of willow. The horses stop and snort as a roar of wings suddenly breaks the stillness, and scores of brown plumed forms go whirling over the brush into the thick cover of the mountain side.

The quail country has been reached, and not far beyond, where the cañon widens out beneath the shadow of a range of hills, is Eagle Camp, the mountain headquarters of sportsmen in the isle of summer. Leaving the horses in the care of the Mexican guide, the hunters were soon walking down the cañon in the warm January sun. Mountains and hills stretched away on every side with no suspicion of the sea, yet a mile away it lay, its saline odors blowing in to mingle with the perfume of the island wild flowers.

The cañon or Middle Ranch, as it is called, gradually widens out, carpeted with green, with here and there patches of cactus and groups of trees. Along the stream grows a hedge of willows, and breaking through the barrier the mouth of a small diverging cañon was seen. Ten steps through the chaparral and there rose on the air the welcome notes of the quail, then across the green gorge a responsive call.

Quail shooting in California differs somewhat from that of the East. The most successful method at Santa Catalina is to move on the flock as quickly as possible, separate and then take the birds as they rise. This course was pursued, and presently through the brush, in the midst of a cactus patch, the flock could be seen. It was the opportunity of a lifetime for the pot-hunter. The birds were standing perfectly still in attitudes of attention, listening to the warning of the cock in the distant brush, who had doubtless seen the enemy and was uttering his warning and defiance with all his power. But the flock, in fancied security, stood a moment and then began feeding in the sand. The males are beautiful little creatures, with a jet black throat and white stripes down the sides of the head, the breasts gleaming with an almost iridescent tint of blue, while from the top of the head rises a jaunty crest of eight or ten feathers that are enlarged at the upper end and incline forward. This ornament is subject to great changes of position. When the birds stop to listen it is cocked bravely in the air, but when they run it seems to drop forward in a languid manner. The crest of the hen is much smaller and inconspicuous.

The little birds have all the decorative beauties of the pheasants; the upper portion of the abdomen being a rich golden brown, the lower portion black, and each feather richly colored and edged with black. On the back of the neck are numerous eye spots, while down the side of the cheek are two pronounced white streaks—too choice and beautiful a creature to shoot if one continues long in contemplation.

Very soon the notes of the cock changed to a short, sharp call, which was answered by the flock, and then with a sudden movement they ran, and the hunters, guns ready, rushed into the open. R-r-r-r-r! came the roar of wings, and scores of dark meteors seemed shooting through the air, plunging into the brush which lined the cañon; while others rose over the green slopes as though over a rising sea and disappeared. It was then that the guns took them right and left, the frightened birds scattering in every direction. Some turned and flew into the lowlands behind the sportsmen, others flew higher into the range. Skirting the ridge, some on one side and some on the other, the hunters picked up the individual birds, which rose sometimes almost underfoot, darting away with marvelous rapidity.

It was difficult to find the quail in the brush, and when well scattered and they were rising rapidly there was always the temptation to drop several if occasion offered before the first was secured. Retrieving was impossible in such a place and dogs are not employed.

One by one the birds were started and finally the flock was driven into another cañon; later they were seen to rise, a faint black cloud, skim over a green divide, for a single second hover in the air and then drop out of sight behind the barrier of green. Up the cañon the sportsmen slowly followed, starting the bluebirds that plunged down into the green abyss with discordant cries, until the ridge was reached. A long steep slope extended down to the ocean, cut here and there with cañons, into one of which the birds had gone.

The afternoon fog in fleecy masses was sweeping in, blowing up the cañon, where it was rapidly broken up. Up through the mist came the roar of the waves as they broke sullenly on the rocks a thousand feet below, while now and then the harsh bark of sea lions told of the herd below.

Taking one of the many zigzag trails which the goats had cut, the hunters entered the brush that here covered the slope. Presently out of the depths were heard the notes of a male quail, and further on the answering call.

The birds had joined other birds and soon they began to rise all about, the sharp crack of the guns reverberating down the cañon, starting others.

Late in the day, with well-filled bags, the quail hunters returned to Eagle Camp, fully agreed that nowhere had they found so novel a quail country as this unique island, where the winter has all the agreeable features of a summer.

CATALINA.

A FRONTIER INCIDENT.

I NEVER expected to write this story for various reasons, but a man who lives in the East asked me to tell something about the frontier life of twenty years ago, and so I will tell something that is very vivid to me, for I can remember the day as if it were yesterday, and it happened in 1873.

I went to Colorado in '72, and formed a kind of partnership with a man on Trinchara Creek, thirty miles east of Trinidad. The spring of '73 came, and I concluded to buy cattle and stay there. About the 1st of June Texas Allen landed a bunch of cattle on the West Carriso, forty miles east of the Trinchara. The Cheyennes had broken out from Camp Supply, Indian Territory, and came west, killing ranchmen when they could catch them, which was seldom; for they ran when they could and fought when cornered in a cheerful way, which must have been discouraging to a respectable Indian gentleman who was out after hair.

My partner was gone to Pueblo, and New York and I were alone on the ranch. York was a nice boy, twenty-one years old. His real name was Addison J. Whitman, and he now lives somewhere in Colorado. He had been in Texas and Colorado for three years, always on the frontier, and was able to take good care of himself on all occasions. From what I have seen of him I think he enjoyed fighting. Now, I don't and never did, and I always try not to be there the day the war comes off, but I have been unlucky all my life in that respect. I went to Colorado for my health and not to associate with Indians or rude people.

Every few days we heard a new Indian story and knew that there must be several small bands near us, but we saw none, and finally one morning York said, "Let's go to Carriso and see those cattle. I don't think that we'll see any Indians;" and so we started early one morning. We were mounted on two little Texas stallions that were tough and fast. York had a Spencer carbine, .56cal., and forty-two cartridges. I had a Sharps .45-70 and only had ten shells loaded, but I thought that was plenty. It was a lovely day, and we rode slowly along the Buffalo Road, so called because it was made by the Mexicans, who went east every year to hunt buffalo.

After we had gone eighteen miles I saw something that looked like some crows flying low just over a ridge about two miles away. They did not look just right, and so I tried the field glass on them. It was the heads of five Indians who were riding to cut us off. I passed the glass to York, and he looked. "Shall we go ahead or shall we turn back?" said I. It was safe to turn back, but we were boys, and so we decided to make a run for Chagnau Cañon, and then make a stand if we had to. The Indians had to make three miles to our two to cut us off, and we commenced to lope our horses. Faster and faster we went, and then we fool boys had a horse race then and there, and forgot the Indians till after I had beaten York's horse badly, and he yelled to me to slow up. We galloped across the cañon side by side on panting ponies, and here came the Indians behind us, strung out and coming at a run. They were a mile away, but we had run our horses almost down.

There was a little mound on level prairie just after we crossed the cañon, with a patch of scrub oaks on it that was about 30ft. in diameter. "We must make a stand here," said York. So we rode into the brush, dismounted, hobbled and tied our horses in the center of the patch and crawled to the edge. The scrub oak was nothing but bushes, not high enough to conceal our horses entirely. The Indians could see their heads and the horns and cantles of the saddles showed. They saw where we were and circled south and then east; but they kept about 400yds. away. I suppose they thought that we wanted to go east, and that they had cut us off. I had a good look at them as they passed us on the south. There were three that looked like young men, and one old fellow that had a muzzleloading rifle. The fifth did not look like an Indian. He was yellow, and had short hair that I think was kinky. All wore moccasins and leggings. Four wore blankets and dropped them when they commenced fighting us, and their copper skins shone as if they were grease. They had long hair that floated in the wind as they rode fast. The other fellow had a shirt and an old blue coat. When they charged us he swore at us in English. The others howled. They were all mounted on little thin hammer-headed Indian ponies, but they ran better than they looked. They only had three guns; two were rim-fire Henry's, and one was a muzzleloader. When they hollered they made me terrified. It's the worst and most savage noise I ever heard, and now I felt that they would get us sure. I wished I had loaded more cartridges. I wished I had stayed in Hartford, Conn. I thought how much nicer it was to read a dime novel about Indians than to be where I was.

I told York some of these things and he laughed at me, and said: "See me take that big buck next time he rides past us and cuts up his fool monkey shines." The Indian was circling around us, lying on the side of his horse away from us, and had cracked away at us several times. The next time he came past York cracked away three times at him, and the last shot hit the horse in the neck. Down he came and the Indian turned several somersaults, struck the ground hard, bounded up, and ran off on foot. Then the four others charged us, and I had to shoot. I did my best, and York kept banging away; and though a good many arrows came whistling close to us, and I heard the purr of several balls, they did not touch us, and we made it so hot for them that they turned and rode off, but we did not touch them either.

Then they got together at about half a mile away and consulted, and I plunked a ball right through the bunch and they scattered like a flock of quail, and I had only five cartridges left. Then they separated and came up on all sides, and when we had made them go back I had only two cartridges left. I told York that the next man I fired at should not be over 20yds. I told York also that I knew we would both be killed, and he said he knew better, and said he liked it. But he didn't.

The wounded pony had got up and was eating grass. He had a hole through his neck that I could see through, where York had hit him. Pretty soon an Indian ran in and drove him away, but he was weak and reeled as he went, and York shot twice at the buck, but did not touch him. They got the saddle off the horse, two got on one horse, and they all rode away toward the southwest. I don't know why they quit us, but they did.

We soon mounted our horses and rode east at a slow lope, and York told me not to say anything about the fight when we got to camp, for he was ashamed of our shooting and besides the Texans might say we were liars. I did not feel a bit good till we got to Texas Allen's camp and found twenty cowmen well armed, and then all was well. But I have never been without fifty loaded cartridges since then.

This is a dry tale and seems not well worth telling, but, my boy, if you had been there and heard those gentlemen yell, I don't believe you would have liked it any better than I did. W. J. D.

Natural History.

WOLVES AND COYOTES.

BROOKLYN.—In days long gone by I have watched the large gray wolves that follow bands of buffalo, and their actions while on the move so closely resemble the fashions of a war party of wild Indians marching across the breaks of a rolling prairie country that the sight has more than once afforded me entertainment. There was little amusement, however, in watching a war party, but more of concern and anxiety.

The wolf will trot along the sheltered edge of a ridge or swell of land, pausing now and then to peer about him and survey the country, his companions meanwhile (and I have seen them in packs of fifty or more) trotting noiselessly on in advance, with uplifted heads in movement of wild grace that was significant of the roving habit, fixed with the remorseless craving to satisfy the inner wolf.

The "Okshena Dutas"—red boys of the plains—imitative by instinct, utilize professionally the sly proclivities of the wolf, fox and panther.

I once came suddenly upon two gray wolves at a buffalo carcass. They instantly broke away in opposite directions, paused a moment at the exact distance to take a wild look at me, then disappeared in the gulches.

At another time we were pursuing "bad" Indians, who had counted *coup* on Custer and his men. The pursuit had reached the Yellowstone River, and Bull Eagle, with most of his tribe, was on the opposite side. Our half-breed interpreter, Billy, had managed to parley with three or four wild-eyed Sioux braves, who had been hanging on the flank of the column, and three of us rode up in a friendly way toward them. In response to Billy's promises they waited for us, but when we were almost close enough to shake hands the wild instinct of the savage nature, never in repose, flashed out on a sudden, and they broke away in the same manner as the wolves, only they kept their eyes on us as their swift ponies carried them away. Our commander was a little bit mad, thinking an important conference had been interrupted; but it turned out all right.

At that day—1876—wolves had become very scarce in Montana, and, as a consequence, the buffalo and other game increased in numbers. In the few years that followed the cessation of active hostilities, the buffalo had dis-

appeared before the accurate aim of the professional skin hunters, who came into that country from the South.

It is in stormy weather that the wolf appears to be in his element; the unearthly chorus, ringing all the changes of the gamut, startles the hunter in camp or the traveler by night. A wolf delights in getting on some point of rock in a storm and howling in unison with the blast that sweeps through the gulches or cañons of the foothills. The wild dogs that infest Indian camps howl in chorus like the wolves, and it requires an expert to distinguish between the two.

About twenty-two years ago Flat Willow Creek, which runs south of the Judith Basin, Montana, into the Musselshell, was a pretty wild-looking country. We pitched camp there one winter's day in a very respectable and commodious-looking Sioux war house, built, tepee fashion, of dry poles and chinked fairly tight with broken slabs and sticks of cottonwood. We were after wolves, foxes and beaver.

In the afternoon I sallied out by myself to take a look at the country. Before me were the dark gulches of the Musselshell, topped by cedar-covered buttes that looked far away toward the Yellowstone. Crossing some little prairies and creeks, I came to a flat that had once been the home of a village of prairie dogs, and on a rise beyond it I saw a buffalo cow standing alone.

I maneuvered for some time to get close enough for a shot. When I looked again the cow had lain down. The point was rather difficult of approach, and I was crawling along low ground, when I saw two large wolves trot up to the cow in feint of attack, the cow getting up and lowering her head to repel them. It was then that I saw she was lame in one leg. The wolves sat down in the most impudent way and watched her. I presume these wolves had followed the cow some distance.

After a while they left the cow and trotted around to where I was partly concealed, and surveyed me with great curiosity from several points, coming within 15yds. or nearer. I made no move for fear of disturbing the cow. I did not care about the wolves, although they were about as large as any I had seen. I have never heard of wolves attacking people in the Northwest. They soon left me and returned to the cow, and edging a little closer I pulled up my .44 Winchester and shot the cow back of the shoulder. She fell a short distance off, and approaching I saw, about 100yds. away, some standing, some sitting, about twenty or more large wolves.

They formed a very pretty picture on the gray prairie, that was almost wind-swept of snow. They were not the dirty gray buffalo wolf, but seemed to be more of the timber species, with tawny markings, some approaching to creamy white. What surprised me was their utter unconcern as I came into view. They were lined up in a row, as if they had been bidden to a feast, and were not particular as to the manner in which it was served. I proceeded to satisfy them. Laying my gun and belt on the ground, I disemboweled the cow, cut and slashed the meat in the usual way, and loaded the carcass with about three-eighths of an ounce of strychnia. My audience took an unusual interest in the work of preparing this bait, but scarcely moved from their first position.

I surmised that this was not the first time they had posed as spectators of a meat-carving diversion, and that they had probably followed the Indians on a buffalo hunt. Though uninvited guests, I felt that their appreciation should not pass unrewarded. When I had finished cutting up the buffalo I gathered my gun and belt and retired from the scene as I came.

A day or two later as we rode that way their beautiful carcasses covered the prairie, and we secured twenty-two fine pelts. L. S. KELLY.

MAINE.—I am greatly pleased with the recent papers treating of the wolf and coyote, and hope for many more such. I have had but a comparatively small experience with the vermin, and that in the dim past; but these articles call up the scenes so vividly that I cannot resist the desire to recount it.

From earliest recollection the howling of the big gray wolf was occasionally heard on winter's nights in the back settlements where I was living in Vermont, although at that time their number had dwindled, but there were still enough to cause considerable loss of small stock, and to cause much anxiety to foot travelers by night. I saw my first wolf in a trap that I had set for foxes. I was out on a look at traps ere it was fairly daylight, and at the first trap I saw what I took to be a large dog, as it lay curled up in the shade of some brush. I had taken one dog that gave me great trouble to release with safety to myself, not caring to dispatch it. On this occasion I crept up, guarding myself with a forked sapling. I wondered at his lying so still, never moving a muscle or looking up, but on getting near there came to the nose a smell so rank that I instantly recalled what I had heard said about the wolf. I stepped back and pried his head up and got one furtive glance from his eye, and then knew my quarry and released him in a manner I had not intended for a dog. Several years later, in the same section, I shot a wolf that was chasing a hound. It was close up and had gashed the sides and rump of the hound, which was giving vent to the most agonizing yelps. Why the wolf had not killed the hound, as he was quite able to do, was curious; he just seemed to be torturing it as a cat will a mouse. The hound, seeing me, approached seemingly for safety, and seeing me a little later the wolf faltered, so that the space between enabled me to clear the hound with the charge of coarse shot that laid out his pursuer.

My next experience with wolves was in Maine forty odd years ago. With two companions I moved to the vicinity of Moosehead Lake. It was in September, and before pitching on a place for the ensuing season's trapping we decided to have a whirl with the moose, which were as "thick as spatter" then. Joe Morris, father of the guide, Charles Morris, lately so prominent before the public, entertained us a couple of days at his snug camp at the foot of the Northeast Carry on the West Branch of the Penobscot, and directed us to Lobster Lake as a good spot. I shot a calf moose on Lobster deadwater and took along the hindquarters, camping the same night at the head of the lake. We turned up the birch and spread blankets ready to turn in ere it was sunset, for we were dead tired. Just then a wolf howl was started in the direction of Katahdin, which was immediately answered from a quarter far away. Soon there was howling apparently from scores of the brutes, and all seemed centering upon us and fast approaching. We discussed the situation nervously, our skins goose-fleshing, I remember. As the brutes came together on the low bank, where a deep moose path led away to "Little Lobster," not more than ten rods from our position, in a huddle and plainly enough to aim at, we sent in a volley from two rifles and a Queen's arm loaded with buckshot. We had gotten the canoe into the water for a hasty departure in case our shots did not disperse them. The howling ceased, but the snapping of jaws, the snarling and crunching of bones, was quite as disturbing. It was not long, however, until all was again quiet, when we made all snug again for the night and turned in. Next morning by daylight we visited the spot. The pucker brush and moss was trodden down for several rods, with flecks of blood and a quantity of hair, but never a bone or bit of remnant.

The number killed and wounded we could only conjecture, and I dare say it amounted to six or eight; enough at least to satisfy those living for the time.

I have had less intimate acquaintance with the coyote. Fifty years ago Uncle Sam had a scrap with Santa Anna down in Mexico, in which I joined, carrying a Springfield flintlock in case it was needed. At Vera Cruz we found the coyotes most plentiful. There during the vomito season the coyotes held high carnival on the dead soldiers. A trench was opened every morning for the dead, which were but slightly covered, and soon as night shut down an army of coyotes commenced their gruesome feast. Ere daylight all had departed to the sandhills and chaparral. A visit to the trench disclosed what would have been a sickening sight to a tenderfoot. Arms and legs were exposed, stripped of flesh, and bodies in many instances dragged out, some reduced to skeletons; and this was of nightly occurrence. On several occasions when on guard I was surrounded by large droves of the brutes. Often they approached in a solid mass within a few paces, snapping and snarling, thirsting for my blood, but too cowardly to strike. There was a constant flashing of heat lightning, giving the yellowish-white brutes a ghostly look. I was not afraid, but kept them stirring pretty lively. And how I did want to unhitch on the crowd with the load of lead, one bullet and three buckshot; but that was not in the play. I did, however, on one occasion take a rise out of them when I hurled my musket with fixed bayonet as a lance, when it found a lodgment in one, and came near getting me into trouble by losing the bayonet, it having been wrenched off in the brute's struggles and carried away; but the rest of the pack saved it by devouring the maimed one then and there, and the weapon was found at my daylight return to post.

ALLEGASH.

THE WILD ANIMAL INSTINCT OF DIRECTION.

How do our migratory birds know north from east, and south from "nor'-nor'west, two points west," in a strange country on a cloudy day or in a dark night?

Evidently they do—at least as a general rule. Occasionally one may get lost. I have heard of such, but I have never yet seen a wildfowl of any of the migratory species which did not appear to know the direction in which to go in order to reach its next place of habitation quite as well as I knew the road to mine.

I have for many years watched such birds when on their regular flights. I have seen them arrive and depart in angular-shaped battalions, sometimes stopping, sometimes not. When they stopped, their action in stopping showed no caprice. They stopped just as if that was a regular stopping place on a predetermined line of travel; and when they left, after feeding and resting for a day or a week, more or less, I could see no more signs of hesitancy as to which way they would go than I have felt myself when, at the end of a day's shooting, the bait-bottle got empty, the shadows grew long, and nightfall was at hand.

Is there anything in human experience which tends to throw light on this question? Let us see.

Occasionally while traveling, like Job's satan, "to and fro in the earth," I have ended a day's journey after dark at a place I never visited before. Invariably in the morning, even though it be cloudy or before sunrise, I instinctively and often unconsciously fix in my own mind the points of compass. This is north, and yonder is east, the place or direction of sunrise, provided the sun retains the good habits which characterized his movements the last time I saw him. And generally I get it right, though if I were called on to explain the reason I could not for the life of me tell how or why. But sometimes I get it wrong, and when it is wrong the impression or conclusion thus instinctively formed is as lasting and as ineradicable as if it were right. I never in such a case can get the points of compass straight without stopping to think.

To illustrate: About ten years ago I became a member of a shooting club away up in central Wisconsin. On my first trip there I arrived at the club house by wagon about 10 P. M. on a starless and moonless night. In the morning I was out on the club house porch before sunrise, and while looking out across a small lake which was covered with quacking, swearing ducks, it took me only about ten seconds by the watch to decide in my own mind that I was looking due west. The fact was that it was due south; and though I have shot on those waters two and three times a year from that day to this, when I am there south to me is west, and the sun invariably rises not near the western terminus of the Atlantic cable, as it ought, but somewhere a little east of the center of the arch of the aurora borealis. And when my vigilant and watchful guide whispers "Mark west," to warn me of a bird coming from that direction, I invariably look somewhere which isn't west, and the bird don't stop. Sad, isn't it?

Now, all this leads me to suggest that probably our barbarous ancestors of some thousands of years ago—say along back toward the glacial period, or possibly earlier—had this instinct of direction well cultivated and developed; if not as much so as the migratory animals, as least sufficiently to enable them to follow with certainty any predetermined point of compass without any necessary reference to landmarks or skymarks; that they could fix their points of compass anywhere and at any time—on the tundra of Siberia, the steppes of Russia, the prairies of America, or in the forests of darkest Africa. But in the rise and growth of civilization, with compasses, charts, maps and weather vanes, with roads, streets and fences laid out and located in defined directions, with rivers and trout streams whose every curve is plotted and labeled, with known landmarks always in sight, man has little use for and seldom has occasion to use the instinct of direction. He has ceased to cultivate it, and is gradually losing it. What is left is simply the residual remains of an old instinct for which he now has but little use, and which, being seldom used, has lost its infallibility.

Now that this faculty of unconsciously trying to fix points of compass is an instinct, and not a matter of reason or judgment, will appear from a single consideration.

An error of judgment, once corrected, is dropped, and ceases to be an element of control in respect of one's actions. The original error disappears, except as a recollection, and the mind is thereafter guided in its volitions by the correct facts. But when a man gets wrong on his points of compass, no amount of correction will ever eradicate from his mind the erroneous impressions formed. He may learn, as a matter of fact, that he is wrong, but the instinctively formed error will never depart from him. And this is just where an error of instinct seems to differ from an error of judgment. Some different principle of mental operation seems to be involved.

Now my next suggestion is this:

That the migratory animals have always retained and still possess this instinct of direction which civilized man has almost wholly lost. If so, then which way to go when on a migration is not with them a matter of judgment or observation, but of instinct. They probably have no more hesitancy about the direction of their migration than a honey bee has as to the shape of its cell. And, by the way, the honey bee shows a like instinct of direction, when, after flying here and there, zigzag, back and forth, every which way, over several miles of territory in gathering plunder from the flowers, it will, when loaded, strike a "bee line" for its hive. So the seals will go through the unmarked, trackless waters of the Pacific for a thousand miles or more, and pull up at the Pribylov Islands with as much accuracy as an ocean liner. So also with the carrier pigeons. And any one who has tried to lose a worthless dog or an obnoxious cat by sending it off miles from home, shut up, sightless, in a bag or basket, has satisfied himself on finding it back home the next day that its instinct of direction was too much for him.

From all which and sundry other considerations, I am strongly inclined to the view that all animals have an instinct of direction and locality by which they are unconsciously guided in their ordinary movements—that the migratory birds, when the time comes for a migration, do not have to stop and think which way they will go. They just get up and go, and unless misled by influences they are not familiar with, as the glare of a lighthouse lamp, they never make a mistake or get lost. They may be frightened and become confused, as by being frequently shot at, but once "beyond the danger line," their instincts regain control and they will resume their journey in a direct line for their ultimate destination, and that too without stopping to think which is the right way.

The actions of some animals, particularly ducks and bees, would suggest the possibility that this instinct of direction operates most readily when the animal is disassociated so far as may be from local surroundings; in other words, that landmarks are a hindrance rather than an aid in getting the right direction. The honey bee, when ready to return to its hive, rises some distance from the ground, and after swinging around two or three times, usually in rapid and apparently angry flight, it strikes its course and is off like a bullet. The carrier pigeon is said often to act in the same way. So far as we can judge, both the bee and the carrier pigeon take their course without guidance from local surroundings, for they act just the same way in localities they never saw before as where they are perfectly at home.

The same habit prevails among many of the wild ducks, when, after feeding and resting, they resume their migratory flight, they commonly rise high and for a few minutes or seconds soar around, gradually gathering in flocks of some size, strike their course and go. From these facts I infer that their guiding instincts work best and more freely when local landmarks are left partially "out of sight."

But possibly all this is bosh, but I do not think so. Who knows? SHAGANOSS.

PITTSBURG, Pa.

A Horned Cow Elk.

Editor Forest and Stream:

Apropos of the discussion concerning hornless bucks, I send you a sketch that I made from life in Paris last December. It represents a double, semi-antlered, female elk. The history of the specimen I do not know, but I saw her many times in the Jardin des Plantes. On the right side of her head there is no trace of an antler; on her left are two small but perfectly distinct antlers. She is a large, well-formed animal, and in all respects other than the possession of antlers is all that a model doe elk ought to be. ERNEST SETON THOMPSON.

DOUBLE SEMI-ANTLERED COW ELK.

Pelican in Niagara River.

LOCKPORT, N. Y., Feb. 8.—On Nov. 5, 1894, an American white pelican (*Pelicanus erythrorhnchos*) was taken in Niagara River near Buffalo and mounted by taxidermist Grieb. Mr. James Savage, of Buffalo, reported the above to me in February following, and also sent me the wishbone taken from the specimen. J. L. DAVISON.

Owls and Game Birds.

Owls have played sad havoc with the game birds of this section during the last two months. In the district of Saanach scarcely a pheasant is left, and in that district over 100 owls have been killed. In this city and district fully 200 have paid the penalty for their marauding instinct, and 500 would be a low estimate for the number of owls killed on Vancouver Island alone.

From the east coast and southern mainland and from the neighboring State of Washington come the same reports of devastation. Owls have simply swooped down on the land like an army of locusts, and are devouring everything in their way, pheasants, grouse, quail and domestic fowl, and even house cats, very unlikely subjects for owls to tackle, but two well-proven charges for this crime are against these prowlers in this city.

In this army of invasion some half dozen species are represented, but the one most in evidence is the dusky horned owl (*Bubo virginianus saturatus*).

Sportsmen of course have been waging a war of extermination, and the number killed for the whole Province would probably reach 1,000.

The question is now, what brought this army here? Indians and wise old men predicted a cold winter, but these predictions have fallen far short of the truth. In fact, the winter has been extremely mild, and at the present writing flowers are in bloom in the gardens. Cold weather may have driven these birds down from their northern homes, but it does not follow that cold weather is going to follow them. This influx, however, is in my experience unprecedented.

John Fannin.

Victoria, B. C., Jan. 18.

How does the Flying-Fish Fly?

Editor Forest and Stream:

Your correspondent, Mr. Harry Higgins, who writes so interestingly of the flying-fish in your issue of the 13th inst., has evidently had unusual opportunities for observing the movements of this fish while it is in the air. Having seen it only from the deck of a steamer, I have never been able to determine to my own satisfaction the exact manner in which the pectoral fins are employed after the fish leaves the water. It is my impression, however, that they are used as parachutes, not as wings, and that whatever movement occurs in them is a fluttering vibration due to the resistance of the air. In extended "flights" the fish apparently derives fresh motive power by striking the crest of the wave with its tail; it also usually seems to leave the water from the face of a wave. It has been my experience, therefore, that in calm weather, when the sea is smooth, comparatively few flying-fish are seen, and that they sail but a short distance; whereas when the sea is at all rough flying-fish are far more numerous and their "flights" are much longer.

Doubtless your correspondent can give us some valuable information on this subject, and I should also be glad to have him describe the "croaking" note of the pelican, to which he refers.

Frank M. Chapman.

American Museum of Natural History, New York City, Feb. 10.

Brünnich's Murres in Northern and Western New York.

Lockport, N. Y., Feb 8.—*Editor Forest and Stream:* As the occurrence of Brünnich's murres (*Uria lomvia*) is being noticed in your columns, I will add what little information I have on the subject.

Two years ago I received a letter from Mr. George Sheley, a young man residing on Red Lake, in the town of Theresa, Jefferson county, N. Y., in which he stated that "on Nov. 8, 1894, he had killed four queer-looking ducks," and on describing them said "that their bills were black and the shape of crows' bills." I wrote him that his ducks were undoubtedly murres, but that I had never known them to occur so far inland, and asked him to send me one of the heads and feet. He did so, and also a pair of wings. I readily identified them as of Brünnich's murres. About this time I received a call from Mr. James Savage, of Buffalo, who informed me that three Brünnich's murres were taken on Niagara River on Dec. 9, 1894, and a short time since I received a letter from Mr. Savage saying that on Dec. 19 last five birds of this species were taken near Buffalo. Two years ago I also saw three specimen skins of this species taken on Lake Ontario, in Orleans county. The first Buffalo record of Mr. Savage, I think, is the earliest reported of this species in western New York.

The Woodcock's Whistle.

Editor Forest and Stream:

I have read many articles in Forest and Stream concerning the woodcock's whistle, and writers differ in regard to the manner of producing it. Harris No. 1 has made a recent test by holding the bird up by the bill, while Harris No. 2 says it comes from the throat. Like the Harrises, I too was desirous of knowing and took a wing-tipped bird home to make a thorough test; but I only found him to utter a quack, as Harris No. 2 described; and was almost as ignorant as when I commenced my investigation until August came and the birds were moulting. I was very much surprised to find a bird which flushed with a whir and no whistle at all; others in flushing would whistle for 20 or 30ft. and then stop; still others uttered no sound during their short periods of flight. Now, if the whistle was made by the rotary movement of the wings, as Harris No. 1 describes, how could the woodcock stop whistling while on the wing? No singing bird will sing while moulting, neither will a woodcock whistle, so by this observation I am convinced that the woodcock utters a quack, as Harris No. 2 describes, in starting, and then the rotary movement of the wings increases it to a roll, which makes that beautiful whistle that every true sportsman loves to hear.

Pennsylvania.

Birds Winter Visitants.

Report from Framingham, Middlesex county, Mass, to Feb. 5, records: No redpolls, no grosbeaks, no snowflakes, one snowy owl, two goshawks. The season is remarkable for the abundance of this last species. Notices of its presence are coming in from various parts of New England. I should say twenty at least have been shot in eastern Massachusetts. It is about fifteen years since I have had it reported in this vicinity. A flight similar to this is stated to have occurred in 1860.

Game Bag and Gun.

DECOY STORIES.—I.

Washington, D. C., Feb. 12.—*Editor Forest and Stream:* My reputation for veracity among my fellow sportsmen has been seriously impaired, if not entirely destroyed, by my insisting upon the truth of the following experience that befell me last Thanksgiving Day: My boy of fifteen and myself were indulging in a few days' outing at a little club house on the Potomac a short distance below old Gunston Hall. The weather was fine, in fact, too fine for our purposes, as we were after ducks. Early in the morning we put out, off the old historic Hallowing Point, dear to many duck hunters, about forty new wooden decoys, as handsome as I ever saw, and then took our positions in the blind, full of those feelings of exhilaration and expectancy which all true sportsmen are bound to feel in some degree, even when all favorable conditions for sport are dead against them. After a few hours' waiting in came a bird, which my boy knocked down prettily and with much enthusiasm retrieved, but which proved to his disgust to be nothing but an old merganser, or saw-bill, known in these parts as a "fisherman," a bird, I need hardly add, of large size and of beautiful plumage, but absolutely unfit for the table.

The incident over, we waited and waited, with no results until finally, leaving the decoys in position, we went back to the club house, prepared and ate a luncheon, and then took a stroll back into the woods and fields on a tour of inspection, when, finding our heavy clothes rather oppressive under the sun's rays, we concluded to return to the blind, where we were sure to find it more comfortable because of the light breeze that was coming over the water. On arriving at the blind, we noticed that one of the decoys was positioned some 25 or 30yds. from the others. My first thought was that it was adrift, and I was about putting out in the skiff to recover it when I noticed that it did not change its position, although the tide was running quite briskly. Could it have floated off and become again caught? Could it have dragged its anchor that long distance while the others remained undisturbed? These and other theories were being discussed by us, when suddenly over our heads from behind there passed a dark shadow, which on our looking up proved to be made by a large eagle, and as we gazed upon him he sailed out over the straggler decoy about which we had been solicitous, poised himself for an instant, and then settled down suddenly, and with outstretched talons grasped the poor, helpless wooden thing and rose with it until the leaden anchor showed at the surface of the water, when for some reason, perhaps because of the discovery of his mistake or because of the sudden and unexpected increase in the weight of his burden, this king of birds dropped his quarry into the water with a splash and scuttled across the river as though to keep a suddenly remembered appointment.

When we had partly recovered from our astonishment my boy remarked, "Well, if that isn't a pretty bird for a national emblem! What a fool!" while I could only express my admiration for the discernment and good taste of my excellent friend John P. (thorough sportsman as he is) in selecting such life-like deceivers for his fall campaign.

It is mainly because this selfsame John has once or twice looked curiously at me while hearing me recount this adventure to others that I have been moved to address this communication to you, in the hope that some one of your many readers may have had a similar experience, which he will kindly relate in your columns, and thus bring my narrative within the bounds of what most of my friends would claim to be reasonable probability.

Melville Church.

SHOOTING MALLARDS IN ICE HOLES.

Late in the fall or very early in the spring very excellent shooting may be had at times in ice holes. These holes are found in running water, or at what are generally known as air holes. When the weather has been cold and prairie ponds are frozen, driving the ducks from open land to timber, naturally at this time they seek water wherever it may be found. They fly through the timber and over the trees in constant search for open water—places where experience had heretofore taught them that water and feed could be found in plenty. Their flight is slow, their search thorough, and they are not unrewarded, for they find a spot where water may be had.

When they find a place like this they alight in great numbers. The quantity lighting in the hole depends on the number of them coming. This hole, like an omnibus, always has room for one more. After the hole is filled they become generous, and wishing to make room for fresh arrivals, they crawl out and sit on the ice, quacking vigorously, or with craws distended with corn, fruits of the last overland trip, sit on the ice pruning themselves and sleeping the time away. Their loud calls vibrate and course through the still woods, carrying welcome music to the alert ears of the hunter.

He marks the direction, and stealthily proceeds to locate them. Then some noisy duck, having partaken too freely of corn, and feeling the effects of its fermentation, raises her voice so loudly that he marks the spot where they are located. He shows his open palm to his dog, and thus conveys to him warning for great caution. The dog understands this signal and crouches close to the earth. Those two friends stand silently behind a projecting tree, the hunter debating in his mind whether to step boldly out and rout the birds or attempt by crawling to get a sitting shot. He decides on the former, and when he steps out in open sight is seen, and with a grand roar that fills the woods with its volume the birds arise in fright, and in pairs and flocks, both great and small, fly away. The dog looks askance at his master, questioning the propriety of routing such an immense flock without firing a shot, but a reassuring pat on the head and he silently acquiesces to the judgment of his master.

The ducks are loath to leave a place like this, and soon begin to return—they will not keep out. Coolly the hunter knocks them right and left; the dog is in an ecstasy of delight. Constant exercise has caused his blood to rush through his veins. He comes and goes in and out of the water, his brown coat glistening with ice, forming brilliant beads in the sunlight; then he marks the course of a wing-tipped drake as it tries hard to follow the flock and falls from 100 to 200yds. from the shooter. Away he goes, over ridges, brushpiles, and frozen sloughs, and soon returns, the drake in his strong jaws, its good wing beating against his nose, and delivers it to his master.

When a man finds a place like this he has found a mine which is exhaustless for that day. If he intends staying in the neighborhood he should hunt some other place similar to this—hunt them on alternate days, and his shooting will be good each day. It is advisable to scatter corn in the hole and around the edges on the ice, but plenty in the hole if the water is shallow. The birds will soon discover this, and come often; and if the hunter is a good shot, will tarry long. As fast as killed, set up the dead ducks for decoys; keep on until you have a good-sized flock. No fear of having too many—the more the better.

In building a blind, advantage must be taken of locality. If in timber secrete yourself well, with a good open place to shoot through. Better have an indifferent blind with a good place to shoot through than one where you find you cannot shoot without interference of limbs. Should you find the shooting must be had in an exposed pond or river, where a shore blind cannot be made, your ingenuity will be taxed to hide yourself, and you must depend as much on quietness and patience as on a blind. Should the ice be strong enough to bear you, build a wall 10 or 12in. high of ice or snow to conceal you. A little hay, a rubber blanket spread over it, cover yourself with a white cloth, wait patiently; it's a splendid place for contemplation, especially if the thermometer registers down about zero; you can drive away the coldness by thinking of Turkish baths, strawberries and cream, and the church sociables you enjoyed the past summer.

One writer, speaking of ice-hole shooting, says a good way to build a blind is, "take a barrel, chop a hole through the ice so the barrel will slip through, nail pieces of scantling on the sides of the barrel, fill the barrel with water until it sinks down far enough, then bail the water out, first cutting narrow edges through the ice, push the scantlings down, give them a half twist and they will hold the barrel where wanted. Put in hay and push snow against the sides and top of the barrel to hide it, and the blind is complete." No doubt this would work, but it would hardly pay to go to so much trouble. The only good way is to shoot from the shore, as first mentioned; any other manner has drawbacks that will more than offset the pleasure derived.

Never take any chances in trying to get duck shooting around ice. Better not get a shot than attempt to get to some place where there is a flight, and then take chances of breaking in. If you haven't a boat or a good dog, you know you cannot get the dead birds without retrieving them yourself over ice that might be weak; turn your back to that hole and walk away—you have no right to take any such chance, and no wise man will do it. Death by drowning is said to be an easy death. If, then, you prefer death in this way, choose summer time; the water will feel decidedly more pleasant and flowers are much cheaper.

G. L. R.

GAME PROTECTION.

The question of better protection of our game will soon be brought up before the New Hampshire Legislature. Speaking of this section of the State, the supply of ruffed grouse has been fair. Woodcock seem to grow scarcer each year. Both the woodcock and grouse are hunted to death and grow wilder every year. As for my hunting, I have not tried or worked hard to make large bags. Six birds in a few hours has been my best score, with a total of some sixty-five grouse and a dozen woodcock. The time has been, and not long ago, when I would kill as many in a week; but I got enough, as many as we cared to eat and a few to give away. I am now giving my time to the foxes and hope to thin them out to some extent before spring with the old-fashioned hound I have. The first eight foxes he started were killed.

A few deer are wandering about our woods. A three-year-old buck was killed early in November a few miles from here, and a few days since while hunting grouse I jumped a deer twice. Doubtless during the present winter a close season for a number of years will be put on deer in this part of the State. In a recent number of the Manchester (N. H.) *Mirror*, which has a department devoted to shooting and fishing under the heading of "Sport," the editor says: "The men who are shooting our grouse for the market are the ones who need checking. Stopping the sale of game, as advocated by Forest and Stream, will do more to preserve our birds than any law we are likely to pass. When the Forest and Stream came out boldly, saying, 'The very best protection of game will be to stop its sale at all times and in all places,' many sportsmen thought such a measure would be of great benefit, but that it would be almost impossible to pass and enforce such a law throughout the country." I predict the time will come, perhaps not until the next generation of sportsmen are in the field, when we of to-day will be blamed for not insisting upon such a law. Mr. R. E. Robinson, in his story of New England fields and woods, speaks of the present century as one of extermination.

In the first half of the present century the buffalo of the Western plains were apparently inexhaustible. The skin hunter got in his work, and they are practically exterminated. The elk and antelope bid fair to follow the same course. Dr. W. F. Carver told me a few years since that in a trip across the plains he saw but seven antelope, while on the same grounds not many years before he had seen thousands, and killed I won't say how many.

The moose of Maine and the Provinces, while they cannot be slaughtered as easily as the large game of the Western plains are being hunted and killed to such an extent that unless rigid measures are taken in time the day will come when the moose hunter of the future may consider himself lucky should he even see an old track.

One of Maine's oldest and best known guides could tell a story, if he would, of moose killing in years past. How the moose in that region lying between Patten and Oxbow, in Aroostook county, were killed for their hides alone. How one man on snowshoes hunted up the yards, shooting everything he found, and his partner following on his trail did the skinning.

Caribou, according to accounts, are growing scarcer, with possibly the exception of Newfoundland. Caribou, as I have found them, were not hard to kill, but it was usually very uncertain about finding them. The question which seems to be now before the commissioners of Maine is what to do to better protect the moose. It is proposed to shorten the open season and to prevent, if possible, hunting by proxy, which some men calling themselves sportsmen are doing. It certainly is easier to stay in camp and hire guides to do the hunting and killing, and the latter are more likely to succeed if well paid. A large amount of money is left annually in

Maine by hunting parties, and of the number who go with hopes of killing a moose only a small percentage succeed. Making the open season for November only will lessen their chances to a great extent. I hardly think a moose caller in the State would promise to call a moose in November, and should there be no snow the still-hunting would not be much better. Many sportsmen who are well aware of the uncertainty of moose hunting under present conditions would doubtless prefer to give up such hunting trips should they consider their chances to be materially lessened. They are absolutely certain to spend a good deal of money, and most of them want a chance of getting something to show for it.

There are quite a number of sportsmen who have been successful in moose hunting, and many of them keep on hunting each season. Why would it not be a good plan to shut down on the men who have already killed a certain number of moose, say two or three. At present there are none too many moose to supply those who heretofore have never killed one. I saw a claim made for a certain gentleman who had been to the Maine woods often enough to know something about hunting large game. The claim was that he held the champion record of his State as a moose killer. A champion record at the target or traps is well enough, but to aspire to a championship for killing animals as large as oxen—well, I would advise any such an individual to devote the rest of his days to hunting rabbits. Seriously, however, I think it would be a good plan to shut down on every man who has killed a certain number of moose. There would not be much trouble in knowing who had; about everyone who has killed a moose has told of it so often that all of his friends and acquaintances have got sick of hearing about it. It might, however, put some fellows in a hole, who have brought out the head and horns of a bull, claiming to have killed it, when in reality it was killed by proxy. What do you say, you who have been successful?

C. M. Stark.

Dunbarton, N. H.

REPORT OF THE MARYLAND GAME AND FISH PROTECTIVE ASSOCIATION.

Baltimore, Jan. 21.—*Mr. President and Members of the Maryland Game and Fish Protective Association:* In accordance with Article VI., Section II., of the constitution, on behalf of the executive committee, I herewith submit my annual report on the condition of the Association. This, like many similar organizations, has had many obstacles to overcome before it was established upon a permanent basis. The greatest difficulty encountered was that of confidence, as it was believed by most of our sportsmen and anglers that the organization would not be permanent; that the officers and promoters of the Association would soon lose interest, and in a short time the Association would lapse into a quiet sleep.

In soliciting members, some would reply, "We will wait and see what you do.' Others would answer, "What is the use? You will not be able to accomplish anything. We have belonged to similar organizations and have never seen any results except failure to do anything." That there were just claims for such assertions we do not deny; but a great mistake was made in estimating the determination of the officers and members of the Association to make the organization permanent and successful.

It is gratifying to know that after an existence of two years it has been demonstrated conclusively and unmistakably that the Maryland Game and Fish Protective Association is a success and has come to stay. A glance at the roll of members will disclose the fact that the membership is largely represented by the leading citizens of Maryland of every vocation, which in itself must inspire confidence. While it is encouraging to report that the membership is gradually increasing, it is to be regretted that there are hundreds of sportsmen and anglers in this Sta e who are not members, but ought to be. It is to be hoped that every sportsman who pulls a trigger and every angler who wets a line, residing in this State, will come and dwell with us. We believe it will be well for them to do so. The necessity for an organization like this has long existed. It has been apparent for years that unless restrictions were placed upon the wholesale destruction of the game and fish supply of Maryland, by the enactment of proper laws and the rigid enforcement of the same, the supply once so bountiful would soon be a thing of the past.

This Association does not want to prohibit. It wants to restrict and regulate the killing of game and catching of fish to a proper limit by proper means and at proper seasons, and insists upon the enforcement of the laws, so that all citizens will have equal rights, which must evidently redound to the welfare of all, whether they shoot and fish for pleasure or for profit. It has been very difficult to enforce the game and fish laws in the past; but when this Association, following the example of other States, had an act passed by the General Assembly last year creating a State game warden, with power to appoint deputy game wardens, the problem was solved. Governor Lowndes appointed Mr. J. Olney Norris State game warden, and by his energetic methods Mr. Norris has an organization of 135 deputies throughout the State, and never before have the game and fish laws been so rigidly enforced and generally observed. The game warden's department is in perfect harmony with the Game and Fish Protective Association. Since the organization of the department last June there have been about seventy-five arrests for violations of the game and fish laws. Convictions followed in nearly all cases.

We deem it but just to call attention to the splendid services rendered by Capt. Wm. J. Keen, of the State Duck Police. Capt. Keen has performed his duty faithfully and fearlessly, making more arrests for violations of the ducking laws this season on the Susquehanna flats than the whole force has made for years. Mr. J. Olney Norris, the State game warden, and his efficient deputies, co-operated with and assisted the duck police in every way possible.

Mr. Norris supplied able counsel to be in attendance upon almost all prosecutions for violations of the duck and fish laws. This was necessary on account of the many repeals and amendments in the duck and fish laws, in order that a careful and correct presentation of the law was made, and besides it would have imposed a great deal of extra work upon the State's prosecuting attorneys, particularly for Harford county, where so many prosecutions took place at a considerable distance from the county seat, and not accessible by railroad.

It is the consensus of opinion of the executive committee, and we believe of every member of this Association, that the game laws of this State should be as nearly uniform as possible; that the fish laws in the tide water districts and the Chesapeake Bay ought to be amended to regulate the size of meshes for all kinds of nets, regulating the size of rock bass and perch taken, making it compulsory that all fish caught in nets under the lawful size be put back into the water. The ducking law needs remodeling, or an entirely new law would be better, made so plain and simple (without granting special privileges to any class), so that the law can be correctly interpreted by anyone. This we believe can be done by conference and arbitration of all parties interested, through their representatives, in convention, some time before the meeting of the General Assembly next January. This will bring about good will and harmony among the box shooters, the bushwhackers and the shore shooters. A law of this kind will benefit all elements, whether they gun for pleasure or for market, and especially the latter class. All our Association desires is that the laws be faithfully observed. This the duck police and the game warden will attend to Another very important matter is a uniform State law for the protection of the world-renowned Maryland diamond-back terrapin. This delicious luxury, once so plentiful and profitable in Maryland waters, is fast b coming extinct, and it is imperative that diamond-back terrapin be properly protected in order that they have a chance to recuperate. The apprehension, speedy trial and conviction of James H. Butler for poisoning 3,000 English phea-ants and several hundred fowl on the property of Bowley's Quarter Ducking Club was one of the most important things accomplished during the year. It was a dastardly act and a severe blow at the private rights of clubs and game preserves. This Association determined to ferret out the guilty party or parties at all hazards. The secretary was empowered to leave no stone unturned in working up the case. Detectives were employed and after a month of tireless, skillful work, the guilty party was arrested, and is now serving a three years' term at "Jessup's Cut."

Another very important scheme that was so successfully carried out under the auspices and direction of this Association was the seining of the Chesapeake & Ohio Canal for the purpose of transferring the bass to the Potomac River, and the destruction of all carp caught; 12,500 bass were put into the river, 5,000 white perch and over 1,000,000 small fish of various kinds, such as the bass feed on. It is but just to say that without the co-operation of the Washington anglers, composed largely of the Blue Ridge and Woodmont Rod and Gun clubs, the scheme could not have been carried out. The anglers of Washington not only contributed the bulk of the funds, but assisted in every way possible. Hagerstown also did nobly.

The Blue Ridge, Woodmont and Hagerstown Rod and Gun clubs are all auxiliary clubs of our Association. Col. G. L. Nicholson, general manager of the C. & O. Canal, not only gave permission to seine the canal, but rendered valuable assistance in many ways. Col. John J. Brice, U. S. Fish Commissioner, furnished four men from his department, equipped with seines, rubber suits, etc. Capt. Harron, who had charge of the men from the Fish Commission, rendered valuable service. Having been authorized by the executive committee to take charge of and superintend this work, I want to return my thanks in this report to Col. Nicholson and Commissioner Brice for their kind attentions and for the very valuable services rendered me.

Our Association now has 201 individual members and six auxiliary clubs representing 120 members. It is hoped that a united effort be made to double the membership at this meeting.

Very respectfully submitted,

Geo. W. Massamore, Sec'y-Treas.

THE NATIONAL ASSOCIATION.

Kalamazoo, Mich., Feb. 13.—*Editor Forest and Stream:* Inclosed find clipping from local press regarding the annual meeting of the National Game and Fish Protective Association as held in this city on the 10th inst., the attendance to which being very slim.

We have had some good cold weather and plenty of snow, but our quail have pulled through o. k. so far. I saw a flock of about a dozen blackbirds on the 10th inst.

Ben O. Bush.

The Kalamazoo *Press* report runs:

The third annual meeting of the National Game, Bird and Fish Protective Association was called to order by President M. R. Bortree, of Chicago, at the Burdick House Wednesday afternoon. Committees on credentials, amendments to the constitution, memorial to Congress, memorial to the New York Legislature and memorial to the State Legislature were appointed, and A. L. Lakey and M R. Bortree were appointed a committee to draft a skeleton bill to prohibit the destruction of wild water fowl eggs in Alaska.

At the evening session the several committees reported. The memorial to Congress regarding the bill now pending to amend the interstate commerce law so as to prohibit the shipment of water fowl eggs, had also a clause relative to the destruction of song and plumage birds for commerce.

The memorial to the Legislature of New York State was adopted. It petitions the Legislature to amend the game law which now allows game to be received and offered for sale in the markets of that State, contrary to and in violation of the laws of many other States.

The committee on uniformity of game laws recommended a union close of season in each of the following five sections of the country:

All that proportion of the United States east of the Mississippi (Minnesota excepted) and north of the Ohio River, and bordered on the south by the southern boundary of Pennsylvania and New Jersey.

All that portion of the United States east of the Mississippi and south of the boundaries mentioned in Section 1.

All that portion of the United States west of the Mississippi, including Minnesota, and north of the southern boundary of Iowa, Nebraska, Wyoming, Idaho and Oregon.

All that portion of the United States west of the Mississippi and south of the boundaries mentioned in Section 3.

It was resolved that the Legislatures of the different States and Territories appoint committees to confer with each other in the respective sections, to accomplish this desirable uniformity for the lasting protection of the game and fish of the United States.

A. L. Lakey made a report in the form of an amendment to the national game laws, making it unlawful for any one to take the eggs or molest or destroy the nests or breeding places of any wild waterfowl, any game or any song bird in Alaska, or in any territory or on any waters owned or controlled by the United States

The following officers were elected: President, A. L. Lakey, of Kalamazoo; Vice-President, M. B. Davis, of Waco, T x.; Secretary, C. E Brewster, of Grand Rapids; Treasurer, J. P. Barnum, of Prairie du Chien, Wis.; Attorney, F S. Baird, of Chicago; Executive Committee: M. R. Bortree and George W. Strell, of Chicago, and M. W. Ellis, of St. Louis.

The constitution was amended so that associations and clubs shall alone constitute the membership.

Kalamazoo was made the permanent headquarters of the Association. The Association will take out a national charter under the laws of Michigan. The charter fee will be $5. St. Louis will be the next place of meeting.

Dr. Morris Gibbs read a paper on the destruction of song and plumage birds for mercantile purposes—for use in ornamenting ladies' hats. Five thousand copies were ordered printed, to be sent to women's clubs and societies throughout the country.

President Bortree gave an excellent retiring address.

The following members of the association were present at the Kalamazoo meeting: M R. Bortree, F. S Baird, G. W. Strell, Chicago; A. L Lakey, Dr. Morris Gibbs, C L. Cobb, G W. Locke, George C. Hall, Kalamazoo; J. W Gebhart, Three Rivers; C. E. Brewster, Grand Rapids; C. H. McGurrin, Kalamazoo; L. G Palmer, Grand Rapids.

CHICAGO AND THE WEST.

Left out the Clam.

The report of the New York Commission of Fisheries, Game and Forests is an admirable volume, and I wish to thank Mr. A. N. Cheney, State Fishculturist, for a copy which he has been good enough to send me. I am pained to note, however, that while the habits of the Virginia deer, the ruffed grouse, the red fox and many other game creatures are described and set forth at great length and with much precision, no mention whatever is made of another game animal, of which Mr. Cheney himself is qualified to speak with familiarity and authority, as being of habitat adjacent, contiguous, or identical with the territory falling under the scope of the above mentioned compendious work. Need I say that this is that humble but meritorious game bird, the clam?

Squirrel Story True.

My friend, the Chief-with-two-Stomachs, and his friend, Dr. Rogers, have made joy over a squirrel story in which I am supposed to believe that squirrels can be killed after night, and they say, moreover, that the "story is true." Of course it is true! To this story I demur. That is to say, I admit each and every allegation, but deny ground of action thereon. The Chief hath had wide experience at night, but hath evidently not yet seen all the things seeable. If he thinks for a minute that Mr. Lamar Fontaine, Capt. Bobo, or any one of many Mississippi hunters cannot kill a squirrel at night, he is advised wrongly in the premises. Nay, more; they even kill far larger animals, such as opossums, coons, etc., etc. As I may prove by Capt. Bobo, I have seen a bear killed at night, and with no lantern near. The Chief is led astray by his friends, who are putting up a job on him. If he thinks squirrels cannot be killed at night, I was going to say I would bet him the suppers I could show him they can; but on deliberation I think I would better not make that wager—I couldn't afford to lose it.

Dog with a Wooden Leg.

Chicago has a dog with a wooden leg. This animal is a fox terrier belonging to Mr. C. Raymond, who lately had an expert maker of artificial limbs fit a cork foot to the front leg of the dog, the right foot having been cut off in an accident. The terrier at once expressed great joy at this improvement upon the former order of things, and is now pursuing its daily avocation of killing rats with even more than its pristine celerity and gusto. There is no use trying to get ahead of Chicago. Has New York, for instance—or *par example*, as we say in Chicago—a dog with a wooden leg?

Chicago Fat Dog.

Far in the north of China there is a certain breed of dog much beloved of mandarins and other club men fond of good living. It is called, so says a Chicago daily paper, the "wunk" dog, this name in Chinese being descriptive of its highly edible qualities. A good fat "wunk" will weigh some 40lbs., and will give basis for an almost incredible amount of fine, rich soup of extremely nutritious sort. The "wunk" dog is fed altogether on grains, and never eats meat of any kind. It is a mute, inglorious sort of dog, a non-sporting class all by itself, whose mission in life is not to learn to labor and grow strong, but simply to eat cracked wheat and cream, and thus dream through the golden hours of life until called hence by the soup-seeking chef of wealth and luxury. We are reported to be practically certain of having a Chinese "wunk" dog at the coming Chicago dog show. Let other cities cease in the mad struggle to surpass Chicago. Has New York, for instance, ever had a "wunk" dog? To repeat, we trow nit.

Smartweed Seed for Ducks.

Mr. F. A. Howe, of this city, many years president of the Tolleston Club and always an active member, tells me something of the efforts made by that organization to supply feed for the wild ducks. The club has for a long time made a custom of putting out corn on the feeding grounds of the birds. Wild rice is native to the club marsh, and the club has planted wild rice to great extent to increase native stock. It is a singular fact, to which attention has earlier been called, that the wild rice of Tolleston Marsh is in a fair way to be destroyed by the carp of the Little Calumet River. These fish fairly swarm in those waters, and run out into every slough and bayou over the rice marsh as far as they can get, wriggling themselves fairly out of water sometimes to get at the wild rice roots and grain. The carp have killed the rice over acres and acres of this country. Mr. Howe has carefully studied the habits of these fish. He says that in the winter time they do not burrow in the mud, as is sometimes asserted, but go to the deepest water they can find. Here in some deep hole of the river they will swim round and round in hundreds and thousands, not feeding at all, but losing weight through the winter season. He says that a fish that would weigh 12lbs. in the summer may weigh only 8 or 10lbs. in the winter. The carp are the first fish to run in the spring, and as soon as the waters open they are out all over the marsh seeking for anything they can find to eat. As soon as the spawn of other fish is deposited the carp at once suck it up. They eat the germinating seeds of wild rice which has been planted or which has fallen into the water. They eat the feed which has been put in the shallow water

for the ducks, and in fact leave desolation behind them, almost incredible as such an assertion may seem when speaking of so harmless an animal as a fish.

It is well known among all duck hunters that ducks, especially mallards, are very fond of the seed of the plant known as the smartweed, there being only a few other varieties of food which they prefer to this. Mr. Howe has been experimenting with smartweed on the Tolleston marshes, where he has been planting it for some years. It has sprung up in great luxuriance over the flats, and in places makes a dense thicket higher than one's head as he sits in his boat. At first Mr. Howe got this seed, a bushel or so at a time, chiefly from the flaxseed companies, at whose works it is separated with the other seeds from the flax. The flaxseed men told Mr. Howe that it was too expensive to separate the smartweed seed from other weed seeds mixed with it in the refuse, but Mr. Howe told them to go ahead and do the best they could, and so obtained a few sacks last year. He tells me now that he has bought a ton of this seed, which will be planted on the Tolleston marsh. The seed is, of course, not quite pure, but there will be enough to make a great showing. The beauty of this smartweed is that the carp do not disturb it, and Mr. Howe feels some exultation over the fact that he has discovered the means of outwitting one of the most insignificant, but one of the most dreaded enemies of the club, that great North American nuisance known as the German carp.

Elk at Jackson's Hole.

Recent dispatches from Wyoming state that more elk are wintering in Jackson's Hole than for many years past. They have been traveling in thousands from the Snake River to the Gros Ventre Hills, and it is estimated that 15,000 head of elk have been seen in one herd.

"The Black Duck."

Mr. Thomas Johnson, of Winnipeg, Man., continues his quest for information in regard to the "black duck," and this time I think his request will result in something definite. Under date of Jan. 21 he writes to me: "My dear Hough: I read your remarks about the black duck in FOREST AND STREAM of Jan. 9, and to find if the duck that breed at Big Lake and Lac la Biche are really the same kind of black duck found in Ontario, I wrote Mr. W. H. Cooper, of Edmonton, to send me one It arrived to-day and I am sending it on to you. He had only one, a female, and on comparing it with the female black duck shown in reproduction of Audubon's original picture (FOREST AND STREAM, issue of Sept. 26) I fail to find any difference Anyway you no doubt have killed lots of black duck and will readily see if this is one. It may be, as Mr. Wells says, of some other kind, but it is certainly not found in Manitoba. Anyway, tell me the name of the specimen sent you. It was killed 1,000 miles north of Winnipeg."

The duck mentioned by Mr. Johnson arrived safely, and when I took it out of the box I at first thought I had a canvasback. It needed no second look, however, to tell the difference between those birds, although the duck was as large as a hen canvasback and something of the same color. The head was slightly disfigured, but it could be seen that the bill was a sort of cross between that of the canvasback and that of the bluebill. There was not the slightest resemblance between this bird and that one called "the black duck" in this country and Ontario. On looking up the Audubon portrait of the "black duck" I could not agree with Mr. Johnson on the similarity of his bird with that portrait. The Audubon portrait shows clearly the marsh duck head, just as this bird shows the unmistakable deep-water head. It is true, the Audubon reproduction shows a very dark body color for the black duck, and also shows a touch of white at the tip of the wing coverts. This touch of white would be more realistic could there be shown also the green color above the white tips, though this is impossible outside of lithographic reproduction. This is probably the misleading part of the picture, for Mr. Johnson's bird has white tips to the feathers just where the white is shown in the black and white portrait of the Audubon reproduction.

I took the bird to the Chicago Academy of Sciences and laid it before their ornithologist, Mr. Frank M. Woodruff, who at once told me that it was the female of the velvet scoter (*Oidemia fusca*). This is a maritime species, perhaps locally called "black duck" in some regions. I had never seen this bird before, and Mr. Woodruff said it was rarely found in this region. He showed me in the collection a specimen of the same bird which was shot on the Meredosia Flats of the Illinois River by J. G. Parker. This bird was valued very much. Another specimen of the same family, a fine male of the white-winged scoter (*Oidemia deglandi*) was killed by Mr. Woodruff himself on Nov. 2, 1895, from the Government pier, not far from Lincoln Park. Thus it seems that Chicago is not to be behind the world in the matter of weird fowl. Mr. Johnson can now rest assured that his so-called Manitoba "black duck" is a base fraud, and no black duck at all. Doubtless before this time his mind has been set quite at rest by seeing in the FOREST AND STREAM the excellent portrait of the black duck printed from the photograph in the issue of Jan 23. In that picture, better than in the Audubon reproduction, he can see the distinguishing peculiarity of the real "black duck" (*Anas obscura*), and can see how like a mallard it is, whence its sometime name, "black mallard."

Rare Birds at the Academy.

While I was at the Academy of Sciences Mr. Woodruff showed me some other birds rare in this locality and much prized on account of the fact that they were collected in this country. There was a good specimen of the auk or guillemot (Brünnich's murre), which was killed at Forsman, Ind., Dec. 1, 1896, by a market hunter, who sent it into South Water street, Chicago, with some quail. What the bird was doing down there, inland in Indiana, is difficult to tell.

Mr. Woodruff recently shot on the lake shore, off Lincoln Park, a fine specimen of the kittiwake gull, a bird practically unknown in this country. This specimen he prizes very much. Among other specimens unusual in this country is a turkey buzzard which was killed in Cook county, Ill., thought to be the only one seen in this region. (I have often seen them in Iowa at this latitude.)

More rare and valuable than the Cook county turkey buzzard is a specimen of the genuine northern raven, a bird scarcely seen this side of Alaska (*Corvus corax principalis*). This specimen was killed by Mr. Woodruff at Meredosia, Ill., Nov. 11, 1892. He sent the specimen on to the Smithsonian Institution for confirmation, and was told that he had a treasure of a bird, worth at least $100.

Yet another bird rare in this neighborhood was collected by Mr. Woodruff recently at Miller's Station, Ind. This was a robin snipe in full plumage At the same place, which is but about thirty miles from Chicago, Mr. Woodruff killed a good specimen of the beetlehead or black bellied plover. This bird looks something like our golden plover, but is larger. It is rare in this country.

While we were looking at the case containing these different specimens of birds I saw near some specimens of our ordinary jacksnipe another jacksnipe which fairly made my eyes start out of my head. It was a perfect giant, a monster of a jacksnipe, exactly similar in every way to our jack, but at least a third larger, with bill and legs in proportion. I had never seen such a jack as this, and Mr. Woodruff smiled at my enthusiasm before telling me that it was killed in South America, where it seems that all jacksnipe grow that big. I think I shall move to South America.

The Meat Dog Again.

From time to time I have said so much about the meat dog that readers of FOREST AND STREAM might be pardoned for kicking against any more of him. Although they might be justified in this, I feel myself that if I shall ever be able to say anything to discourage the perpetuation of the slab sided, cowardly, short-winded, scanty-brained, tissue paper imitations of dogs known as field trial performers, I shall after all not have lived in vain, whatever the majority of my friends may think about that. This time I think I have really found a meat dog, and I append a letter from Mr. George McDougall, of Butte, Mont, which describes him. The only suspicious thing about the matter is that Mr. McDougall is willing to sell the dog. I never knew a man who had a real meat dog who would sell him at any price If I had a meat dog and was broke, I might eat him, but I would never sell him. Probably Mr. McDougall is only joking about selling this dog, and therefore the advertising editor will overlook his statements about price, etc., which do not strictly belong next to pure reading matter like Chicago and the West. The public will please note what Mr. McDougall says about "entertaining letters." This marks him as a man of great discernment and judgment. He goes on to say:

"For the last three or four years, every time I have read one of your very entertaining letters in FOREST AND STREAM I have felt impelled to write you—not that I have anything particular to say, but just to tell you how much I enjoy your communications. Shake!

"About meat dogs. I have just the one your friend wants—a pointer; will soon be two years old—but I don't feel much like parting with him unless for a whaling big price, for who knows when I will get another? I forget your exact requirements, as it is a long time since you published your specifications in full; but as to being run over by a wagon, will you count a rather heavy, two-seated surrey loaded with your most obedient and 'the lady that owns me,' two heavy saddles, 50lbs. dog biscuit, about 50lbs. of ammunition, three guns, three valises and a couple of gunny sacks of clothing and general dunnage, about 50lbs. of oats, an 8×10 wall tent, and old Twister (greyhound, about 75lbs.) reposing in his most dignified style on top of the load—will that go for a wagon within the meaning of your specification? We were starting on a trip about 130 miles south, and had got about ten miles from Butte. It was a beautiful, crisp September morning. The aforesaid meat dog, Sam (good, old-fashioned name), and three greyhouds were following the wagon, and we were going through some very likely jack-rabbit ground. I was afraid Sam would put one up, which might make it bad for the greyhounds—I had no fears for him, nothing hurts him—so I tied him behind the wagon with a nice, light greyhound lead. It was his first experience at being led behind a wagon, and he is so consistent a conservative that each new experience is considered by him *casus belli*. The result was that he tried to haul the wagon around by the hind axle, the hind wheel went over him, and I was out a good lead. But he followed me the rest of the way—120 miles, or thereabout—hunted on an average every other day for five weeks, followed me home and arrived here in the best of spirits, a little thin, appetite fine, and pretty nearly as hard headed as ever. It took five days of steady pounding to make him point, two more to make him stand to shot and wing, and a couple more to wait till told to retrieve. I never hammered a dog so in my life, and think I would have failed to break him then had it not been that my hunting chum shot him accidentally as he was breaking after a bevy like a quarter-horse. He did not know it was an accident, and came back very humble and with such a respect for the report of a gun that I had very little more trouble with him. It made me wish I had shot him a little before. Of course the shot did not hurt him—nothing does. This fellow is now a perfect meat dog, has a great nose, understands the habits of chickens, grand retriever, ranges to hand fairly well, though he would much rather pick his own range, distrusting my judgment about such things; not a very good galloper, being of the old-fashioned, heavy build, but strikes a lively canter and keeps it up week in and week out. He bites all tramps, the Chinese washerman, the butcher, baker, groceryman and other visitors who are not aristocratic enough to suit him; will run a jack with enthusiasm, though a shot in the air will stop him since he acquired his respect for the gun; helped the hounds to kill a coyote and did most of the fighting after he got there, which was a little late; won't ride in a wagon unless tied down and cross hobbled, with a boy to hold him and pound him on the head with a club, for he regards it as waste of valuable time in which he might be hunting, and will only back a dog in whom he has complete confidence—with others he investigates for himself. Now, I am not trying to sell this fellow particularly, but your friend can have him for $150, though I had a little rather he would think that too high. He has no pedigree, or what he has is not long enough to get tangled in the sagebrush. His sire is Sam, a good chicken dog, and a handsome fellow, who came from the Lord knows where; his dam is my Lit, a good chicken dog, but worse to handle than he is, and never was thoroughly broken. She was got by a 'dog,' don't know his name, parentage, ownership or previous condition of servitude, but he was said to be from Johnny Wise's kennel, though Johnny denies it. Her dam was from Old Dominion's kennel and had a kind of a pedigree, and there you are. I have lost my job in the court here—new administration did not want me—and don't know where I will be this fall; but if I am here, I now invite you to take a hunt with me between Aug 15 and Oct 15. The game will be sage chickens; I will take you where you can kill 200 in a day, if you can shoot straight enough and walk far enough, or you can ride if you are too lazy to walk, and I will not kick if you fill Sam's hide so full of shot that it won't hold water—it won't hurt him and may do him good—and the aforesaid 'lady that owns me' will cook sage chickens for you so that you will swear they are as good as blue grouse, and help you to kill them and handle Sam into the bargain. Only one season of his future is behind him, but it was a good one, full of hard work and tribulation for both him and me.

"About jack rabbits. This is where I reside, so to speak. I am a candidate for the position of purveyor of jack rabbits to the crowned heads of Europe and America. I can furnish jacks till you can't rest—good, husky blacktails, price $1 each, f. o. b. Market Lake, Idaho. They had a drive down there last month and killed thousands. I was invited to attend and offered transportation, but could not go. About a year ago they rounded up over 2,000 and shipped them to Salt Lake City in hog cars to be distributed to poor people. Send in your orders and the jacks will be forthcoming."

I submit that the above is about the nearest we have come to a real meat dog for some time, and it would give me great pleasure to shoot over him and shoot at him, as it would remind me of old times with my old dog. We used to use him to pattern our guns on, and he really enjoyed the sport very much. In regard to the sage hen shoot, I am glad to have the invitation. I was shy an invitation for August, though I think I have all the rest of the year covered with invitations to shoot, fish or camp out from New Brunswick to old Mexico and from Maine to Montana. I am rapidly endeavoring to so arrange my affairs that I shall not have to work any more.

Protecting Rabbits.

Mr. G. G. Kuykendall, of Carmi, Ill., writes to FOREST AND STREAM upon the subject of game laws as below, and there is a general justice in what he says, although it may yet be difficult to secure a game law on rabbits. The farmer is a man too little considered by those usually asking for stricter game laws, and it is gratifying to see this interest among Illinois farmers in the matter of game protection, and to note that they realize the scarcity and the impending extermination of the game which was once so abundant on their land. Mr. Kuykendall says:

"In order to give the sportsmen of this State some idea of the views and wants of the farmers of this part of the State with regard to protecting the little remnant of game we have left, I write this letter so the sportsmen who help to frame our game laws may know the likes and dislikes of the farmers. We would like to be able after the open season is over to keep men, both black and white, that care for no law nor any one's rights, and would kill if they could every mite of game that is left by the farmer and his friends for next season's supply—all such we want to be able to keep off our farms.

"Fifteen months ago four prairie chickens came to my farm. I was feeding cattle and they wintered on the farm, and in the spring nested across the line on my neighbor's farm. He and I agreed that we would protect them if we could. When the broods were grown we had twenty-four. We had little trouble during the open season, but since the close season the negroes and the class of white men that I spoke of come on to our farms pretending to hunt rabbits, but in fact are hunting and shooting chickens and quail. I have chased several away, but failed to get near enough to them to know them or afterward to learn who they were.

"If the law would protect bunny at the same time it protects birds, then the plea of hunting the rabbit would be done for.

"If the rabbits become destructive to young trees or shrubbery of any kind let the law allow the farmer to destroy the rabbits. I have talked with many of the farmers on this subject and they all think that so long as the hunting goes on all winter, professedly to kill rabbits, our supply of birds will continue to decrease."

Killing Things and Protecting Things.

So much as above for new and rapid ways of killing things. We do not hear so much about new and desirable ways of increasing and protecting things. Man seeks always to destroy, and trusts always to nature to furnish something for him to destroy. Only thinking men are the ones who stop to reflect that even nature can protest and finally go on strike. All sportsmen of thoughtful methods to-day realize that we must protect the game or soon have none to shoot at. One of the earliest men to reach this conclusion and to advocate his view has been Mr. Charles Hallock, whom some day I think we shall be calling Sir Charles, as the only man in America such a title would suit and would not spoil. Mr. Hallock always believed in uniform game laws, and he is still at his old idea, and has out a printed scheme for a system of game laws to cover the entire country of the United States. He divides the country as Cæsar did ancient Gaul, into three parts, or "concessions," as follows:

Northern Concession.—The following named States comprise the Northern Concession, to wit: The six New England States, the Middle States the two Virginias, Ohio, Kentucky, Michigan, Illinois, Indiana, Missouri, Iowa, Wisconsin, Minnesota, the two Dakotas, Kansas, Nebraska, Montana, Wyoming and Colorado, to the summit of the Continental Divide.

Southern Concession.—The following-named States comprise the Southern Concession, to wit: North and South Carolina, Georgia, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Florida, Texas, Indian Territory and New Mexico, to the crest of the Continental Divide.

Pacific Concession.—The following-named States constitute the Pacific Coast Concession, to wit: Washington, Oregon, California, Idaho, Nevada, Utah and Arizona.

The law as submitted for each "concession" is, for the most part, stringent enough and wise enough to please any sportsman. There is one concession, however, and a very important one, which Mr. Hallock has left out, and that is the concession which our friends the game dealers will not be likely to make to the sportsmen when they see this "Hallock code" approaching them some dark night. We are told that a cat may look at a king, and that there is no law forbidding a mortal to gaze, therefore it is perhaps not illicit to long for uniform game laws. Heretofore we have mostly been obliged to take it out in looking and longing, not as yet having acquired the consent of his majesty the game dealer to do more than look and long.

E. HOUGH

1206 BOYCE BUILDING, Chicago.

He Might Establish an Endowment Fund for those Descendants.

INCLOSED please find $10 for FOREST AND STREAM for three years—Jan. 1, 1897, to Jan. 1, 1900. Hoping that some of my descendants will duplicate this subscription for the years 1997 to 2000, I remain, fraternally yours,

G. E. W.

THE MAINE GUIDES' SONG.

From the Lewiston Journal.

THE proposed law, whereby Maine guides must register, secure a license by the payment of $3 and wear badges when engaged in their business, has ruffled these free-and-easy Leatherstockings. They protest in breezy fashion, especially to that clause whereby they are required to keep a record of game seen, game killed, fish caught, etc. A brand new Maine hunting song is respectfully suggested to these recalcitrants, who ought to assist Commissioner Carleton in his reforms.

We're off, we're off to the noble greenwood, ha, ha, and eke likewise, he, he.
It's perfectly awful, but still we are lawful, authorized guides are we.
Oh, say, is the duffle all tight and all right? Have you looked it carefully o'er?
Look out for the gun, for we have only one, but of typewriters we must have more.
For we're off, we're off to the good greenwood, with our badges and licenses too;
With our legalized, authorized permits and modernized orders of what we must do.
We *must* keep a list of the game that is missed and of critters that scamper away.
We've got to keep tab whenever we nab a buck or a moose as we stray.
And when we start out with a party to guide we're ordered to write out a census,
With ages and names, square as old truthful James; and woe if a slip-up prevents us.
So, hurrah for the wood, we will try to be good and describe all that crosses our way.
We'll study stenography, typewriting, photography; we'll scribble away all the day.
We'll try to deserve it—the license we got; our badges we'll wear on our breast.
We'll write of our rambles, our tussles, our scrambles, enumerate flies and the rest.
And if we've permission, or if the Commission would like for to have us inform,
We'll halt bucks and ewes and solicit their views on the question of tariff reform.
Then hurrah for the wood, we are going, last call; do you want to go with us for fun?
Take another typewriter; as the pack must be lighter, I guess we won't need the old gun.
For I think when they see us with license and badge a-jotting down points, as I've said,
The deer that we're after will double with laughter and squirm in a fit and fall dead.

BOSTON, Feb. 13.—The guide license bill has passed one reading in the Maine House at Augusta with scarcely a dissenting voice. But Hinckley, of Rangeley, has asked for delay until Thursday, the 18th, that he may offer an amendment providing that men simply working for sportsmen temporarily shall not be obliged to take out licenses. As the bill now stands, "any person engaging in the business of guiding, as commonly understood," is liable to a fine of $50 if he does so without a license. SPECIAL.

Maine Moose Protection.

Editor Forest and Stream:

The moose is the largest game animal and the most valuable, and, unfortunately for him, the only animal which can be called from his most secure places in the forest by the use of the bark horn. The experienced guides can so closely imitate the call of the cow moose that the bull can be brought within a short range of the hunter's rifle. They are so much sought after that the ambitious hunter had rather kill one moose than fifty deer. Furthermore, there are so many more experienced guides and hunters now that with very little trouble they can locate almost every bull moose in Maine.

If a bull moose having a good head of horns is worth $100 to the hunter, I think he would be better worth $1,000 to the State of Maine to be left in the wilderness for five years for breeding purposes. If the bull moose is allowed to be exterminated, of what use is it to protect the cows? Protect all moose while there are some to protect—don't wait until they are exterminated before taking action. If there is not a continued close time put upon moose at once I sincerely believe there will be none left to protect when the Legislature meets again.

It is no reason for saying that moose are plenty that so many have been killed of late by the numerous hunters, and by poachers in the deep snows, where the moose are so perfectly helpless. That so many have been killed is reason enough that they should now be scarce. There are 1,000 hunters who go to Maine for the purpose of killing a moose or other large game now, where there were fifty twenty-five years ago; and the guides are becoming more familiar with the forest since it has become so easy of access.

Twenty-five or thirty years ago moose could be found all over the large forests in Maine, now there are very few places in Maine where they can be found at all.

Put a close time on all moose for five years, and a fine and imprisonment for the killing of any; half the fine to go to the informer.

On all other game shorten the open season the month of December. Permission to hunt in that month brings very little money into the State, and the dangerous slaughter in the snows of that month should be prevented. A fine should be imposed upon any one carrying firearms into the woods during close time. That will protect the game in the State of Maine, I believe, better than any other measure.

The deer and smaller game are so plenty they will afford the hunter good sport for a number of years to come if they are properly protected, and if a more liberal appropriation could be made by the Legislature for the protection of the fish and game, it would enable the Commissioner to do the work that is so much needed at the present time.

D. H. BLANCHARD.

BOSTON, Feb. 8.

Ducks in Maryland Waters.

STOCKTON, Md., Feb. 4.—When I wrote on Jan. 10 there had been no redheads and very few blackheads, and as far as I could hear the same lack existed all the way to the capes. I had letters from three gentlemen who had been to the Broadwaters; they reported lots of coots, south-southerlys and black ducks, but few bluebills and no redheads. Another gentleman stopped here over night coming from there with the same report. As he had to take the 10:10 train North the next morning, I had him out on one of the islands by daylight. We put out a few decoys for cub-heads (a nice-sized duck, always fat, called whistler and jingler on the Chesapeake and golden eye North), and were back by 9:30 with seventeen ducks, well satisfied with the two hours' shooting. I state this to show that as far as I could learn there were few redheads below previous to Jan 10.

On Jan. 23 I was at the landing when one of the oyster boats came in. Capt Tom said: "Say, boss, you ought to be out there now," pointing to the shoals, "it is alive with ducks and all redheads." I asked him if he would go out if I got my gun and shells. As it is only a quarter of a mile to my house, I was soon back. He had my box on board, and about 150 decoys, so we were soon under way. Going out I saw bunch after bunch coming down the eastern channel and crossing to the upper shoals, which was evidence enough to me that they were northern ducks. It was after 4 o'clock when I was all fixed in the box. Tom was to sail up the birds, come back in half an hour, run down the drift of dead ducks and gather them. The ducks when routed came in great bunches of hundreds, made no offer, and in fact took no notice of the decoys. However, by the time Tom got back I had down thirteen redheads, all single ducks or pairs that had turned out of the big flights.

I was pleased with the show, and that night telegraphed to some gentlemen in New York who were waiting for such news. Sunday night the wind came out from the northwest, and blew a living gale up to the 27th.; then changed to the east, with snow. That night the wind went back to northwest again, blowing very hard for four days, freezing up every creek, cove and the great bay itself from shore to shore. Feb. 2 the wind turned to the south, warm; on the 3d and 4th it blew hard from the east, but still warm, bringing in a big tide; and on the 5th every particle of ice was gone from the bay. Some little could be seen where the ice had piled in shallow coves, but aside from this everything was clear.

Now it seems perfectly plain that these ducks come from the North in front of this most severe storm. I was out on the shoals this morning; there are a great many ducks there already, the majority, as far as I could see, being redheads. All these seem to be coming up from the lower shoals, showing that they will not stay South, but are anxious to begin their northern flight again. I saw also a few bunches of brant and plenty of geese. Yesterday I killed five jacksnipe, the first this year; they were thin and very wild.

O. D. FOULKS.

Bob White in the Northwest.

LATONA, Wash.—Ranchers in the island counties of the State are not in love with dogs to any great extent, and the way hounds disappear down there makes deer hunters keep shy of those parts. This is a good thing, for hounding deer in the island country would in time exterminate the deer on all the islands of the lower sound, and this the ranch owners do not see fit to permit.

On the islands are many fields of oats, wheat and other small grain. Some parties procured a number of Eastern quail several years ago and liberated them on the most favorable spots. This year I saw Bob White in the Seattle markets as a result. The birds have multiplied and spread over a good section of country. The average Siwash has no idea of sport, but he knows how a Hudson Bay musket will scatter shot, and he never wastes a load. Result—Eastern quail at 15 cents per head in open market in Seattle. "Where do you get them?" "On, down on the islands," answers the butcher. W. S PHILLIPS.

Spring Shooting in New York.

TROY, N. Y., Feb. 12.—*Editor Forest and Stream:* The following excerpt was clipped from yesterday's legislative proceedings:

"Senator Krum, extending the open season for killing of plover, jacksnipe and other similar birds from April 1 to Dec. 31, instead of from July 1 to Dec. 1."

If this is the sort of legislation that is to be advocated by the chairman of the committee on game laws, we may expect very little of good to be accomplished in the way of game protection at this session, notwithstanding the advanced position taken by the Fisheries, Game and Forest Commissioners in their recent report to the Legislature. Senator Krum's bill is wrong in principle, and should not become a part of our game law. M. SCHENCK.

Louisiana Quail.

OPELOUSAS, La., Feb. 1.—We have just been experiencing a dreadful spell of weather. We had sleet and snow and the whole country was covered with a white surface. Freeze after freeze followed and business and farm work were stagnant. Exposed horses, cattle, etc., suffered terribly. A change for the better took place night before last, and yesterday we had rain and lots of it, which served materially to thaw and melt the cake of ice on the ground.

Those who have been out afield have killed good bags and it is reported that quail were never more plentiful. A party of three gentlemen sportsmen (?) from New Orleans were here a few weeks ago and they, in company with a local trap shot, bagged about 1,200 quail in a week. This is what you call slaughter in the first degree, and if such work continues very long we will have little game left. T. A. J.

A Bag in Up-Country China.

Editor Forest and Stream:

My friend C. J. Ashley, of Shanghai, China, long a subscriber to your paper, advises me, under date of Jan. 11, of his return from his annual up country hunt. The party, four in number, were away eleven days, making a bag of 554 pheasants, 26 ducks, 18 deer, 14 geese, 20 teal, 10 woodcock, 50 partridges, 7 hares, 1 fox, 1 wolf—701 victims.

J. K. D.

"How Birds Affect the Farm and Garden."

THE Forest and Stream Publishing Company requests us to say that Miss Merriam's paper will be supplied at cost by that company for general distribution. We make the statement with the greatest pleasure; and we hope that this little tract of thirty-two pages may have the widest possible circulation. In every sense of the word it is a useful and instructive tract. It does not indulge even in sentiment, though sentiment, as distinguished from sentimentalism, is a highly moral thing. The object of this tract is to state solid facts which ought to be known concerning the uses of birds in the economy of nature, and their special utility to the farmer and the gardener. The author takes up seriatum a long list of American birds, and shows the peculiar utility of each in the destruction of insects which are prejudicial to the plant life from which the farmer and gardener make their wealth; the inference following, as a matter of course, that the bird in question ought to be carefully protected by all who are engaged in agriculture and horticulture.—*Our Animal Friends.*

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

ELKHORN.—II.

ONE bright October morning in the past fall, when the sun began to peep above the hills near the big trestle, Jimmie Gibbons wended his way to the Midland Depot. He had made up his mind—as he often does—to go a-fishing. And where else could he go at that time of year—when the rains had retired from the front and taken on a season of abstinence and the rocks were showing in the smaller streams—than to Elkhorn. Old Harrison, his colored porter, had borne his bucket of minnows to the depot ahead of his arrival, and from time to time was adding a little more fresh water, to liven them up, from the hydrant under the baggage room. It was a choice lot he had selected for the day's sport—quick, active fellows, 4 and 5in long.

With wading boots in hand, a cold lunch stowed away in his pockets, a slender cane rod of exquisite taper and elastic, steel-like temper, a No. 2 Milam reel holding a supply of Clark's thread wound from a No. 8 spool, and with that inevitable one-half pint flask of "wrath" for sudden cramps, Jimmie Gibbons entered the depot just two minutes ahead of train-starting time, in the best of spirits. He thinks it awful funny to give the train the benefit of a minute or so of time, in the vague impression that it is going to get away before he arrives. But one day when his watch was wrong, or a customer talked too long, and he saw the rear end of the train stealing away up the long grade, it wasn't half so funny as it usually seemed. On this particular morning—the 21st of October—being on the bright side of two minutes, he had nothing to grieve over and much to expect. Stowing his minnow bucket and himself and tackle in the baggage car, the train was soon climbing the 100ft. grade under the labored pulsings of the engine. On the right were the precipitous slopes and rough blastings of the big cut, while to the left the hillside was strewn with the *débris* of shattered rock, cast aside to make way for the passage of the iron horse. Below lay a peaceful valley, bending as the rainbow, with Frankfort as its bag of gold at one end and the other terminating on the Kentucky below Lock No. 4.

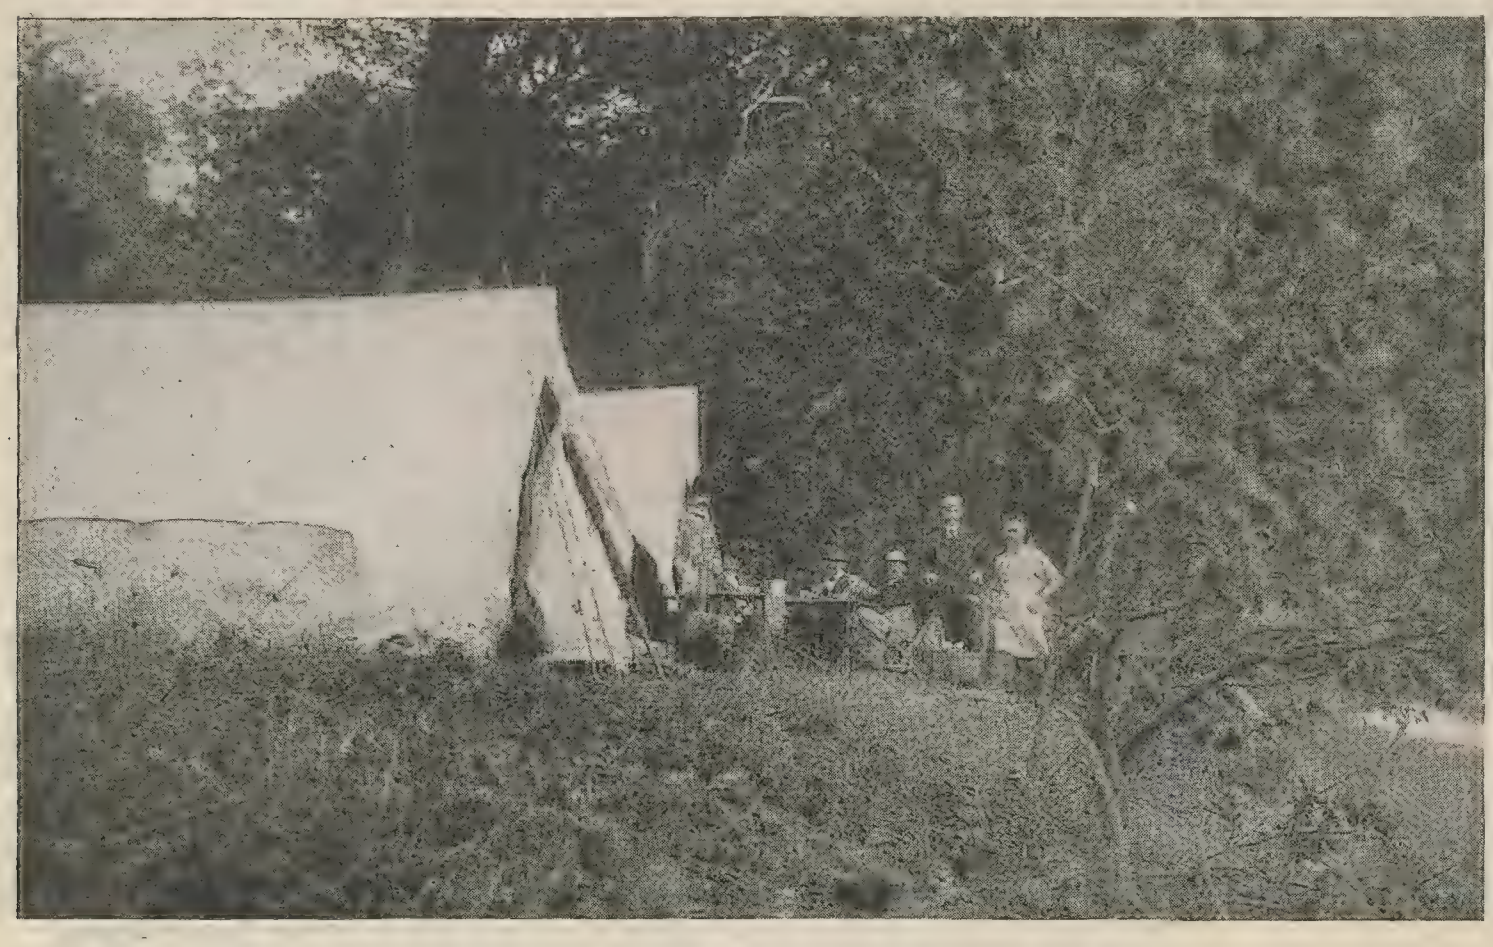
The Buffalo Trace Trestle, with its slender columns, crossed, the summit a vanishing height to the rear, a quick transit over Elkhorn Bridge and its adjacent trestle, a short stop at Elkhorn Station, and scarce twenty minutes have elapsed before the whistle announces Switzer Depot.

This is the favorite stopping place for scores of fishermen, for close by is the creek and the long, deep pool of Jones's Dam. The dam is in plain sight from the depot, and the old mills, growing rickety with age, and turned to ignoble uses as tobacco barns form a quaint picture of the vanishing age. The rotting logs of the dam, with here and there a great gaping rent on the lower face, made by the winter floods, portend only too vividly when there will be a roar, a cracking of timbers, a great rush of waters, and Jones's Dam will be a thing of the past; while the miles of deep water, brimming with fish, will go tearing away to the Kentucky River.

Thousands of beautiful and toothsome fish have been caught in Jones's Dam—mainly silver perch—and there are thousands yet that swim in its miles of cool, clear, placid waters, broken only by the ripples brushed up by the inconstant wind.

Close by Switzer Depot, nestling under the brow of the hill, and only a stone's throw from the rustic creek bridge, is the hospitable home of Uncle Billy Bristow, where tired fishermen find a hearty welcome; soft, clean beds, and an old-fashioned Kentucky meal that my mouth waters now to think about. His attentive wife knows when the corn pones are browned to a nicety and crisp with sweetness; when the fish are done to a turn, and the chicken tenderest, with its juices basted in butter gravy; and adding fresh buttermilk from the churn that stands ever ready for duty in the back porch, there floats in suggestive lines a vision of the old plantation days before the war. When I invaded those piled plates of corn pones, and drank the rich buttermilk flaked with ungathered tidbits of butter from the stone churn (such diet is too rich for city folk now), involuntarily my thoughts ran back to the long ago, when the Kentucky farmhouse was the home of hospitality and comfort.

Most of the incidents that gave attractiveness to that time are gone now, or are going fast—the simple things, whose presence gave cheer and content—the suppers of short'nin' bread and fresh sweet or buttermilk, with golden butter without age; the big fire-place and huge mantlepiece; the crane in the chimney, with hooks pendant for the kettle; the broad, stone hearth; the blazing fire of hickory against the big back-log; the coals drawn under the oven and sprinkled over its heavy top; the yeast bread in the pan drawn to the corner to get its "rise" for the morning meal; the ebony cook bustling with importance to have things in shape to please the house folks; the barefooted pickaninnies sitting in the corners, grinning and giggling, and anon scrouging for the best seats, their toes making prints and furrows in the ashes, and occasionally "het up" with a live coal—well, well, *tempora mutantur, et nos mutamur in illis.* If we sit still we will get run over in this utilitarian age—this rushing, grasping, practical age, when pleasure itself is too often, alas, made a business, cut to lengths and widths.



But we must not lose sight of our friend Gibbons, who has alighted from the train, gathered his traps, and is starting westward down the track toward the branch that enters the creek at the foot of the Pump House Pool. The sun was now well up in the east and its genial warmth started the blithe chirrup of the crickets under almost every stone. The brown grasshoppers that lay in the warmer dust of the pike, that ran parallel with the track, at intervals would spring up in the air and go through that stationary fanning of the wings that we presume is part of their daily physical exercise. This athletic performance was greatly facilitated by the quick step of Gibbons, who was eager to reach the creek and test the temper of the bass.

Turning to the left beyond the rustic bridge that spanned the branch, and following the farm road by a tobacco barn, it was but a few steps till the glistening waters of Elkhorn, as they broke sparkling over the shoal at the foot of the Pump House Pool, caught his eager eyes. This Pump House Pool, next below Jones's Dam, gets its name from a wind mill pump, located on its south bank, to supply water to a farmer's stock on the heights adjacent. The upper end of the pool, which latter is quite broad and generally shallow through its length, has detached fragments of brush

which have become fastened in the mud of the bottom, while the lower end is rocky and the bottom rough and uncertain. These conditions make favorable grounds for silver perch and catfish near the head and for bass at the middle and lower end of the pool.

But to-day our friend ignored utterly the charms of the Pump House Pool, and quickly submerged his minnow bucket in the clear waters of the pool below, changing the water several times as soon as the minnows began to show a disposition to raise a racket under the influences of the life-giving oxygen and pure water.

Much has been said and written on the subject of keeping minnows alive—a desideratum hungered for by all fishermen. It takes just two things, in our judgment, to preserve the graceful little darlings for later immolation by their larger brethren: pure, cool water and fresh air, the oxygen of the latter performing its life-giving office through the medium of

ON THE MAIN ELKHORN, NEAR STEADMAN'S DAM.
Photo by Dr. W. E. Baxter.

the former. The devices for providing these necessities are various as the ingenuity of the mind, but the few common devices accessible to all are most in demand.

No good fisherman will leave his minnow bucket sitting on the bank in moderately warm weather while he is dabbling in the pool to get a bite. In hot weather it would indicate idiocy. Nor will he place his bucket in the water top up and bottom down. Nor will he empty out all the warm water, after a long walk or travel, and fill his bucket with water from a spring at a temperature of 50° to 55°. Much less will he submerge his minnow bucket, filled with water at moderate temperature, in water that is warmer.

The minnow bucket should be kept always in the water, lying on its side or top up-stream; the changes of water should be gradual and frequent during the late spring and early fall, when the water approximates the hot atmosphere.

Agitation has kept thousands of minnows alive, when stillness meant sure death. When we suspect danger, even during the walks from pool to pool, we violently shake the bucket; and traveling to the creek by train, we make it a duty to shake the bucket at intervals.

Years ago, accompanied by Dr. Morris and Dick Morris, we started on a fishing trip to lower Elkhorn. Our minnows, in two buckets, were placed in a meal sack, and the latter slung saddle-bag fashion across the horse that Dick rode. The trip was on horseback over a rough road, and the creek five miles away. When we arrived at the creek there wasn't water enough in the buckets to cover the minnows. It was merely a mixture of froth and foam, and the minnows packed close as sardines. Yet, after a few minutes' submersion they all recovered and were lively as crickets.

Another instance of the fact that it isn't the supply of water that always preserves minnows, but rather its condition, occurred the past summer when I took seven buckets of minnows along for a fortnight's outing on the creek. These buckets I submerged in running water at the foot of a riffle, on their sides, tops up-stream, and 1ft. or more under the surface, the spot shaded by forest trees. I saved scarcely a bucket for use in the next three or four days, though the dead minnows were thrown out each morning. I attributed the loss to the warmness of the water, and the fact that the hogs were rooting daily on the shoals for crawfish, helgramites, snails and mussels, keeping the creek milky with impurities in its low stage.

Jimmie Gibbons keeps his minnows the summer and winter through in a barrel in the rear of his store, freshening the water when needed from the hydrant. It is a capital plan, and may be well followed by others.

When Jimmie had livened his minnows with the fresh water of the creek, he waded diagonally across the head of the pool to a gravelly bar 2ft. under water, and extending along the bank to where a rocky shoal broke the waters at the lower end to form a second pool. Taking a lively steel-back minnow from the bucket, and inserting the point of the No. 2 Cincinnati bass hook upward through the lower lip till its barb appearing through the upper lip denoted a secure fastening, he gently dropped the bait a few yards out in the stream, where the eddies of the riffle smoothed away in the deeper water. As the tremulous line, unweighted with sinker and unretarded by cork, followed the wanderings of the minnow along the bottom, suddenly there was a slight twitch, as if the minnow found reason for a change of base; the line straightened out and steadily started down stream.

Gathering up his slack, taking the rod firmly in his right hand while the left guarded the reel that no knot form nor loose end catch the handle, he lowered the tip toward the water, and when the right moment seemed to press decision with a few gentle turns of the reel till the tightening line caused the angler to "feel the fish," he struck firmly. Not too hard, for the No. 8 Clark's thread was never made for death-dealing blows nor the fierce strokes of amateurs. Quick as a flash the hooked captive started for the sunken ledge on the opposite side, but the steady strain of the rod caused him to change his purpose, and like a flash he went out of water. A big one surely, the heavy splash in the water and widening circles attested as he went down again. The line seemed slack and inert for a moment, and the fear sprang up that in the vigorous leap the hook had been shaken loose. But no, as the reel gathers in the thread there is resistance at the end, and again, with rapid movements, the fighting begins. Swift drives for the ledge and again for the rocks at the lower end are mingled with short, sharp dashes below the surface as the gallant small mouth seeks to shake from his jaws the offensive hook. The water, where he touches the bottom and its sifted mud layer gathered by the fall leaves that have settled in drifts, becomes discolored, and following his rapid circles boils to the top.

Electric thrills pulsate the nerves of the angler as messages to tell of the battle that is more to the conception than the sight. The rod bends in graceful obeisance to the vaulting turns and erratic sweeps of the gallant warrior, who seems to realize well that life trembles on the issue.

But fight as he may, gallantly and gloriously, the skill of the angler and the elasticity of the rod are wearing his strength away; his circles are lessening, his tugs are weaker, his dashes grow short with broken energy, and drawn resistingly to the top, as becomes a true warrior, he shakes his head in defiant despair at the captor who has wrought his ruin with that insignificant No. 8 cotton thread—and he a full pound and three-quarters small-mouth.

It was an auspicious beginning. Stringing the bass, Gibbons selected another active minnow and threw across to the

GIBBONS AND HIS FISH.

edge of the sunken ledge whose outlines were visible through the semi-transparent water, slightly colored by a recent rain. This ledge ran diagonally down the stream, ending beneath the bank below, abrupt in its declivity and shaded by a row of sycamore and elm trees. Scarce had the minnow disappeared when there was a swirling in the water, followed by a subsidence of the wavelets and an inactivity that brooded doubt, with danger. Giving time for the wary fish to swallow the bait—a time that nobody can teach, but is only learned as the fruit of long experience aided by the promptings of intuition—Jimmie gave the fatal blow and started the fight and fish. The battle was short, for the contestant was only a half-pounder and soon wearied of the unequal strife.

Three more small-mouth bass were taken along this ledge and two among the boulders at the lower end of the pool, making seven splendid fish, ranging from ½lb. to 1¾lbs.—all captured within the hour after reaching the creek.

There was a lull in the biting and a change of locality suggestive. Wading close by the southern bank, whose covert of willows, alders and weeds made bank travel impossible, and keeping out of the deeper water that threatened to inundate his boot-tops, the angler crossed the narrow, exposed rocky creek bed that was covered at high tide, and sought the temptations of the next pool. Slightly longer, it was almost a duplicate of the first, with submerged rocky ledge, gravelly bottom, shoaling gradually on the south side, and rough rocks and boulders at the lower end, terminating at a water gap.

Near the head of the pool was a tongue of land reaching out halfway the stream from the south bank, affording excellent vantage ground for casting and a good landing place for fish indisposed to "come out of the wet."

The same good luck attended the angler here as in the first pool, and half a dozen nice fish were landed as fast as hook could be baited and the frisky fighters persuaded to change their habitat. There was one spot at an angle of the ledge and opposite a big rock on the bank that seemed especially productive. The minnow would scarcely touch this fruitful spot when his interest in life lost force through the attentions of some watchful small-mouth, eager with appetite.

Several good ones had been led out and away to swell the growing string when the temptation of an extra-sized minnow brought to the timely strike a resistance that portended trouble.

There was a lusty dash down the creek that seemed aimed for the water gap, 30yds. of line were unreeled ere it was deemed wise to check the bold ranger, and then as the line grew taut and the rod bent under the strain the bass broke water in a shower of spray, "shook his jaws" (regardless of Dr. Ellzey), and disappeared for further battle below the surface. It was a grand, an exciting battle, for he promised upward of 2lbs. to the scales. After a fight full of gallant effort and fruitful in resource, his strength yielded and he was drawn toward the bank, and then—there was a sudden parting between hook and fish, and the latter had business elsewhere. The big ones, you know, always get away. A moment later, as if in recompense for the loss, a bass of over 1lb. was landed.

Fishing the pool downward to its lower end, bass after bass was added to the string. They were on their feed with a hunger that seemed rapacious. Below the water gap was a short, rocky pool that yielded three bass of over 1lb. each, with several of lesser weight. A touch of hunger suggested the noon hour, and the bank being shady, the angler concluded to dispose of his lunch. Casting his baited hook well out in the creek, he set his rod with the aid of a couple of stones, emptied his pockets and was getting away with an enticing spread, when the click of the reel sounded its alarm. Halting in his repast, he quickly transferred the disturber to a domain of restricted liberty. The meal resumed, a second interruption occurred, and finding lunching in peace impossible, he fished with one hand and ate his meal in sections from the other.

The afternoon was spent in a long and rough journey over a rocky path down the right bank of the creek to a longer and wider pool than had yet been visited, and in the return journey over the same ground back to the starting point. The lower pool yielded its quota of sport, and when the declining sun in warning shadow beckoned him to the train from Elkhorn's enticing waters, there was weariness of weight to flagging footsteps in his string. Over thirty bass that weighed 21lbs. was the score—truly a red-letter day! Several days later, over the same ground, he caught fifteen that weighed 10½lbs., all with No. 8 Clark's O. N. T. thread. With the same slender line he took, several years ago, a 5lb. bass from Lost River, near West Baden Springs, Ind.

The bass of Elkhorn are not in average the monsters of the Northern waters—though 3 and 4-pounders are by no means rare—yet in every inch and in every ounce they are full of fight and pluck, and every line of the body speaks of symmetry and strength and motion.

Jimmie Gibbons is a most enthusiastic fisherman, a foe to seiners and dynamiters, and a warm advocate of fish protection and propagation. The singing of the reel is to his ear the sweetest of music, the leap of the bass in furious fight the most charming sight to his eyes, and as he talks of fish and fishing he will involuntarily rise from his chair and with that peculiar inimitable outward motion of his left arm send out the imaginative lure to the very spot where the wary bass lie in ambush.

OLD SAM.

[Old Sam writes of the illustration: The camp was made a year or so ago near Steadman's dam, close by the creek, shown slightly on the right of the picture. The party on the left with Derby hat is Dr. Baxter, inventor of a most excellent camping outfit in compact form for carrying by hand. The one on right is Zach Merritt, the cook. Next, with cap, is Geo. L. Payne, one of our "Kingfisher" gang; next in order are Jack Murphy, Jake and Lewis Cox.]

The Silkworm Gut Supply.

WE have received from Robert Ramsbottom the following report:

In reporting upon the gut crop of 1896–7, I have to announce a diminished production of the shorter lengths, mostly used by the American market and the Continent. The diminution amounts to about one-third of the crop, and later in the season will have the effect of hardening prices.

Of the ordinary kinds for the English market there is an average crop, but of the two extremes (finest trout and heaviest salmon) the supply is by no means equal to the demand, and great difficulty will be experienced in filling orders as the season advances, the more especially now that America and the Continent are taking increasingly large quantities.

The quality this season is fully maintained and leaves little to be desired. Prices for the present remain practically unchanged, but an upward tendency will probably be shown before the earliest shipments of next season's crop.

The Michigan Netting Law.

LANSING, Feb. 10.—Attorney-General Maynard has just rendered his decision upon the subject of spearing fish in Michigan:

"It is unlawful for any one to catch or kill, or to attempt to catch or kill, in any inland lake, fish, with the exception of when a hook and line is used. A person found upon the water with a spear, net, trap, set line, artificial light, dynamite, powder, or any explosive, that shall be deemed *prima facie* evidence of a violation of the law, and he may on conviction be fined $25 or imprisoned in jail thirty days."

In 1893 the Legislature sought to change the law, but the Supreme Court decided the law as amended and passed to be unconstitutional, and the provisions of the old law remain in force. There has been some misunderstanding regarding the exact provisions of the law, and the Attorney-General has made the decision public to correct any false impression upon the subject.

JULIAN.

MEN I HAVE FISHED WITH.

XXXII.—Billy Shaw.

Among men who occasionally go a-fishing there is a class of jolly old roosters to whom a fishing trip means enjoyment of various kinds, the least of which is the capture of fish. Billy was easily in this class, but not one of those who make an angling trip an excuse to cover a spree, and then try to save their reputations by buying a lot of fish and sending presents to friends as trophies of the angle. There are such men, and most of us have known them. As they do not come under the head of fishermen nor anglers, I write no more of them. Billy loved good company, and plenty of it. He was not a Walton to sit by the river bank alone, and contemplate while watching his cork or quill go down; but I'll try to introduce him to the acquaintance of readers of Forest and Stream as a fairly good fellow.

The idea of an introduction in this way is not original. A few days ago I met my old army comrade, Judge W. E. Slocum, now of Brooklyn, who said: "I want to thank you for introducing me to some interesting men. I had not the pleasure of knowing Francis Endicott in life, but I know him now, and thank you for the introduction." The Judge gave words to a thought that I could never have expressed. The idea in these sketches has been to show you the man, and not to tell fishing stories of more or less credibility. With this understanding between us, permit me to introduce to your notice Mr. "Billy" Shaw.

His tombstone, for he is dead, probably has the name of "William Shaw" upon it; but I will affirm that I knew this man from childhood, and never once heard him called William.

As a chronicler of some facts which may have partly escaped the note book, but have left an imprint on the gelatine film of memory, it becomes necessary to refute an insinuation of Judge Slocum that "All the 'men I have fished with' are dead;" and the inference which it implies. He is ten years my junior.

My earliest recollection of Billy is that he was the only child of a poor widow, living in Greenbush, and that he had to hustle to help support his mother as soon as he was old enough. He took an occasional part in our tumbling in the bark pile back of the tannery of Ruyter & Van Valkenburgh, but was rather too closely knit for somersaults and never got near the head of that class. He was about my age and once or twice went down with our party to fish in the island creek, the Popskinny, as we spelled it. A trifling thing fixes this in memory. John Atwood said: "Look at Billy Shaw's line! He's got his hooks below his sinker, just as if he was a-fishin' offen the dock and the current would hold the baits up." We were fishing from the bank with hand lines in quite still water and naturally his baits lay on the muddy bottom. Swinging the sinkers around, we would cast out 30ft. into the middle of the creek, and the hooks, being above the sinkers, would rest near but not on the bottom. Billy was green at fishing, but altered his rig and learned a lesson.

Billy's little café in Albany was in full blast when I returned to Albany in 1865, and it was famous for its oysters, and once while one of his men was opening some Shrewsburys a trifle faster than I could dispose of them he asked:

"How are you getting along now?"

"Slowly, Billy; I'm getting a few pounds of meat on my bones and can walk without a cane, but will never be good for much."

"Come along with us on our annual fishing trip; we'll be away for four or five weeks, maybe six, and it'll help you more than to stay here and mope around."

"Can't do it, Billy. Why, I can't walk a mile on pavements, and a rod among briers and vines would do me up. No, no! Couldn't think of it."

"You needn't walk a rod on shore, for we've got a schooner and will tow down the Hudson to New York, then up the East River and sail up Long Island Sound and fish for bluefish down about Orient Point, Plum Island and other places. The schooner can accommodate ten and there's only six to go, seven with you. How's them oysters?"

"Fine! This is the only place in Albany where Shrewsburys are kept. My miserable stomach can digest them because they have not been plumped in fresh water, but it refuses freshened oysters."

"Last week," said Billy, "there was a man from Schenectady came in and called for oysters. He didn't ask for any particular brand; just said, 'gi' me a dozen,' and the oyster butcher opened him a nice, fat Shrewsbury. He kicked up a row and I went to see what was the matter. 'See here,' sez he, 'you don't s'pose I'm a goin' to eat an oyster that's got the janders, do you? Look a-that!' I explained that the oysters from the Shrewsbury River, in New Jersey, were always tinted by the yellow clay of the river bed, and told the butcher to open the gentleman some East Rivers or other white oysters. While he was eating the other oysters with great satisfaction Erastus Corning and a friend came in and called for Shrewsburys. The man from Schenectady watched them closely and saw that every oyster they ate was yellow. He paid the cashier and then said to me, 'I'll be durned ef I didn't think them isters had the yaller janders, an' you was tryin' to play 'em off on me 'cause I come from the country.' Next day he came in and said: 'Gi' me some o' them yaller isters, I forget the name of 'em,' and he came here every day while he was in town. But how about the fishing trip; will you go?"

"When do you start, who is your cook, and will you take a doctor along?"

"We will leave Albany on the 3d of July; Sam, our cook, will be the doctor, and he is a very highly colored man. If your blooming stomach can't stand his cooking you can cook for yourself. You needn't eat a thing on the whole trip if you don't want to, but it'll do you good to see us eat. You've been discharged and haven't got to report to any duffers, so come along."

A week later the stanch schooner Rainbow left Albany in company with a big tow of barges and canalers for New York. The dwellers in towns along the river who were awake saw a fine display of fireworks from the schooner, and as I sank to sleep about midnight the last thing I remember was hearing Shaw say: "No, sir! We won't hoist the Jolly Roger until we get to Long Island Sound. Who ever heard of a pirate ship being towed by a steamboat?"

The next morning we arranged things in the hold, where there was plenty of space to hang up clothing. Four of the party were old acquaintances and the others soon were. It soon appeared that I was a member of a gang of pirates who were to strike terror to the people of Long Island, and that the owner of the schooner and his son—who were the working crew—were to be pressed into the service after passing the fort on Throgg's Neck and entering the waters of the Sound, which we did two days later. It was also evident that the party had been selected for some musical ability, as "Capt. Kidd's Minstrels" held their first rehearsal the next evening.

Leaving the tug after saluting the fort with our port gun—which also did duty as the starboard gun, if required—the Jolly Roger was run to the fore and saluted with cheers. It was an enormous one, made of black bunting with the white skull and cross-bones neatly sewed in, and large letters saying "No Quarter," over very small ones, "to Fish," added. On the mainmast was tacked:

A List of ye Pirates.

J. H. Norton, clam opener, weather regulator and fiddler (crab).

Billy Shaw, first fish liar, splicer of the main brace, middle man and interlocutor.

Ben Van Voast, keeper of the Jolly Roger and of the cribbage board; also second fiddler, if he can play "Old Dan Tucker."

Frank Quackenbush, assistant fish liar, chief of the horse marines, compass oiler and manipulator of the tamborine.

F. M., keeper of the log, head eel skinner, custodian of the keel and tormentor of the banjo.

George Van Allen, anchor polisher, grub destroyer, juggler of the bones, heel twister and jigist extraordinary.

C. F. Bell, bell boy, pie biter, keeper of the seal (if we get any) and basso profundioso.

Sam, head galley slave, concocter of lobscouse, maker of dundyfunk, originator of plum duff, and audience of the troupe.

Old Joe and young Joe, supernumeraries, wigglers of the tiller, letters-go of the jib and custodians of the sheet rope.

Orders.

1. Any pirate giving quarter to any dogfish, whale or spider crab, or a quarter to any native for bait, unless the native is watching his clams, shall have no plums in his duff during the voyage.

2. Any one using any appetizer except bilge water before breakfast shall have his elixir confiscated for the benefit of the crew.

3. No one shall sleep more than twenty hours out of the twenty-four.

4. No one shall use Sam's brush without his permission, and any pirate who shall use charcoal for drawing charts on Sam's face shall be blackballed.

5. No one shall mention hooking a big fish unless he can show him on the deck. Put up (your fish) or shut up.

6. Any pirate heard speaking of the hold as "down cellar," or of the deck as "upstairs," shall be forced to splice the main brace.

7. None of the company shall throw the skipper overboard in a gale and take the helm unless we are in danger.

8. When the water is rough every pirate must heave when the skipper sings "Heave ho!"

The fishing was good and we struck a big school of bluefish in Plum Gut one day and took nearly 300 in about five hours, the fish averaging about 3lbs. each. Our stores needed replenishing and we sailed around to Greenport, sold the fish to a dealer who sent them to New York that afternoon, and we laid in fresh eggs as well as other good things and then tied up for the night. In fact we sought a harbor most every night in order to stretch our legs on shore. But there is no harbor between Port Jefferson and Orient, something like fifty miles, and twice we anchored near the smaller islands.

When the nights were fine, as most July nights are on Long Island Sound, Capt. Kidd's minstrels held a performance—with white faces—on deck, mainly for their own amusement and incidentally for that of any rats which might be about the wharves. Our quartette was very good, Quackenbush having a pure tenor voice that was well known to Albany churchgoers of that day, and he had also sung in English opera with the Caroline Richings Company. As I sit writing this I feel incompetent to tell you what a gigantic mountain of fun we had! When Van Allen came on deck in knee breeches and shoes with parchment soles, sprinkled a little fine sand on the cover of the hatch, and doubled and trebled every kink in the lyric that the banjo sang, old black Sam, our permanent audience, would scream: "Look a-dah! Listen to dat little double while he's weedin' cawn! Now he kivers taters, fust single an' den double, an' by golly he tribbles em! Um, um, I t'ink I hab see' some jiggin' in ole Varginny, but dat ah boy he beats 'em all, he do, fo' a fac'. Yah ha! He make more music wid he foot dan der banjer, I golly!"

Sam was a good specimen of the old-time Southern darky—happy and improvident. Always anxious to get a dollar, and in as great haste to spend it. His pay on the pirate craft was not large, but his tips for special service and the princely wave of the hand when a pirate said, "Keep the change," were beyond the dreams of the most avaricious pirate of our fleet. In answer to my question Sam said: "Yes, sah! I does make a few dolla's in de summah season, sah, but somehow I'se nevah lucky at faro, pokah nor policy, sah, an' I'll tell yo' dat ah policy is a game dat I'm allus gwine to beat, but somehow de right numbas doan cum out. Las' winta I played de washwoman's gig, fo' 'leven fo'ty-fo', 'leben times, an' each time two ob de numbas cum, an' it was de same wid de nigga gig, nine, ten, nineteen, an' I 'sult de dream book, but I specs I's hoodood."

"Sam," said I, "why don't you put away a dollar in a bank once in a while, so as to have something to bury you, as you have no family nor friends?"

"Lordy, Miss'r Fred, dat's no use to me! What I want save money to bury me fo'? When I'se dead de Boa'd o' Health dey bury me; dey doan leave no dead colo'd folks layin' 'roun'. No, no, dey'll take cah o' me. Yah, ha!"

Days passed, we took no note of time. Billy Shaw once remarked: "Some old duffer once said, 'Time was made for slaves,' but he forgot to include setting hens, for it takes just twenty-one days to hatch a chicken." In my capacity as "keeper of the log" there seemed to be no log to keep; for we hadn't been near a sawmill, and if there had been a saw log floating in our vicinity and we could have captured it I would have done my best to keep it. How can a fellow keep what he hasn't got? As the head eel skinner I was alert, but no eels were caught; and as the "custodian of the keel" I—but there's no use in bragging. The keel came back in good order and spoke for itself.

On Sundays we had plum duff, and for the benefit of benighted inlanders who have never been outside of Sandy Hook it may be well to say: "Duff" is a sailor's word for pudding, and is merely Jack's mispronunciation of "dough," which in years agone he rhymed with "enough." See, Mister? "Plums," of course, is English for what we call "raisins," and there you are. Billy Shaw said: "Plum pudding and plum duff are one and inseparable, now and hereafter. *Plumbibus pudding, epluribus duff.*" On other days a dessert of some kind, to my relief; for a heavy, boiled lot of indigestible dough, whether you call it a plum pudding or give it the more sailor-like cognomen of plum duff, is a gastronomic abomination.

One morning Billy Shaw was detected in eating some of the bait clams before breakfast. He was promptly seized, bound and brought before Norton, the clam-opener. He pleaded guilty, but craved indulgence because he had not swallowed the shells. Mercy, tempered by extenuating circumstances, prevailed, and Billy was permitted to live and be restored to his family without the stain of crime upon him. Pirates are partly human. They have feelings the same as sand worms and mud turtles, and we didn't propose to blast the life and business prospects of Billy Shaw in Albany on account of a few miserable clams. Of course he had violated the rules, and we could have killed him and fed him to the sharks, and no right thinking man would have said that we did wrong; but there was a spark of humanity left in the breast of every pirate, which said: "No, I druther put up fur a bushel o' clams, an' all the salt, vinegar an' peppersass 'at goes with 'em, 'an to have Billy Shaw sent home dead for vi'latin' some rules about eatin' clams!"

We anchored and fished for blackfish, as we called the tautog, sea bass or anything that chose to bite; and before we had been out a week the fun of filling some pirate's bed with sea spiders, starfish or clam shells seemed to lack variety. The crew settled down to serious business. Old Joe, our skipper, made us a speech one morning, and he said: "Gentlemen; I'll call ye gentlemen ef you do try to be pirates, fur I hain't seen ye do nothin' disrupable, an' I hain't got much knowledge o' how pirates act. But I don't think some things is fair. Now, I've sailed ye, an' Black Sam has cooked fur ye afore, an' he's as good a cook as any schooner carries; but the goin's on o' this trip is diffrunt. You've allers used me well, but I don't think you're fair on Sam. Of course if some one cuts up Mr. Shaw's suspenders and slips 'em in the bean soup when Sam ain't a-lookin', he can't help it; but it hurts his rippitation as a cook when the soup comes on the table and the pieces of suspenders is found in it. Now, I like fun fustrate, an' I don't mind a handful of curled hair taken out of a cushion ef anybody wants it, but to find it mixed in the hash hurts Sam's rippitation, and I don't see no fun in it. Besides, it spiles the hash. That's all, gentlemen, I ain't got no more ter say."

Capt. Joe's speech was applauded and Van Allen offered a resolution that anyone who should introduce any foreign substances, not generally used as food, into the soup or hash, should be considered an ungentlemanly pirate; and that in future if buttons, combs, suspender buckles, gold watches, or other valuable articles should be found in the soup they were to be the property of the finder.

Quackenbush and Norton had been fishing for sea bass in one of the small boats and had been gone all day. The weather was fine and there was no fear for them, but with the tenor and first violin gone there was no minstrel performance as we lay at anchor in the Sound. They came aboard unheeded in the night, for these careless pirates simply put lights in the rigging, as law requires, and went to sleep. Such combined carelessness and respect for law is not on record in the annals of piracy.

In the morning they told of finding a dead man floating near them and how they towed him into Port Jefferson harbor, as the nearest place to get rid of him, and then turned him over to the coroner, but they must be back at the inquest to relate the particulars. So, with "A yo heave ho, and a rumbelow" our mud hook came up and the Rainbow stood in for the harbor with the morning breeze.

The poor fellow belonged near the harbor, was a hard-working bayman who had somehow fallen overboard during some momentary dizziness perhaps, but he had been missed for nearly a fortnight; the tides playing him to and fro. There was a weeping widow and several small children, and they were in desperate want. Their bread winner had not been winning for some time, yet Sam managed to fill up the children and the pirates added a little cash to the fund that the charitable people of the place chipped in, and then a merchant suggested that we give an entertainment for the benefit of the family of the dead man in the town hall. Capt. Joe cheerfully gave up his cushions for wigs and the thing was done. "Capt. Kidd's Minstrels" made their first and only appearance in public on this occasion. I have no programme and can only recall that the features of the evening were the rendering of "The Lost Child," from the opera of "The Bronze Horse," with its echoes, and a tenor song by Quackenbush about a father who did not come home when "the clock in the steeple struck one," and a sub-cellar lament by Bell because he was rocked in some cradle of the deep. The banjo obligato was perfectly horrible, yet we escaped with our lives and Shaw turned over some money to the widow. Perhaps it is due to her intercession that we left the place without molestation.

As the first fish liar, Shaw exacted a promise that none of us would contradict any yarns that he and his assistant, Quackenbush, might tell in Albany. We agreed; and as the keeper of the log it gives me pleasure to say that I have never heard a man doubt the fish stories told by any member of the piratical crew that infested Long Island Sound during the century of which we write.

While returning home up the Sound we dipped the Jolly Roger and fired a gun as we passed Execution Rock and light, in honor of some pirate or two who were hanged there in the long ago. We knew at the time the names of our predecessors who danced upon the wind over that lone rock, but really I was a pirate for such a short time that I

may plead it as an excuse for forgetting the names of those ornaments of the profession. No names come up now but those of William Kidd, who was no more of a pirate than we were, and who was unfairly hanged in London; and Babe, who, I think, met the same fate on Bedloe' Island in New York Harbor, where the Liberty statue now stands. Babe was a sure enough pirate, but never attained the reputation that Kidd did, who wasn't even an amateur pirate.

Returning to Albany in 1874, I wandered up in Beaver street to find Billy Shaw. His business had been closed out and a man told me that he had died same months before. Van Voast died soon after, and Bell contracted a fever in Texas, where I sent him to hatch salmon, and died on his way North. Of the others I know nothing. Billy left a widow, but no children. I can see him now, a small man with a thoughtful face, which to those who knew him seemed to be concocting some joke. He was not a man of keen nor of subtle wit, for it needs some learning to polish and perfect such a mind, but he was a man with a love of harmless fun and with a coarse humor which can best be illustrated by his getting Bell to sing that lugubrious basso song, "The Old Sexton," and as he sang the words:

"He stood by a grave that was newly made,
The sexton leaned on his earth-worn spade,"

Shaw would interpolate a clog step: "Rat-a-tat-a-tat-tat, rat-a-tat," and so on throughout that dismal ditty. He was not much more of a sailor than I when it is rough, and I can heartily say with Douglas Jerrold:

"Love the sea? I dote upon it—from the beach."

FRED MATHER.

ANGLING NOTES.

Women Anglers.

On every suitable occasion I have for many years advocated angling for women, particularly fly-fishing, and when they have placed themselves in competition with men, or rather when from force of circumstances they have been so placed, I have noticed that they occupy a position close to the front, even if they do not fill the first place. I think it was only last year that I mentioned in this column that a summary of salmon fishing in Ireland showed that the largest salmon killed the previous year was killed by a woman. Readers of this journal will recall the fact that the record tarpon killed with rod (for I believe Senator Quay's fish was not) was killed by a woman. In looking over the notes made by John Enright, the world's champion fly-caster, of salmon over 40lbs. in weight killed at Castle Connell, Ireland during the season of 1896, I find that the largest fish weighed 46lbs., and that a fish of 44lbs., which came very near the top, was killed by Mrs. A. C. McCorquodale. Women as fly-tyers excel, and why should they not excel as fly-fishers? One experience always appears before my mind's eye whenever I think of women as anglers.

I was at Parmachenee Lake in Maine, when John Danforth was proprietor of Camp Caribou, and before the property passed into the possession of the Parmachenee Club. My neighbor at the table was a young woman who had accompanied her husband to the camp over the carries, one of them six and a half miles, and once there had seemingly nothing to do but read or stroll about the small island, nearly covered by the camp buildings and the standing trees, while her husband was at one or another of the back camps, where the fishing was better than in the lake about the island. I thought her sympathy with her husband's sport, which led her, as it were, to sacrifice herself in her devotion to him, most charming, and I was sure that there was a harp and a halo awaiting her as a saint in another world, if not in this. My face was burned after a trip up the Magalloway River, and my neighbor prescribed cold cream and furnished the cream, and I was sure I could see the halo growing about her head. I felt much sympathy that I could not express that she should be doomed day after day to be confined to that island, watching alone, with nothing to do but watch the sky or read a book, while all the men were away enjoying the best of fishing. One afternoon I started after dinner with my guide to go down to Black Cat Brook, which comes into the river below the lake, and I said to my neighbor, who had not only prescribed for my burned face, but had furnished me with fly oil when I had none of my own, "I regret exceedingly that you have no inclination to fish, for as the sun goes down I think the trout will be feeding." I am not sure about the precise words in which I made a general ass of myself by offering her a seat in the boat provided she had been fond of fishing, but she smiled like a saint, and I went off like a selfish beast, taking it for granted that she cared nothing about fishing.

There is no occasion for me to refer to my fishing journal to find what I caught that afternoon, for I remember well that I caught all the trout that it was proper for me to kill, and that one fish weighing 2oz. under 2lbs. jumped from the water twice after it was hooked on a Montreal fly. That was one of the very few brook trout that I have known to jump out of the water after it was hooked.

Returning to camp about sundown, I was very well satisfied with myself, and Marshall Linnell, the guide, was quietly paddling the boat along the shore when, as we rounded a point and got a view of the lake nearly opposite the camp, where a brook came in from the east, I was astonished to discover a woman standing in a boat and casting a fly like a past grand master of the art. Marshall must have been as surprised as I was, for he ceased paddling and in silence we watched the caster. It was my neighbor and she was alone and unconscious of spectators, and made a most charming picture of independence and skill as she cast her flies as gracefully as it is possible to imagine. It was not tournament casting, it was fly-fishing in the highest degree of excellence, and it was catching as well as fishing. I would have been glad had there been some back way for me to sneak into camp by going around one of the mountains, where no one could see me. I had actually felt sympathy for this woman because she had no inclination to fish when big trout were to be had for the casting, and doubtless showed it in my manner when I had given her an invitation with a string to it to go fishing, and here she was fishing equal to the best of the anglers gathered at the camp, and far more gracefully, and she did not require a guide or the assistance of any man to paddle her boat or land her fish. My self-satisfaction oozed out at my fingers' ends and I hope that I showed it, and as boldly as I could I congratulated my fair neighbor upon her skill and went on to camp. I can always recall the picture of the fair fly-caster, and the lesson that this incident taught me will remain as a warning never to take it for granted that a woman cannot fish because she does not parade the fact after the manner of men who fish.

Parmachenee-Belle.

The Parmachenee-belle is one of the best flies ever tied that does not pretend to represent an insect of some sort. Mr. H. P. Wells has told how he came to design the fly during a nooning with that prince of woodsmen, John Danforth, on one of the Maine lakes near Parmachenee (not Parmacheene, as it is so often spelled), and that it is perhaps as much like the belly fin of a trout as anything else.

I have found the fly good for trout and black bass, and a standard fly in many waters. Last year I found that the fly was considered one of the very best for trout in the waters of the Triton Club.

Last season the steelhead trout were for the first time planted in the waters of New York State, having been brought from the Pacific coast and hatched by the Fisheries, Game and Forest Commission. The fry of the steelheads were planted on Long Island and in Lake George, and the question is often asked if the steelheads are a game fish and if they will take the fly.

A Canadian salmon fisherman, who has caught the steelhead in British Columbia, says they take the fly readily, and on the hook are as game as a salmon in a Canadian river.

A correspondent of *Land and Water*, writing from British Columbia, says: "I do not think the trout in the rivers of interior British Columbia feed very much, if at all, on small fry. I have never noticed them striking at them as do the trout in England, and out of several hundreds which I have seen opened I have never observed anything like a small fish inside them. They appear to be full of larvæ and salmon roe. Neither have I seen a trout over about 1lb in weight rise to a natural fly; and I think the big ones only take the artificial fly, like Jack-Scott and Parmachenee-belle, presented to them as salmon do in the old country, viz., out of curiosity. The Parmachenee-belle, by the way, is a very killing fly in British Columbia waters, although it would scarcely attract the trout in England."

If the steelheads have a fondness for the Parmachenee-belle they will find the lure ready for them when they have grown to catchable size.

Sunken Flies for Big Trout.

One expression in the article I have quoted brought back to me a matter I had almost forgotten. This is the expression: "Neither have I seen a trout over about 1lb. in weight rise to a natural fly."

Before I went to Maine Mr. Wells told me that he had never known of a big trout taking a fly on the surface. I think he said a trout over 2lbs. in weight. To catch the big trout the fly must be allowed to sink 1 or 2in., and then drawn beneath the surface. I practiced this style of fishing at Parmachenee and at Rangeley almost entirely, for I was sure Mr Wells had investigated the matter thoroughly, as it is his custom to go to the root of any subject, and naturally all the large trout I caught were caught in this way; but from the time I did my last fishing in Maine I cannot recall that I deliberately made a practice of fishing with a sunken fly. In Canada, where large trout grow, I never thought of sinking the flies (in Maine I used but one fly), but fished them on the surface, and the fishing was good enough. If it is my good fortune to fish on the Triton Club tract next September I will try and remember to try one good-sized fly and sink it below the surface to see if it will take larger trout than when the fly is drawn on the surface.

Brown Trout.

A correspondent, Mr. E. W. Raymond, writes: "Will you give us, through Forest and Stream, information in regard to German lake trout? Do they require about the same feed and temperature of water as our native lake trout, and to what size do they generally grow? with any other information in regard to them."

There is no fish that I know of called the German lake trout. The first eggs received in this country of the common brook trout of Europe came from Germany, and the fish, now quite common in this country, are sometimes called the German, or German brown trout. Brown trout is the name commonly applied to the fish in England, although they are called yellow trout in Scotland. In Germany they are called brook trout. If this is the fish, and without further information I must assume that it is, they require practically the same food as our native brook trout, but more of it, as they grow faster and to a greater size. They will bear a slightly higher temperature than our native brook trout and it is not good policy to plant the brown trout in small streams with our native trout. The European fish grows to a weight of over 20lbs. and in this country has been called a cannibal; but this is also true of our native brook trout under the same conditions that make the brown trout a cannibal. Mr. Marston—and there can be no firmer advocate of the brown trout—"Walton's trout"—says: "To attempt to stock American streams with brown trout which are already stocked with native brook trout seems to be unnecessary, if not unwise. * * * In England the finest trout are found in the slow streams watering the richest parts of the country, streams flowing through old-fashioned villages and quaint country towns. The better cultivated the land and water is, the better the trout will thrive. * * * Given fairly pure running water and our trout do well anywhere if they have a good supply of food."

This I consider the best information that can be given in regard to the brown trout. Too often the mistake has been made of planting the brown trout in small mountain trout streams. They are a fish of rapid growth and require an abundance of food. If planted in large, slow-flowing streams, or in lakes from which the native trout has been fished out and the conditions have changed to make it unwise to restock them, the brown trout will doubtless prove satisfactory.

Texas Tarpon Fishing.

Some months ago I quoted in this journal from some letters written by my friend, Mr. William D. Cleveland, of Houston, Tex., concerning tarpon fishing in Texas waters, and Forest and Stream reproduced a photograph of Mr. Cleveland and a tarpon which he caught foul-hooked after a long struggle. At the close of one of the letters I suggested that the Texas method differed apparently from the one employed in Florida, for Mr Cleveland referred to a float on his line, and intimated that he might with profit to all concerned explain his method of fishing in Texas.

I have just received a letter from Mr. Cleveland, in which he says: "My business has kept me so constantly occupied the past season that I have had no time to write even about tarpon fishing. I have had a number of outings after tarpon since writing you, and have caught several, and wish I now had time to give you a full description of one big fellow of about 156lbs. that I got hold of. His antics were far beyond those of any other tarpon that I have hooked, and after he had run under my boat two or three times and jumped over my head as many times more, I concluded that it was wiser to stand up in the boat, so if he struck me it would be in the legs and not in the head. I had rowing for me a Mexican whose complexion was somewhat darker than my own, and when the fish first jumped over the boat between me and him he turned as white as a sheet, and I actually sympathized with the fellow as he sat shivering with fear, almost unable to handle the oars as he was directed. This fish jumped clean out of the water on to the bank and rolled back twice. I lost him at last by his running around some bridge timbers and breaking the line. I did not know how they did fish for tarpon until a friend sent me a St. Louis paper with an account of Florida tarpon fishing in it. They do not fish for tarpon in Florida as we do here, for I never before heard of fishing on the bottom with dead bait, such as is mentioned in the article. Besides, I do not think it would give as much sport as trolling or still-fishing with live bait. I use a regular tarpon rod and reel such as I have described to you. Just above the leader in still fishing I attach a cork which keeps the live mullet near the surface of the water, and when the tarpon takes it, it is with such a splash and with such force that it makes the blood tingle from the tip end of the toe nails to the tip end of the finger nails and the tip end of each particular hair. Besides it is so startling that one never entirely recovers during the whole fight of the fish. It is the same way in trolling, the bait is near the surface and you have the same experience. I believe one would have more success fishing the way they do in Florida (that is, they would land more fish because they would more certainly hook them securely than in the method we employ), but I would rather catch a dozen tarpon on my hook, play them for half an hour and lose them, than to have the trouble and work of landing one, because after half an hour or so it becomes very hard work and the sport is pretty well over."

Black Bass Through the Ice.

My friend Dr. Jno. D. Quackenbos sends me a newspaper clipping, with what is apparently a telegraph item, dated Exeter, N. H., announcing that Wm. E. Robinson while fishing through the ice at Little Pond, Kingston, N. H., caught a small-mouth black bass of 4½lbs. in weight. The item gives further information as follows:

"So far as recorded, this is the first black bass ever caught through the ice in winter, and scientists have declared that the bass hibernates, burying in the mud and there remaining dormant until spring.

"Dr. Henshall in his treatise declares that he has yet to learn of a black bass ever caught through the ice, except in the early spring when the ice was breaking up.

"Dr. D C Estes, a Minnesota authority, and G. C. Scott declare to the same effect, and a Smithsonian Institution report says black bass are never caught in winter."

The person who pruned that item could not have been a constant reader of Forest and Stream, or he or she would have known that, in spite of the authorities quoted, a great many small-mouth black bass have been caught through the ice. It is true that black bass congregate in the fall as cold weather approaches, and pass the winter in a partially dormant condition, but not necessarily in the mud. They have been known to bury themselves in the mud, but as a rule, if the conditions obtain, they gather in bunches among boulders or broken rocks in deep water. They have been found in a hollow log in the water, but it does not follow that they always resort to hollow logs. Fishermen who know where the bass congregate on the deep shoals can and have caught them through the ice, as I related in this column a year or so ago, and it is for this reason that the Fisheries, Game and Forest Commissioners have recommended a close season for this fish to end on Oct. 15.

The bass can be caught if the baited hook is placed before their noses even when they are hibernating, as it is called; but they afford no sport. Only last fall, in one of the New York lakes, the largest catch of black bass of the season was made after the bass had gone into winter quarters, and it was so the fall before, and it was about that time that the large string of big bass was caught through the ice, as I related. I have never caught black bass through the ice, for I never fished for them at such a time; but I did once fish for them just before the ice formed. It was with Mr. Cleveland, whose letter I quoted in the preceding note. For several years we had been to Brant Lake, in northern New York, for black bass; but one year we spent the summer in West Virginia and in the fall went to Maine, and finally to Lake Champlain; so that it was late in October and quite cold when he said he would like to go to Brant before he turned back to Texas. We both realized that it was far too late for good bass fishing, but the journey was a pleasant one, with the fall foliage one mass of brilliant color, such as is not given to a Texan as a home attraction, and we packed our fishing tackle and started.

When we reached the "bass pavilion" of Uncle Ben Hays the fishermen had long before deserted it, and the fishing was over for the season.

We fished the waters, with which we were perfectly familiar, a whole day without getting a single bass bite, and the next day I began sounding the lake to find a mass of sunken rocks and thus half a day was spent, but we found what we were searching for, and in the afternoon began to fish. Baiting our hooks with minnows, we lowered them into the crevices of the rocks or between the big boulders, and finally we got faint nibbles, and that was all we did get; but such nibbling and mouthing of minnows I never knew before that day by any kind of a fish. Besides minnows we had for bait larvæ of the darning-needle, which had been sent to a fisherman at the hotel, and arriving after his departure Uncle Ben had kept them in wet "eel grass" and turned them over to us after we arrived. Baiting our hooks with the "what is it," as the larva was called, the same nibbling was practiced down among the rocks by the bass until one wearied of it. It was nibble and strike, nibble and strike, nibble, nibble, nibble! Once in a while we would hook a bass, and when this happened the fighting, game black bass would come to the landing net with just as much play as a dead and salted codfish. There is nothing about this kind of fishing which even remotely resembles sport; it is meat hunting pure and simple, and if a man is starving and can get food in no other way he would be foolish not to avail himself of feeling for bass in the rocks with a hook. It is burning the candle at both ends with a vengeance to catch black bass through the month of June when they are spawning and brooding their

young, and then descend upon them in the fall when they are congregated in winter quarters and pull them out like so many leaden weights, so sluggish that they can scarcely wriggle their tails in protest at the outrage.

Black Bass Planting.

While on the subject of black bass, I wish to call attention to the applications made to the State for this fish. I have already noted that millions of black bass are applied for each year when the State at best can furnish but a few thousands, for they are not hatched artificially. An applicant fills out his application for perhaps 10,000 bass and gets 100 or 200 adult fish, enough to thoroughly stock a lake ten miles long, if the bass are protected during the breeding season and the law as to size of bass killed is observed; but the next year the same man will put in another application for more bass for the same water, and I presume if the fish were furnished the application would appear annually, just as a shooting club might turn out each season enough quail to furnish the members of the club with quail shooting for a season and renew the stock by purchase each succeeding year. The State has not got the bass and cannot get them to stock waters annually, and there is no need of such stocking. A lake in this State which has furnished the largest black bass of the small-mouth species ever caught, and probably tons of bass of all sizes, during the past twenty-eight years was stocked with thirteen little bass about 4in. long. Not for twenty-six years after it was originally stocked did it receive another contribution of black bass, but it furnished many fish for stocking other waters and was fished as few lakes of its size (one and one-quarter miles long) have ever been fished. A. N. CHENEY.

Black Bass in the Northwest.

LATONA, Wash.—The extremely high water of the fall wrought havoc among the trout in some sections of the State. A friend lately from Snohomish county tells me there were places where this game fish had been left stranded in the fields by the overflow.

About seven years ago the fish commissioners planted a number of large-mouth black bass, crappie, perch, sunfish and catfish in lakes Union and Washington; and last year all of these fish were very much in evidence. The native fish are rainbow trout in both lakes, and they seem as plentiful as ever in spite of the inroads which the bass must make on their numbers.

Lake Union has produced some bass already of 4 and 5lbs., caught with live minnow or spoon.

Lake Washington is twenty-five miles long and about four to six miles wide, with the best of bays and best of feed for bass, yet they have not been caught to any extent in this lake—probably because of its size.

I have heard several times of grayling in Lake Washington too, but have not been able as yet to locate them. Ex-Mayor Phelps, of Seattle, says he has caught them in several parts of the lake, and there is no reason to doubt the statement. Other parties have also told me of catching them, yet I have never caught one nor seen one that was caught there.

W. S. PHILLIPS.

Landlocked Salmon the Coming Fish in Maine.

COMMISSIONER O. H. STANLEY writes: "We had the largest run of trout and salmon to their spawning grounds last fall I have ever known in Maine; also the largest fish, especially at Sebago; we took in our weir several salmon that would run over 20lbs.; I think the average would come up to 8lbs. We have got as many salmon eggs as we can hatch and feed the young fry until October at all our hatcheries. Salmon put in an appearance last fall in many new waters, ponds that I am happy to say I stocked myself. The coming fish in Maine is to be the landlocked salmon. He will thrive with the pickerel and live in higher temperature than the trout. All he needs is plenty of pure water and smelts for food. He is king on the hook as well as for the table. He also knows enough not to take every bait that is offered him. I have even known him to refuse the Stanley smelt sometimes; but that is rare. We now have some very fine bass fishing in Maine, which attracts many anglers here. One thing is curious: where the black bass have been put in pickerel ponds, which were good trout waters before the introduction of pickerel, the bass have thinned out the pickerel and the trout are coming back in considerable numbers. I don't think they interfere with the trout at all."

"Angling Talks."

WE have a very few copies of George Dawson's "Angling Talks," a series of chapters of entertaining chat about men, fishermen, fish, fishing and fishing places. Cloth, 50 cents. Forest and Stream Publishing Co.

FOX HUNTING IN ILLINOIS.

Editor Forest and Stream:

Fox hunting in Illinois is not what it used to be a great many years ago. Then when a fox was started the horsemen and dogs were bothered with no fences, especially wire ones, which are so troublesome now, although we had to contend with swamps and wild grass. The swamps now are tilled.

The hunt which I am about to relate occurred Jan. 23, 1897. We were to start from Fairview Farm at 8 o'clock A. M. The morning was fine and warm, the sun shining, the snow about 3in. deep and melting, and a southwest wind was blowing.

The boys arrived in due time with eight dogs, four of which were owned by L. W. Green, Jr; two were Kentucky hounds and two were imported hounds; three were owned by R. Sandusky, one imported and two were Ohio bred. One was owned by George Baum, all of Indianola. There were twenty-two horsemen. No guns were allowed.

We started north and struck a fresh track. The hounds took the fox three miles east to Indianola. He then turned in a cornfield, making a complete circle and getting the best of us by about ten minutes by back tracking. He then went west to where he started from all the time keeping in the cornfields when possible and running diagonally to the route. Then he made another turn north, going west through a large hedge, and here we first saw him.

We had ridden north when the dogs turned west through the fence into the cornfield. We therefore turned west, and as we did we saw him about 100yds away making a circle south and around us. There were six of us in that squad, the remainder of the party being scattered over a section of land. When he was sighted everybody gave chase. He ran southwest to a large ditch, thence down the embankment one-half mile, with four of us only 50yds from his brush and yelling worse than a band of Apache Indians. He ran the length of the cornfield, about one-half mile, turned east and south to the railroad, shook his brush in the air and bade us good day. Then began the hard running after a scared fox.

He went down the railroad nearly to town, through the meadow to the timber, straight for the Little Vermilion River, which he swam; then over hills, hollows, through pastures, cornfields and barnyards, till he came to the high grade of the railroad. The dogs were then about one and one half minutes behind the fox and twelve miles from the starting point as the "crow flies," so we were told by a farmer who lived near. Here is where the fox got in his work and where he got his title, "Cunning as a fox." He mounted the grade, took a look back over his shoulder, then trotted over the trestle, 200yds. in length and 40ft. high, came down the same side of the track at the other end of the trestle, and made his circle toward home. Here he threw the dogs off the track, but we made a circle of one-half mile and found it, and were hot after him again, with a loss of fifteen minutes. We then ran him back through the same country, but he began to get tired and to hunt the bunches of cattle and horses, and run through barnyards to throw the dogs off the scent, but he was found every time without much delay. We ran him to the timber, up the Little Vermilion River again, and came in sight of him crossing a plowed field. We ran him one-fourth of a mile across this and a white spotted hound, Rowdy, took the lead by sight and ran up to within 10ft and couldn't gain any more, so it seemed; but as soon as the fox struck the smooth ground along the plank fence then Rowdy began to crawl up on him, inch by inch, until within 100yds. he was only about 2ft. from his tail, and both dog and fox lying low on the ground and going like the wind. A few jumps and reynard tried for a hole in the fence, and then it was all up. Rowdy struck him like a cyclone and both rolled over and over in the snow, and by that time Rowdy's brother from Ohio was with him and the chase was over. Out of twenty-two men who started in the chase with eight dogs, only nine men were left and four dogs. The distance traveled was about thirty-five miles.

Manitoba Field Trials Club.

WINNIPEG, Man., Feb 9.—*Editor Forest and Stream:* A regular meeting of the club was held this afternoon at the Hotel Manitoba, President Simpson in the chair.

The resignations of S. B. Borradaile as second vice-president, and John Wootton as secretary-treasurer, were then read and accepted. The following officers were then duly elected: First Vice-President, John Wootton; Second Vice-President, Wm. C. Lee; Secretary-Treasurer, G. B. Borradaile, Winnipeg. Four new members were elected by ballot.

It was decided to have the same stakes as last year, viz., Derby and All-Age stakes, each $250, and also an Amateur Stake, open to all amateurs residing in Canada.

The entrace fee to Derby and All-Age stakes will be $10; to start, $5 additional. A committee of three, including the president, were elected to secure a judge.

JOHN WOOTTON, Sec'y-Treas.

Irish Setter Club Meeting.

NO. 1813 DE LANCEY PLACE, Philadelphia, Feb. 11.—The annual meeting of the Irish Setter Club of America will be held at the Madison Square Garden, New York, during the W. K. C. show, on Wednesday, Feb. 24, at 12 o'clock.

GEO. H. THOMSON, Sec'y-Treas.

POINTS AND FLUSHES.

The entries of the last W. K. C. numbered 1,409 Those of this show greatly exceed the former, the total being 1,667, divided among the different breeds as follows: Mastiffs 10, St Bernards 153, bloodhounds 13, Great Danes 51, Newfounds 4, Russian wolfhounds 18, deerhounds 13, greyhounds 27, English foxhounds 11, American foxhounds 17, Chesapeake Bay dogs 7, pointers 92, English setters 60, Irish setters 56, Gordon setters 33, field spaniels 37, cocker spaniels 82, collies 107, English sheep dogs 8, poodles 91, bull dogs 86, French bull dogs 19, bull terriers 70, Boston terriers 119, dachshunde 52, beagles 64, Irish terriers 57, Scottish terriers 16, fox terriers (smooth) 80, fox terriers (wire-haired) 40, Bedlington terriers 11, Skye terriers 4, Dandie Dinmont terriers 2, Black and Tan terriers 25, white English terriers 1, whippets 4, schipperkes 3, Pomeranians 3, Maltese terriers 6, Yorkshire terriers 15, toy terriers 8, pugs 22, toy spaniels 47, Italian greyhounds 4, miscellaneous 9.

We are informed by Dr. J. E. Hair, Bridgeport, Conn., that a bill embodying some radical changes concerning the licensing and ownership of dogs was presented to the Connecticut Legislature, and in turn referred to the Judiciary Committee. He asks that the interested residents of each district exercise their influence with their Representatives and Senators to secure the passage of the bill. Briefly stated, the bill provides that all dogs registered in the A. K. C. S. B. shall be licensed for $1.15, and bitches so registered shall be registered for the sum of $5.15 A special license, to be issued on payment of $25, to be known as a kennel license, shall be issued to breeders of registered dogs, said license permitting the licensee to keep not more than ten dogs, and exempting from the license law all puppies under twelve months. Every person owning a dog shall appraise the same upon the tax list at its actual value, and any person stealing or killing any dog so listed, except that killing may be justified by doing it in self-defense, or if the dog is actually engaged in worrying sheep, shall be liable for the value of the dog so killed, or shall be punished by fine and imprisonment the same as if the dog were a domestic of like value. The sum at which the owner lists his dog shall be *prima facie* evidence of its value in either a civil or criminal prosecution.

Further special prizes have been added to the premium list of the Mascoutah Kennel Club. The St. Bernard Club of America offers the Waters challenge cup for the best American-bred St. Bernard, and two silver cups, one for best stud dog with two of his get, and one for best bitch with two of her progeny. The Butterfly Bench Show Association offers three medals, one each for best sporting dog, non-sporting dog, and best terrier.

The W. K. C. announces that additional valuable specials have been offered by the Boston Terrier Club, the English Bloodhound Club of America, the Bull Dog Club of America, the Brunswick Fur Club, and others, for spaniels, poodles, French bull dogs, beagles and Irish terriers.

There will be an annual meeting of the Irish Setter Club of America in Madison Square Garden, Thursday, Feb. 25, at 12 o'clock M., for the election of officers and the transaction of business. The secretary, Mr. Geo. H. Thomson, 1813 De Lancey Place, Philadelphia, requests that members send in their annual dues ($5) and the names of those who are to be proposed for membership.

The annual business meeting of the American Pet Dog Club, the secretary, Mr. T. Farrer Rackham, writes us, will be held at the Lincoln House, New York city, on Wednesday, Feb. 24, punctually at 2:30 P. M. The election of officers and other important business will take place.

Mr. John Wootton, of Manitou, Mass., writes us that the outlook for the Manitoba trials on chickens is good, andt hat he expects to see a much larger entry list this year than last.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

THE NATIONAL CYCLE SHOWS.

AT the great cycle show held in Chicago a few weeks since six acres of floor space were devoted to the exhibition of bicycles, while in the New York show, which has just come to a close, nine acres were given up for the same purpose. The individual exhibits at each place counted well up among the hundreds, while the attendance was reckoned by numbers that ran up to six figures.

The Drift of Affairs.

At both New York and Chicago the same tendencies were marked. One that appealed to the manufacturers was that national cycle shows, at least at the time of year they are now held, have ceased to be of very material profit to the exhibitors as far as direct returns are concerned. This was especially true of the Chicago show. Agents who formerly came to purchase stock for the ensuing year's trade have been conspicuous by their absence. The shows are no longer great marts of trade, for by the time they are held dealers are already stocked, and those who visit the show are no longer susceptible to argument. They come rather to renew old friendships or to become personally acquainted with the men with whom as a result of previous negotiations they are to do business during the year. This condition of affairs, though of gradual growth, has taken expression this year in a way that is not to be mistaken, and exhibitors in general have had to be satisfied with the indirect returns that come from the advertising of their product through the shows themselves and through the newspaper notices that are given of them.

Approaching a Standard.

Another general tendency noted at both shows was the growing conservatism of the manufacturers, which was exhibited not only in the lack of sensational features in their product, but also in business methods. There is a marked disposition to get away from all that is impracticable, and to solidify and simplify methods and manufacture. It has become an established fact that a man who promotes a machine out of the recognized and generally accepted type comes to an untimely and disastrous end. The effect of this conservatism is to conform bicycles more and more to a certain fixed type that embodies what is best in the opinions of the majority of manufacturers. Though minor details are found in endless variation, most of the chief features of cycle construction show a remarkable uniformity.

The length of wheel base in the models exhibited this year, for instance, shows much less variation from the average than heretofore, and moderate sizes of tubing for frame construction are the rule

The practical absence of chainless bicycles from the show demonstrates as well as anything this conservatism. No doubt the manufacturers have all given the subject of turning out such wheels due consideration, and very possibly some of them will add chainless bicycles to their line in course of time, but so far none of the prominent manufacturers have shown any undue eagerness to rush into the business.

The Racer no Longer Supreme.

A commendable tendency, which is very marked in some quarters, is the attention paid to the feature of comfort in cycling. Wheels are being made with a greater clearance between forks to permit the use of larger tires, and tires are made heavier and of larger diameter than heretofore. Hygienic saddles are very much in evidence, and no one will hereafter have cause to complain that he cannot procure a safe and comfortable saddle. A year ago there were many who said that existing saddles of the fence rail type were good enough for anybody, but the popularity of the double point of support styles is good enough evidence that they were mistaken. Common-sense ideas will prevail, and comfort and strength are more carefully considered each year by the manufacturers.

The big tires are intended to reduce the jar of riding over rough surfaces, and another improvement with the same end in view is the cushion frames. No less than a dozen manufacturers in the New York show had wheels fitted with an unobtrusive pneumatic cushion frame device.

Simplifying Construction.

Another feature that has the almost universal support of the exhibitors is the simplifying of the mechanism of their wheels. All aim to make the taking apart and assembling by amateurs as easy as possible. In the matter of cranks, for instance, nearly every manufacturer had some improvement to show to permit taking them off without the use of too much violence. The bearings also are generally supplied with retaining devices, and the matter of adjustment is made less difficult.

Odds and Ends.

Wooden handle bars are one of the features of these shows of recent development. Now anyone can have them as an option on his wheel. Wood at present is exclusively used for rims, and in ladies' wheels it enters largely into the construction of chain and wheel guards, and there seems to be a slight tendency toward its use for bicycle frames. More wooden bicycles were shown than chainless types. In all these machines, however, metal wheels were used, probably because they are to be had cheaper than wooden spokes and hubs.

Few gear cases were in evidence. Gear cases conduce to the comfort of the rider and make possible wet weather wheeling, and inasmuch as their use would tend to extend the wheeling season, which for the majority of riders is practically limited to the summer, manufacturers should encourage their use. One reason why more gear cases are not seen is the difficulty of attaching them to wheels of American manufacture. If our bicycle builders would make some provision for gear cases more would be in use, and riders generally would come to recognize their advantages for muddy or dusty roads.

A number of new brakes were exhibited. One was operated by compressed air; another by twisting one of the handle grips, while others still became operative through the act of back pedaling. A novelty in the line of mud guards was a hollow rubber roller, which runs on the rear wheel and causes the mud to fly backward, instead of over the rider.

The Future of National Shows.

Just now it looks very much as if we had seen the last of national cycle shows. Chicago's was unsatisfactory from the exhibitor's standpoint, and New York only partially redeemed herself. If changes there be, however, it is more likely to be in name than in actual substance; and whether "national" or not, New York and Chicago will undoubtedly have as great cycle shows in 1898 as in 1897.

At the annual meeting of the manufacturers' board of trade on Feb. 10 the following resolution was passed:

"*Resolved*, That it is the sense of this meeting, that the National Board of Cycle Manufacturers discontinue its annual national cycle exhibition is deemed advisable by the board of directors, and in place thereof it encourage and sanction local cycle shows under terms and conditions prescribed by the board of directors upon the following general lines:

"Sanction and encouragement to be given first and preferably to local cycle boards of trade.

"A percentage of the gross receipts of all local cycle shows to be paid to the National Board of Trade of Cycle Manufacturers for its maintenance and increase of its usefulness.

"The conduct and terms of such local cycle shows to be in conformity to such rules, regulations and provisions as the Board of Directors of the National Board of Trade of Cycle Manufacturers may prescribe.

"Sanction to be granted only for such local shows as commence not earlier than the last Saturday in February and terminate not later than the first Saturday in April of each year

"Spaces to be of uniform size, and no exhibitor permitted to occupy more than two spaces. Price of space to be adjusted in accordance with location."

The New York Cycle Show.

The New York cycle show of 1897 was held in the Grand Central Palace of Industry, Forty third street and Lexington avenue, Feb. 6–13. This is New York's third national cycle exhibition, the two previous shows having been held in the Madison Square Garden.

The accommodations for this year's exhibition were not nearly so good as at the Garden. The various exhibits were scattered over four floors instead of being concentrated on one, and owing to the intricate construction of the building it was often a very difficult matter to locate any particular exhibit. In the center of the Palace of Industry is a large court, which is open from the second floor to the top of the building. Access to the various floors can be had only at the east end of the building, and the elevator accommodations are very poor.

The second floor was the central part of the exhibition of bicycles, and on it most of the leading firms were represented. Occupying the central position in the Court of Honor was the Board of Trade exhibit, which was also the central feature of the Chicago show. This was a pagoda-shaped pavilion erected on a broad pyramidal base and surmounted by a huge golden dome crowned by a bicycle supporting a cluster of incandescent lights and surrounded by a number of other illuminated wheels. In this pavilion were exhibited medals and trophies won by champion cyclists. Nearly 800 spaces were given up to the exhibits as against 650 at Chicago.

Yachting.

The story which we reprint this week from the Boston *Transcript* is but one of many of the same tenor now circulating through the American press. If those Canadians who have opposed the Royal Canadian Y. C. in the amendment of the racing rules are possessed of any national pride, it must be gratifying to them in the extreme to know that through their efforts their countrymen and fellow yachtsmen are now being advertised through the States as a lot of sharpers. We know of no good whatever which has come from this unfortunate and unnecessary quarrel, while no end of harm has been done to the good name of Canadian yachtsmen through the widespread circulation of such stories in the American papers.

The Forest and Stream is desirous of reporting as fully and accurately as possible the races of the Sound Y. R. U. during the coming season. As an aid in this work we shall be glad to receive at as early a date a possible the books of the different clubs, announcements of fixtures, race programmes, etc.; and in particular names, measurements, racing numbers, etc., of yachts, both old and new. We should like, with the assistance of the Y. R. U. officers, to be able to compile before May 30 a practically complete list of yachts and owners for the Sound racing.

We learn from our Chicago correspondent that there is no likelihood of a challenge from Chicago yachtsmen for the Canada cup. This is to be regretted, as a race this year would do much to help yachting on the lakes. It would also attract the interest of salt-water yachtsmen to the sport on fresh water. There being no race for the America's cup this year, an international race on Lake Ontario would, after the race of 1896, draw many Eastern yachtsmen for the first time to this beautiful inland sea; whereas, should such a race occur in the same year as one for the America's cup, it would pass almost without notice. While thus far no challenge has been sent from Chicago, the Chicago and other American papers have not hesitated in accusing the Royal Canadian Y. C. of being afraid of a second trial; and if correctly quoted, the owner of Vencedor is responsible for the same accusation.

We have little doubt that if the owner of Vencedor is willing to try for the second time to defeat Canada, and is willing to build a yacht to her class, 42ft., and with the same minimum of section, 28 per cent., the holders of the cup will waive the ten months' notice and make a match. The odds in this case, of building to beat a known boat, would be on the side of the challenger; but we believe that the Canadians are good enough sportsmen to disregard them and make a match.

If Chicago yachtsmen are really in earnest in their desire to retrieve the honors lost last year, they can at least put the matter to a test by a fair and bold challenge to race Canada against a new Chicago boat.

As stated elsewhere, there is a prospect that Chicago will send a yacht to the trial races of the Seawanhaka C. Y. C. We hope that this report is true, not only because the presence of a Western yacht will add materially to the interest in the races, but because the visit of a Western yacht to New York waters will have a beneficial effect at home. We would like to see as contestants in the trial races half a dozen of the best representatives of the fine racing fleets that have been built up of recent years on Lake Geneva, Lake Minnetonka, Pewaukee Lake, Fox Lake and other Western waters. The glory that would follow even a successful performance in the trial races would well repay the effort to build and race the yacht.

Royal St. Lawrence Y. C.

The annual meeting of the Royal St. Lawrence Y. C. was held on Feb. 1, with Vice-Com. Fitzgibbon in the chair; the following officers being elected: Hon. Com., Sir Donald A. Smith; Com., James Ross; Vice-Com., A. F. Riddell; Rear-Com., Harry Abbott, Q. C.; Hon. Sec'y, W. A. C Hamilton; Measurers: D. A. Poe, R. Fitz Gibbon and H. K. Wicksteed. Executive Committee: A. Pringle, W. Barclay Stephens, F. S. Martin, J. E. Schultze, H. G. Eadie, E. Kirk Greene, W. McLea Walbank and G. H. Duggan.

A vote of thanks was tendered the retiring officers, and, as a mark of appreciation, the Hon. Sec'y-Treas., Mr. W. A. C. Hamilton, was presented with a suitable souvenir for his valuable services to the club.

The secretary-treasurer presented a long and very satisfactory report, in which the following allusion is made to the international races:

"True national pride may readily be expressed on the splendid victory of Com. Ross's bonny craft, our club's flagship. She was designed, built, owned and sailed by Canadians, everything in, on or about her being strictly Canadian from stem to stern. She easily vanquished all yachts of other Canadian designers, besides joining El Heirie in beating some of the most able yacht designers and builders in the world.

"Before leaving this glorious result of our club's first attempt at international contests, we would record our appreciation of the cordial hospitality extended by the Seawanhaka Corinthian Y. C. to our representatives and members attending the races. We note the kindly feeling expressed in this organization's annual report, and congratulate ourselves on having the opportunity to further cement the existing pleasant relations, notwithstanding the evident keen rivalry.

"The club had representatives at Brockville, Lake of Two Mountains, Valois and Ogdensburg, who more than held their own against all comers. At Ogdensburg and Lake of Two Mountains kind hospitality was shown our members, sufficient to require no second bidding to bring us to their shores again."

The following summary of the racing of the 15ft. class for the season was given in the report:

	Starts	Firsts	Seconds	Thirds	Fourths	Disabled	Withdrew	Disqualified.
Glencairn, Com. Ross	3	3	..	..	..	..	..	..
Viva, C. H. Routh and A. W. Shearwood	15	..	1	3	2	1	1	2
Mischief, Arthur Hamilton	13	1	3	2	2	2	..	..
Shanet-a-Boo, Rear-Com. Fitz Gibbon	15	..	2	2	2	1	1	..
Otowynn, L. J. Smith	2	..	..	..	..	..	2	..
*Anita, H. G. Eadie	13	2	3	2	1	..	1	1
Bantam, J. C. C Almon	14	..	3	1	..	3	4	1
Sothis, G. H. Duggan and F. P. Shearwood	12	7	..	3	..	..	1	..
Titania, W. M. Kirkpatrick and J. H. Prissick	15	1	2	1	1	1	..	2
Osma, E. S. Clouston	5	..	1	..	..	..	2	..
Sais, D. A. Poe	6	..	..	..	..	1	3	..
Nouya, R. R. Wallace	6	..	..	..	..	1	..	..
Gyascutis, A. L. and H. R. Drummond	3	..	..	..	..	..	3	..
Windward, C. O. Clark	6	..	..	..	..	..	2	..
Missie, Rev. Hy. Kittson	8	2	1	..	1	..	..	..
Oneida, L. H. Dinning	5	..	..	1	..	..	1	..

* Won Hamilton challenge trophy.

Work is now under way in the club on a large number of 20-footers. The club will build a new house on the present site.

New York Y. C.

The annual meeting of the New York Y. C. was held on Feb. 11, the following officers being elected: Com., J. Pierpont Morgan, steam yacht Corsair; Vice-Com., Lewis Cass Ledyard, schr. yacht Montauk; Rear-Com., August Belmont, cutter Mineola; Sec'y, J. V. S. Oddie; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch, M. D. Regatta Committee: John C. Barron, Theodore C. Zerega and W. Barton Hopkins. Committee on Admissions: Edward M. Brown, C. Oliver Iselin, Lewis Cass Ledyard, W. Butler Duncan, Jr., and James A. Wright. House Committee: Edward E. Chase, Frank M. Cronise, F. H. Davies, C. L. F. Robinson and C. Alfred Grymes. Library Committee: Fordham Morris, Arthur H. Clark and A. V. H. Ellis. Committee on Club Stations: William H. Thomas, Frederick H. Benedict, F. Augustus Schermerhorn, L. Vaughan Clark, Tarrant Putnam, Frederick P. Sands, Frederick Grinnell, John P. Duncan, Amzi L. Barber and Edward R. Ladew.

The secretary's report showed a membership of 1,217 and a fleet of 328 yachts. The date for the annual regatta was fixed, Thursday, June 17. The date for the cruise was not decided on, but Mr. Ogden Goelet offered again two cups costing $1,000 and $500 for schooners and cutters, to be raced for as usual off Newport during the cruise. An invitation was read from the Yacht Racing Union of Long Island Sound inviting the New York Y. C. to join the Union; it was referred to the special committee on the proposed yacht league.

The following amendments to the racing rules were presented:

Rule 1 to be amended to read as follows:

Section 4. The maximum draft of any yacht when in racing trim shall not exceed that specified for her class in the following table, exclusive of centerboard, except as hereafter mentioned. But this limit shall not apply to any yacht in existence at the time of the passage of these amendments when racing in the class in which she was classified prior to that time. This exemption, however, shall not be so construed as to permit a vessel launched prior to Oct. 22, 1896, to increase her draft beyond the limit allowed for her class.

Sec. 6. Any yacht which has her measurement increased for the purpose of sailing in a class above that in which she would sail according to the last official measurement taken prior to Nov. 1, 1896, shall not be entitled to any time allowance from other yachts in that class.

Rule 4 to be so amended as to read as follows:

Sec. 4. At least two yachts must start in each class to entitle a yacht to a prize of full value. Should a yacht obliged to sail alone in her class, go over the course of her class, she shall be entitled to a prize of one-half the value of the regular prize, and upon the same shall be inscribed "Sailover prize."

Sec. 5 (new). Any yacht alone in her class may sail in the class next above, but in such case such yacht shall assume and be entered as of the mean racing length specified for the class in which she so enters; but this shall not be so construed as to permit a single-masted vessel or yawl to enter a schooner class.

Rule 16—To be so amended as to read as follows:

Sec. 8. An overlap is established when an overtaking yacht has no longer a free choice on which side she will pass, and continues to exist as long as the leeward yacht, by luffing or the weather yacht, by bearing away, is in danger of fouling. The owner or representative of an overtaking yacht intending to claim an overlap shall notify the overtaken yacht to that effect by hailing her.

Sec. 14. If an overlap exists between two yachts when both of them, without tacking, are about to pass a mark on the required side, then the outside yacht must give the inside yacht room to pass clear of the mark, except as provided in Sec. 15. A yacht shall not, however, be justified in attempting to establish an overlap and thus force a passage between another yacht and the mark after the latter yacht has altered her helm for the purpose of rounding.

Sec. 15. When two yachts in maneuvering for the start both on the same tack, one to windward and one to leeward, and the weather yacht being freer than the leeward yacht should the leeward yacht be close hauled on the wind, and before an overlap has been established, the leeward yacht shall have the right to hold and maintain her course, even if thereby the windward yacht should be forced on the wrong side of the starting mark.

Sec. 16. When a yacht is approaching a shore, shoal, pier, rock, vessel, or other dangerous obstruction, and cannot keep clear by altering her course without fouling another yacht then this latter shall, on being hailed by the former, at once give room; and in case one yacht is forced to tack or to bear away in order to give room, the other shall also tack or bear away, as the case may be, at as near the same time as is possible without danger of fouling. But should such obstruction be a designated mark of the course, a yacht forcing another to tack under the provision of this section shall be disqualified.

The amendments to Rule 1 and that to Rule 16, Sec. 1, were passed; the amendments to Rule 4 and Rule 16, Sec. were lost; and the others, to Rule 16, Secs. 14, 15, were referred to the regatta committee. The following new members were elected: I. Cox, Dr. A. G. Brower, L. C. Wachsmuth, Ensign O. P. Jackson, U. S. N.; Lieut. G. A. Calhoun, U. S. N.; Lieut. Wm. H. Driggs, U. S. N.; A. V. Soper, W. L. Elkins, Jr., Lieut. T. D. Griffin, U. S. N.; W. T. Lawson, Lieut. J. D. McDonald, U. S. N.; Ensign J. Bradshaw, U. S. N.; J. Cotting, C. McK. Leoser, M. S. Barger, A. Marshall, N. Hathaway, N. Witherell, Surgeon M. Guest, U. S. N.; Gen. T. W. Hyde, T. Beckwith, Lieut. K. Rohrer, U. S. N.; C. A. Andresen, Lieut. R. H. Galt, U. S. N.; E. S. Woodward, F. A. Dallett, A. Schwarzman and Surgeon L. Morris, U. S. N.

The Yacht Racing Union.

The council of the Y. R. U. held its monthly meeting on Feb. 8 at the Seawanhaka C. Y. C. house, a number of important matters being under discussion. In deference to the requests of owners of the special 30-footers, it was decided by a mail vote to allow these boats to be measured without crews and to carry the same crews as in 1896, but to be steered only by amateurs. In the matter of courses, the use of triangular courses exclusively is recommended, to be sailed twice or three times, the distances being: A schooners, 30 miles; single stick yachts, first, 70ft., 60ft., 51 classes, 25 miles; 43ft., 36ft., and 30ft. classes, 20 miles; 30 cats and 25ft. sloops, 15 miles; 25ft. cats and 20ft. sloops, miles; and the 20ft. and 15ft. cats and 15ft. sloops, 10 miles.

It was decided to retain the present system of starting signals; but where each class is to be started separately from the gun the class letter shall be displayed on a large white sphere at the masthead of the committee boat. Mr. John Hyslop was elected official measurer of the Union, and the Forest and Stream was named as the official organ for the publication of all notices, etc. Arrangements were also made for the preservation and compilation of racing records.

It was decided to invite the New York Y. C. to take representation in the Union, and also to renew the invitation previously given to the Larchmont Y. C. The Atlantic Y. C., now having no station on Long Island Sound, is nominally disqualified for membership in the Union, but a conference of the two bodies will take place very soon, the Atlantic Y. C. now having a special committee for the purpose of conferring with other clubs as to future union.

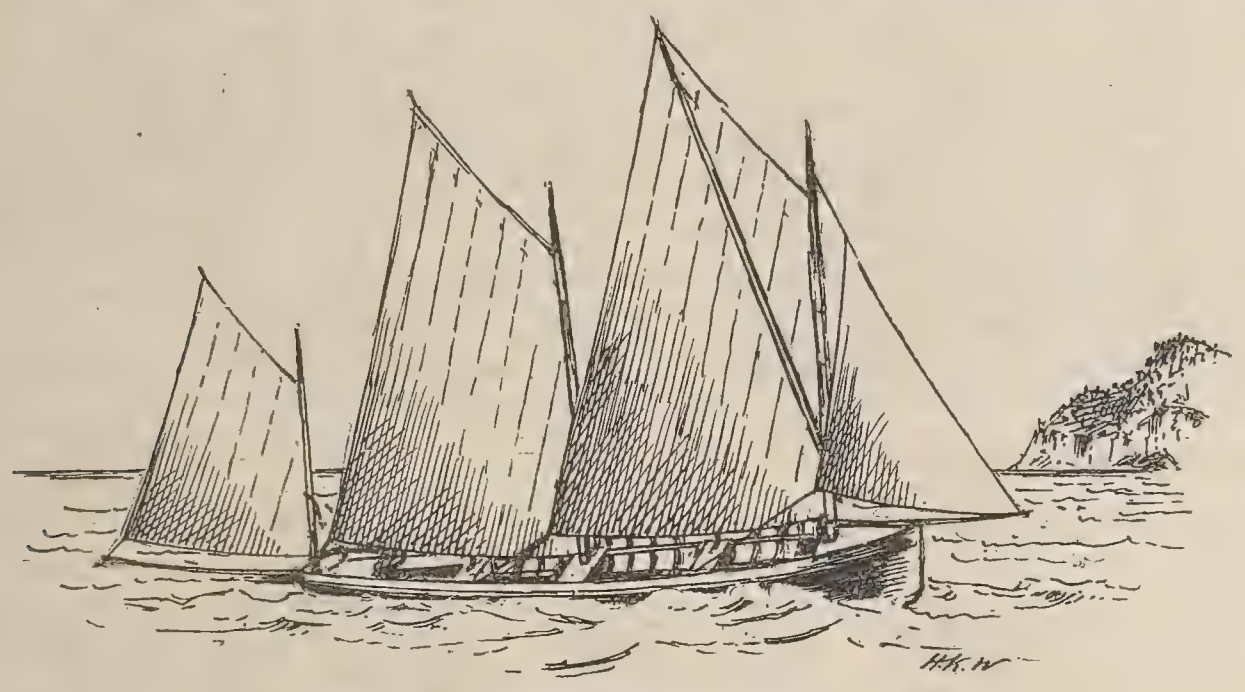
A special committee of three, Messrs. E. Burton Hart, P. Tower and Sec'y Jones, was appointed to visit Boston and confer with the executive committee of the Mass. Y. R. A.

Possible Chicago Boat for Eastern Races.

There is a vague rumor out in Chicago this week, with a certain amount of confirmation, though not sufficient to warrant of a decisive announcement of it as news, that there will be a one-rater built in the West, at or near Chicago, this spring, which will go East to compete in the Seawanhaka Y. C. trial races. The boat would go by rail from this city, and should the owner conclude to carry out his present unformulated decision the building of the boat would be hurried from now on, so that the boat could be tried on Western waters before going East. The possible skipper has not yet given any order for the boat, and does not care to have his name announced, but tells me he may see fit to do this. It is much to be hoped that he will do so as this would be something of a novelty in boating matters. No Chicago craft has gone for these races, and the notion of such a competitor is one very hard to relinquish. I can go so far as to say that should this gentleman build this boat he will prove himself to Eastern men a competitor worthy of their friendship and of their best efforts in the contests. Should the boat go East there will be a large and enthusiastic Chicago contingent go with it, and thus there would be a pleasant rivalry between the two cities, of that sort which among sportsmen makes friendships of the most lasting nature. Let us hope the young Chicago yachtsman will conclude to build and sail this chicago boat for the honor of the city.

E. Hough

1206 Boyce Building, Chicago.



The Quebec Pilot Boat.

THE Quebec "pilot boat" is to the lower St. Lawrence what e catboat is to Great South Bay and similar localities, and e is interesting as being a direct importation from Brit-ny. She is the *chasse marée* of the French Channel ports, odified to a certain extent by the climate and conditions of e lower river, but only to a comparatively small extent.

The *chasse marée*, speaking broadly, is a lugger with very uff ends above water, a big displacement, and varies in ze from an open boat to a craft big enough to cross the tlantic. The "pilot boat" is never too big to permit of her ing handled on shore by her crew, and the boats are ways beached at low tide. The larger craft of the river e the universal schooner, the typical craft of America in ite of the sloop, and perhaps an adventurous pin flat.

The pilot boats are not rigged with the lug, and the rea-n for this is not hard to find. The lug requires for its effect-e use a big crew, and a big crew is not available in the lower . Lawrence any more than on any other American water-ay. I take it for granted that why no localized American aft carries a lug rig, and that why so many of their Europ-n prototypes do is mainly because men were and are more entiful, and cost less in wage and share, in Europe than on is continent; as it is with an engine lathe, so is it with a il; the American has had to invent something that would the work with the least possible amount of labor, and the ld countryman," to use a Canadian colloquialism, has not.

The pilot boats are powerful craft of about three beams length, built on a straight plank keel, projecting 9 to 10in. low the garboards. They are very full fore and aft above e waterline, and have what used to be called a lifting bow, nd good big quarters. Their deadrise is of about 15° with

THE QUEBEC PILOT BOAT.

hard bilge, and they are heavily and strongly constructed, enerally carvel, but if lapstrake it is of the heaviest and rudest description, the full thickness of plank being carried ver the lands. This is typical of all the French-Canadians' apstrake constructions.

One very funny part of their outfit is the leg that keeps hem upright when they go ashore. It is an iron bar hackled to the gunwale, with a shoe on the bottom to keep t above the mud.

The rig is as shown in the sketch, and while it is much cut p it is still about as simple, effective, and has as low a cen-er of effort as a rig can have. The boats are very stiff and veatherly, and the stone ballast goes up to the windward hen it blows, so that they carry sail hard; but if it blows arder, as there are no reef points, there can be no "haul out nd tie down." The mainsail is doused, then if the breeze she blow some up," in comes the jib, then the jigger sprit omes out, then the sprit out of the foresail, and by that ime nothing but a pilot boat and a 4,000-tonner have much usiness to do on the lower St. Lawrence.

One little peculiarity of the rig is worth noticing: the miz-en is stepped off the center to let the straight tiller come nboard, and it does not seem to do them any harm.

The boats are strong, seaworthy and weatherly to a degree, ccidents being unknown, and yet the lower river is no looming picnic ground; and they have a great reputation or speed, as have all local boats of this class that possess the nore necessary good qualities enumerated. RETAW.

The Lake Yachtsmen.

FOR a journal which is as a rule both well informed and air-minded, the Boston *Transcript* has, in the following, chieved a collection of misstatements which almost entitle t to the local supremacy in this peculiar line of misrepres-ntation and undeserved abuse:

"It looks now as though the formation of a lake yacht rac-ng association, on which pretty much depends the future f international racing on the Great Lakes, would be a diffi-ult matter. The Canadians interested in racing on the reat Lakes appear to be a grasping and obstinate set of nen, and although the Americans have made some impor-ant and as a good many of them think uncalled-for conces-ions, it is not thought that the rules which have thus far een put forward will be adopted by the four associations of which the union is to consist. If the reports of the proceed-ngs which have been sent on here are correct, the American achtsmen on the Great Lakes must be a particularly guile-ess and unsophisticated set of men, and entirely wanting in he astuteness which has so often been shown by their breth-en of the salt water in international racing arrangements. The races last year were sailed under conditions which made hem practical gifts to the Canada. There is no question hat she is the better boat of the two, but the arrangements were such that the Vencedor could not have won if she had een proportionately better than the Canada. At one of the ecent meetings for the formation of the union, one of the ules which was presented by the Canadians, and was only ejected by the Americans after an elaborate consideration, vas one providing that the midship section of all new boats hould be 35 per cent. of the load waterline multi-lied by the extreme draft. The Canada's midship sec-ion is 28 per cent., so that it can easily be seen just bout how much chance there would be to build a boat nder such a rule which would beat her. This rule was inally rejected, and a set of rules which was not much better vas adopted. These rules provided that the percentage of he midship section of the new boats should not be less than hat of certain boats which were cited, one for each class, nd every one of which was a Canadian. This rule is not nly unfair, but impracticable, as it would be almost impos-ible for American designers to secure the measurements of he Canadian boats. The general opinion of the Americans n the Lakes is that the Canada people do not want to race or the cup again."

There is in the above hardly a single statement which is within hailing distance of the truth, and the whole tenor of he article is most unjust and misleading. The races last year were sailed under conditions willingly agreed to by the Chicago yachtsmen, who at this late day cannot evade the blame for their defeat by pleading the "baby act." If the Chicago papers are to be believed, as well as the statements of Western yachtsmen, Lake Michigan has nothing to learn from the East. Apart from the purely local skill, amateur and professional, it has now the services of the real designer of Vigilant, Gloriana, Niagara and Defender, as well as of one of the best of Defender's crew. After the boasts made last winter of the superior skill of the men who were making the match, designing the yacht, and who proposed to and finally did sail her, it is idle to cry over having been outmatched as well as outsailed by the other side, which said little or nothing, but went to work quietly to meet the challenge in the best possible manner.

The match from the start was an uneven one; it could not be otherwise under the circumstances, but the only ones to blame for it were the Chicago men, who held back their intended challenge until their yacht was partly built, and then sought to force the other party into a special size and type which was not only most undesirable in itself, but in which the challenging party would have a very great advantage over the challenged. The refusal of the Canadians to build after the Niagara class and type made a race impossible except by some special arrangement, and such was made after due discussion and deliberation by the challengers, some of the most experienced yachtsmen of Lake Michigan. Not only the Vencedor party, but the Canadians as well, were bound by set limits from the signing of the agreement early in the spring; the latter came to the line in August with waterline and sail area within the limits; the former was prepared to sail on a shorter waterline than agreed, and to carry a larger clubtopsail. The agreement explicitly called for Corinthian crews, and Canada was manned throughout by amateurs; while two of Vencedor's crew, offered as Corinthians, were rejected by the judges because they were professional yacht sailors, their places being finally taken by others.

If their own word is to be taken, the Chicago yachtsmen are neither guileless nor gullible, but a particularly sharp and wideawake set of men; here is the evidence of one Chicago journal, given when the race was first proposed: The Lincoln Park Y. C. is "a club of paramount standing with Larchmont, Atlantic, Seawanhaka or even New York on tidewater, and just a little bit higher up the shrouds and better stayed than any individual club of the Lake Y. R. A. (Ontario)."

The statement of the *Transcript*, that the proposed rule was "that the midship section should be 35 per cent. of the waterline multiplied by the extreme draft," would indicate that it had paid no attention whatever to facts or common sense, but had merely jumbled up a lot of statements that might serve to create ill feeling between Americans and Canadians; such nonsense as this is of itself enough to discredit the whole article. The rule regarding the midship section was proposed by some Canadian yachtsmen and indorsed by many of the American members of the Lake Y. R. A. as fair and sensible. But one American club opposed it, the real serious opposition being from two Canadian clubs; and this purely for local and personal reasons. The action of these clubs at the Buffalo meeting in advocating the proposed rule with but a small difference in the size of the coefficient, proves that they had no real quarrel with the principle involved. The dispute is in no sense an international one between American and Canadian clubs, but purely a local quarrel between Toronto and Hamilton. It was through the American clubs on Lake Erie that the proposal was retained in the Yacht Racing Union of the Great Lakes, just as it was through the influence of a few Canadians that it was opposed in the Lake Y. R. A.

The midship section of Canada was made public early last season, long before the race, by her owners, and has been published in the FOREST AND STREAM, as well as in many other American papers. The proposal to take for the standard certain Canadian yachts was made by the opposing party; and was finally reconsidered and killed by the action of the men whom the *Transcript* so severely condemns.

These same "grasping and obstinate men" have from the first agreed to exclude their yacht from any advantages she might gain by the passage of the amendment which they proposed in furtherance of what they believed to be the interests of sport on the lakes; and they have also given to the new Union, which they have aided to found, the cup won by them last summer as a perpetual challenge cup. This, as the first holders, they are now ready to defend from any qualified challenger within the terms of the deed, as recently published.

The local quarrel on Lake Ontario has done enough to hurt yachting on the Great Lakes, and there is no need whatever for such articles as this in American papers, tending to stir up ill-feeling between men who have for years worked and raced together without a thought of which flag they were under for the time being. We hope that the *Transcript* will at least take the trouble, as it easily may, to inform itself of the real facts and to make amends for its incorrect and unjust statements.

A National Union.

THE failure in the New York Y. C. of the proposed national league scheme by no means settles the question, and it is evident that the influences to which we have frequently referred are now working very strongly toward a union of considerable extent. Whether or no any actual union of the Sound and Eastern clubs is made this spring is a small matter, it is now plain that the parties concerned, both exceedingly prosperous in their home work, are in harmony on many points, and tend strongly toward a union. The position of the three large New York clubs, the New York, Atlantic and Larchmont, with regard to the Y. R. U. is still uncertain; the Atlantic Y. C. at least is in hearty sympathy, and only a nominal obstacle to its membership exists. The Boston *Globe* discourses very fairly and sensibly on the question of one union of the coast clubs, as follows:

In spite of the refusal of the New York Y. C. to join the movement for a national association of yacht clubs, the movement goes steadily forward, while at the same time the plan grows steadily in favor with clubs which do not have to support the burden of being the premier yacht club of the country.

Which is as it should be.

Even if it cannot at once secure uniform measurement and classification rules, or even if such uniformity can never be entirely brought about, a national association can benefit the sport in many ways, and bring the yachtsmen of the country into closer and more friendly relations than at present.

If a club does not care to join at present, the remedy is to make so good an association that the club cannot afford to stay out; particularly if the association requires no surrender of strictly club rights, but simply asks a lending of influence in ways which will benefit all the clubs.

Uniformity in sailing rules is, for instance, one of the things which a national association could bring about with advantage to itself and to all of the clubs affiliated with it. Time was when the New York Y. C. was considered the model for all others, but with the growth of other clubs and the spread of racing the clubs have struck out for themselves, and have found that practical experience counts for more than prestige.

The sailing rules are indeed very nearly uniform at the present time, but they still differ in several vital points, and if these points could be made uniform by mutual agreement a standard would be established which even a premier club could not afford to ignore.

With all the clubs in one association, the possibility of future uniformity in measurement rules would be largely increased, for comparisons of the advantages of various rules could be systematically made and intelligently discussed. It is possible, owing to varying local conditions, that no uniform rule could be found for boats of under 30ft. waterline, but certainly a uniform rule for boats over that length does not present such difficulties, while in any event the effort at uniformity is well worth the making.

The question of joining a national association will be brought before the Yacht Racing Association of Massachusetts the coming week, at a conference to be held in this city between the Association's executive committee and a special committee from the Yacht Racing Union of Long Island Sound. The proposition for a conference comes from the New York people, and should result in an interchange of ideas which will be of advantage to both organizations.

So long as the Massachusetts Y. R. A. is not asked to change its present measurement rule, any action of its exexutive committee looking to a national association would doubtless be approved by the clubs now having membership in it But even if they did not express approval finally, they would undoubtedly like to hear the arguments pro and con for a national association, so that the conference cannot fail to be worth the time taken for it.

The way toward a national association will be made much easier by a general recognition of the fact that no immediate action is possible in the matter of measurement and classification. No club or association has to-day a rule which it can confidently support as satisfactory for local or universal use. For the present at least, and until some better rule is proposed, there is no necessity for a difference as to which of several imperfect rules is the better. A great many important ends may be attained by the immediate formation of a union; but the question of measurement may well be left to "local option." It should ultimately be possible to devise a rule, or perhaps two rules, for yachts over and under 30ft., that would be applicable to every club, large and small, throughout the country. The universal adoption of such a single or double rule, however, would of necessity be gradual, several years at least being required before all the clubs were obliged to conform to it.

In the meanwhile there is plenty to be done in the uniting of the different associations and clubs, the unifying of the racing rules, and the concerted effort to discover a new and better measurement rule.

YACHTING NEWS NOTES.

At Tebo's Docks, South Brooklyn, the steam yacht Sultana, J. R. Drexel, is fitting out for a cruise to the West Indies. The steam yacht Buccaneer, formerly Unquowa, has also fitted for a cruise to Cuba. Her present owner, W. R. Hearst, has refitted her most elaborately below. Lasca, schr., Gen. James S. Watson, is nearly ready for a cruise to the Mediterranean. Coronet, schr., after her long cruise to the Pacific, is again in the basin.

A yacht club has been recently organized at Osterville, Mass., on Cape Cod, under the name of the Osterville Y. C. The officers are: Pres., A. B. Robbins; Vice-Pres., M. C. Crocker; Com., Herbert Crosby; Vice-Com., Wilton Crosby; Sec'y-Treas., Alexander Till.

The French yachting journal, *Le Yacht*, of 55 Rue Chateaudun, Paris, publishes a very large and complete list of works on yachting, navigation, etc., in different languages, published or sold by it.

The Sibbick 52-footer Samphire will this year meet a new rival in the Mediterranean, where she now is, in the yacht launched on Jan. 9 at the works of A. le Marchand, at Havre. Luciole III. is a fin-keel of the modern type, with long overhangs—a very handsome craft, to judge from her photos. Her owner, Mr. L. Viton, of Bordeaux, is an enthusiastic racing man. The new yacht is one of the largest racing yachts recently built in France. Her design and construction, as in the case of the very large number of smaller yachts, bear witness to the wonderful advances which the French have made in recent years.

Marietta II. has been renamed Llewellyn by her present owner, Alfred Carr.

Some San Francisco yachtsmen are now planning to build half a dozen yachts from the designs of Myra, skipjack, published in the FOREST AND STREAM. Quite a number of boats have already been built from this design in different places, giving great satisfaction to their owners.

Mr. Archibald Hogg, N.A., has recently issued through the Tyne Printing Works, Newcastle-upon-Tyne, Eng., a useful little book of "Tables for Constructing Ships' Lines." The tables, which are adapted to commercial work, passenger and cargo steamers, etc., are intended to enable the designer to secure quickly and accurately any required displacement, coefficient of fineness, position of C.B. and areas of sections. By their use the design may be rapidly roughed out, with a certainty that these main elements will be correct. There is also included a formula for wetted surface.

On Feb. 1 the Southwork Y. C. elected the following officers: Com., Joseph Peoples; Vice-Com., Thomas Platz; Rear-Com., William Johnson; Sec'y, John O'Shea; Ass't Sec'y, R. Bennett; Treas., J. Wilhelm; Measurers: B. Wilson, T. Murray, C. Brown, R. Bennett; Trustees, E. Dealy, B. Wilson, R. Murray; Steward, Harry Quinn.

The Hudson River Ice Yacht Club has elected the following officers: Com., Archibald Rogers; Vice-Com., James Reynolds; Sec'y-Treas., John Hopkins; Meas., Thomas Newbold. Regatta Committee: Guy C. Bayley, Chairman; Archibald Rogers, H. Livingston, Thomas H. Ransom and Charles W. Swift.

On Feb. 8 a meeting of yachtsmen was held at Oshkosh, Wis., and it was decided to attempt the reorganization of the Oshkosh Y. C.

Atlantic Y. C.

THE annual meeting of the Atlantic Y. C. was held on Feb. 8 at the Waldorf, with Com. Gould in the chair. The following officers were elected: Com., George J. Gould, steam yacht Atalanta; Vice-Com., Frederick T. Adams, schr. yacht Sachem; Rear Com., Benjamin M. Whitlock, auxiliary yacht Hildegarde; Sec'y, Col. David E. Austin; Treas., George H. Church; Meas., George Hill; Trustees, J. Rogers Maxwell, Philip G. Sanford, Alexander P. Ketchum, Newberry D. Lawton, Gen. Thomas L. Watson and Henry B. Howell. Membership Committee: Louis F. Jackson, Spencer Swain and Henry W. Banks, Jr. Regatta Committee: Newberry D. Lawton, Col. David E. Austen and George W. McNulty.

The report of the secretary showed a membership of 400 and a fleet of 234 yachts. The following amendments to the rules were passed:

In Rule 6, Sec. 4, substitute the word "minimum" for "mean."

In Rule 10, at the beginning of the rule, substitute the word "prizes" for the words "sail-over prizes," and add at the end of said rule the words, "in classes in which three or more yachts start a second prize shall be awarded to the second boat, and in classes in which five or more yachts start a third prize shall be awarded to the third boat."

In Rule 22 substitute for all that portion of said rule following subdivision 6 the following:

"The preparatory signal for the start of the regatta shall be given at the time stated in the circular of the race, or at any even quarter of an hour thereafter. The yachts shall be started in divisions to be announced in the circular of the race. The preparatory signal shall be a blue peter, to be displayed for ten minutes, which shall be the preparatory interval for the start of the first division.

"The signal for the start of the first division shall be a red ball, displayed at the expiration of the preparatory interval. The signal for the start of the second division shall be two red balls, displayed five minutes after the signal for the start of the first division. The signal for the start of the third division shall be three red balls, displayed five minutes after the signal for the start of the second division. If necessary to start the fleet in more than three divisions, additional signals for the other divisions will be announced by the regatta committee in the circular for the race.

Rule 24, Sec. 14, was also amended so as to read:

"When two or more yachts, in maneuvering for the start, are on the same tack, should the leeward yacht be close-hauled on the wind, prior to and at the time of an overlap being established, such yacht shall have the right to hold her course, even if thereby the windward yacht should be forced on the wrong side of the starting mark."

The final steps have been taken for the carrying out of the removal of the club to a new station on Norton's Point. A most eligible site has been obtained, and a large and comfortable club house will be built, with a basin for the yachts. A special steamer service between the station and the city will be established. Vice-Com. Adams repeated his gift of last year of two cups for sloops and catboats. A vote of thanks was passed by the club to Mr. John L. Bliss, of the regatta committee, for his labors during the past season.

Chicago and Western Yachts.

CHICAGO, Ill., Feb. 13.—It is thought among the yachtsmen of Chicago that the season of 1897 will be an unusually busy one for this city. There is a strong movement on foot for the consolidation of all the Chicago yacht clubs into one organization, to be known as the Chicago Y. C. Effort would be made to take into this club the smaller bodies of yachtsmen who have boats on the inland lakes of the Wisconsin summer country, Oconomowoc, Pewaukee, Geneva and other lakes, where a great number of Chicago men are interested. Should all these men come into the central organization, there would seem a fair chance to unite elements which are now in some cases affected with discordance, and to build up a stable interest for these waters, where heretofore yachting has been but a spasmodic sport at best.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

Commodore, John N. MacKendrick, Galt, Canada.
Sec'y-Treas., John R. Blake, Galt, Canada.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, H. W. Fleischman, 1611 N. 21st St., Phila., Pa.
Central Division, Laurence C. Woodworth, Gouverneur, N. Y.
Eastern Division, F. J. Burrage, West Newton, Mass.
Northern Division, Francis H. Macnee, Kingston, Canada.
Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

CRUISING INFORMATION.

IN the early days of the American Canoe Association systematic attempts were made to collect and distribute information such as is needed by cruising men. Such a scheme as this was at the very foundation of the Association, Mr. N. H. Bishop, the organizer of the A. C. A., having long been devoted to a study of American waterways. At a time when cruising was more general, about 1883-4, many were found to furnish information as to waters on which they had cruised, and there was quite a demand from men about to cruise. As the interest in cruising decreased, racing alone claiming the time and attention of the leading canoeists, this work was of necessity neglected, and for ten years nothing has been done. The present officers, the commodore in particular being a cruising man, have decided to attempt the revival of the scheme, and to that end have just sent out the following circular:

GALT, Ont., Jan. 10, 1897.—Fellow Canoeist:—It has been suggested to the executive officers that the general interest of the canoeist in the Year Book of the Association could be increased by the publication of a "Cruiser's Guide." We wish to publish the names of those who have an acquaintance with the several waters suitable for cruising, and also are willing to supply information to intending cruisers concerning those waters.

If you can assist us in this object, we would be pleased to have you fill out the accompanying schedule and return it as soon as convenient to the address of the Secretary-Treasurerer, Galt, Ontario, Canada. Thanking you in advance, I am yours truly, (Signed) JOHN R. BLAKE, Sec'y-Treas.

While we would like to see the scheme succeed, if only as an indication of a general interest in canoe cruising, we can foresee several difficulties, the main one being the small number of men who cruise enough to need such information for themselves or to obtain it for others. The experiment may be tried in a way by publishing in the Year Book a list of canoeing waters and the men familiar with them; but to go into the matter on a really adequate scale, by publishing a yearly guide, would involve an expense out of all proportion to the good to be derived.

Rifle Range and Gallery.

Pistol Shooting at the Sportsmen's Exposition.

NEW YORK, Feb. 15.—The coming revolver tournament, to be held under the auspices of the Sportsmen's Association and during its third annual exposition, March 13-20, at Madison Square Garden, is designed to be the national standard championship contest that will test the question: "Who is the best pistol shot in America?" The man selected as director of the tournament at the Sportsmen's Exposition is Captain James S. Conlin, of the Knickerbocker Athletic Club. The general committee of the revolver tournament consists of Dr. C. T Adams, Chairman; Capt. J. S. Conlin, Shooting Director; Capt James C Summers, Secretary; Gen Bird W. Spencer, Commissioner; A. P. Andrews, Major W. R. Pryor, W. C. Southwick, Guy E. Robinson, Pierre Lorillard, Jr., Dr. H. E. Westbay, Col. Leslie C. Bruce, A. C Gould, Dr. Reginald H. Sayre, Dr. W. J. Furness, C. L. Lewis and B. C. Williams

The prizes to be contested for are not yet specifically defined, but will include artistic and valuable trophies representative and emblematical of the important contests in which their recipients must prove victorious.

The tournament will be conducted in a gallery constructed according to improved and approved methods, after suggestions developed out of Captain Conlin's thirty years' connection with shooting, and the committee's combined experience. The gallery will be located in the basement of the Garden on the Twenty-sixth street side, the butts located toward Fourth avenue. Power fans will clear the smoke away, and there will be a space suitably decorated and containing an unrivaled collection of souvenirs and illustrations of shooting contests, where the interested public can view the shooting for the American championship. Western frontiersmen, Southerners with a hereditary handiness for pistols, and the gallery cracks of the East, will commingle in a friendly rivalry, and all try to put thirty bullets into the smallest space.

There will be three principal matches, designated as "Police," "Military" and "Any." These will be subdivided into team and individual matches. In addition to this classification, it is proposed to have a press match for individual journalists and teams representing different journals, and possibly press clubs.

The police are taking a great deal of interest in their end of the tournament, and in the departments of Pittsburg and Baltimore, it is reported (as well as New York), they are practicing for the coming contest. The guardsmen of different States, as well as regular army men, will compete, and the naval reserve has been heard from, and teams representing Philadelphia, Boston and New York will compete in the military tournament.

The committee on rules and regulations has reported, and printed copies can be obtained by addressing Secretary-Treasurer J. A. H. Dressel, at the new offices of the Sportsmen's Association, 377-379 Broadway. The rules are twenty in number, and provide for the service of three officials of the tournament. These are designated as statistical and financial officer, range officer and officer of the day. All the shooting is to be at 50yds., and the rules and qualifications are sufficiently strict to insure that the American champion will be proud of a distinction hereafter not easily to be won.

Cincinnati Rifle Association.

CINCINNATI, O., Feb. 7.—The following scores were made to-day by members of the Cincinnati Rifle Association. Conditions: 200yds., off-hand, standard American target and German ring target. Capt. Gindele made the fine score of 94:

German ring target:

Gindele	22	21	23	23	23	22	24	21	22	23	—224
Payne	22	19	19	19	24	22	24	22	19	22	—212

Rifle Notes.

THE contests for the .22 short rifles at the Madison Square Garden, March 13-20, during the week of the Sportsmen's Exposition, will undoubtedly be of great interest to riflemen throughout the country. Valuable prizes will be offered for competition, the list published in last week's issue of FOREST AND STREAM giving a foretaste of the good things in store for those who can hold well and steadily. The Zimmerman trophy contest will be specially interesting

On Monday, Feb. 8, Charley Zettler, of Zettler Bros.' rifle gallery, had an experience that was a startler About 2:30 P. M two strangers came into the gallery and gave him to understand that they wanted to see which of the two was the best shot. As neither of them knew a thing about a rifle, Zettler loaded and cocked it for them. Each fired 10 shots, and by some means one of them got a bullet somewhere near the center. He won. It was not until the last shot was being fired by the loser that it was seen what he was doing: He was holding the gun and pointing it down the range; with his eye glued to the telescope at the side of the tunnel, he waited until he caught sight of the target through the telescope, then he pulled the trigger!

Here's a hint for proprietors of shooting galleries where business is slack: "Taking a hint from a Louisiana drummer, a Tampa, Fla., proprietor of a shooting range, where business had become slack because people were tired of firing at a negro's head, had a new target made representing Weyler, with the bullseye over the heart. Immediately Cubans and their sympathizers swarmed about his place, forming in line to await their turn at the rifles. Some of the excitable ones offered a bonus to be allowed to stab it and to beat the effigy with clubs."

Rosenbaum was in Great Form.

JERSEY CITY, N. J., Feb. 4.—A 100-shot match was decided on the range of the Hudson Rifle Club to-day. Capt. H. Mahlenbrock and Wm. Rosenbaum, both members of the Hudson Rifle Club, were the contestants. The match was for a small side bet and the "refreshments." Rosenbaum shot in great form, and put up 2,433 points out of a possible 2,500. His 100 shots were so many consecutive bullseyes, and his score of 2 433 is the highest ever made on this club's range. Rosenbaum beat his opponent by 31 points, Capt. Mahlenbrock scoring 2,402. The conditions were 25yds., 25-ring target, ¼in. rings.

Some time ago Mr. Michael Dorrler shot a 50-shot match on this range and scored 1,211, or an average of $242\frac{2}{5}$; he is considered to be one of the best gallery shots in the country. Rosenbaum's average in his match with Mahlenbrock was $243\frac{3}{10}$; Mahlenbrock's $241\frac{1}{5}$.

Androscoggin Gun Club.

LEWISTON, Me., Feb. 4.—The members of the Androscoggin Gun Club, of this city, made the following scores to-day in the contest for the Doten medal, each man shooting at 25 targets:

Medal shoot: G. R. Hunnewell 25, Rich 24, Anderson 23, Cobb 23, Joslyn 22, Doten 20, Godfrey 19, Brown 18, Nason 17, Dexter 16, Andrews 16, Smith 15.

Considering the fact that the boys have not been doing much shooting this winter, the above scores compare very favorably with those made elsewhere. Hunnewell's 25 straight is his first essay over the traps since he got hurt last August. R.

Revolver Shooting in England.

ONLY the heavy charged ammunition as used in England will be allowed at Bisley this year, and no competitions will be held for any but .44-cal. or larger revolvers. This will prevent any comparison being made between the United States, or in fact any other country's military revolver, and the English large caliber, heavily charged one.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Feb. 22.—NEW HAVEN, Conn.—All-day shoot of the New Haven Gun Club. Targets. Wm. H Hazel, Sec'y.

Feb. 22. WISSINOMING STATION, P. R. R., Pa.—All-day shoot of the Florists Gun Club, of Philadelphia. Targets.

Feb. 22.—PARKERSBURG, W. Va.—All-day shoot of the Mountain State Gun Club. Targets. Leo Epstein, Sec'y.

Feb. 22.—NEWARK, N. J.—All-day shoot of the Forester Gun Club. Targets. H. E. Winans, Sec'y.

Feb. 22.—ELKWOOD PARK, N. J.—Full programme of live-bird events. Shooting commences at 10:30 A. M

Feb. 22.—MARION, N. J.—All day shoot of the Endeavor Gun Club. Targets. A. R Strader, Sec'y.

Feb. 22.—INDIANAPOLIS, Ind.—All-day shoot of the Limited Gun Club. Targets. Royal Robinson, Sec'y.

Feb. 22.—PITTSBURG, Pa.—Target shoot of the Pittsburg Gun Club. Elmer Shaner, Sec'y.

Feb. 27.—HACKENSACK, N. J.—Contest for the E C. cup, on the grounds of the Bergen County Gun Club. C. O. Gardner, Sec'y.

March 4.—YARDVILLE, N. J.—Inaugural handicap, 20 birds, $15, birds included, at 25 cents each; handicaps 28 to 33yds. Open to all.

March 16-19.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed. Open to all. Nobody barred.

March 23-25.—NEW YORK.—Interstate Association's fifth annual Grand American Handicap (live birds), at Elkwood Park. $1,000 guaranteed in the main event, all surplus added. Entries close March 20.

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open-to-all tournament.

April 7.—HACKENSACK, N. J.—Third contest for the Recreation cup, under the auspices of the Bergen County Gun Club, Cup contest at 12 noon sharp. C. O Gardner, Sec'y.

April 14-16.—BALTIMORE, Md.—Tournament of the Interstate Association, under the auspices of the Baltimore Shooting Association.

April 15.—YOUNGSTOWN, O.—First tournament of the Pennsylvania and Ohio Border Gun League. Geo H. Jones, Sec'y.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

April 21-23.—SAN ANTONIO, Tex.—Second annual meeting and tournament of the Texas State Sportsmen's Association. O. C. Guessaz, Sec'y.

April 27-30.—FONDA, Ia.—Tournament under the management of Geo. E. Hughes and C. R. McCord. Live birds. $800 added money.

April 28-29.—RICHMOND, Va.—Tournament of the Interstate Association, under the auspices of the West End Gun Club.

May 5-7.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 11-13.—PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club. First two days, targets; last day, live birds.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

May 19-20.—SAVANNAH, Ga.—Tournament of the Interstate Association under the auspices of the Forest City Gun Club.

May 20.—GREENVILLE, Pa.—Second tournament of the Pennsylvania and Ohio Border Gun League. Geo H Jones, Sec'y.

May 26-29.—EAST ST. LOUIS, Ill.—Annual tournament of the King's Smokeless Gun Club.

June 2-4.—SPRINGFIELD, O.—Annual tournament of the Ohio Trap-Shooters' League, under the auspices of the Springfield Gun Club.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 10.—NEWCASTLE, Pa.—Third tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

July 14-15. NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H Jones, Sec'y

Aug. 5-6. MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Ferd Van Dyke reached New Jersey on Monday, Feb. 8, and was in New York for a few hours on Tuesday before leaving for New Haven. Van was feeling good, and seemed to be quite satisfied with his experience of Texas and northers combined. He spoke in high terms of the way in which the Big Three carried out the programme, despite all drawbacks and despite climatic conditions that might well have made a stouter combination quail. The ownership of the Schmelzer cup—for which Van, Heikes and Charley Young tied—was not decided at San Antonio, but will be shot off at some date that will be set to suit all three of the claimants.

The result of the Greiff-Ross match shot on Friday last, Feb. 12, on the grounds of the Cobweb Gun Club, at Baychester, N. Y., came somewhat in the nature of a surprise It was not so much the big score made by Ross as it was the poor showing made by Gus Greiff that surprised us. The birds were not good ones; they couldn't be good with the weather such as it was—a northeaster full of snow and sleet blowing right in from the traps. No birds could fly well under such circumstances; they were almost bound to be incomers; but still fast incomers are about as nasty a bird as any one wants, especially if they have the wind under their tails. The difference in the totals does not accurately represent the shooting capabilities of the two men. Ross shot a great gait, but Greiff was away out of form. The score was something like 93 to 79.

F. Sinnock, the winner of the cup at Hackensack, N. J., on Feb. 10, is a young shooter who hails from Newark, N. J., where he is a member of the Forester Gun Club. Sinnock shoots regularly with his own club on the Newark marshes, just west of the embankment where the Lehigh Valley crosses the Pennsylvania main line. On this occasion he was shooting a Winchester repeating shotgun for the third time, and was naturally pleased with the result of his combination of such a gun with W-A powder and leader shells. A score of 94 out of 100 is good on any kind of targets, and is fast enough to trot in any company. He broke 46 out of 50 at known angles and 48 out of 50 at unknown; in the latter he lost his 25th and 26th targets, each time spoiling a 25 straight.

The monthly shoot for the Portage county (O.) championship E. C. cup and the handicap championship badge was held at the Ravenna Gun Club grounds on Tuesday, and was a very interesting affair, shooters from different parts of the county contesting, some of the new shooters making it interesting for the older ones. These shoots are held on the second Tuesday of each month, and are at 50 targets, unknown angles. The cup was donated by the E. C. Powder Co., and the gold badge by a friend of the club. Mingo, of Ravenna, won the cup, score 47; Spiers, of Atwater, the handicap championship gold badge. Crail and Madone divided first purse, Kellogg won second, Schweitzer third. The contest was witnessed by a number of people who seemed to enjoy the sport, and especially the marvelous shooting of George S. Paine. Mingo's load, score 47 dead, was 8¼drs. of E. C. powder.

Tom Morfey, of Paterson, N. J., is doing some practice work on targets on the grounds of the Bergen County Gun Club at Hackensack, N. J. Morfey is fast coming up in target shooting, and is harder to beat in a match than in a sweepstake. He will naturally "come on" faster now than heretofore, as he is getting more and more interested in smashing targets. His 91 out of 100 on Feb. 12, in a strong nor'easter, with sleet and snow to bother him, was a really good performance, particularly as he shot an uphill race from start to finish. Griffiths, of the home club, gave him a hard tussle until the last target had been shot at.

The Androscoggin Gun Club, of Lewiston, Me., is a club of which we and the readers of FOREST AND STREAM have heard but little. The doings of this club will attract more attention from now on, from the fact that the Interstate Association will give a tournament at Lewiston on Aug. 4-5 next under the auspices of the Androscoggin Gun Club. We publish this week a record of the scores made by members of this club in a medal contest, a regular club shoot of 25 targets per man. A straight, one 24, two 23s and a 22 is a pretty good record for any club to boast of. The natives will evidently not be very easy when Aug. 4-5 comes on deck.

We thought it was well understood that Capt. A. W. Money was not coming back to this country until the middle of February at the earliest. We note consequently with much surprise that one of our cotemporaries states that he has returned and that he showed to great advantage over the Elkwood Park traps on Saturday, Feb. 6. As a matter of fact, it was Noel F. Money, "one of the Money Bros.," who was at Elkwood on that date, and who, with M. Herrington, of the W-A powder, divided the honors of the day.

Elsewhere we give a review of the programme for the Grand American Handicap meeting at Elkwood Park, N. J., March 23-25. We have extracted freely from the programme because it is all good reading, and besides being of interest to shooters and intending participants in the Grand American Handicap, is worth noting by club secretaries and others who care to study literature on tournaments and how to get up a programme. We look upon this programme as the masterpiece of such efforts on the part of the Association.

The Pennsylvania and Ohio Border Gun League, an organization that was started last year, and that met with great success at its monthly team shoots, starts out this year with a very good prospect of beating its last year's record. The schedule of its dates shows: April 15, Youngstown, O.; May 20, Greenville, Pa.; June 10, Newcastle, Pa.; July 2?, Meadville, Pa.; Aug. 19, Warren, O. The attendance at its five monthly shoots last season averaged 60.

The North Side Gun Club, of Pittsburg, Pa., will hold a shoot on Washington's Birthday at its grounds, Marshall avenue, Allegheny City. The regular programme commences at 1 P. M. sharp, preliminary practice commencing at noon. All purses will be divided under the Rose system. The club members will also compete for one of the W-A trophies, presented by the Laflin & Rand Powder Co.

The Interstate Association's circuit for target tournaments for the season of 1897 is now completed, the Association having arranged for a tournament at Savannah, Ga., on May 19-20. We can trace the hands of the Palmetto Gun Club's boys in this matter, the Charleston shooters having had two Interstate tournaments held on their grounds. The Savannah shoot will be a popular one.

Neaf Apgar has gotten a new gun and has struck his old gait, pounding out straights and "all-but-ones" with the regularity that marked his work in the past. In the first three strings for the *Recreation* cup at Hackensack, N. J., on Feb. 10, he knocked out two 24s and one 25! The targets may not have been thrown "60yds.," but no one else could duplicate his efforts.

Secretary Royal Robinson writes that the Limited Gun Club, of Indianapolis, Ind., will hold a shoot at targets on Washington's Birthday. The programme will consist of 15-target and 20 target events alternately; the entrance fees will be $1.50 and $2 respectively; four moneys in the 15 target events and five moneys in those of 20 targets. Shooting commences at 9:30 A. M.

The Winchester Repeating Arms Co. are in the market with a new shell, to be known as the New Rival. It is specially designed for black powder, and is made of an excellent class of paper, with a primer hole well and clearly cut, thus insuring perfect ignition. Its color is olive green, so that it will readily be recognized from any shell now on the market.

The Penacook (N. H.) Gun and Rifle Club is a new organization in New England, having been organized on Feb. 2 with a membership of 25. Dr. A. H. Hoyt is the club's president; Guy H. Hubbard its secretary. The club has grounds for both rifle and shotgun, and commences life with bright prospects of success.

From the communications we have received during the past three or four weeks, it looks as if every gun club of any size was going to have an all-day shoot on Monday next, Washington's Birthday. Times may be hard, and the boys may not shoot quite as many shells away as they used to do, but when it comes to a holiday they'll all be there.

We are making notes of the fixtures we announce, and also of the space we devote each week to running notes of coming shoots sent us by parties interested in booming such affairs; we are also making notes of those who remember us when the shoot is over and our services no longer needed. "We'll never tell," but—we'll do some thinking.

Harry Coldren, of Reading, Pa., and John Rehrig, of Leighton, Pa., shot a race on Feb. 9 at 50 live birds per man, $100 a side. The match took place on the Spring Valley shooting grounds, at Reading, the birds furnished being strong flyers. The match was a close one throughout, Coldren finally winning by a margin of 1, the scores standing 44 to 43.

The Donaldson medal, a badge for which members of the Florists' Gun Club, of Philadelphia, Pa., have competed 93 times, was finally won on Tuesday, Feb. 9, by C. D. Ball, after a tie with George Craig, both men having 4 wins to their credit. On the shoot-off Ball was an easy winner.

R. S. Waddell, general agent central States for the Du Pont and Hazard powder companies, and also for the Sycamore Powder Co., of Nashville, Tenn., was in New York last week and paid a visit to this office. It was our loss that we were absent from the city when Mr. Waddell called.

The Pittsburg (Pa.) Gun Club will hold a target shoot on Washington's Birthday, on the Marshall avenue grounds, Allegheny City. The W-A trophy, presented by the Laflin & Rand Powder Co., will be shot for, shooting commencing at 1 P. M. Elmer Shaner is secretary of this club.

A new gun club has been organized at New Canaan, Conn., under the title of Engleside Gun Club. Only a temporary organization has been effected; permanent officers are to be chosen on Monday next, Feb. 22, the date of the club's first target shoot. Mr. A. S. Bunnell is secretary *pro tem.*

The Endeavor Gun Club, of Jersey City, N. J., will hold an all-day shoot at targets at its Marion grounds on Washington's Birthday, Feb. 22. The monthly prize shoot of the club will be held in connection with this shoot. Traps ready by 10 A. M.

There will be a four days' tournament at Fonda, Ia., April 27-30, under the management of Geo. E. Hughes and C. R. McCord. The programme will consist of live-bird events, $800 in cash being added to the programme.

Billy Fieles has organized a gun club at Christiana, Pa., and has already gotten together more than a squad of shooters. Something must have been wrong with Billy at the new club's shoot on Feb. 4. His scores were not those of a couple of years ago.

Jim Elliott and Charley Grimm have not come together as yet. Maybe we shall hear something after the Grand American Handicap of 1897 has become a part of our trap-shooting history.

Alfred and George W. Clay, of Austerlitz, Ky., hold a shoot on Feb. 17 at crows and targets on the grounds of the Bourbon Gun Club, near Paris, Ky.

Some of the boys are getting lots of practice for the Grand American Handicap. They are keeping the traps at Hot Springs, Ark., busy all day and every day.

The third contest for the *Recreation* cup will be held at Hackensack, N. J., April 7, under the auspices of the Bergen County Gun Club.

Elkwood Park will have a full programme of live-bird events for Washington's Birthday.

FEB. 16. EDWARD BANKS.

ON LONG ISLAND.

BROOKLYN GUN CLUB.

Feb. 13.—So far as the weather was concerned, this was an excellent day for the initial shoot of the newly organized Brooklyn Gun Club. There were, however, too many counter attractions to-day for a large attendance of shooters to be looked for. In addition to this, there had been a great deal of shooting around New York during the past week. Still a dozen shooters on hand insures a good afternoon's sport, and that was just what the boys had at the traps of the Brooklyn Gun Club. The traps worked well, and threw the targets "out of sight." It was real hard shooting, the targets flying far and fast, while the trappers lined them up and down the screen in a way that made the shooting very difficult. The dazzling whiteness of the snow under the rays of a hot sun caused temporary breaks in the shooting of many a man, and targets would occasionally steal a march on the boys. The lay of the ground, too, makes the shooting naturally harder than at most places: To the left it slopes off abruptly into a small-sized ravine, while to the right it rises gently; right-quarterers seem to be rising fast, while left-quarterers appear to have a much flatter trajectory than they really possess. Right quarterers were shot *over* and left-quarterers shot *under* with a regularity that some of the shooters found very depressing.

The shoot was run by Messrs. John Wright, Theodore Baron, and the club's secretary, Eddie Morehouse. Everything went off smoothly, not a hitch occurring anywhere, not even in the matter of lunch, the latter article disappearing with a smoothness and rapidity that showed appreciation. Among the shooters were Neaf Apgar, J. G. Grier, of Dunellen, N. J.; Dick Phister (Woods), Platt Adams, Edward McAdam, H. J. Knebel, Billy Mills, F. S. Edwards, etc. Team races and sweepstake shooting made up the programme for the afternoon, scores in the team races being as below:

No. 1, team race, 15 targets, unknown angles: Edwards's team: Edwards 12, Mills 11, Baron 10, Woods 8—41. Apgar's team: Apgar 13, Grier 10, Adams 8, Patterson 2—35.

No. 2, same conditions: Edwards's team: Edwards 13, Baron 10, Mills 7, Grier 7—37. Apgar's team: Apgar 13, Woods 10, Adams 8, J. Patterson 1—32.

No. 3, fifteen targets, known angles: Edwards's team: Edwards 13, Baron 12, Woods 11, Mills 9, Wright 6—51. Apgar's team: Apgar 13, Grier 13, Adams 13, McAdam 13, Henry 9—61.

No. 4, same again: Edwards's team: F. S. Edwards 13, P. Adams 11, K. J. Henry 11, R. Woods 9, T. Baron 7—51. Apgar's team: John Grier 13, N. Apgar 12, E. McAdam 10, W. Mills 9, J. Wright 6—50.

A special feature of these team races was the way in which Nos. 1 and 2 were decided, the boys naming them "FOREST AND STREAM Razzle Dazzles." The way they were managed was productive of much fun, nobody knowing on which side he was until the whole score had been shot out. Edwards and Apgar were chosen captains, and two numbers (1 and 2) were put into a hat, the captains drawing a number each without showing what they were. Slips numbered 3 to 8 were then put into the hat, the other six shooters each drawing a number and putting it into his pocket also without looking at it. As soon as the scores had been shot, a general "show up" followed, those having the numbers 1, 3, 5 and 7 being on one side, and Nos. 2, 4, 6 and 8 being on the other side. In each case the losing side paid for the winners' targets. The other team races, Nos. 3 and 4, were ordinary "pick-up sides."

In tabulated form the other scores shot to-day were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	10	10	15	15	15	15	10	10	10	10	25
Apgar	8	8	6	8	13	11	..	..	..	..	5	6	..
Baron	5	6	4	7	..	..	13	..	6	6	..	..	..
Wright	5	9	..	..	4	..	..	5	..	..	..	..	..
Edwards	..	7	8	10	11	12	..	..	..	..	8	6	22
Adams	..	5	5	7	7	10	8	10	6	8	6	5	.
Woods	..	..	5	5	10	..	..	..	..	..	..	..	..
Green	..	..	..	6	10	11	..	10	..	..	5	5	18
Mills	..	..	..	5	10	..	..	..	..	..	4	..	..
Knebel	..	..	..	..	8	..	..	..	..	..	..	..	..
McAdam	..	..	..	..	8	6	10	10	6	5	..	..	..

Richards	..	..	..	..	7	10	11	10	7	6	2	..	..

Nos. 1 and 2 at known angles; No. 3, expert rule; Nos. 11 and 12 at 5 pairs; all others at unknown angles.

ERIE GUN CLUB.

Feb. 10.—The Erie Gun Club turned out strongly this afternoon, the occasion being the regular monthly live-bird shoot of the club at Dexter Park. John Plate, of Class AA, was the only man to score all his 7 birds. Scores:

John Plate (AA, 28)	1112222—7	J Schmidt (B, 27)	0021120—4
H Dohrmann (AA, 28)	0012212—5	G Fuchs (B, 27)	0?0?11—4
C Detlefsen (AA, 28)	1011200—4	B H Plate (B, 27)	0100?2—4
H Muller (A, 28)	2100212 5	Fred Gref (B, 27)	0020?2—3
H Blackley (B, 27)	0?2?012—5	G Schuf-ldt	011?20?—5
W Roberts (B, 27)	200?022—5	C Runge	1020011—4
H Jankowski (B, 27)	1110202—5	C H Luhrssen	0000?2—2

UNKNOWN GUN CLUB.

Feb. 11.—The regular monthly live-bird shoot of the Unknown Gun Club was held this afternoon at Dexter Park. Sixteen members took part in the shoot, four of the number making clean scores, as below:

Dr Schwartz (25)	1112121—7	John O'Hara (25)	2021201—5
John Bohling (26)	2211212—7	Frank Ibert (25)	1011?0—4
William Sands (25)	2222222—7	Gabriel Selig (25)	1220100—4
H Boemmermann (25)	1122111—7	John Akhurst (25)	0?00?2—4
E A Vroome (29)	2121011—6	John Knebel (22)	1100210—3
Moses Brown (28)	1112101—6	J B Voorhees (29)	0021002—3
Dr Moore (26)	1221220—6	Henry Knebel (26)	0001102—3
Robert Smith (25)	0211111—6	A C Rankin (25)	1020100—3

NEW UTRECHT GUN CLUB.

Feb. 13.—The New Utrecht Gun Club held its regular shoot this afternoon on its target grounds at Dyker Meadow. Seven members shot in the club event, D. C. Bennett winning the Class A badge with 25 straight, and Fleet taking the Class B badge with 18. The club shoot conditions have been changed from those which prevailed last year; the conditions now are unknown angles, handicap allowances of extra targets to shoot at, the members being divided into different classes. A full afternoon's sport was had, everything being in favor of good scores, with the exception of a strong glare from the snow. Scores were:

Club shoot, 35 targets, unknown angles, handicap allowance:

D C Bennett (A, 25)	1111111111111111111111111 —25
J Gaughen (A, 25)	1101111111011111111000111 —20
J A Bennett (A, 27)	1111101111101001011011101111 —19

CRESCENT A. C., OF BROOKLYN.

Feb. 13.—The Crescent Athletic Club, of Brooklyn, expected a visit from a team of the Princeton College Gun Club, but the expected did not happen. The members of the home club had an afternoon's shooting, a number of matches and sweepstakes being decided. Nos. 3 and 4 were handicap events, handicaps of misses as breaks being allowed. In No. 3 C. Sykes shot at scratch, allowing Pickett 5 misses as breaks and Hopkins 12; in No. 4 Sykes allowed Pickett 4 and Hopkins 11 misses as breaks. In the other events everybody shot from scratch. Scores were:

New Guns for Chicago.

CHICAGO, Ill., Feb. 13.—Within the past month Louis Jordan, a rising and already popular gunmaker of this city, received from the old country a consignment of arms possessed of more than ordinary interest to sportsmen. Of these guns there were twenty-four in all, most of them going out at once on special orders for which they were made. At this writing only seven out of the twenty-four are left. Of the lot eight were fine ejectors, from $50 to $225, many of these very highly engraved and admirable specimens of the gunmaker's art. Three of the guns were three-barrel arms, rifle and shot, the barrel of the rifle underneath. These were as practical three-barrel guns as one is apt to see, and the surprising thing is that they weighed not over 7¾lbs. One of these was made for Dr. C. E. Fuller, of this city, who is highly pleased with the little gun. The other guns are $90 or $100 grade guns, not so highly finished, but very attractive weapons.

The interesting thing about the guns above mentioned is their extreme lightness in weight. I do not think a gun out of the twenty-four was so heavy as 7lbs., yet they are guaranteed to resist any charge of the strongest nitro made, to any point possible in any other gun. This fact is due to the material used in the barrels, the new material known as the Krupp special steel, which in reports once printed in FOREST AND STREAM by Mr. Armin Tenter was shown to possess a singular toughness and strength, combined with great lightness in bulk required to attain all the desired qualities of a perfect gun barrel. Mr. Jordan, who has relatives in the great factories of Fr. Krupp in Essen, Germany, has been fortunate enough to secure the agency for America for these barrels, and already has had many inquiries from gunmakers as well as individual sportsmen of this country. Should all continue to go well with Mr. Jordan, he should make a success of this new line of trade. He is a skilled and artistic gunmaker himself, and received the World's Fair diploma for hand made guns of highest excellence.

The guns shown in the Krupp barrels are delightfully neat and light. It seems the tendency of the day to use lighter and lighter arms both in rifles and shotguns, and some of these little fellows were beauties. The Krupp barrels are set on the breech block in a peculiar way. It seems this metal will not stand brazing, so the barrels are set on the block by means of a dovetail joint of great strength and absolute rigidity, solder only being used to make the joint watertight. This arrangement of the barrels gives a wide and strong look to the arm, which indeed is a sturdy weapon, light though it may be. In color the Krupp steel is blue, unfigured, resembling the Crown steel or Whitworth fluid steel in appearance. Mr. Jordan has had requests to fit such barrels on other actions, but owing to the peculiarity above mentioned of fastening on the barrels to the breech block, he does not counsel this, as the job does not suit his eye when so made. Louis Jordan has long had a good clientage of his own in this city, but has not thought upon going out of local trade so much until he was lucky enough to make this arrangement for the agency of the Krupp steel barrel. I understand this came about through the fact that Louis Jordan had an uncle at court. It is at times a very good thing to have an uncle. As a matter of local pride, Chicago is glad that Mr. Jordan had this uncle, and so brought to Chicago this interesting addition to the useful and beautiful improvements the gunmakers of to-day are continually bringing forth for those pampered beings, the sportsmen. Mr. Jordan had a regular levee on the day when the guns were unpacked, his shop being filled with shooters admiring the new guns, which are something of a novelty here as yet.

E. HOUGH.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Feb. 10.—The Rochester Rod and Gun Club held a tournament open to all to-day. There was match, prize and sweepstake shooting. The programme called for eleven events. No. 6 was a free prize contest, five prizes, each a 1lb can of Gold Dust Smokeless powder with measure. The ties were shot off and won as follows: Byer first, Meyer second, Davis third, East fourth, Dr. Weller fifth.

After the programme was shot off there were two matches shot. The first was between Davis and Byer. The second was a three-cornered match, winner to take the money. Mr. Davis is a new and young shooter of 130 lbs., and carries a chip on his shoulder that corresponds with his weight. Some of the old heads tried to knock it off, but Davis has a nerve of steel and can point the gun like an expert, puts up the money, smashes the targets, walks in and picks up the money, puts it in his pocket, and smiles.

Events:	1	2	3	4	5	6	7	8	9	10	11

DE WITT.

Trap Around Pittsburg.

HERRON HILL GUN CLUB.

PITTSBURG, Pa., Feb. 12.—A fast lot of birds were trapped to-day at the grounds of the Herron Hill Gun Club. Seven shooters took part in the 15 bird race, Alex. King and Anson being high with 14 each. In the 7 bird event Strong was first alone with a straight. Scores:

Anson	2012 2222222222—14	0 211 2—6

Elkwood Park's Programme.

BELOW is the programme for Elkwood Park on Saturday, Feb. 20, commencing at 12:30 P. M.; Brookdale handicap, 10 birds, $10, handicaps 26 to 31yds., high guns. Sweepstakes on the other two sets of traps.

For Washington's Birthday, Monday, Feb. 22, the following programme has been arranged, shooting commencing at 10:30 A. M.:

No. 1, Star miss-and-out, $1.

No. 2, the Washington: 15 birds, $15, 3 moneys, Rose system; professionals, 32yds.; amateurs, 30yds.; ties, miss and out.

No. 3, Long Branch handicap: 10 birds, $5; handicaps from 25 to 31yds. Those at 25 and 26yds. allowed 2 misses as "no birds;" 27 and 28yds. 1 miss as a "no bird." High guns, ties, miss-and-out; allowances do not run on ties.

Western Trap.

"SPORTING" NEWS.

CHICAGO, Feb. 13.—Advice was privately received in Chicago last Monday, Feb. 8, that Mr. Daniel Stuart, a magnate of present residence at Carson, Nev., where he contemplates holding at an early date a carnival of slugging, in which Mr. Corbett and Mr. Fitzsimmons will be leading actors, has just decided to give also a two days' tournament at pigeons, adding the neat sum of $1,000 to such sweepstake money as shall seem expedient for the shooters present. He expects to attract a great many prominent gentlemen shooters from Chicago, New York and other large cities. This is perhaps the first time on record when a live-bird tournament and a prize fight have been advertised as joint attractions. The juxtaposition even in the types will hardly please a great many who do not interpret the word "sport" perhaps quite as Mr. Daniel Stuart does.

E. HOUGH.

The last issue of *Harper's Weekly* contained some excellent reproductions of portraits taken during the recent Larchmont amateur championship shoot, Jan. 29-30. The positions at the score of both Murphy and Macalester are characteristic, while Dr. Wynn's picture shows him as he appeared 100 times on the two days—just before he stepped to the score to shoot. There are a few remarks in the same paper regarding the shoot itself. The remarks are signed by Caspar Whitney. One of the criticisms passed upon the shoot is rather interesting. It runs thus: "Considering that the prizes apart from the championship trophy, were certain percentages of the sweepstakes made up from taxing each entry $100, the average sportsman will be perplexed by the 'amateur' description of the affair. It is no clearer to me than it is to him. If in pigeon shooting men may compete for a purse and be called amateurs, it will be interesting to learn what conditions describe the professional." It is always rash to jump at a conclusion, but on this occasion the conclusion is forced upon us that Mr. Whitney has not only not studied the subject which he essays to criticise, but is also palpably ignorant of what constitutes an amateur or a professional.

Hot Springs Tournament.

Hot Springs, Ark., Feb. 8.—The opening day of the tournament was not productive of a large attendance, but this was not to be expected as this tournament is to be a prolonged one. The weather too had a tendency to keep the entries down. This morning it was cloudy, and the atmosphere was bleak and raw; but in the afternoon the sun came out and made it much pleasanter. Another thing that added pleasure to the shoot was a telegram from Wirt announcing that he, Parmelee, Merrill, Powers and Settle would be with the boys to-morrow.

At no time during the day did the entries run high, the largest number in any event being fourteen. In the first event Sharp, a novice, gave the boys a surprise. He borrowed a gun from Hughes, and with it knocked out a straight, all one-barrel kills, cutting up first money with Bartlett. The second event, a miss-and-out, was productive of quite a shooting match between Sumpter, Heikes, Bartlett, Du Bray and Elliott. There were twelve entries in this, and all went out rather early, though Winston managed to stay 11 rounds. After his departure the five first mentioned proceeded to have it out. The birds in this event were rather ordinary, being somewhat, like the shooters, hampered by the weather; but it is seldom that we see such scores put up by five men, even on ordinary birds After each of the five had killed 20 straight from the 30yds. mark, Elliott proposed that they go back 4yds. in order to finish it. If Jim thought he had any the best of it here he soon had this illusion dispelled, as his very first bird came very near going out, being in by only about 1ft. Then he got down three more, and the others did the same; but his 25th, a fairly fast one, went out of bounds. No sooner had Jim been disposed of than the others decided to cut up the money. There were two other events, another miss-and-out and a 10-bird event, both handicaps, the scores of which are given below:

The feature of the day was the fine shooting of Capt. Bartlett; he shot at 52 birds and scored all but one of them, the lost one falling dead out of bounds. Du Bray also shot in fine form, losing only one out of 35 shot at.

No. 1, 10 birds, entrance $5, three moneys, 50, 30 and 20 per cent.: Sharp 10, Bartlett 10, Murphy 9, Winston 9, Parker 9, Du Bray 9, Dickey 9, Sergeant 9, Heikes 8, Houston 8, Ellis 7, Hughes 7, Taylor 6.

No 2, miss-and-out, $2: Sumpter, Heikes, Bartlett and Du Bray, 25; Elliott 24, Winston 10, Keller 8, Parker 6, Houston 4, Ellis 2, Murphy 2, Dickey 1

No. 3, same: Winston, Ellis, Murphy and Bennett, 8; Heikes 7, Bartlett 5, Parker 4, Wallace 3; Sumpter, Keller and Dickey, 2; Norman 0.

No. 4, 10 birds, $5, three moneys, handicap: Norman (27) 10, Bartlett (30) 10, Bennett (29) 10, Murphy (29) 10, Sumpter (30) 9, Wallace (28) 9, Heikes (31) 8, Keller (28) 7, Parker (30) 7, Dickey (31) 6, Ellis (27) 5, Winston (30) 5

Second Day, Feb. 9.

This was the day set for the Arlington Handicap, but the weather again kept the entries down. The false hopes that had been awakened in the shooters' minds were all dispelled when they awoke in the morning and found the sky overcast and the same bleak wind that blew most of the time at San Antonio once more very much in evidence. At times the sun managed to break through the clouds, but only for a little while, so it had scarcely any effect on the temperature. The shooters were late getting to the grounds, so to warm up matters a little a miss-and-out was started. This had twenty entries, but was not a very long drawn out affair and lasted only six rounds, when only six remained. These six—Parker, Elliott, Heikes, Bennett, Wirt and Powers—agreed to divide the $40.

THE HANDICAP.

Immediately upon the conclusion of the above the handicap began with twenty-four entries. Of these only one, Norman, killed straight; he is a beginner and was therefore given the 27yds. mark, and was also exceedingly fortunate in drawing easy birds. There were three 24s: Parmelee, Merrill and Settle. Parmelee shot in good time and in good form, and the only bird he lost was a fast outgoer which managed to avoid both loads. Merrill got off wrong, as he lost his first one, a fast one similar to that which threw Parmelee down. He afterward atoned for this by shooting a good, steady pace, and made several brilliant stops of exceedingly fast birds. His seventh was the fastest of the lot and was killed far out by a good second. Settle also shot in a very smooth style, his first was very effective and nearly always well placed.

His only lost bird, a dead out of bounds, was not a very hard one; he drew a number that were much faster, all of which he scored. Capt. Bartlett, Sumpter, Bennett and Houston scored 23. Bartlett, who had shot so brilliantly the day before, had the bad luck to lose his 1st bird dead out of bounds, and that by less than a yard; it was a rapid driver, and though hit hard with both loads went out. His 16th bird did the same thing, but this one went much further. Sumpter shot along in elegant style, going straight up to the 15th round, when he missed a rather slow one, that lingered at the trap. Then he settled down to that fast pace he had displayed all along, until his final bird, which was a very rapid incomer This miss was excusable from the fact that it was a black bird and nearly dark when the miss occurred. This round proved disastrous to many. Bennett is an assumed name, and is the colors that a deaf mute shooter from St. Paul sails under. This shooter has a style that is very captivating, and his judgment is such canas only come by long experience. His two losses were dead out of bounds. The first was one of the slobbering kind, but the second was of the hard luck order, an instance where the bird was too strong for both loads and struggled out. Houston, the other 23, is another inexperienced shooter, and on the strength of this was given the 26yds mark. Both his losses were clean misses. The first was a quartering towerer that doubtlessly was undershot, while the other was a fast outgoer.

In the 24 hole were Heikes, Wirt, Powers, Keller and Elliott. Heikes's three losses all got away without any apparent injury, and only by the greatest streak of luck was his 15th scored to him. This bird, a towerer, acted very peculiarly; it flew straight away and when almost out of bounds came back, circled around over the grounds, but was never out of bounds, and finally started back for the dead line, and when all but out suddenly collapsed, much to the satisfaction of the shooter, who had already left the score. Powers is another one who avoided the 21 hole; he lost two birds dead out of bounds, one of them a fairly fast one. Wirt had two dead out of bounds, but missed rather an easy one along toward the last, just as he was expecting to go out with 23. Keller scored 22 and was well satisfied with his showing, and with any kind of luck would have had two more added to his total; two dead out of bounds his score shows, and both very close to the boundary. The cipher in his score represents one of the hardest birds that was trapped in the entire 600, and only got out on account of bad light. Elliott is the remaining 22; his first miss occurred on a very fast driver, but the second was a rank easy incomer. The dead out of bounds was a good hard bird, the kind that any one will miss any time. Sergeant, Hughes, Du Bray and Leach wound up with 21.

THE BIRDS.

As is usually the case in these events, the birds were a mixed lot, some fast ones and some poor ones, but the most of them only fair. For a while there were some very good ones, and then came some soft ones, and then at the close, as it was nearly dark, a fast lot was sprung on the boys that caused lots of trouble, and several missed just when some of them were figuring on going out with one more to their credit.

Arlington handicap, 25 birds, entrance $10, birds extra, 5 moneys, class shooting:

Third Day, Feb. 10.

There was nothing on the programme for to-day, and the forenoon was spent in practice, and three miss-and-outs were shot by McDonald, Leach, Winston and Werk; in each of these Leach managed to stay, and the last one he landed all by himself. About noon Winston got into his elements again; for some time, in fact, ever since we met him going to San Antonio, he has been talking matches, so finally to-day he got on one with Murphy, but not exactly to his liking, as it was a one-barrel game, 25yds. rise, gun below the elbow; yet he won by 2 birds. Score:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

Miss-and-out, $2, handicap rise, re-entry in the first round:

Powers (30) 20, Du Bray (29) 20, Settle (27) 20, Sergeant (27) 18, Winston (31) 17, Werk (26) 15, Wirt (27) 14, Norman (28) 11, Parker (30) 10, Heikes (31) 8, Dickey (30) 8, Ellis (27) 6, Bartlett (30) 5, Merrill (30) 2, Murphy (29) 2, Sumpter (30) 1, Leach (29) 1.

Wirt, Bartlett and Merrill re-entered after missing their first birds.

After the match the above miss-and-out was shot, which proved to be very interesting and was finally divided by Powers, Du Bray and Settle with 20 straight When it was shot down to seven men Winston asked for a divide, as his shells were exhausted, but to this the others would not agree. He lost his eighteenth dead out of bounds, and the next round proved disastrous to Sergeant After each of the remaining ones had killed 20 straight they decided to divide.

The weather again was very unfavorable, being dark and threatening and not any too pleasant.

Paul R. Litzke.

Fourth Day, Feb. 11.

There was only one event on the programme to-day, a 15-bird race, entrance $10, five high guns. This was not shot until some time after dinner. By agreement Winston and Murphy were to shoot two matches to-day, one at 10 o'clock in the morning and one in the afternoon. Notwithstanding that this has been the worst day of the lot so far as weather was concerned, both principals were on the grounds at the appointed time ready to begin the match. Winston again selected the birds, but the mean, wet, drizzling rain that was falling made easy birds of most of them. Murphy won the toss and the match. Owing to the poor quality of the birds, which is mainly attributable to the weather conditions, there was little of interest in the match. Murphy led off, scoring a kill, and continued to do so until he had stacked up 25 straight. Murphy's best bird was his 20th; this was a very fast twisting quarterer, and was well killed by an excellent second. Winston shot well, killing all his hard birds, which were not numerous. The bird that cost him the match was a rank easy incomer that was hit too far back with the first, while the second did no damage, being used with poor judgment. It came almost straight in, and Jack made a great effort to catch it, but it got over the dead line. He came very near losing another one, his 21st, a very fast twisting incomer, that fell almost on the dead line. His best birds were his 8th and 24th, both of which were well killed.

Conditions were 25 live birds, $25 a side, loser to pay for the birds, Winston at 30yds. and Murphy at 28:

1 1 1 2 2 2 2 2 2 2 2 2 2 2 ● 2 2 2 2 2 2 2 2 2—24

In addition to the programme event, two other events were shot, a 10 bird race, $5, three moneys, and a $2 miss and-out. The scores of the 10 bird race are given below. The miss-and-out, which had seventeen entries and two re entries, was cut up by Sergeant, Parmelee, Parker, Wirt and Sumpter on the sixth round. The 15-bird event had eighteen entries; five scored all and divided the $112. In this event everybody stood on the 30yds. mark. Sumpter did the best shooting to-day, scoring 30 out of 31; his lost bird was one of the best trapped during the shoot. Scores in the 10-bird event were as follows:

Ten birds, $5, three moneys, class shooting: Murphy 10, Wirt 10, Merrill 10, Sumpter 9, Settle 9, Powers 9, Norman 8, Bennett 8, Ellis 8, Leach 8.

The totals in the 15-bird event were as below: Sumpter 15, Bennett 15, Heikes 15, Norman 15, Du Bray 15, Ellis 14, Bartlett 14, Powers 14, Merrill 14, Wirt 14, Settle 14, Parmelee 14, Leach 13, Dickey 13, Murphy 13, Winston 13, Sergeant 12, Wallace 9.

Fifth Day, Feb. 12.

After a long time those shooters who made their trip South have at last experienced the pleasure of shooting on one day of sunshine. The weather is absolutely perfect, the only thing lacking being good wind to aid the birds in their flight. Just to start the ball, a $2 miss-and-out was shot, with everybody on the 34yds mark. The birds in this event were like the weather, and it was not a long-drawn out affair. At the end of the 3d round Bartlett, Parmelee, Settle, Elliott, Sumpter, Parker, Merrill and Du Bray were all of the 20 starters that had stayed, so it occurred to Jim Elliott that it would be a good idea to divide. This was agreed to.

EASTMAN HOTEL HANDICAP.

This event, like the Arlington Hotel Handicap, had twenty-four entries. Of this number only one scored straight, and the lucky one was the promoter and manager of the tournament, John J Sumpter, Jr. All through the shoot John has been shooting in great form, having lost only one bird out of his last 6 ! In his present form he is a hard man to beat, but he had some good luck connected with his shooting to-day; not that he drew all easy birds, as he got his share of the good ones, but his 18th bird, a fairly fast one, showed no effects of the loads sent after it, and looked like a lost one as it flew straight away; when it was almost out, it circled, came back toward the score, and toppled over close to the dead line. Had it kept on its course it would certainly have fallen out of bounds. This time there were only two 24s, Merrill and Leach; Merrill seemed booked for a straight, but after he had grassed 21 he slipped up on a bird that should have been scored with the second at least. This bird towered when it left the trap, and Merrill undershot it, but it turned and came back so as to present an easy incoming shot; this is where it should have been easily killed, but the second never touched it, though the first had done the damage, as the bird afterward fell from the roof of the pavilion. Leach also lost his bird dead out of bounds; this was a good fast one, and after it had gone out it fell on the hillside and rolled back in.

As will be seen, Norman, the winner of first in the Arlington Hotel Handicap, failed to get in for money, but he was moved back 2yds. and 4 of his 5 lost birds were dead out of bounds.

Conditions, Eastman Hotel Handicap, 25 birds, $15, birds extra, five moneys; first $138, second $115, third $92, fourth $69 and fifth $46.

Poughkeepsie Gun Club.

Poughkeepsie, N. Y., Feb. 10.—The Poughkeepsie Gun Club held its regular monthly meeting this evening. At the meeting articles of incorporation were signed setting forth that the club is organized and incorporated for the purpose of advancing field sports and for the protection of game in Dutchess county. During the meeting a communication was read from the secretary of the New York State Association announcing that the Poughkeepsie Club would be accepted as members of the State Association. This will give the club the privilege of sending five delegates to the next meeting of the State Association. It was decided to extend an invitation to the local clubs along the Hudson River to attend the sweepstake shoot at live birds to be held on Washington's Birthday, Feb. 22, on our grounds. The Poughkeepsie Gun Club will shoot a match of twelve men on a side with the Marlborough Gun Club on the former's grounds, Thursday, Feb. 18.

Feb. 11.—The following scores were made at the club's regular weekly shoot, held to day:

J M Spencer	011111001111111111111111—22

W. J. Perkins, Fin. Sec'y.

The Grand Prix at Monte Carlo.

The Grand Prix du Casino was decided at Monte Carlo on Feb. 2. Signor G. Grasselli (an Italian) won first prize, about $4,000 and a trophy An Englishman, Hon. F. Erskine, and M. Horodetzki, a Russian, divided second and third prizes, a sum of about $3,500. M. A. Poizat, a Frenchman, won fourth money, $900. Eleven tied with 11 out of 12 shot at, four of the eleven missing their 12th birds. On the shoot off, miss-and out, Signor Grasselli won in the 5th round. The Americans, Messrs. Crittenden, Robinson and J. O'H. Denny, retired in the 11th and 5th rounds respectively with two misses against them. There were 118 entries in all, the conditions being as follows:

Grand Prix du Casino of £-0), added to a sweepstakes of £8 each; second received £1·0 and 25 per cent. of the entries; third £80 and 25 per cent.; fourth £40 and 15 per cent.; four birds at 26 mètres, eight at 27 mètres; the winner in 1895 to stand back 2 mètres, previous winners 1 mètre; three misses to put out; 118 subs.

Signor G. Grasselli shot a Greener gun and Walsrode powder; Hon. F. Erskine, a Boss gun and Schultze; M. Horodetzki, a Russian gun and Schultze.

IN NEW JERSEY.

SECOND CUP SHOOT AT HACKENSACK.

Feb. 10.—An entry list of 16 in a 100-target scratch race is something for the Bergen County Gun Club to be proud of. The second contest for the *Recreation* cup, emblematic of the amateur championship of the gun clubs of New Jersey, took place to-day on the grounds of the above club, 16 men entering for the race This club may be young in years and experience, but it does nothing by halves, and as a result of its work it can look back to to-day's contest as its banner shoot to date. There was only one thing lacking to-day to make the management of the shoot all one could ask, and that was an insufficiency of help E. G. Horton is a man who has only the normal quantity of limbs, and it is hardly fair to expect him to do everything, even to carving the turkey, spreading bread and butter, pouring out coffee, taking entries for new events and squaring up old ones. The club should not ride a willing horse to death. (This is written and will appear without Mr. Horton being aware of it. We might add that he never uttered a single kick all day.) The referee was as usual, C. E. Dawson, and had his good eye with him. The puller and the trapper boys all worked hard and did a great deal to make the shoot an easy one to run. There was a slight rumbling of a mutinous nature when empty stomachs grew numerous behind the trap screen. A brief rest and some solid refreshments soon made the sky bright again. Apropos of the turkey, it is only right to mention that the club "set up" an excellent lunch free of all charge, making the shooters its guests in deed as well as in name.

Among the shooters were F S. Sinnock, the winner, from the Forester Gun Club, Newark; Neaf Apgar, of the Climax Gun Club, Plainfield; Harry Thurman, of Philadelphia, Pa., shooting as a member of the Climax Gun Club; J. S. S. Remsen, the winner of the cup at the first shoot in December last, a member of the Bergen County Club; Noel E. Money, of the American E. C. Powder Company; T. W. Morfey and Chris Wright, of Paterson; Job Lott, of New York - the last four being also members of the Bergen County Gun Club; F. S. Edwards, of New York; Ed Taylor, of the Laflin & Rand Powder Company; M. Herrington, of the W-A Powder; G. H. Piercy, of Jersey City; the last four are members of the Endeavor Gun Club. Theodore Baron, representing Von Lengerke & Detmold, and a member of the Boiling Springs Gun Club; J. G. Lindzey, of the Dunellen Gun Club; C. F. Lenone, of the Passaic City Gun Club; J. R. Banta, of the Oritani Field Club; Hexamer, a shooter whose club's name we cannot recall. The above list makes a formidable one even for New Jersey. Gus Greiff, W. H. Huck, Dutchy Smith, Tom Brantingham, Warren Smith, etc., were absentees.

Sinnock, the winner, shot an excellent race and landed in the lead by one target, though it looked as if Apgar should have won the cup hands down. Sinnock shot a Winchester repeating shotgun, Leader shells and W-A powder. His victory, therefore, was gratifying to Ed Taylor and Marshall Herrington. Neaf Apgar, of course, shot Austin powder and a Smith gun. Harry Thurman shot Noel Money's gun and Au tin powder, as he came to the grounds totally unprepared to take part in the contest. Edwards shot a Winchester and E. C. powder in U. M. C. factory-loaded Smokeless shells. The score, as furnished us, shows a 25 straight for Sinnock in the last string; this is an error, as he lost his first target. The only 25 straight was made by Apgar in his third string. The score book also shows Edwards's total carried out, 23 for his last string, while the detailed score gives him three misses: his total is thus 91, if the score is correct (and the detailed official score goes in this case, of course). Remsen broke badly in his first and last strings, but scored 47 out of his middle 50.

The conditions were 100 targets per man, $2 entrance, optional sweeps of 50 cents on each 25. The 100 targets were thrown 50 known and 50 unknown angles, the known angles being shot first. Banta arrived late and only shot 50 targets at unknown angles. The winner of the race scored a win for the cup, the second receiving $5 and the third man saving his stake. The cup is to be shot for five more times, the shoots taking place in the months of April, June, August, October and December. The man winning it the greatest number of times to become the owner of it. The scores are higher than at the first shoot for the cup, Remsen winning then with 84. But the targets were thrown much harder on that occasion than they were to-day. Though the sky was clouded, there was no wind to play tricks with the targets, everything being in favor of good scores. The background is by no means an easy one, targets thrown low and to the right being hard to gauge accurately. Scores in detail were:

```

In addition to the 100-target race for the cup, a long list of sweeps were also shot off. Apgar followed up his good work in the long race by scoring 57 out of 60 in three 20-target races. Scores were as below, twenty-seven shooters taking part in the day's sport:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

Ed Taylor shot in No. 5, scoring 19; Brackett in No. 6, scoring 16; Prest in No. 7, scoring 4; in No 8 Johnson broke 7, Coe 3 and Ward 7.

Over 3,700 targets were thrown during the day.

BERGEN COUNTY GUN CLUB.

Feb. 12.—Lincoln's Birthday, Feb. 12, was pitched upon by the Bergen County Gun Club as a suitable date for a trial of a 100-target event, handicap, unknown angles, on its grounds at Hackensack. The date may have been suitable as such things go, but the weather experienced by those who went to shoot at Hackensack was the sort that makes outdoor sports closely resemble hard labor. It will shorten matters, and be just as effective, if we extract from the New York *Evening Sun* of this date the following in regard to the weather:

"This city experienced the third big storm of the winter to-day. Nearly 6in. of snow had fallen at 3 o'clock this afternoon. Much of it came down in the form of sleet, turning into snow of the consistency of coarse salt as it struck the ground. To the layman it seemed like hail that would turn naturally into rain in a short time, but Local Forecaster Dunn explained that hail and sleet, though each will sting like a hornet when driven by a gale, are born of essentially different meteorological conditions. He held out no hope of relief before to-morrow. A high northeast wind, gradually increasing to a gale, prevailed all day. Shipping was warned all along the Atlantic Coast to stay safely in port. Travel was delayed in the morning, and snow plows and sweepers were kept busy all day clearing the lines of steam and surface railroads. The temperature remained stationary at about 21° all day, nd no material change is expected before to-morrow."

With such conditions to combat against, it was really a wonder that any good scores were made. Tom Morfey's 91 and Griffiths's 89 were a great deal better than they look on paper. The driving snow and sleet drifted into the left eyes of the shooters, and made the breading of left-quarterers considerably a matter of luck. If a snowflake didn't hit one in the eye at the critical moment it was all right; otherwise, and it was all wrong. Neaf Apgar was in trouble from the start; he is a south paw and naturally, under the conditions, made heavier weather of it than the starboard handed craft. He faced the sleet and snow, while the others humped their backs to the gale.

The trapper boys stuck to their work bravely, and it was entirely due to the amount of hot coffee poured down their throats that none of them were frozen in their nests. Referee Dawson's task was about as unpleasant as it could be, but he held the fort, and dealt out "dead" and "lost" with his usual impartiality. The puller has a neat little house, in which he accommodated the scorer, J. H. W. Fleming, the energetic secretary of the Rockaways and Cuckoos, who kindly consented to take charge of the score sheets.

The handicap was one of allowances of extra targets to shoot at, and every man's handicap was based upon a calculation to bring him as close as possible to 92, that figure being named as the highest possible, unless some shooter broke more than that number out of his first 100 targets, in which case such number would be the highest possible. Morfey came within 1 point of not needing a handicap at all, but Griffiths needed every target he was allowed to shoot at. Bell got into second place with an allowance of 11 to shoot at, while Louis Piercy, who dropped 3 out of the 10 allowed him, broke 90 and won third money. The purse, as is necessary when a highest possible is named, was divided under the Rose system. Scores were:

About 2,500 targets were thrown to-day notwithstanding the heavy fall of snow.

A STORMY DAY AT BOILING SPRINGS.

Feb. 6.—None but cranks would have turned out to-day. The wind blew a gale from the northeast, driving the heavy rain before it in sheets, and yet, simply because it was the regular monthly club shoot, fourteen members of the Boiling Springs Gun Club put in an appearance at the club's grounds, at Rutherford, and went out to shoot their scores in the 50-target handicap race that constitutes the club's regular monthly cup event. Platt Adams was also on hand, but he had better sense than to go out and risk pneumonia, grip and rheumatism for the sake of a cup and other honors that go with it. Huck shot a great race and scored 44 in the best of styles. Edwards, who was shooting a strange gun and wearing rain-washed spectacles, was next to him with 39. Frank, with 5 handicap, was next with 38; Greiff (scratch) and De Wolfe (5) were in fourth place with 37. The scores made were as below:

```
Lewis (15)....1100001000010100101001101100110101111001000110110—24

* Lane did not shoot his handicap. Snow and Cutler only shot at 25 targets each.

YANTICAW GUN CLUB.

Feb. 13.—The first open shoot of the Yanticaw Gun Club, of Nutley, N. J., took place to-day and was quite well attended, as the scores show. The object of the shoot was to get better acquainted with out-of-town shooters and to have a good time. We succeeded very well, and when the weather gets more settled and warmer we are going to try it again. We tried to hit upon a day when there were no other attractions, but as there are a great many gun clubs and only four Saturdays in this month it is not possible to get "first place alone." Scores:

JOHN HOPKINSON, Sec'y.

PASSAIC CITY GUN CLUB.

Feb. 10.—The annual dinner of the Passaic City Gun Club was held this evening at the Hotel Martin, University place and Ninth street, New York city. It has been customary for the members of the Passaic City Gun Club to hold these annual dinners at this time of the year and in this hotel. Previous efforts in the same line have proved successes, and the annual dinner of 1897 was just as successful as any of its predecessors. The attendance was large and influential. Among those present were:

Colin B. Wise, president of the club; Hon. Andrew McLean, R. B. Tindall, Dennis W. Mahoney, H. K. Beatty, Walter Kipp, George T. Welch, W. S. Clearwater, Ed T. Ivimy, A. M. Ferguson, E. M. Kevitt, Ira A. Cadmus, J. H. Platt, Hon. William F. Gaston, W. McDonald, B. Abbott, L. F. Schulting, John Jelleme A. W. Shaw, A. McAllister M. J. Coman, John H. Bowker, John H. Capstick, A. W. Clapp, ex-President John H. Hall, John Alexander, T. Van Tassell, G. G. Farnham, Chris Kelly, Adrian Norman, John J. Slater, Richard Morrell, Jas. A. Parker, Orrin Van Derhoven, Noel E. Money and the trap editor of FOREST AND STREAM. Messrs. Mahoney and Van Derhoven are representatives of the press in the city of Passaic, N. J.

The president, Mr. Wise, acted as toastmaster, making a few short remarks when introducing the speakers, who responded in the following order to the various toasts: "The Club," Hon. William F. Gaston; "The Sportsman," Hon. Andrew McLean; "The Press," Dennis W. Mahoney; "The Committee," ex-President John H. Hall; "Drivers and Twisters," the representative of FOREST AND STREAM; "Sport of All Kinds," Noel E. Money.

It is unnecessary almost to remark that the dinner was A No. 1. With Capt. Hall as head of the committee, the creature comforts of the guests were scarcely likely to be lacking. The menu is sufficient commentary on this point:

MENU.

Vin.

Cocktail. Huitres.
Olives. Celeri saucisson.
Ch. Courbiac, '85. Tortue verte, claire.
Red snapper, sauce Genevoise.
Sauternes. Bouchées Toulouse.
Superieur. Filet pique, à la Martin.
Nid de pommes souffle.
Pommery sec. Asperges, sauce Hollandaise.
Mumm. Sorbet Montmorency.
Caille Casserole au Genevie.
Salade Panachee.
Liqueurs. Fantaisie Parisienne.
Cigars. Gateau Regent.
Cigarettes.
Fromage. Fruits. Mendiants.
Café.

FORESTER GUN CLUB.

Feb. 12.—The scores given below were made to-day by members of the Forester Gun Club. Nos. 1, 3, 4, 5, 7, 8, 10, 12 and 15 were at known angles; Nos. 2, 9, 11 and 13 at reversed order; No. 14, expert; No. 6, 5 pairs. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

Detroit Yacht Club's Shoot.

DETROIT, Mich., Feb. 9.—I send you the score of the Detroit Yacht Club's shoot at Bell Isle Park on the ice in front of the club house. The Detroit Yacht Club has a membership of about 300, and at the last meeting of the club, as there are a large number of the members who are fond of shooting as well as yachting, the club appointed a committee to ask permission of the Park Commission to shoot on the ice in front of the club house. The permission was granted. The club requested W. H. Brady to manage the opening shoot, and on Wednesday afternoon, Feb. 3, several extra events were shot, and in all 1,905 blue rocks were thrown. The club was so well pleased with this first effort that it has decided to give a club shoot every Wednesday afternoon as long as the ice lasts. After the shoot the boys were treated to a nice little spread prepared by Mr. M. Kramer. You will appreciate that the club house is built on Bell Island, or the city park, consequently they will not be able to shoot on the Park Grounds proper. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16

DETROIT.

Pennsylvania and Ohio Border Gun League.

WARREN, O., Feb. 4. The spring meeting of the Pennsylvania and Ohio Border Gun League was held in the city of Warren, O., to-day. The following cities were represented: Meadville, by Messrs. Ergot and Kride; Greenville, by Messrs. Henlein and McGary; New Castle, by Messrs. Weakland and Andrews; Youngstown, by Messrs. Ewalt and Jones; and Warren, O., by R. W. Ewalt and Geo. H. Jones.

The tournaments held by this League the past year were the largest held in the Middle States, the attendance averaging sixty, and the prospects are most flattering for still greater success the coming season.

The Remington Arms Co., Cleveland Target Co., King Powder Co., E. C. Powder Co., U. S Smokeless Powder Co. and Du Pont Powder Co. have made the League handsome donations to assist in making the list of prizes attractive.

At the monthly tournaments given by the League each city will be represented by a team of five men, who will compete for the trophy cup and prizes. Before and after these contests sweepstake shooting will be shot, open to all.

The following dates were chosen: Youngstown, O., April 16; New Castle, June 10; Greenville, Pa., May 20; Meadville, Pa., July 22; and Warren, O., Aug. 19.

GEO. H. JONES, Sec'y.

An Interstate Team Race out West.

WE have received the following interesting item from Ogden, Utah, dated Feb. 6:

"Arrangements for a team shoot between a Utah and Montana team of four men each have been perfected and articles of agreement signed. The match is to be shot at Ogden, Utah, Feb. 22-24, for a purse of $800. A. S. A. rules to govern; each man to shoot at 100 live pigeons.

"The members of the Montana team are: John F. Cowan and M. Wright, of Butte, and James Conley and D. D. Twohy, of Anaconda. The Utah team consists of J. M. Browning, M. S. Browning, G. L. Becker and A. P. Bigelow, all of the Ogden Gun Club.

"The match has been arranged with a view to increasing the interest in trap shooting throughout the West, and it is expected that many of the trap-shooters west of the Rockies will be present, as reduced railroad rates have been obtained. There will be no difficulty in getting a fine lot of fast birds, as they are largely raised around Ogden.

"It is expected that two days will be consumed in shooting the match. The third day will be devoted to sweepstake shooting, and a general good time is promised to all who attend."

Hyde Park Gun Club.

HYDE PARK, N. Y., Feb. 9.—Several members of the Hyde Park Gun Club met this afternoon on the club's grounds, Lover's Lane, for the purpose of taking part in some events at target shooting. The day was a fine one for the occasion, the sky being clear, the sun warm, and not a breath of air stirring. The traps faced east and the targets were thrown against a sky background. Several spectators were present to watch the shooting. The scores made are fair, as, with one or two exceptions, all are novices at the traps. The scores in the 25-target event were as follows:

```
Baker.....11111111111101001111011110—20

SECRETARY.

Grand American Handicap.

THE PROGRAMME.

THE programme for the Grand American Handicap is now ready for mailing, and advance copies of the same have been received by FOREST AND STREAM. In drawing up the programme the Association has been at great pains to make it a popular one. There are some new features on the list, features that we think have been very happily chosen Owing to the extra length of the reading matter in the programme, as well as to the number of important points touched upon, it is almost impossible to do more than give a review of its contents. Intending shooters should lose no time in writing to the secretary or to the manager for a copy of the programme, as there is sure to be a big rush for them. The secretary's address is John L. Lequin, P. O. Box 605, 44-48 Cedar street, New York city; the address of the manager is Elmer E. Shaner, 122 Diamond Market. Pittsburg, Pa.

THE INTRODUCTION

is really a review of the past Grand American Handicaps, and as such will be of interest and must be allowed space in this issue. It runs as follows:

"The Interstate Association, in presenting the programme for this, its fifth annual Grand American Handicap, feels that it should do something more than make an ordinary announcement. There are reasons for this—good reasons. A few figures will tell the story.

"On April 5, 1893, the Grand American Handicap was inaugurated with an entry list of just twenty-one shooters. The tournament was held at Dexter Park, L. I. Of the twenty-one shooters four tied on 23, and shot off miss-and-out, Robt. A. Welch, of Philadelphia, winning in the fourth round. His handicap was 28yds. The others who tied him were Noel E Money (28), George Work (30), and Ferd. Van Dyke (30). There were three moneys, divided as follows: $477.50, $163 50 and $ 11; a total of $755 in the purse.

"The second annual Grand American Handicap was also held at Dexter Park, L. I., the date being April 5, 1894. That the event was growing in popularity is plainly shown by the fact that the entry list numbered fifty-four. Of this number, Capt. A. W Money (30) and T. W. Morfey (28) each scored 25 straight, tieing for first and second moneys. On the shoot off at 10 birds each scored 8 and tied again. They then shot off miss-and-out, Morfey winning in the second round. F. G. Moore (29) won third with 24. The total purse was $1,335.

"The third annual Grand American Handicap was decided at Willard Park, Paterson, N. J., on April 4-5, 1895. Once more there was a marked increase in the number of entries, 61 shooters sending in their names, 58 of the number competing; 3 paid forfeit. The total purse was $1,520—a large enough purse to satisfy anybody. Of the 58 shooters 3 scored 25 straight - J. A R. Elliott (33), Frank Class (32) and J. G. Messner (25) On the shoot-off at 10 birds Messner won with 10 straight; Elliott was second with 9, his lost bird falling dead out of bounds; Class scored 7.

"The fourth annual Grand American Handicap was decided at Elkwood Park, N. J., on March 25- 6, 1896. The entry list was a most gratifying surprise to the Association. From 61 in 1895 it had sprung to 109 in 1896 - a number greater than ever before in the history of trap-shooting in this country paid entrance money in an event of this kind. An entry list of 109 shooters in an open-to-all handicap at 25 birds, $25 entrance, birds extra, broke all records. The division of the purse, no doubt, had much to do with the increased list of entries, and something will be said on that point later. Only 5 men forfeited, so that the actual number of shooters was 104. Of that number not a man went straight. Eight tied on 24, while 13 were tied with 23 for the last 6 moneys. The purse under the system of division of moneys adopted by the Interstate Association providing for 14 moneys, high guns. On the shoot-off O. R. Dickey (29) won in the 6th round with a total of 30 out of 31. Messner, the winner of the previous Grand American Handicap, was handicapped at 29yds., and finished 11th. The total purse reached the great figure of $2,710.

"From the above figures, and trusting also to other attractions fully set forth later, the Interstate Association feels every confidence that its annual Grand American Handicap will continue, as heretofore, to hold its place as the leading live-bird event of America."

The next point touched upon is

THE SELECTION OF GROUNDS.

This portion of the programme deals with the choice of Elkwood Park for the second time in the history of the Association, and gives reasons why such choice was made. It closes with the following short paragraph: "Rain or storm, the Grand American Handicap of 1897 will be shot in comfort, and with the perfect system for rapid work in shooting off events possible with such appointments as are now in position at Elkwood Park, it will be feasible to shoot off the Grand American Handicap in one day unless the entry list reaches a mark higher than that of 1896."

Then comes the

CONDITIONS GOVERNING THE MAIN EVENT.

So important are they that we extract them in full:

"Twenty-five live birds, handicaps ranging from 25 to 33yds., 50yds. boundary, with a dead line at the 33yds. mark; $1,000 divided 50, 30 and 20 per cent. to the three highest guns. All money in the purse in excess of $1,000 will be divided among high guns other than the three first. The number of parts into which the surplus money will be divided will be determined by the number of entries received; entrance money $25; $1,000 guaranteed by the Interstate Association, and all surplus added. Regular entries must be made on or before March 20, 1897, and must be accompanied by $10 forfeit; the remaining $15 may be paid up to the last shot of the second round. Penalty entries may be made after March 20, up to the last shot of the second round, by paying $35. Entries will be received at the New York office, John L. Lequin, Secretary-Treasurer, P. O. Box 605, 44-48 Cedar street, New York, N. Y."

The next page contains the

FIRST DAY'S PROGRAMME.

There are four events on the schedule, calling for a total of 39 birds. The conditions of the Nitro Powder Handicap are changed, and it must also be noted that all events are high guns, *not class shooting* In order the events and their conditions are as follows:

Elkwood Park Introductory: 7 birds, $5 entrance, birds extra, 30yds. rise, three moneys, 50, 30 and 20 per cent. High guns, not class shooting.

Nitro Powder Handicap: 15 birds, $10 entrance, birds extra, handicaps 25 to 33yds. The number of moneys into which the purse will be divided will be determined by the number of entries received, as is fully explained elsewhere in this programme. The handicaps contestants receive for the Grand American Handicap will govern in this event. High guns, not class shooting.

Branchport Sweepstakes: 10 birds, $7 entrance, birds extra, 30yds. rise, four moneys, 40, 30, 20 and 10 per cent High guns, not class shooting.

Sportsmen's Delight: 7 birds, $5 entrance, birds extra, 30yds rise, three moneys, 50, 30 and 20 per cent. High guns, not class shooting.

SECOND DAY'S PROGRAMME.

The programme for the second day as usual consists of one event only—the Grand American Handicap, the greatest event of the kind in the country, and an annual affair. The division of the purse is on the same system as last year, the trial in 1896 proving so extremely satisfactory. Shortly, the system is as follows: $1,000 is divided 50, 30 and 20 per cent. among the high guns; the surplus is divided on the basis of two additional moneys for every ten entries over fifty. If there are more than forty entries (the number necessary to fill), but not more than fifty entries, the surplus over the guarantee of $1,000 will be divided 50, 30 and 20 per cent. to the 4th, 5th and 6th high guns respectively The system is very fully explained, and provides for entries up to 150 With that number of entries there would be altogether twenty-six moneys. The explanatory article closes thus:

"Briefly summarizing the foregoing, it will be noted that the purse will be divided in accordance with the number of entries received; the three high guns in any case receiving respectively $500, $330 and $200 By this division two places are created for every ten entries over fifty. It is not possible for fourth money to exceed third, and the moneys would seem divided in such manner as to be just to all. For instance: If there are fifty entries, fourth gun would be entitled to $75, while eighth gun would just save entrance. If eighty entries, fourth gun would receive $190, and the twelfth gun $50. If 100 entries, fourth gun would get $195, and the 16th gun $45. It should be remembered that the Grand American Handicap is not class shooting, and high guns will win."

THIRD DAY'S PROGRAMME.

Shooting commences this day at 10 sharp, the first business being the completion of the Grand American Handicap if it is carried over from the second day. Then come three more events, all interesting ones:

Consolation Handicap: 15 birds, $10 entrance, birds extra, handicaps 25 to 33yds. The number of moneys into which the purse will be divided will be determined by the number of entries received, as is fully explained elsewhere in this programme. Winners of money in the Grand American Handicap will have 1yd. added to their handicap. High guns, not class shooting.

Long Branch Scramble: 10 birds, $7 entrance, birds extra, 30yds. rise, four moneys, 40, 30, 20 and 10 per cent. High guns, not class shooting.

Auld Lang Syne Sweepstakes: 7 birds, $5 entrance, birds extra, 30yds. rise, three moneys, 50, 30 and 20 per cent, High guns, not class shooting.

As stated above,

ALL EVENTS ARE HIGH GUNS,

the Association having been tempted to change the old order of things. We recommend this change to the careful consideration of all shooters, and we venture to say that the vast majority will coincide with FOREST AND STREAM'S expressed opinion that the change is for the better. The Association has this to say on the point: "The Interstate Association being a progressive organization, and familiar with the requirements of such an event as the Grand American Handicap tournament, has deemed it best to make all events high guns. In making this change the Association has not moved without much thought. It has, however, been plainly shown time and again, at both large and small tournaments, that under the old system of class shooting a man 'could kill them all' and yet come out worse off in pocket than another who had missed one or more birds. This error the Association is attempting to correct and yet make this shoot a popular one with shooters. A careful perusal of the conditions governing each event will show that everything has been prepared with great care."

In the 15-bird events the system of dividing the purses will be on the same plan as in the Grand American Handicap—2 moneys with 1 to 10 entries; over 10 entries, 2 moneys additional for every 10 entries. In the 10-bird events and in the 7-bird events it will be "high guns, pure and simple"

THE GROUNDS DESCRIBED.

The description of the grounds is very full and ample. Readers of FOREST AND STREAM'S trap columns have already been made aware of the many excellent features of these grounds. In the reading matter on this point in the programme will be found the cut showing the location of the grounds which has made our readers familiar with the same. The arrangement of the club house, the facilities for trapping birds, etc., all this is treated of fully and makes good material for a programme.

The shooting rules will be those of the Interstate Association (Hurlingham rules revised) No guns larger than 12-gauge will be allowed, and all guns over 8lbs. in weight will be barred. Other points are as follows:

In order to expedite the shooting a contestant missing two birds in any event, except the Grand American Handicap, must drop out, with the privilege of re-entering in case he has a chance to win any portion of the purse. In the Grand American Handicap it will be three misses out with the same privilege Shooters calling "no bird" on birds slow to start will be charged for same, providing they prove good flyers. All ties must be shot off at the original handicap distances. All contestants will shoot their score at the same traps.

Birds will be extra in all events. When entering for any event the shooter must pay for all birds called for in that event, in addition to the entrance fee. Money will be refunded for all birds not shot at on application to the compiler of scores, who will furnish rebate tickets that will be redeemed for cash at the cashier's office

HANDICAPS.

Messrs. Jacob Pentz, of *Shooting and Fishing;* Edward Banks, of FOREST AND STREAM; J. M. Taylor, of *American Field;* W K Park, of *Sporting Life*, and Elmer E. Shaner have been appointed a handicapping committee, and will handicap all contestants from 25 to 33yds. Half yards will be given wherever such course is deemed advisable.

In order to place all contestants on an equal footing, handicaps will not be announced until the evening of March 22, the day on which the committee meets.

HOW THE GRAND AMERICAN HANDICAP WILL BE SHOT.

The manner of shooting the Grand American Handicap this year, and in fact all events scheduled for the tournament, is as follows: Shooters will be called to the score in turn, shooting their first bird at No. 1 set of traps; as soon as a shooter has shot at his first bird, he passes on to No. 2 set and shoots at his second bird on that set; he then shoots at another bird at No. 3 set and passes into the building through the right wing, waiting until it is time for him to go out and shoot at his 4th, 5th and 6th birds, and so on

In case the Grand American Handicap entries are so numerous that it is impossible to finish in good light on March 24, the referees shall stop the shooting at any time they may deem it necessary; in this case the shooting will commence at 10 o'clock, sharp, Thursday, March 25. Positively no entry will be taken, nor shooting up allowed, after the end of the second round. A contestant missing three (3) birds must drop out, with the privilege of re-entering in case he has a chance to win any portion of the purse. The Interstate Association reserves the right to refuse any entry.

ADMITTANCE TO ELKWOOD PARK.

An admission fee of 25 cents will be charged each day All contestants in the Grand American Handicap will receive a badge which will admit them to the park free during the entire tournament. Any shooter who is not a contestant in the Grand American Handicap will have the 25 cents paid for admission refunded (at the cashier's office) upon his making entry in any sweepstakes event.

COMFORT OF THE SHOOTERS

The comfort and convenience of the contestants, as well as the spectators, has been looked after carefully, inasmuch as the entire club house is closed in with glass front and heated throughout. The left wing, located within a few yards of the traps, will be reserved for the exclusive use of shooters, where they can witness the sport when not actively engaged in it.

COMPILER OF SCORES.

The office of compiler of scores will be filled by Mr Edward Banks: His services last season in a similar capacity are a sufficient guarantee of excellent results on this occasion Mr. Banks also will act as press representative.

FREE HACKS.

Conveyances will meet trains at the Elkwood Park stopping place and carry shooters free of charge to club house. Shooters are requested to make sure that they ride in the conveyances provided by the Elkwood Park management and show admission badge to conductor.

LUNCHEON.

A warm and substantial lunch will be served each day in the club house for the sum of 50 cents. Shooters desiring meals *à la carte* can secure same at Elkwood Inn.

SPORTSMEN'S EXPOSITION.

The Interstate Association having arranged for space at the Sportsmen's Exposition, in Madison Square Garden, New York, March 13 to 20 inclusive, entries for the Grand American Handicap will be received there during the period named. This will be a convenience to many shooters who contemplate taking part in the tournament.

The concluding pages of the programme contain a railroad time table, directions how to get to Branchport, and a full list of hotels, with their rates, number of rooms, etc. From the above extracts it will be seen that the work of getting up this programme has been no sinecure.

WHERE TO SHIP YOUR SHELLS.

This small point, small at least in a live-bird tournament, has been overlooked apparently. We can take it upon ourselves to say that all guns and shells shipped in care of Daly & Chanfrau, Elkwood Inn, Branchport, N. J., will be taken care of by those gentlemen, and will be delivered at the grounds free of charge.

Audubon Gun Club, of Buffalo.

BUFFALO, N Y., Feb. 6.—It rained hard here all day, but the steady downpour did not prevent 15 members of the Audubon Gun Club from taking part in the various events shot at the regular weekly shoot of the club this afternoon. In the club badge event, No. 3, Norris and L. W. Bennett tied for the Class A badge; on the shoot off Bennett won; Reynolds and Coomos were the winners in Class B and Class C respectively. Scores were as below:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
E C Burkhardt	9	14	22	12	13	15	8	13	A Coombs	..	..	19	..	..	..	..	..

Brady	2221121222—10	Scotten	2201 2012— 8

DETROIT.

New Haven Gun Club.

NEW HAVEN, Conn., Feb. 10.—The New Haven Gun Club held its second monthly shoot of the year to day. There was quite a large attendance, twenty members taking part in the different events. We also had as guests Messrs. Gaines, Parker and Davis, of Meriden, who shot along with the club. Mr. Davis distinguished himself by breaking 8 in a sweep at 5 pairs and tied for first place. In shooting off the tie he held out well, but finally succumbed to Stevens. Messrs. Parker and Gaines also shot well, Parker breaking 14 out of 15 at reversed angles.

The members of the home club did some good shooting, as will be seen by the following scores. Trap shooting has been practically dead for the last year or two through this State, but we expect to make things hum the coming season. Scores:

No. 1, 15 targets, reversed order: Parker 14, Clark, Whitney 13, Van Dyke, Bennett, Stevens 11, Cowel 10, Gaines 9, Gormley 8, Davis, Reggiori 7.

No. 2, 5 pairs: Davis, Stevens, Van Dyke, Gormley 8, Stevenson, Whitney 7, Ortseifer 6, Clark, Bristol, Cowel, Kelly, Washburn 5, Gaines, Reggiori, Parker, Merriman 4.

In the handicap the scores were:

Handicap, 30 targets, 15 known and 15 unknown:

		Broke.	Allow.	Tot.
Bement	001111111111111111110111111111	27	4	30

Davis	101111000110011111101011111101	20		

Ties on 20 shot off miss-and-out, Stevenson winning in the 2d round Ties on 27 shot off also miss-and-out, Van Dyke winning in the 8th round. Scores in the team race were as below:

Team race, 20 targets, known angles:

Clark's Team: Clark 19, Van Dyke 18, Stevens 19, Cowel 19, Ortseifer 16, Gilbert 14, Strong 14, Stevenson 17, Kegelmeyer 9, Washburn 13; total 158.

Whitney's Team: Whitney 19, Potter 18, Bennett 15, Bristol 13, Kelly 19, Merriman 11, Bement 14, Brown 10, Reggiori 12, Bassett 15; total 146.

G. W. HAZEL, Sec'y.

Ft. Dodge versus Dayton.

FT DODGE, Ia., Feb. 8.—Five members of the Ft. Dodge Gun Club went to Dayton to-day to shoot a match at live birds with the same number of men from the Dayton club. We were nicely entertained by the Dayton Gun Club until the time for the match, 9 A. M., when we were taken to the club's grounds, which are nicely laid out and well furnished. The club has a house, a covered shooting stand, five expert target traps with electric pulls, five King live-bird traps, a wire fence boundary for live birds, and in general an equipment which would do justice to a far larger team. The club members are men whom it is a pleasure to meet, and are shooters of no small ability. The day was cold, dark and about as "ornery" weather as could have been made to order. Notwithstanding the efforts made to keep the club house warm, the shooters were all handicapped by the cold. The birds were a fine lot, only two failing to fly when the traps fell, and one of these was found to have been hurt; the other rose promptly on being flagged The shoot was nobody's game until the finish, though at one time Dayton was seven birds in the lead. Ft Dodge made a strong finish and won by one bird

This is the second match between the clubs, Ft. Dodge winning both by the narrow margin of 1.

Conditions: 20 live birds per man, 30yds. rise, A S. A. rules. Score:

C. A. BRYANT.

Trap at Norfolk, Va.

NORFOLK, Va., Feb. 8—On Feb. 5 several of our shooters had a shoot at live birds and targets. The following, clipped from the *Virginian* of this city, of Feb. 6, tells the story of the live-bird shooting:

"At 2:30 o'clock yesterday afternoon a number of crack shots gathered in the old field opposite the Catholic cemetery and participated in a shooting match, in which birds as well as targets were used. The participants were: Messrs. Hurst, Fulford, Peed, Lambert, Smith, Barnes and Garrett, of Norfolk; Messrs. Gallagher and White, of Portsmouth, and Captain Cranmer, of the schooner Lydia B. Roper."

The score was as follows:

Capt Cranmer	1020222020— 7	J E Barnes	11100 — 3
W E Hurst	1111111122—10	W N White	20022 — 4

Answers to Correspondents.

No notice taken of anonymous communications

F. C., Lehigh, Ia.—Address secretary A. K. C., 55 Liberty street, New York.

W. P. F., Jr., New York.—We do not know where to refer you for skye terriers; no breeders are advertising these dogs.

B., Hartford, Conn.—Give me the address of the American Spaniel Club. Ans. Rowland P. Keasbey, Sec'y, 874 Broadway, New York.

SUBSCRIBER, Rio, Wis.—Where can I secure an official record book of thoroughbred dogs of the United States? Ans. Address Mr. A. P. Vredenburgh, secretary A. K. C., 55 Liberty street, New York.

McK., Detroit, Mich.—Is it the accepted theory among sportsmen that imported pointers and setters lose to a considerable degree the sensitiveness of their nose by reason of the ocean voyage? Ans. Such a theory is not even promulgated by men who have any correct knowledge of the matter. It would be quite as unreasonable to advance a theory that the dog, by reason of an ocean voyage, has impaired eyesight, or hearing, or tasting, or feeling, all of which are functions of the senses, as is the power of smelling.

G., Fort Wayne, Ind.—Is it permissible for a pointer dog to have any erectile power at the base of the ears? Or is this feature an indication of poor breeding? The feature referred to above seems to be quite universal according to my own observations, although Points of Judging say "without any tendency to prick." Ans. All pointers and setters have more or less erectile power in the ears, which they frequently employ when in the act of listening. At other times they should hang correctly in place. The standard refers to ears which are naturally set too erect, or prick-eared.

PUBLISHERS' DEPARTMENT.

Mardi Gras—New Orleans.

THE Southern Railway, the direct line between New York and New Orleans, announces one fare, round trip rates, from Washington to New Orleans. Tickets for sale on Feb. 26 to March 1 inclusive, and good to return within fifteen days from date of sale. The time between New York and New Orleans is thirty-nine hours, and the service is perfect in every respect. Dining and sleeping cars on the limited trains. For further information call on or address New York Office, 271 Broadway.—*Adv.*

NEW YORK LIFE BUILDING

Present Entrance on Leonard Street

Most boys as naturally take to the rod and gun as young ducks to water. Encourage them in this if you would instil into their minds self-respect, self-confidence, an ardent love of nature; and develop in their young muscles such vigor and endurance as will enable them to defend themselves and their country in battle; and in peace to drive the hungry wolf from their doors. D. W. Cross.

FOREST RESERVATIONS DOUBLED.

ALMOST a year ago, in March last, we announced the appointment by the Secretary of the Interior of a forestry commission, consisting of experts nominated by the National Academy of Sciences. This commission was to go into the field and study existing forest conditions, and then to report as to these conditions, and to recommend what the Government ought to do in order to conserve and to increase our forests, and to make them of the greatest benefit to the country. The commission, as will be remembered, consisted of Professors Charles S. Sargent, Oliver Wolcott Gibbs, Alexander Agassiz, General Henry L. Abbott, Professor William H. Brewer, Mr. Arnold Hague and Mr. Gifford Pinchot. An appropriation of $25,000 was made by Congress to enable the Secretary of the Interior to meet the expenses of the commission's investigation and report on the inauguration of a national forestry policy for the forested lands of the United States.

The members of this body, except Prof. Agassiz, spent part of the summer in the field, traveling over much of the territory west of the Missouri River, and after their return to Washington undertook the collation of their observations and the preparation of their report. This was submitted some little time ago to the Secretary of the Interior, and by him was transmitted to the President with certain recommendations. As a result of this, the President on Monday last signed and promulgated thirteen proclamations, establishing thirteen additional forest reservations, containing in the aggregate 21,379,840 acres.

These reservations are scattered over a wide extent of territory, extending from the outlying mountain ranges in the plains country east of the Continental Divide to the Coast Range of the Pacific slope, and from the boundary line between the United States and Canada south to southern California.

The reservations so established are described briefly in the following list:

The Black Hills Reservation embraces the central portion of the Black Hills in South Dakota, with an area of more than 967,000 acres.

The Big Horn Reservation embraces both slopes of the Big Horn Mountains, including almost 1,200,000 acres.

The Teton Reservation covers nearly 830,000 acres, south of and adjacent to the Yellowstone Park Timber Land Reserve. This includes the Teton Range and Jackson's Lake.

The Flat Head Forest Reservation embraces both slopes of the main Rocky Mountain Range in northern Montana, from near the line of the Great Northern Railway, northward to the International Boundary. Its area is nearly 1,400,000 acres, and it includes in its eastern portion the lands purchased from the Blackfeet Indians by the treaty ratified by Congress June 10, 1896.

The Lewis and Clarke Forest Reservation embraces both slopes of the Continental Divide in Montana and extends from near the line of the Great Northern Railway south nearly to the 47th degree of north latitude. It has an estimated area of about 2,900,000 acres.

The Priest River Reservation includes portions of northern Idaho and northeastern Washington, and has an area of 645,000 acres.

The Bitter Root Reserve comprises 4,100,000 acres in Montana and Idaho, including the Bitter Root Mountains, tributaries of the Clear Water River, of the Salmon River and of the Snake River.

The Washington Forest Reserve extends from about 120° west longitude nearly to 122°, and from the International Boundary south to about the 48th degree of latitude, and embraces nearly 3,600,000 acres.

The Olympia Forest Reservation includes the Olympian Mountains, and embraces nearly 2,200,000 acres.

The Mount Rainier Forest Reserve is an enlargement of the old Pacific Forest Reserve by 1,267,000 acres, making a total of 2,234,000 acres.

The Stanislaus Forest Reserve is in the summits of the Sierra Nevada Mountains in California, and includes about 700,000 acres.

The San Jacinto Forest Reservation in California embraces 737,000 acres.

The Uintah Forest Reservation is in northern Utah, and includes the northern slopes of the western part of the Uintah range.

These proclamations more than double the area of our forest reservations, and will be of incalculable benefit to the Western country. We have at last a basis for a satisfactory system of forest preservation.

The work done by the commission deserves the highest commendation, and amply justifies all that was said about its composition at the time of its appointment. It may be added that this work, admirable as it is, might however, have gone for nothing if it had not been for the intellligent appreciation of the subject shown by the President. His mind early grasped the importance of the preservation of our forests with intelligence and firmness, and he has shown himself earnest to do all that lay in his power in behalf of this subject. In fact, without the encouragement which the commission has received from him, it may be conjectured that the report and the recommendations now acted on would have been very much less sweeping and so less valuable than they are.

Everything that has so far been done by the commission merits the highest praise. It now remains for Congress to enact such laws as shall carry out the recommendations, which will, no doubt, be found in their report when it is published.

PROTECT THE GRAND CAÑON.

WITH each recurring session of Congress come fresh attempts to raid the National Park. These raids sometimes take the form of throwing open a section of it to settlement, or of running a railroad through it, or again of establishing a monopoly in connection with some special feature of the Park. There are always plenty of people collected in Washington who are ready to use this reservation—or for the matter of that any other possession of the Government—to further their schemes for making money. Such ambitions have perhaps nothing criminal about them, yet certainly when they take the form of destroying the attractiveness or the usefulness of the possession in question they are infringements on the rights of the public, and must be opposed by those persons who have the public welfare at heart, and by Government officials whose duty it is to look after the public interests.

The most recent of the attempts to injure the Yellowstone Park is an old one, revived now, and being pushed with vigor in the Interior Department—the project to put an elevator in the Grand Cañon of the Yellowstone River, immediately below the Lower Falls. By means of this it is proposed to carry visitors to the Falls from the level of the upper river down into the bottom of the cañon. As we have said, this project is an old one, and it has more than once been denounced by the superintendent of the Park and by those who take the deepest interest in the reservation. It is difficult to imagine any scheme which would more effectually destroy the strange, wild beauty of the Cañon of the Yellowstone. The great charm of this marvelous piece of natural scenery—unequaled anywhere in the world—is that no evidence of man's handiwork is to be seen in it. To interrupt the purity of this scene by an elevator shaft, by an inclined railway, by an engine house and a tall chimney vomiting forth black smoke, would be actually to destroy the beauties of this scene. To do this would be a crime.

It is understood that application for a lease of land on which such structures shall stand and for permission to build them has been made to the Secretary of the Interior. What action might have been taken on the matter is unknown, for the new secretary of course can have but little knowledge of the Yellowstone Park. Fortunately the revived scheme was discovered by a gentleman of Washington who is one of the oldest, most watchful and warmest friends of the Yellowstone Park, and was by him brought to the attention of Senator Vest. On Feb. 16 Senator Vest introduced in the Senate a resolution, which by unanimous consent was considered and agreed to. The resolution reads:

"*Be it resolved*, That the Secretary of the Interior is requested to communicate to the Senate whether any action has been taken, or is contemplated to grant to any person or persons the privilege of erecting a steam plant, elevator or other appliances on the Yellowstone Cañon in the Yellowstone Park, for the purpose of conveying persons from the top of the cañon to the bottom; and the Secretary of the Interior is further requested to withhold any action in the premises until it can be determined by Congress as to the propriety of the granting of such privilege."

The resolution will undoubtedly bring out the facts in the matter, and will lead to a discussion of it which is very much needed. Usually a little publicity is all that is required to bring about the downfall of projects which are to benefit individuals at the expense of the public, and we shall be glad to have this one fully discussed.

There are many persons of the sternly practical sort who would be glad to build mills of different kinds all along the Yellowstone River, to take out the water from above the falls to run these mills, and to run the waste from the mills down into the Grand Cañon of the Yellowstone. There are persons who would think the Grand Cañon of the Yellowstone well destroyed if it brought to their pockets a single dollar, but the value of this cañon is not to be measured in dollars and cents. We have in this wonderful piece of natural scenery one of the acknowledged marvels of the world, and anything that defaces or interferes with its naturalness is entirely to be condemned, and if possible to be prevented.

The strongest friend which the National Park has in the United States Senate is Senator Vest, and he may be trusted to stand now, as he has always stood, sturdy in his defense of the Park. He will do all in his power to oppose this act of vandalism and to prevent the ruin of this grand piece of scenery. The present wonder and impressiveness of the Yellowstone Cañon are felt by all who visit it. It is real nature, and indeed the whole charm of the Park is due largely to the fact that few evidences of civilization are seen there. All who are interested in retaining somewhere in this country one little bit of real nature will be glad to lift their voices in support of Senator Vest in his efforts in behalf of the Park.

AUDUBON BIRD PLATES.

IN this issue is given the fifth in the series of half-tone reproductions of Audubon's famous bird portraits, from the rare first edition. It is of the American golden plover. The list of plates already printed and to come includes:

THE BLACK DUCK, Sept. 26, 1896.
THE PRAIRIE CHICKEN, Oct. 24.
THE CANVASBACK DUCK, Nov. 21.
THE WILLOW PTARMIGAN, Dec. 19.
THE AMERICAN GOLDEN PLOVER, Feb. 27, 1897.
THE SHOVELLER DUCK.
THE REDHEAD DUCK.
THE PURPLE SANDPIPER.

The Sportsman Tourist.

ON THE SPANISH MAIN.—II.

Fish and Fishing in Nicaragua and Costa Rica.

BY J. F. LE BARON, C. E.

The fish found along the eastern coast and in the inlets of Central America resemble in general those of Florida and the Gulf of Mexico. Like the Florida inlets, these waters teem with innumerable numbers of the finny tribe.

In Nicaragua, where I was stationed for over two years in charge of all the operations of the Nicaraguan Canal, I organized a crew, gave them a boat, and procured a 300ft. seine from New York. At this time I had twenty-eight camps of engineers and laborers, some of them containing over 100 men, at work on the line of the canal, including the dredges and snag boats. This fishing crew of three men kept these camps and my headquarters supplied with all the fish we could eat.

I noticed the following varieties: Mullet, 25 to 30in. long; crevalli or jackfish; rovalli, or "snout," as it is called in Florida, called by the Nicaraguan guovina; the rockfish (*Labeax lineatus*); kingfish (*Humbrina alburnnis*); redfish (*Coracionus*); drumfish or el tambor; the porgie (*Sogrus*); the mackerel (*Scomber colias*); the grouper, or, as they call it, "garupa" (*Serranus*), and many others.

There also occur in these waters several varieties of sharks (Spanish, *tiburon*), the sawfish or *peje sierra* (*Pristis squalus*), the hog fish (*Helops*), the eel (*Murœna auguila*), the barracuda (*Sphyrœna barracuta*), the tarpon or *grande ecoile*, and many others having only Spanish or Indian names whose scientific names I do not know.

In the fresh-water streams I found the guapote, which is the same as the big-mouthed black bass, called trout in Florida; also the zavolo and the zavolete (*Aloza*), the former of which grows to enormous dimensions (and is believed to be the tarpon, but I am not sure); the barbudo (*Cyprinus barbus*) or barbel; the tigrilla, the mojarra, etc., etc.

In Lake Managua they catch great quantities of a small white fish which they call sardines and which they dry in the sun, and which form in this condition a considerable article of trade. They consist of several mixed varieties, such as *Tetragonopterus*, *Antheinichtys*, etc., etc.

A very singular fact is noticed here, and that is that Lake Nicaragua and the San Juan River swarm with immense sharks and sawfish, which have not lost any of their voracity by their life in fresh water.

I saw great numbers of hammerhead sharks at the confluence of the San Carlos and San Juan rivers, fifty miles above the salt water.

There is a *Resquada*, or custom station, at this point, where I stopped several days while examining the site for a dam across the river, and in company with the officers of the station frequently bathed in the river; but while doing so we kept a sharp watch for the back fin of the monsters, and when we saw one approaching we at once beat a hasty retreat from the water.

This is the only place on this continent where sharks have been known to ascend and live in fresh water. They have been noted in the waters of the upper Nile and one other river in South Africa.

It is extremely dangerous bathing in the waters of Nicaragua. Not only are the waters—fresh as well as salt—teeming with voracious sharks, but there are great numbers of immense crocodiles from 12 to 20ft. in length, which are very bold and vicious. I lost two of my men on the canal, who were seized and devoured by crocodiles while bathing. One was a Jamaica negro and the other a Swede. The negro was bathing on Sunday in the harbor at Greytown in front of the receiving camp when he was seized and dragged under. His cries brought 200 men to the shore, who were in the camp. Many of them had rifles and revolvers, but the saurian dove at once, dragging the unfortunate man under water, where he soon drowned. The reptile rose again with him in his mouth after a little while, but it was seen that the man was dead. Several shots were fired at the animal, which dove again with the man's body, and neither was ever seen again.

The crocodiles of Central America are very different from the alligators of Florida. They are lighter in color, attain to fully double the length of the alligator and have a much sharper snout. The upper jaw is hinged, which is not the case in the alligator, so that they can throw it up at right angles to the body. They have a peculiar habit when sleeping on the sand banks of lying in the sun with the mouth wide open, the upper jaw standing. I have often seen them lying in this way on the sand banks in the San Juan River and the harbor of Greytown.

They differ from the alligator also in the manner of depositing their eggs, which they lay in the sand like a turtle, without making any nest whatever. The Florida alligator, on the contrary, makes a large nest of sticks and grass, often 10ft. or more in diameter, in the marsh or raised out of the shoal water of the morass.

I have never heard of the eggs of the alligator being eaten, but the eggs of the Central American crocodile are largely used as food by the Indians and negroes. The crocodile is much more ferocious and dangerous than the alligator.

The manatee or sea cow (*Manatus americano*), that cross between a fish and an animal which is supposed to be the origin of the fabled mermaid, is very numerous in the lagoons and rivers of the east coast of Central America. Their meat is very good eating, and is a staple article in the market of Greytown. The flesh is white, sweet and tender, somewhat resembling veal.

When we first arrived in Nicaragua we were told by some officers of the navy, who had been in the country on former canal surveys, that there were plenty of fish in the streams, but that they would not bite, and could not be caught with hook and line.

It did not take us very long to thoroughly disprove the latter statement. At first I was inclined to believe it, after making numerous unsuccessful efforts with different kinds of bait, but I saw the quiet pools in many places swarming with fish, and shot several, finding them excellent eating. Instead of giving up the matter I called to my aid one of my Nicaraguan servants, and with the camp doctor—a jovial Englishman, long a resident of the country—we started one day in a boat on the San Carlos River in Costa Rica to try our luck. Under the skillful tuition of the native we had no difficulty in capturing a fine string of guapote (pronounced warpote), identical with the black bass of Florida. We caught also several barbudos, or barbels, a good pan fish.

I had previously appointed a camp hunter for each camp, and I now supplied him with hooks and lines, and was pleased to find that the chiefs of the different camps reported a good supply of fresh fish brought in, which was a very welcome addition to the bill of fare.

On one of my numerous excursions to reconnoiter and map the country I ascended the Trinidad River to Lake Maniti in Costa Rica. This stream is an affluent of the river San Juan just above the Serapigui, about thirty miles above Greytown. The upper part of this river that empties into the Maniti Lake is a mere creek about 25ft. wide, and just where it debouches into the lake I had rare sport with a spinner on a long line trolling behind the boat, catching eight very large *guapote* or black bass from 20 to 32in. long in less than half an hour. I used no bait on my spinner except a red flannel rag. The fish were very gamy, often leaping clear out of water, and required skillful playing to kill.

The boats that we used were galvanized steel canoes, of which we had twenty-two, from 15 to 22ft. in length, made to order in New York and brought out on the ship with us. They had no rowlocks, but were paddled; the natives of that country not understanding the use of oars, but using the paddle to perfection.

My boat's crew always consisted of four men and a cockswain or *capitan*, who steered. All our traveling was done in these boats and in steamers on the San Juan River and Lake Nicaragua, there being no roads whatever in the eastern side of the country. The small streams are all filled with logs, fallen trees often extending clear across and completely barring navigation. Sometimes we were obliged to take all our provisions and camp equipage out of the boats and haul them around on the bank; at other times, when the log was not too large, we would cut it in the middle and it would then sink sufficiently to allow us to pass, but generally we would haul the bow of the boat as far up on the log as possible, putting all the weight in the stern, the officers also sitting in the stern, to raise the bow. Then, when the men had hauled the boat as high up as possible, all the weight would be shifted to the bow, the officers standing there also, when the men, jumping overboard and standing in the water, would raise the stern and launch her over the log; the weight would be distributed again and we would continue our voyage. I crossed in this way, ascending the Trinidad River, fifty-five logs in a distance of ten miles. With wooden boats, or any less strong than the excellent steel boats furnished us, this would have been impossible, as the boat's back would have been broken and the seams opened; but these boats stood this work for over two years, until the bottom was actually worn through. Add to these troubles the fact that it generally rained twenty hours out of twenty-four every day, and some of the discomforts of canoeing in that country can be appreciated. This is on the east side of the great lake, or the country between the lake and the Caribbean Sea, where the rain gauges that I established and had measured every day recorded a rainfall of 298in. per year. On the western or Pacific slope the climate and country are entirely different, our rain gauges showing only 57in. of rainfall per year, and where good roads exist and the country is inhabited, and not like the eastern slope, a howling wilderness, without a single road or even a cattle trail for 100 miles. There are a few settlers on the immediate banks of the San Juan River, but none whatever back from the river.

At Castillo rapids there is a little town of perhaps fifty people, clustered around the old massive stone fort that was built by the Spaniards in 1673, and here the Nicaraguan Government maintains a custom house (Greytown being a free port) and a garrison of twenty-five or thirty soldiers.

At these rapids there are great quantities of the voracious fish called *zavolos*, or savages, from their ferocity. They will rush in a school at anything thrown overboard from the steamers, and it appeared an easy matter to catch them, so I got out my rod and line and baited with a piece of meat from the cook's galley and tried it. At the first throw a dozen fish from 1ft. to 2ft. in length rushed for the bait, and although I hooked one at once I was unable to land a single fish, for they would tear the hook and be off before I could play them or haul in. Several of the other passengers on the steamboat tried also, but with no better success. These fish are so voracious that they will attack any person in swarms when bathing and bite any part of the body they can reach.

While I was in charge of the surveys for the canal I had my headquarters on a small island in the San Juan River, called San Francisco Island, about forty miles from Greytown. While here I had some fish traps made and set in the river, and we caught quite a number of fresh-water crayfish about a foot in length and quite similar to a lobster, but lacking the large claws. We found them very nice eating.

I saw numerous tarpon in the river here, and one day I concluded to try and harpoon one. I had among my boatmen a Carib Indian, who, like all of that tribe, are very skillful boatmen and fishermen. I had provided myself with a good "lilly iron," a kind of fish spear so made that when a fish is struck the stick is detached and floats off on the water, the line being fastened to the spear head. We took about 200ft. of large line, about the size of a clothes line, to the end of which was attached a float or buoy made of bolsa wood, which is as light as cork, and which grows abundantly all along the river banks in that country. Thus equipped we entered a canoe and paddled out in the stream, which was about a quarter of a mile in width at this place. The Carib stood in the bow with the harpoon ready poised, scanning the water, while I slowly and noiselessly paddled the boat from my seat in the stern.

It was not long before he saw the silvery sides of a tarpon gliding across the bow of the canoe, and he launched the harpoon with so true an aim that the harpoon pierced the side of the fish, which gave a tremendous leap and rushed off, making the line spin out as if shot from a cannon. The Carib instantly threw overboard all the line and the buoy, which the immense fish dragged off, making it spin through the water as if dragged by a locomotive. Now up the river the buoy went, then across and back, the beautiful fish often jumping 6ft. or more out of the water in the vain attempt to free himself from the line, his sides glistening in the sunlight like burnished silver. But the harpoon held, and the weight of the drag and loss of blood began to tell on him, and gradually we could see by the slower movement of the buoy that he was succumbing. We picked up the harpoon stick and watched him, and for fully an hour he kept up the fight against death. Sometimes we thought he was dead and moved toward the buoy, but he would gather his energies and start off again, apparently as lively as at first. More than a dozen times he leaped clear of the water, falling back again and dashing the spray high into the air, and darting off with an almost indescribable velocity. At last, however, the float lay quiet upon the water, drifting down toward us with the current, and we paddled up to it and drew it in, finding the noble fish dead. We drew him into the canoe, not without some trouble and danger of capsizing, and returned to camp, where we found him to measure 6ft. 2in. in length, and very fair eating. The scales measured 2½ by 3in. each.

The object of the buoy is to give the fish play, and to drag him back and so tire him out. If the line had been fastened to the canoe he would have speedily overturned it, and probably have torn out the harpoon in his first tremendous rush. There is probably no gamer or more energetic fish than the tarpon. I have harpooned sharks, sawfish and big drumfish weighing over 1001bs., and jewfish of double this weight; but nothing that I ever saw so much resembles the embodiment of electrical energy as a tarpon. The fish in shape and general appearance resembles an immense herring.

The disciples of Izaak Walton will find abundant sport in Nicaragua and Costa Rica, and the naturalist will be rewarded by many unique specimens. The fishing in Lake Nicaragua is excellent, and one can stand on the beach at Greytown, as I have done, or on the rocks of Brito in the Pacific, and catch small fish, such as rockfish, sailor's choice, etc., in abundance. In the Caribbean Sea, off Greytown, I have had fine sport catching crevalli by trolling behind one of our tug boats.

We incidentally killed a great many fish with dynamite in the Descado and San Francisco rivers when engaged in blowing up logs to clear the channel for our steamboats to reach the canal line, among which were many strange and, to us, unknown varieties.

Great numbers of green turtles are caught in the Caribbean Sea, and they formed a staple article of food with us. I fenced off a part of the harbor at Greytown and bought these delicious turtles by the hundreds, keeping them in the "crawl" thus made until wanted to send to the camps in place of beef, which was difficult to obtain there, and more costly. We obtained their eggs also in large numbers. They are round, with a soft, membranous shell, about the size of a pullet's egg, and we became very fond of them for the table. It is impossible to boil them hard, like a hen's egg.

The fishing in Lake Nicaragua is very fine around some old wrecks at Fort San Carlos, and the small, cold streams falling from the mountains contain many small but fine fish; but I did not see any trout.

Natural History.

THE GOLDEN PLOVER*

(*Charadrius pluvialis*, Linn.).

The golden plover spends the autumn, winter and part of the spring in various portions of the United States, appearing in considerable numbers both along the coast and in the interior, and not infrequently on our highest grounds. A much greater number, however, proceed in severe winters beyond the limits of our Southern States, and the partial migrations of this species are much influenced by the state of the weather. They are more abundant along the sea shores of the Middle and Eastern districts, from the middle of April to the beginning of May, whereas in autumn they range over the interior, and more especially the Western prairies. In the early part of May they congregate in immense flocks, and commence their journey toward more northern regions, where they are said to breed.

The account which Wilson gave of this species refers in part to the bull-headed plover (*Charadrius helveticus*), although his figure cannot be mistaken for that of the latter, even in its first autumnal dress. But the editor of the second edition of Wilson's work has rejected the golden plover as an American bird, although he might have frequently seen it in the very markets of Philadelphia. The Prince of Musignano corrected this error in his valuable "Observations on the Nomenclature of Wilson's Ornithology." Mr. Selby, in speaking of the golden plover, gives it as his opinion that the bird so called in America differs from that of Europe. This opinion, however, I cannot consider as correct, as I have seen and examined the golden plovers of both countries, and have found their manners, tone of voice and appearance precisely similar.

This bird moves on the ground with sprightliness. When observed it often runs with considerable rapidity to some distance, suddenly stops short, nods once or twice, vibrating its body at the same time, and if it should imagine itself noticed it often lies down and remains crouched until the danger is over. At the time of their departure from the north, and while on the sands or mud bars on the sea shore, they often raise their wings as if to air them for a few moments. While searching for food they move in a direct manner, often look sideways toward the ground, and pick up the object of their search by a peculiar bending movement of the body. They are frequently observed to pat the moist earth with their feet, to force worms from their burrows. In autumn they betake themselves to the higher grounds, where berries as well as insects are to be met with, and where they find abundance of grasshoppers.

When traveling to a considerable distance, the golden plover flies at the height at from 30 to 60ft., in a regular manner, with considerable velocity; the flock, when large, forming an extended front and moving with regular flappings, an individual now and then uttering a mellow note. Before alighting they often perform various evolutions, now descending and flying swiftly over the ground, then curving upward or sidewise, closing and extending their ranks, until the sportsman is often tired of watching them; and, after all, the flock, just when he expects it to alight, may suddenly shoot off and fly to a distance. When they alight

* From "Audubon's Ornithological Biography."

AUDUBON'S PORTRAIT OF THE AMERICAN GOLDEN PLOVER.

within shooting distance, the moment their feet touch the ground is the critical one, for they are generally in a compact body, and almost immediately afterward they disperse. I have often discovered them, while flying from one place to another, suddenly check their course for a moment or two, as if to look at the objects below, in the manner of curlews.

While at New Orleans on March 16, 1821, I was invited by some French gunners to accompany them to the neighborhood of Lake St. John, to witness the passage of thousands of these birds, which were coming from the northeast and continuing their course. At the first appearance of the birds, early in the morning, the gunners had assembled in parties of from twenty to fifty at different places, where they knew from experience that the plovers would pass. There stationed, at nearly equal distances from each other, they were sitting on the ground. When a flock approached every individual whistled in imitation of the plover's call note, on which the birds descended, wheeled, and, passing within 40 or 50yds., ran the gauntlet as it were. Every gun went off in succession, and with such effect that I several times saw a flock of a hundred or more reduced to a miserable remnant of five or six individuals. The game was brought up after each volley by the dogs, while their masters were charging their pieces anew. This sport was continued all day, and at sunset, when I left one of these lines of gunners, they seemed as intent on killing more as when I arrived. A man near the place where I was seated had killed sixty-three dozens. I calculated the number in the field at 200, and supposing each to have shot twenty dozens, 48,000 golden plovers would have fallen that day.

On inquiring if these passages were of frequent occurrence, I was told that six years before such another had occurred immediately after two or three days of warm weather, when they came up with a breeze from the northeast. Only some of the birds were fat, the greater number of those which I examined being very lean; scarcely any had food in their stomach, and the eggs in the ovaries of the females were undeveloped. The next morning the markets were amply supplied with plovers at a very low price.

I have again applied to my friend William Macgillivray for an account of the manners of this species during the breeding season, which I now lay before you:

"The golden plover is in many parts of Scotland, but especially in the Northern Highlands and in the Hebrides, a very common bird. When the weather begins to improve toward the end of spring these birds may be seen flying over the shores or fields in their vicinity at a great height, in loose flocks, which now extend into a wide front, now form irregular angular lines, move with a quiet and regular flight, frequently emitting their peculiar soft notes, and at times uttering a singular cry, somewhat resembling the syllables *courlie-wee*. These flocks are leaving their winter haunts and returning to the inland moors, over which they disperse in pairs. In the beginning of May, should you traverse one of the dreary heaths, you will often hear the plaintive cry the plover, mingling perhaps with the feeble cheep of the dunlin or the loud scream of the curlew. Before you have advanced to any considerable distance there may come up and alight on some mossy knoll beside you a male clad in his beautiful summer vesture of black and green. You may approach him within ten paces if you are inclined, and in some districts it would be easy for one to shoot many dozens of them in a day at this season. After incubation has commenced the females seldom make their appearance on such occasions. Whether the males assist their mates at that time or not, they certainly do not forsake them. The nest is a slight hollow in a tuft of moss, or on a dry place among the heath, irregularly strewed with fragments of withered plants. The eggs, of which the full number is four, are placed, as usual in this genus, with the small ends together. They are much larger and more pointed than those of the lapwing, being at an average 2½in. in length and 1½in. in their greatest transverse diameter. The shell is thin and smooth, of a light grayish-yellow or cream color, irregularly spotted, dotted and patched with dark brown, and sometimes having a few light purple spots interspersed, the markings larger toward the broadest part. The young leave the nest immediately after they burst the shell, and conceal themselves by lying flat on the ground. At this period the female evinces the greatest anxiety for their safety, and will occasionally feign lameness to entice the intruder to pursue her. I have several times seen one fly off to a considerable distance, alight in a conspicuous place, and tumble about as if in the agonies of death, her wings flapping as if they had been fractured or dislocated. The eggs are delicious, and the young birds when fledged not less so.

"When the young are able to fly the plovers collect into flocks, but remain on the moors until the commencement of winter, when they advance toward the pasture lands, and in severe weather betake themselves to the low grounds near the shores. During continued frosts they feed on the sands and rocky shores at low water, and in general during the winter remain at no great distance from the sea.

"When a flock alights at this season on a field the individuals disperse, run about with great activity, and pick up their food. Sometimes one finds them so tame that he can approach within 15yds., and I have often walked around a flock several times in order to force them together before shooting. In windy weather they often rest by lying flat on the ground, and I have reason to think that at night this is their general practice. In the Hebrides I have often gone to shoot them at night by moonlight, when they seemed as actively engaged as by day, which was also the case with the snipe; but I seldom succeeded in my object, it being extremely difficult to estimate distances at night. The numbers that at this season frequent the sandy pastures and shores of the outer Hebrides is astonishing.

"The golden plover, although occasionally addicted to wading, evidently prefers dry ground, in which respect it differs essentially in habits from the *Totani* and *Limosæ*. It frequently probes the moist sands, and in summer the dry cow dung on the moors and upland pastures is seen perforated by its bill. It affords delicious eating, and in my opinion is scarcely inferior in this respect to the woodcock."

To FOREST AND STREAM,
New York City.

RANGE OF THE ANTELOPE.

Fort Assiniboine, Mont., Jan. 12.—*Editor Forest and Stream:* Antelope are never seen in the vicinity of this post under ordinary conditions. Early last November there was a snowfall of nearly a foot without drifting. This was followed by about five weeks of the most intensely cold weather, the thermometer going down to 40° below and ranging below zero all that time. Toward the end of this period large droves of antelope moved into Milk River valley for the food and shelter which they could not find in their usual haunts. They were in this part of the country something over a week when the weather broke, a "chinook" carried off the snow in forty-eight hours and nearly all the antelope vanished. A railroad man who is also a sportsman told me that he believed there were 40,000 head in Milk River valley between Havre and Glasgow—125 miles—that a band of them was seen every half mile. I saw six bands within three miles of this post and caught two individuals with my greyhounds. These antelope were slaughtered unmercifully; you could buy them at considerably less per pound than beef. For several weeks a band of several hundred were in a large field, four miles square, several miles from Havre. For all I know there may be some there yet; I know that some apparently had not been able to get out after several weeks. There are a few small bunches and scattered individuals that are still occasionally seen a few miles from the post.

Now as to their usual distribution. Last summer I had occasion to accompany a detachment conveying a band of Cree Indians to the Canadian line from the vicinity of Helena to Coutts, near the Sweetgrass Hills. I carefully inquired about game and found antelope rare during summer along Sun River and the Teton, but reasonably plenty in winter. Between Teton River and the Marias River I personally saw none, but several large bands were seen by our detachment North of the Marias, especially between the railroad and Canadian line, they were more than plenty. I suppose I saw a dozen small bunches in the course of an afternoon. I learned that they were always plenty in the vicinity of the Sweetgrass Hills, and was told by members of the mounted police at Coutts that they could find antelope any time without much trouble On returning to this post the detachment went to the eastward of the Sweetgrass. Antelope were not hunted, but one was killed and a number seen.

I later spent a month hunting in the St. Mary's Lake country. On the return of the detachment from there, the line of the railroad was followed. Between Blackfort and Chester, about 100 miles, antelope were common, although a large surveying party was said to have driven most of them out of the country. I know of the presence of a few antelope on Sage Creek, twenty miles to the west of here; and a sheep man on Milk River, about twenty-five miles west from here, told me he roped several fawns last spring.

In 1895 I served at Fort Yates, N. D., about sixty miles below Bismarck. I heard that antelope were reasonably plenty a day's journey back from the river, and I saw a tame one in Mandan at that time. I am told by officers here that antelope were plenty on the Fort Buford Reservation, N. D., recently abandoned, and understand that they are plenty during the fall and winter south of Glasgow. I believe antelope are plenty on the great plains north of Milk River, from its source to its mouth, but they keep well away in the bad lands and breaks and are seldom seen This country is the "abomination of desolation," without wood or water, absolutely rather than relatively, and with ordinary winters, which will not drive them from their usual haunts, the extermination of antelope in that section is far distant.

Edward L. Munson, Ass't Surg , U. S. A.

PRAIRIE DOGS OF THE PLAINS.

While conducting scientific investigations in the West a few years since I became interested in the prairie dogs (*Cynomys ludovicianus*) of the arid plains, especially in southwestern New Mexico and Arizona

So much has been written by various authors that a description is unnecessary. Some facts were obtained by me which I have not seen mentioned by others, and many which other writers have chronicled, are here recorded mainly because of their value as corroborative evidence.

In southwestern New Mexico these animals certainly abstain from the use of water, unless it be during the short rainy season, and I have no direct evidence that even then this animal makes use of its opportunities and uses it. It is believed by some that the prairie dog receives a sufficient amount of moisture from the grasses and other plants on which it subsists to answer all demands for water.

If this be the case, however, it could thrive without any water; for it has been demonstrated by long continued observations by me that the plants on which it lives contain such a small amount of moisture as at least to amount to practically nothing as such.

At certain seasons of the year the prairie dog becomes very fat; but where it gets sufficient food for this, especially at these times of the year, is rather difficult to say.

The villages vary from those containing only half a dozen holes to those containing tens of thousands and extending unbroken over a stretch of country seven miles in length. Such an extensive village exists on the plains west of Cook's Peak, in southwestern New Mexico.

Not infrequently the traveler will find old, abandoned villages with perhaps not a single living occupant; or at most, not more than half a dozen inhabitants.

At times a large village will quite suddenly become depopulated, and for no apparent reason. This phenomenon I have personally observed, and could find no good cause for it; neither could old plainsmen, who had observed the same thing, throw any light upon it.

It is sometimes the case, however, that a few families of prairie dogs will for some cause leave the old village and start an independent one of their own; and sometimes the place they select will be located in a narrow, stony valley or gulch, among the foothills bordering the plains.

During the late fall and winter the prairie dogs become very fat, as just stated, and their skins fine. In some cases during these periods large numbers are trapped for their skins and oil, both of which are said to possess considerable commercial value.

Stockmen generally look upon the prairie dog as an unmitigated nuisance, and use every known method to destroy them. During 1889-92, while I was in New Mexico, thousands were destroyed by various methods, poison being the most successful. The most barbarous and inexcusable method employed, however, was to fasten several large fishhooks into a board and place it in the entrance of their holes. In coming out the dog would meet with no difficulty from the obstructions, but on entering the burrow would invariably be impaled on these hooks, and being unable to extricate itself would be left there to die of starvation or to be eaten by its companions; for although a true rodent, the prairie dog is also under certain circumstances carnivorous in its habits, as I have abundant evidence to show.

It is often noticed that with a species which has a very great geographic range, especially in latitude, those individuals existing in the one extreme will exhibit in habits some quite marked departure from those of the other extreme. It is of interest, however, to note that with the prairie dogs their general characteristics and habits are identical—so far as I have observed and learned—throughout the great range occupied by them, and which extends from the prairies of the British possessions on the north to the distant plains of Mexico.

This being the case, I cannot do better than to quote a few statements regarding their habits from the excellent paper on the subject by Mr. Vernon Bailey, of the U. S. Department of Agriculture, in its annual report for 1887: "The prairie dogs feed on grasses and various kinds of weeds indigenous to the regions occupied by them.

"Their holes run down at an angle never far from 45°, and seem to go straight in at that pitch for about 8 or 10ft. at least. (I often observed them to extend nearly, if not quite, straight down for the first 3 or 4ft.) The holes are usually smaller at the opening than further down; the entrances are slightly flattened, so that the two diameters are not alike.

"In most cases the dirt is thrown out of the hole all around, instead of in a pile on one side. It then forms a cone like a volcano around the opening, the rim varying in height from 10in. to less. The quantity of dirt thrown out varies much; at some places there may be two cubic yards of it, while at other places there is none.

"The earth is very hard at the edges of some holes, and forms a sharp rim around the hole. The animals are very shy. When they see you they run to the nearest hole, and then sit up like a gopher and watch until you approach within forty rods or less; then they dodge down the hole, or sometimes crawl part of the way in and continue to watch until you are quite close, but if shot then and killed they will slide down beyond all reach.

"When they are sitting up at a distance watching you, they keep up a chippering that is almost exactly like the bark of a very small dog, but is faster.

"While barking they keep their tails flapping up and down very fast, and also when they are running and when they start down a hole. In very many cases in these towns quite a large number of animals under ordinary circumstances occupy various holes, but have one hole which appears to be home, and to which they usually run if scared; and on reaching it they will all usually stand up straight around its margin to watch you, and when six or seven are there they certainly present a comical appearance.

"When six or seven go into one hole, generally the last one stays out and barks until approached quite near, when he too dodges in; and as you come nearer he gets lower down in the hole until almost out of sight, but keeps barking and flapping his tail until he thinks the danger is too near, then with a parting shake of his tail down he goes.

"When they run into their holes they will often come out again in a few moments, or perhaps not for an hour or even half a day. So far as my own personal observations go, they do not hibernate, at least not in their southern range."

In only one or two cases during my long series of observations on this animal did I observe the burrowing owl to live with them, and never did I see a rattlesnake in any of their villages.

Clement L. Webster.

Iowa.

AN INTERESTING PET.

Some years ago, while out in the mountains, I came across the works of a little animal that interested me very much. These occurred along the borders of mountain streams and wet, grassy places, and consisted of holes in the banks, trails under old logs, and always with places in the immediate neighborhood where grass and weeds had been cut down and packed away, and although I have since noticed these signs in many different parts of the Province, I have never been able to satisfy myself as to the identity of the author until about a year ago, when I was out after caribou.

We had climbed to the summit of the mountains between Adams and Shuswap lakes, and for two days had worked our way through a tangle of down timber and scrub pines till we finally came out on an open stretch of grassy land, which was to be our camping place during our stay in the mountains.

We pitched our tent beside a small stream, which, coursing its way down from the timber toward the open land, only showed itself at intervals from beneath a raft of moss-covered roots, fallen trees and brush. Here again I saw the work of the little "haymaker," as I called him, and I made up my mind to make his acquaintance before leaving. We were camped about 20ft. from one of the open places in the creek, and next morning the Doctor and guide had started out after caribou, and while I was standing by the fire watching this open space a flash of gray darted round its upper end, rested on a piece of rotten wood, dipped its hands down into the water and commenced with very rapid motions to wash its face. This done, it turned its head one side, listened for a few moments, then lowered itself on all fours and started to feed on some weeds that grew on the edge of the stream. The mystery was solved. I identified my little "haymaker" as the sewellel or bank beaver (*Aplodontia leporina*).

My gun was within easy reach, but the first motion I made toward it he was gone like a flash, and I never saw him again or any of his friends during our stay.

In September last a friend of mine in Seattle sent me a live specimen of this interesting little animal, and it did not take us long to become great friends. I kept him in a box with wire netting front, divided into two apartments, one for his eating room, the other for sleeping in. I made his bed of excelsior, in which he would bury himself so that no part of him was visible. In the morning when I went to feed him I generally had to whistle to get him out, when he would come with a rush, and shaking himself clear of the excelsior he would spring up the wire netting, hanging on by his long claws and making his lips go as if he were saying, "Now bring on your grub." I fed him on grass and dandelion. Of the latter he was very fond, and his mode of eating was very comical. He would grasp the dandelion by the lower end, slap the stalk once or twice into the dish of water which was kept in the cage, then starting at the lower end he would feed it in through the side of his mouth till the top or seed was reached. This he would throw away. I tried him

on apples, carrots and turnips, none of which he appeared to care for. When through with his meal he would very often wash his face, and his motions, though very quick, were strangely like those of a human being. He was very fond of play, but if a stranger came up he would scurry off to his bed. I never heard him make a sound.

It was my intention to take his photo and send it with this, but the other morning on reaching the museum the first news I received was that the little beaver was gone. He had eaten a hole through the wire netting and escaped.

Victoria, B. C. John Fannin.

BURLS AND THE CAUSE OF THEM.

The nature of burls is a subject that has not been so closely studied as it deserves. These curious and frequently valuable monstrosities on trees have, however, a law unto themselves by which they and the origin of them may be satisfactorily explained. In these woods of the Blue Ridge, where insects and birds and burls abound, the burls may be studied with interest and satisfaction to those who like myself permit their minds to have no rest until the true inwardness of what they see is discovered. This is a region of burly trees, not only both for the very common knots which go by the name of burls, but as to that other meaning, size or bulk. For here we have sassafras 30in. in diameter, poplars 9ft., chetsnuts 7 or 8, and the common laurel large enough to saw into boards, and as well trees with burls as large as flour barrels, and in some cases as sugar hogsheads. Being of a restless sort of mind, and always wanting to know the reason for things, I have studied these excrescences on the trees and have learned that they are due to various causes. The woodpeckers often start this abnormal growth; sometimes it is the nature of the trees themselves which are given to these deformities more easily than others, from the curly nature of the fiber of the timber, but mostly the cause is some injury by birds or animals which starts the curious growth.

Now your correspondent, to whom we are indebted for the drawing of a curious burl, is not exactly right when he says the bark of trees has no annual rings as the wood has. It is the habit of trees to make an annual layer of new wood, between the old wood and the bark, and one-half of this annual layer goes to make wood, and the other makes bark. This may be proved by the simple examination of the bark of some trees in which the bark has distinct annual rings, as in the redwoods of California, in which it is very conspicuous. But as the trees grow in size the outer layer of the bark cracks and forms the rough bark, as the inner layer is formed inside. Then the outer bark scales off and drops from the trees, in the way every woodsman who studies this growth discovers with as much ease as he does in regard to the annual rings inside the bark. Now when a bird—as the woodpecker, rightly called a sap sucker on account of its sucking the sweet sap of the newly formed annual ring of alburnum of the tree—bores holes in the hickory, which has almost as sweet a sap as the sugar maple, and the pine as well, whose inner bark is so sweet that the boys cut it out and eat it for its sweetness, the bird is after this soft alburnum, which in time forms two layers—one of bark and one of wood. Then the injured bark, in the effort of nature to heal the wounds, grows to excess around these rings, forming in time just such burls as the one described by your correspondent. Of course this new diseased growth takes on abnormal forms and in many cases just such forms as this. I have seen hickories of large size with burls around the tree several inches deep, and of such curious texture as when sawn and turned in a lathe will make beautiful ornamental work, the disturbed growth often penetrating quite through the wood.

I cannot refrain from mentioning another common mistake made by persons interested in fishing and fish. This is the common belief that fish are valued as food for the phosphoric acid they contain, and are consequently excellent for persons whoes brain needs stimulating. It was a most happy *double entendre* of that genial soul Mark Twain (who by reason of his name perhaps has a habit of making these double barreled jokes) when he remarked in response to a weak-brained youth who asked what size fish he might reasonably eat at a meal to strengthen his brain, was ordinary that a moderate sized whale might do for his breakfast. Now whether the youth's brain was weak, as some might believe, or the fish was falsely alleged to be overflowing with phosphoric acid, and consequently this impossible supply of it was needed on account of the small quantity of phosphorus in it, Mr. Twain never said. But reasoning from the truth of the matter, we must believe that the reply to this inquiring youth was really intended to mean that it was a mistake to think that fish are so well furnished with this element, or the brain either; for it is a fact that these common beliefs are wholly unfounded. The popular thought as to fish is based on the fact that stale fish often exhibit a phosphorescene when seen in the dark. This, however, is due to some molecular disturbance, much similar to the newly discovered Roentgen rays, which come from the vacuum tubes in which precisely this same light is seen. It is the light of the firefly, or glowworm as well, a light without heat, and precisely the same as the woodsman is familiar with in rotting wood. It is not due to phosphorus at all; and it is a well-known fact that the bright light following a ship at sea, lighting up the wake of it in a calm night like a brilliant flame, is simply due to the vast multitude of organisms in the water, which glow when disturbed as the glowworm does on land.

There is still one thing more I have to say, which is that your interesting correspondent Mr. Hough ought to take another name, which, as in the case of Romeo, would not change his interesting character nor the piquant flavor of his letters. It is exasperating to have to discuss the pronunciation of this gentleman's name with your readers, who visit us here in the summer in pursuit of sport. Says one, his name should be pronounced as "How," for bough is pronounced that way. But, says another, rough is pronounced ruff. Yes, says another, cough is pronounced coff. And another insists that dough is pronounced do, with a long o, and so on. Why does he not write Huff, and have done with this heart-breaking difficulty? H. Stewart.

Unusual Ducks in Currituck Sound.

Editor Forest and Stream:

While shooting on the marshes belonging to the Narrows Island Club, of Currituck county, N. C., I killed on Feb. 2 a young male European widgeon (*Anas penelope*).

During this day many widgeons were flying over the Big Pond in Brant Island, where I was shooting, but scarcely any of them manifested any disposition to alight in the pond or paid any attention to the decoys or to the calling of the boatman. They were what the boatman called "trade birds," that is to say, were making long flights from one point to another. Once in a while, however, a little bunch would come down toward the pond and would cut over the decoys, and in this way I secured a few. The specimen in question was a single bird flying quite high up, and was shot under the impression that it was an ordinary widgeon. It was not until the boatman retrieved it and brought it into the blind that I realized what it was.

The specimen has been preserved.

On the same day I shot here a hybrid duck—evidently the product of a mallard and black duck. This specimen in general coloration resembled the black duck, and was supposed to be such until brought to the blind. It was then seen that the upper part of the head down as far as the eyes was iridescent green, but a dark green, like the top of the head of a highly-plumaged black duck; not a bright green like a mallard. The lower neck and breast were suffused with a tint of rufous, the feathers being chestnut with dark centers. The speculum was bordered in front and behind by a broad, white star. The upper and under tail coverts were glossy black. This specimen and the one killed later showed the recurved upper tail covert characteristic of the male mallard.

A week later, Feb. 9, I killed at Pillentary Pond another of these hybrids. It was not precisely like the first, but differed from it chiefly in having the under tail coverts mottled, much as in the black duck, and in having the scapulars of the precise color of those of the male mallard, and the plumage of the shoulders and belly freckled with dirty gray. Both these birds bore a slight resemblance to Audubon's figure of "*Anas bimaculate*," but the body color was very much darker throughout.

These birds are not specially remarkable, yet are perhaps worthy of record. George Bird Grinnell.

Game Bag and Gun.

PHEASANT MANAGEMENT.

Editor Forest and Stream:

In accordance with your kind request I have the pleasure to hand you a few notes on the management of pheasants, premising, however, that there are no hard and fast rules, beyond what common sense dictates. Climate, soil and other conditions vary so greatly according to locality, that what may be a necessity in one case will be unnecessary and even detrimental in another.

One thing is certain, viz., that pheasants have come to this country to stay, their introduction and propagation having long ago passed the experimental stage. Still I cannot say that every rood of ground in the States will afford them suitable accommodation and be acceptable to them as a future dwelling place; so many people have turned what might have been from the outset a pronounced success into an utter failure, from crude ideas about the nature and needs of these birds. They have thereby caused many others to consider them merely as an exotic toy, to be admired in aviaries, where they demand the utmost care, rather than as a hardy and prolific game bird, to which should be given the free range of the countryside, and which will in return afford splendid bags to the sportsmen each recurring year.

I ought, of course, to state here, for the benefit of those whose knowledge of pheasants may be but slender, that I am now referring only to those breeds which are used for sport, as distinct from the remainder, whose only claim for attention is founded on their gorgeous plumage, and whose fitting place is behind the wires of the aviary. These occupy, however, the longer list, and comprise such beauties as the gold, silver, Lady Amherst, Elliott, Impeyan and argus pheasants, to mention only a few of the best known. But to these I shall not allude further in this letter.

Now to hark back; when speaking of pheasants for sport four distinct kinds only are understood, viz.: the old English dark-necked pheasant (*Phasianus colchicus*), the Chinese pheasant (*Phasianus torquatus*), the Japanese pheasant (*Phasianus versicolor*) and the Reeves pheasant (*Phasianus reevesii*); also one hybrid, the English ring necked pheasant, which is the cross between the two first-named breeds. The Japanese and Reeves pheasants are not commonly used for shooting, and the pure old English bird is but little known in the States, though the chosen variety throughout the length and breadth of Europe. In the States the hybrid English ring-necked pheasant and the Chinese are alone propagated for the stocking of preserves, and everywhere in the Northern, Central and Eastern Territories the former has rightly taken the first place. I will not now enter upon the consideration of the points that cause the Chinese bird to be less suitable for sport than the English ring-necked pheasant, as I want to commence without further delay my remarks on their proper management as game.

I have already remarked that not every place will be naturally found to be or can be made a fitting abode for pheasants. They have their likes and dislikes the same as everything else in this world, and their choice of a favored spot is often unaccountable and not amenable to any human explanation, and *vice versa*. They are essentially a woodland bird, but there must be plenty of arable land in their vicinity, where they can feed on the fallen grain and scratch in the stubble for insects. In the daytime, especially early in the morning, and again as the shadows lengthen of an evening, they will be found roaming over the fields in their search for food. At these times if disturbed they will wing their flight back to their leafy shelter or "scoot" for the protection of the nearest hedge. It is useless to put out pheasants where their natural food is not abundant, for they will not remain there to starve. They will not inhabit large forests any more than open expanses. Much, of course, can be done to render a very unlikely place entirely acceptable to them, in the former case by clearing open spaces or forming glades where crops of buckwheat or millet can be grown for their delectation and support. If, on the contrary, the land is bare of any trees, spinneys must be planted to hold the birds, affording warmth in the winter and shade in the summer, besides roosting places at night. They will at once make their home in and never leave any wooded hollow, where cedars and other evergreen trees abound, through whose depths runs a never-failing stream, and which lies amid fields of grass and grain. Such is an ideal harborage for them, where their every want will be supplied.

I am often asked whether it is better to begin by buying eggs or birds when desirous of establishing a head of "long-tails" in a preserve. This is a question that no one can satisfactorily answer without a fuller knowledge of the circumstances and surroundings of the locality than is generally to be gleaned from a letter or a brief, perhaps vague, description. When the experience of these birds is not large and the amount of the initial expense is of secondary consideration, I would, as a rule, recommend the purchase of birds as the easiest and surest mode, due common sense being used and advice asked, and when given followed out.

There are, needless to say, two ways even of putting out pheasants in a wood or coppice: a right and a wrong. Never let them loose in the daytime, when, being frightened, they will fly and run till their strength fails them, and they finally come to a halt on a distant neighbor's land, never to return to yours. On the contrary, carry them of an evening to the selected thicket, and at some spot where the shade is densest open gently the case containing the birds and retire. They will then, finding themselves at liberty, seek at their ease repose on some bough close by. With the dawn they will investigate all the nooks around, and if satisfied take up their abode there permanently. Should such change of domicile happen between the late autumn and the early spring, it is advantageous to scatter grain in some glade or favorite resort to insure them a sufficiency of food, however deep the snow may be lying, and thereby save them from encountering icy breezes in the open. A pheasant has no objection to cold even when it is far below zero, but it does detest those cutting arctic blasts that would shave a brass monkey. To still further secure their attachment to the place, I would recommend the making of a small wire inclosure, open at the top, among the trees, in which to place the birds after cutting or pulling out the feathers of one wing. It is only necessary to extract the cut quills five weeks before the date desired for liberation from the pen, by which time the lost plumage will be renewed, and meanwhile the strangers will have become perfectly at home in their new surroundings.

The same man must each day give them their food and water till they are full-winged again, when they will fly out of their pen for exercise in the exuberance of their spirits. The scene of their captivity will continue to have an attraction for them for some time, being a species of cupboard love, and they will haunt its vicinity in hopes of finding food till frosts are past. The date of their self-release should be timed for the commencement of the breeding season, that is to say, about the first days in April, as such occupation will be an additional tie to the spot. The great point to remember is to thoroughly establish your stock on the place, to get the nucleus of your pheasants permanently attached there. Certainly some birds more enterprising than others, or preferring more elbow room, may wander away; but if your pheasants have once taken a liking to the place, and gone through a nesting season there, very few will seek other quarters if properly thinned down by the gun. It is an utter waste to turn out pheasants in a large forest, through which they will wander for miles on end, with no inducement to halt anywhere. They will never be found again, any number short of many thousands being swallowed up by such a vast, wild expanse.

I should have mentioned that in trying to set up a stock of pheasants no efforts will be fully repaid, no success will be perfect, unless a determined and continued onslaught is made on their foes, furred and feathered. The brook so necessary for their comfort is the lurking place of the mink. The grateful shade of the trees harbors hawks and owls, and many a brood will be left motherless, and many a hen be bereft of her young, unless all such depredators be ruthlessly exterminated.

Now let us turn our attention to the alternative manner of providing a head of pheasants for a preserve, namely, by hatching their eggs under fowls and rearing the progeny by hand. Volumes have been written on this most interesting subject, and I can now but briefly sketch out the main rules within the limits of this letter. Well, if this course is adopted one important fact must be remembered: that these birds only lay during two months in the spring, and the early laid eggs are the more fertile and their chicks the more easily reared. So, having decided to buy eggs, procure them as early in May as possible, a sufficiency of barnyard hens being ready against their arrival. Bantams are quite unnecessary, as they cannot cover more than seven to nine eggs apiece. Any hen with clean legs, not weighing more than 3lbs., will do equally well, so long as she is not clumsy, sits well, and can easily cover fifteen eggs. If the nests cannot be made on the ground, put a large, thick sod at the bottom of each, slightly hollowed out, with a wisp of straw suitably arranged around it. The ventilation must be plentiful and all the surroundings clean and sweet. Do not place the eggs under hens in close, dirty, smelling houses. Air penetrates the shell through the pores, and a foul atmosphere will weaken and often destroy the embryo. Leave the hen during the period of incubation as much alone as possible. If she is a good mother no one can teach her her business; if a bad one, remove the eggs at once to the care of a better. Should any be broken in the nest, wash the others well in warm water and remove every particle of stale yolk; and do the same should the hen foul her nest, as some close sitters do. If a hen when incubating becomes restless, do not wait till she has finally resolved to abandon it altogether, nor try to induce her to change her mind. It is a sheer waste of time, and what is far more serious, a waste of the entire nestful as well. At once, therefore, remove the eggs to another hen—not another hen onto the eggs. Sometimes a hen will suddenly give up sitting, but never during the night time, when sleep compels her to crouch down on her charge. So if the round of the sitting hens is made early each morning, and one be found tired of her duties, the eggs can be placed under another before any harm will have come to them. When the embryo has once attained any size its life-retaining powers wax stronger each day, so that after the first fortnight they can remain on a warm day neglected even for hours without any more deleterious results than a slight delay when the date for hatching comes round. The duration of incubation for pheasants' eggs is twenty-four days. As soon as the eggs begin to chip shut the hens in, leaving no crevice, because the young ones will run as soon as dry and try to escape. Let the hen remain absolutely untouched till all the eggs have hatched and the poults are strong and dry. The day previous to hatching I always go round each nest, and by gently shaking the eggs I can tell the good from the bad. The addled ones I remove, so as to leave more room for the fledgelings. Before quitting this point let me warn against using an incubator—a sure means of wasting money, time and expletives.

We must next direct our attention to the place where the rearing operations are to take place. It is as well to choose a field in close proximity to the covert which the birds are destined to inhabit later on. The soil should not be of a damp, wet-holding nature; on the other hand, if it is sandy it may be too hot and void of an abundance of insect life, which is absolutely essential. Nothing is better than a field

on a gentle slope, bearing a good crop of clover and timothy. The poults must be well protected from the broiling rays of the sun, and the clear stems of the clover do not clog the young birds with wet to their exceeding detriment in rainy weather or when the dews are extra heavy. It is all important to keep the rearing field free from intruders of every kind, so the space needed should be inclosed with wire 8ft. high, the lower portion being snake and vermin proof. In this inclosure coops should be placed 15yds. apart every way, a narrow path being mown to connect each. The coops are constructed of thin planks, 2ft. square on the ground, with a sloping roof 20in. high in front and 10in. at the back. The front of the coop should be barred with lathes sufficiently wide apart to allow the young birds till two months old to pass between, but close enough to retain in confinement the maternal hen.

Everything being in order and the little pheasants being strong and lively, remove them and their mothers in baskets to the rearing fields and place them in the coops. In front of each coop construct little yards, a broad plank high, 2ft. wide and 3ft. long, in which to confine the little creepers till they have learned their mother's call and are strong enough to make their way through the grass. These yards are only required for the first two or three days, and when dispensed with the coop must be daily moved onto a fresh piece of turf.

As regards the food of the young pheasants, fowls' eggs must be their chief sustenance. There are many ways of preparing them. The easiest way and certainly as successful as any is to boil them hard and when cool hash them up, shell and all, quite small. Then add some bread crumbs, or, what will save an immensity of trouble, the finer portion of Spratts patent game meal, slightly soaked in water. Thus an excellent food is ready. Some people prefer to give custard made with sweet unskimmed milk and eggs, from which the whey has been expressed. But this is slightly more troublesome to prepare After a fortnight the food need not be given quite so fine and a little well-boiled rice and chopped lettuce can be mingled with it. Some barley and corn meals should be sifted over the other ingredients, enough to make the mixture neither sloppy nor too floury, but of a crumbly consistency. When the birds are a month old add some meat to the other food, and if more bulk is required some boiled potatoes pressed through a colander. During the first month the food should be given six times a day, and the frequency reduced by degrees to three times a day at ten weeks, when whole grain can be substituted for the last meal each evening This is a brief account of how to feed the young birds till they are old enough to leave the maternal care and fly away to the woods. Then they will be able to support themselves for the remainder of their existence, till a charge of No. 5 causes it suddenly to cease.

When first put in the coop the hen requires no more food than is given to her young ones, as she must teach them to eat. Afterward a handful of soaked grain can be given to her every day.

The giving of water to young pheasants is a very much debated subject. It is unnecessary in damp weather, but when the days are hot and dry I consider it a *sine qua non*. The water must be fresh drawn, given in a china saucer, and only left for the birds to drink of for ten minutes.

Of course, where an unlimited supply of ants' eggs can be got regularly, nothing exceeds their perfection as the principal article of diet, but it is dangerous to commence giving them if the quantity obtainable is doubtful, for the young birds find them so appetizing that they will not touch any other food when once accustomed to this, and will often pine away sooner than accept other sustenance, which would otherwise have contented them.

A much vaunted but entirely overrated article of nutriment are maggots. They are quite unnecessary considering the extremely offensive operation entailed in procuring them, and if needed on a large scale the neighborhood of the charnel house becomes perfectly pestilential. I once essayed to rear some thousands of young pheasants on this diet, and as half a dozen dead horses a week were required, I rendered the life of everybody, including my own, unbearable for a radius of a mile round. In addition, the maggots must be very carefully prepared or they will scour the poults, and so do more harm than good.

I have forgotten to mention the chief ingredient in the pheasants' food, viz., common sense. The exercise of this quality and scrupulous cleanliness in everything connected with the birds far outweigh experience alone.

The last subject is the diseases that young pheasants are liable to. Their chief complaints are four in number, viz., gapes, scours, blindness and cramp. In every case prevention is better than cure. If the ground is damp, low-lying, or is in any way not sweet and clean, especially if lately run over by fowls, gapes will infallibly annihilate the broods. The scours are caused by ill-prepared food, either stale or sour, or put in dirty utensils. If too much food is given and allowed to lie in the sun the birds will soon sicken. Blindness is generally the result of an insufficiency of shade, and cramp comes after wet where there is no natural drainage. Young pheasants will never recover entirely from any attack of these four destroying agencies, even if their lives are saved. So again I urge to avoid giving any excuse for the presence of such pests

In these few notes, which I trust will prove of use to those anxious to stock their demesnes with these superlative game birds, I have carefully avoided all really controversial points, and have tried to give as much information as possible within a brief space. Needless to say, I have not been able to enter at length into details, or been able to give all my reasons, or fully discuss the pros and cons. Nor have I been able to attend to the many nostrums advocated as infallible for pheasants, nearly all of which are needless. Only remember that till the down on the occiput is replaced by feathers, young pheasants are more delicate than chickens; but that when once approaching maturity, they will undergo severities of climate that would exterminate the hardiest barnyard fowl.

In the winter time I have often over a thousand pheasants on an open, exposed field, the snow lying 1ft. and more deep, and the thermometer ranging about zero, and never a bird sick or sorry. No greater proof can be given than their success in Vermont and Nova Scotia, where I have sent lots of these birds for stocking preserves I have written the above for sportsmen who may desire to rear a more or less considerable head of pheasants, not for the mere dilettante who potters around a coopful of poults, and at the end of a few weeks proclaims his experience, as often wrong as right *urbi et orbe* for public admiration and guidance. The rearing of pheasants is not a new art, but was reduced by our grandfathers, and by generations before them, to a regular system. I have occupied myself with the practical management of these birds for over a dozen years and am still learning, taking world-wide authorities as my guide, backed by experience. I shall be glad if the knowledge I have gained and sketched in outline above may be of some slight service to all good lovers of sport. VERNER DE GUISE.

MAHWAH, N J.

CATCHING A DEER.

NEW YORK, Feb 13.—*Editor Forest and Stream:* It isn't everybody who can put salt on a bird's tail, neither is it everybody who can get their hands on a deer's tail, providing the deer is running at large in the full possession of his powers and understanding. When such a feat is accomplished, therefore, it is worthy of mention, and particularly when the facts of the case are so well substantiated as the deer-catching episode in which Mr. Champaign (spelling not guaranteed), of Whitehall, N Y., took part.

Last week I was in Whitehall talking with Mr. C. B Pike, the spoon bait manufacturer, when a little man ran by the front door, his coat tails flying and evidently in a hurry. Mr. Pike no sooner saw him than he exclaimed, "There's Champaign, the Frenchman, that caught the deer on South Bay," and he sent one of his clerks after him post haste, so that I could hear the story from his own lips.

Meanwhile Mr. Pike volunteered a few words of explanation.

A few weeks previously he had been hunting rabbits on a mountain overlooking the South Bay of Lake Champlain, which was frozen from shore to shore, and on whose surface a number of men were fishing through holes in the ice, when he saw a deer dash out of the woods, pursued by a cur dog. The deer ran toward the fishermen, and, as luck would have it, came so close that one of them, the Frenchman Champaign caught it.

Here Champaign appeared in person in tow of the clerk. He was a swarthy little French-Canadian of wiry build, with a scrubby black beard, and very voluble. During the conversation which followed he never stood two consecutive seconds in the same spot, and as he became interested in his recital he gesticulated like a man fighting flies. They say a Canuck couldn't talk with his arms cut off.

Yes, he had caught the deer, he was willing to acknowledge. "Not bad for a hol' man fifty-five years hol', eh? An' Ah'll tell you he kicked to beat the band when Ah get a-straddle of 'im, now didn't he, Mr Pike?"

Then he of the effervescing name proceeded to go into detail.

"Ah see him comin' at me, and Ah jumped out an' waved me 'at, an' the deer he slipped an' fell out like a wet towel on the ice.

"He was so far from me"—Champaign indicated a distance of about 10ft. to the door. "No, little mite furder," and he moved back about 6in

"His legs slip out in front, an' Ah think Ah'll have 'im, but he jumps up and come right for me Ah stepped to one side, an' as he went by Ah grabbed 'im by the tail an' down he went, and down Ah went too. That deer had the biggest tail Ah'll ever see, eh, Mr. Pike?" and Champaign indicated its size in the manner of fishermen describing their big fish.

"Yes, sah, his tail was 3ft. long. The deer he shook me once, but Ah got 'im again by the tail an' held 'im till Ah got a-straddle. He couldn't hurt me none, for Ah had on this big coat and these lumberman's leggin's So Ah took ma belt from around ma coat that held it together an' Ah stopped the deer's front legs, an' then Ah took some string and I tied his hindlegs together, and when Ah look up there was mos' fifty men standin' all around, looking at me an' the deer; but Ah got him all alone, didn't Ah Mr. Pike, hein? Den Mr. Pike he tell me Ah'll better let the deer go —'gainst the law to have deer in January. Ah'll didn't want to keel 'im, Ah wanted to take 'im home an' tie 'im up an' keep 'im. But Mr. Pike he said, 'Better let 'im go' He was fat, an' wasn't he pretty! He'd weigh over a hunderd dressed Sleek as a calf, but Ah didn't want to keel 'im. If Ah'd been there all alone Ah wouldn't have taken my knife an' cut his throat. No, sah, not me.

"Some of those mens said Ah caught 'im because he was too tired to stand, but when Ah'll let him go he went over the tops of those bushes like a bird. Den when he got to the edge of the woods he stopped and looked back over his shoulder. Wasn't he pretty! You wanted to raise your gun and keel 'im yourself, now didn't you, Mr. Pike.

"Ah'll wish Ah hadn't let 'im go! Ah'll never catch another deer by the tail like that, not me; no such luck! eh, Mr. Pike?" J.

CHICAGO AND THE WEST.

The Story of a Book.

CHICAGO, Ill., Feb. 12.—When I was a boy I had a book. It was the first book I ever really and truly read. Of course I read in the "readers" at school, passing from the "Primer" up through the "First Reader," "Second Reader," "Third Reader," "Fourth Reader," and even the "Fifth Reader;" but I went through these literary collections of Mr. McGuffey's not because I wanted to, but because I had to. I also early in youth gave great delight to my good parents by assiduous reading of the Scriptures, until it was by chance discovered one day that I was confining my studies entirely to the Old Testament, more especially to those portions which described the fighting and great battles between the contending kings. The first book, then, that I ever really and truly read was this one that I have now in mind. I began upon it when words of more than one syllable were stumbling blocks. By the time I had gotten so far along as Mr. McGuffey's "Fourth Reader" I had quite gone through this book from front to back. Then I read it through again, again and again, until by the time I was ten or twelve years of age I had read it I should not like to say how many times.

It was a rather big book for a little fellow to handle, so I used to put it on the floor, pound it out flat with my fist, and then lie down on my stomach and read it by the hour. I read the covers off it, made of stout leather though they were, I read the yellow Indian off from the back read the title page off, read the frontispiece away; and page by page read the entire book away, until after a while it had vanished into thin air, going no one knew whither Before this time had come, my dear mother had sought to preserve the book by sewing together the stout leather backs where they had broken apart at the creases. Seeing that this would not do, the dear old lady made for the cover of the book a handsome backing of black and red checkerboard velvet, which I remember was constructed from a frock I wore before I got into the "First Reader," and which was, in our family, considered to be a very swell affair. Gradually I read away this cover also, and so on until, as I have said, the book was gathered unto the good fairies who produced it It made no difference; its contents were in my head. By day I rehearsed the actions of its chief characters, practicing the loading of my (wooden) rifle while running at full speed, *in lo* Lewis Whetzel, or acquainting myself with the best way of detaching the scalp from the head of a foe, said foe often being improvised from a turnip which had its leafy top on. By night I dreamed and shivered as the thrilling scenes of the book flitted before my eyes. From that day to this the book has been mine, although gathered back unto the fairies.

This wonderful book bore the title on its back, "The Great West." The time when I read it was twenty-five years or so ago. Fremont was then but lately done with making his explorations across the Rocky Mountains. How I regretted that I had not been old enough to go with Fremont! How I wished that I had been a backwoodsman back in Ohio and Kentucky, with Kenton and Boone and Louis Whetzel! Even then, twenty-five years ago, it seemed to me that there had departed the glory of the "Great West," of which this book spoke so thrillingly. The book told the story of arms and of men. It had not a dull page within its covers. Hunting, trapping, fighting, exploring the ways of man in the primitive backwoods times of the West, such were the themes treated. As I absorbed these stories into my boyish heart, they came to have too great an influence over me, so that, as I have since told a friend, I could never tell whether I inherited from my father or from this book the love for the outdoor life which has since then kept me from being president of the United States, and later led me into trying indeed feebly and ineffectually, to learn about and write about that "Great West" whose spirit whispered from the first printed page I ever loved

By industry and perseverance my parents succeeded in preventing me from becoming an Indian fighter and trapper, and induced me to go to school. All this I write not in an egotistic vein, but simply to tell the story of this book, as shall presently appear. After I came out of school, it seemed necessary for me to make some sort of a bluff at making a living. Thus gradually, and more and more as the years passed by, my idolized book faded away from my mind; that is to say, its incentives faded, though its records remained somewhere in the basement of that funny thing we call the brain. From time to time as I went back to the old home I would think of the book and ask about it, but no one could give any trace of it. It had been gathered to the fairies. I could find in the slough near the old homestead the tall weeds which used to furnish spear shafts for us boys when we played at being Indians; and I could find on the prairie not far away dark green places which might have been the very spots where we kindled our midnight campfires, around which we played at being hunters, thrilling meantime with secret fears of the darkness which compassed us about I could find all the places in the hazel brush thickets where I used to do the scouting act; but I could not find my book.

By and by, as I grew older, there seemed to come into life a stronger demand for the thing tangible and not the thing imagined. I knew I had my book in my head, but I wanted to hold it in my hands. I wanted to see the yellow Indian on the back, the buff-colored picture in the front, in which an Indian stood upon the hill and looked out sadly over the settlement of the white man now extending into his wilderness. I wanted to see the strange old woodcuts, the picture of the emigrant family, with their white-topped wagon and their wayside fire; the picture of the white woman chopping off the heads of Indians as fast as they were intruded into her cabin door; the picture of the prairie dog town on the plains, and that of the wagon train bound for the further West I wanted to see the rusty leather of the cover, and the yellow of the pages, and the turned-down corners which marked the tracts especially good. Alas! I could not find my book. It was gone absolutely. No one could tell me where I could secure a copy. The best librarians of the country failed me so far as I was able to make inquiry. I could not learn who wrote the book, or who published it originally, and could give no one more accurate description than that the name of the book was the "Great West," and that it was the most wonderful book ever written.

Thus year after year passed, and finally I came to believe that my old-time friend had perished off the face of the earth Sad commentary on the glory of letters, for it seemed to me that if this book could not survive, then certainly all books must die.

It chanced that within the past three or four years I was reading one of the monthly magazines, and dropped upon an article by Mr. Theodore Roosevelt upon "St Clair's Defeat." Now it chanced that the story of "St Clair's Defeat" was one of the choice bits of my old book, according to my notion, and although I had not read it since I was ten or twelve years of age, I should say, I knew the whole story—all about the reeking scalps, the bloody retreat, the man hid in the tree top, and every little detail of the like. Something in this magazine article, which I do not at this time exactly recall, convinced me that the writer had either seen my old book or some of the original books from which mine was perhaps compiled. I was almost tempted to write and ask the author if he knew any place where I could get a copy of my book, but never did so, and so went on a few years more groping about in the dark. I asked all the writers on Western topics whom I knew if they had ever heard of a book called "The Great West," but not one of them had ever seen or heard of it. Then, a couple of years ago, I met Mr. Ripley Hitchcock, editor of the "Story of the West" series of books published by D. Appleton & Co. Surely, I thought, this is the man to find me my book. Mr. Hitchcock pleaded ignorance, but undertook to do all he could in the search. Finally he sent me a letter from Mr. George C. Hurlbut, of the American Geographical Society, of New York city. This letter bears date of Jan. 16, 1897, and is addressed to Mr. Hitchcock, but the writer has no satisfaction to give. He says: "I am sorry to say that I am unable to aid you in the search for the book on 'The Great West.' It is not in this library, and I have not succeeded in tracing it." Mr. Hitchcock promised to look further, but I had no further word from him.

At about this time I happened to pick up a copy of *Shooting and Fishing*, and in it saw a contribution over the name of Horace Kephart. As I had earlier found this name to be always attached to something good, I read the article, which had to do with rifle shooting in the early backwoods time. As I read along I struck a paragraph from the first few words of which there flashed forth an instantaneous picture of the whole. I could have said it almost word for word. I could have told about this snuffing the candle in the dark with the rifle. I could have told how the backwoods rifleman used

to rest his rifle lightly against a tree stump when taking a rest shot, sometimes making a soft pad of moss for the barrel. In yet another article I had confirmation of what I knew was a certainty. This man, Horace Kephart, had read my book! Yet, though he gave due credit to the sources of his information, he said not a word about "The Great West," but credited one Dodridge as being the author of the book from which he gave his extract Dodridge I did not know, and indeed I did not know Mr. Kephart, but I sat down at once and wrote him a letter in care of the paper in which his article appeared. All I knew was that Mr. Kephart was a delightful writer. He might live in New Zealand, New England or Mesopotamia, for all I knew. But I knew that he would write to me, and I knew that when his letter came my quest would be ended I should again, in some way, see and take in my hands this wonderful book I had read when yet a boy!

What Mr. Kephart would write all readers may easily guess, and I think he will not therefore object if I use his very words. They gave me the only thorough knowledge I had of my book after all; for while I knew all the Indian fights in it I did not know even its date of publication. Here is what Mr. Kephart said:

"Mercantile Library, St. Louis, Mo., Feb. 1.—I have known you long and intimately in the happy hunting ground of Forest and Stream. Your quest for the first book you ever read shall not go unrewarded. I know just how you feel about it, for it was only a few months ago that my mother found and brought me the first book that I ever read —poor, battered and thumbed old "Robinson Crusoe"—the identical copy that I used to take out into the little cottonwood grove and read over and over, while I played Robinson and was Robinson on that prairie sea. Good Lord! it was nearly thirty years ago! and I suppose the unbroken prairie of my recollections has long since been cut up into farms.

"Your book was entitled 'Historical Collections of the Great West,' and was compiled by Henry Howe. It was first published in Cincinnati in 1851. Later editions were dated '52, '53, '54, '55 (at Greenville, Tenn.), and '73. I have the latter before me, and the quotation from Dodridge is on pp. 227–8. Within a few days I hope to have the pleasure of sending you a copy of one of the early edition .

"Whenever you visit St. Louis, please drop in here and let me show you some other books. The Mercantile, of St. Louis, is the only library that makes a specialty of wildcraft. (Ask Fred Hild, or Cheney, or any other of your Chicago librarians what that means, and I'll bet a box of primers they can't tell you.)"

So it seemed Mr. Kephart was a librairian who knew the desirablity of having in his library the most wonderful book in the world.

When I got his letter I at once wrote him again, glad to find him—as I had half suspected him to be—a man curious in literature, as well as a sportsman by instinct I begged him to tarry not, but to send me the oldest and dirtiest copy of my book which he could find, for that I must have it, no matter what the cost. Before my letter had reached him there came into my office one morning a bundle well wrapped in dark-brown paper; before the expressman had thrown this bundle on the table I said: "It is my book!" I knew it. I could feel it. It was the identical copy I had read out of existence years ago It had come back to me from the fairies! I could feel it speak as I cut the twine and tore off the wrapper.

It was my book. I have it. It lies in my lap as I write these lines about it. Money cannot buy this book. The best that my best friend can do about it is to come here and read it under my immediate supervision. I shall have a large pocket made in my overcoat for it This book, as I wrote to Mr. Kephart, shall be prized and kept forever, with the long old muzzleloading rifle which my father gave to me, a treasure kept since his own boyhood.

It was delicate of Mr Kephart that he gave me a gift of this book. I do not know where he got it, but in some way he communicated with the fairies and had them give it back to me. It was the same copy, I am sure, which I had when I was a boy. The backs are ready to fall off, and are pieced with pasted leather The mahogany and brown of the cover is the same, and the deep stamping on the leather is identical. My yellow Indian with his bow is still faintly visible in this materialized book, about as he was at perhaps the fiftieth reading of the passing of the book, more than a quarter of a century ago. The picture of the aged pioneer sitting under a yellow lithograph vine and fig tree is the same. The ambitious buff lithograph of the Indian and the city is there unfaded. Page by page I turn through, and from every one speaks some familiar sentence. Personally I presume my memory is not better than the average, but I find I remember this book almost in toto. So much for the vividness of youthful impressions. So much, too, for the glory and dignity of the theme handled in this book, one indeed worthy enough to engage a man's interest or to direct his efforts. As for Mr. Kephart, I simply cannot thank him, and am not going to try. He could not have given me a greater pleasure.

It seems that my book was something of a work in its time, and it met the large sales that it deserved. My copy, which is the fourth edition, has at the top of the title page the suggestive words, "Fortieth Thousand." The full title page reads as follow:

(Fortieth Thousand.)
HISTORICAL COLLECTIONS
of the
GREAT WEST.
Containing
Narratives of the Most Important and Interesting Events in Western History—Remarkable Individual Adventures—Sketches of Frontier Life—Descriptions of Natural Curiosities—To which are Appended Historical and Descriptive Sketches of Oregon, New Mexico, Texas, Minnesota, Utah and California.
BY HENRY HOWE,
Auther of "Historical Collections of Virginia," "Historical Collections of Ohio."
Illustrated with Numerous Engravings.
VOLS. I. AND II.
Cincinnati: Published by Henry Howe at E. Morgan & Co.'s, No. 11 Main street. 1854.

I have rambled so far in my story, which is perhaps not so interesting to others as to myself, that I shall not have any time to describe in detail the character of this book, which is indeed an interesting and a standard publication. But we may judge of the whirling march of civilization in the "great West" since the day when this book was printed if we look at one or two things mentioned in its pages. Thus I find that the author states gravely that in 1850 the "entire white population of the State of Minnesota" was about 8,000. It says, "St. Pauls (sic), the capital, is 327 miles above Galena, Ill., and eight miles below the falls of St. Anthony. It is principally on a beautiful level plateau, about 8ft. above the Mississippi River, and has 1,200 inhabitants." (Minneapolis, it seems, was not then heard of.) We learn also that the Great American Desert has an existence. We hear that there has really been a project formed of building a railroad across the continent! Of this our author says: "A project more gigantic than any that has yet been achieved in the world's history is now agitating the world's mind." He adds: "Upon the further question of the route to be pursued by the new road, the judgment of the country is far from being settled." And so the quaint, queer, delightful, fascinating old book goes babbling on about things which, God bless us! have been decided, passed by and forgotten, so fully are they taken into the daily knowledge of the millions. "The trappers of the Rocky Mountains," says the book, "are a genus by themselves The majority of them are French-Canadians or St. Louis Creoles!" And so on and so. But one dare not begin to thus make quotations from this book of the "Great West." It would run full and overflow the entire Forest and Stream with matter of which the readers of the paper would demand more, and then more. Here is a mass of the most valuable material for those who really wish to learn of that early West, which was really a West. With this one book a man could set himself up as an authority upon these topics, and this he might do with impunity if only he could claim age enough. As to anybody else's knowing anything about the book, that would be highly unlikely, for here I have been trying for twenty-five years to find some one who had heard of it, and so far have found but one. Of the 40,000 persons who had bought this work at the time my copy was printed, or rather of the many more than that, for each book is read of many men, and of the thousands who after that date read it, it would seem that all have died or have forgotten all about it. Only Mr. Kephart and myself are left; for I am not sure that Mr. Roosevelt ever saw this work, having perhaps had access to some earlier writers who were of service to Mr. Howe in making his book. I have never found any other trace of the work except as above noted. If there are among the Forest and Stream readers others who have seen this old book of the Great West it may please them to be thus reminded of it, and to know that a copy of it actually exists and is accessible. Mr. Kephart will show it at the Mercantile Library, of St. Louis, and I will show it here to any who may like to see it. It is one of the treasures of this place, and I am more than ever reminded of the Forest and Stream luck when I look at it. The fairies have brought the book and laid it down at precisely the right spot, here under the wing of Forest and Stream, the mother of all things pertaining to the outdoor air and to manly days, whether of to-day or of the past.

Illinois Sportsmen Meet.

Chicago, Ill., Feb. 19.—Pursuant to call issued by the president of the Illinois State Sportsmen's Association, some thirty members of clubs of this or closely adjacent cities met last evening at the Sherman House. Pres. C. E Felton was in the chair and Mr. F. R. Bissell, secretary of the State Association, was at the desk. The evening was given over to a general discussion of game law matters, this being the season when new measures come up for action in the Legislature. It is thought that the sportsmen have a very good chance to secure some legislation this year as they have in the Legislature a very good friend in the shape of Mr. H. D. Nicholls, a well-known Chicago sportsman who is willing to take hold and work for any good measure proposed by the craft. Other members are friendly to the sportsmen, and all in all it may be within the realms of possibility that something may result.

At the meeting word was had from Wisconsin that the shooters of that State looked to Illinois to do something in the way of abolishing spring shooting. This matter was discussed at length, and all present agreed that the shooting of any birds in the spring should be stopped. Yet it is well known to all who understand the Illinois game law situation that every member from the lower or river counties of this State goes to the Legislature already pledged to kill any measure looking to the abolishment of spring shooting. It will always be next to impossible to get a bill of this sort through, as the lower part of the State will kill it, though the upper part would be glad to see it go through

Warden Blow was present last night, and was approved by the members present. He will be up for the place of game warden again.

A committee of seven was appointed to draft resolutions for submission to Congress in support of the act already before that body to amend the Interstate Commerce Act in so far as to regulate shipment of game from States not having uniform laws. This committee will report later at call of its chairman, Mr. F. S. Baird, who framed the bill sent to Congress.

A committee of five was appointed, consisting of Messrs. R. B Organ, Wm. Doe, of Elgin; Warden Blow, H. H. Waters and F S. Baird, these retiring to draft resolutions in accordance with the sense of the call issued for the meeting, the main clause of which was in relation to non-resident license laws passed by other States. The committee reported a set of resolutions, which were adopted, the same given below. It would seem that Mr. Baird must have offered a minority report, as he is counsel for the National Association, whose predilection for non-resident licences is well known. The sportsmen of Illinois must of course shoot as non-residents if at all nowadays, so the position of the resolutions is a necessary one. But as to the "right hand of fellowship" to sportsmen of other States, one may be pardoned for believing the latter will not care much for the hand, because there is nothing in it, so to speak. Our game is all gone, so we can afford to make laws to protect it, and to invite others to help kill it. We don't want it. We can give the glad hand to anybody who does want it, more especially if there is a show for a swap with some other State not quite so far along in the road of civilization and wildernesslessness. The resolutions were as follows:

Whereas, In certain States acts have been passed which make license fees greater for non-resident sportsmen than required from citizens for permission to shoot in the open season; and

Whereas, Legislation in other States is being attempted to similar ends; and

Whereas, Sportsmen who secure licenses to shoot game are prohibited from shipping or taking the game they kill out of the State in which killed; and

Whereas, Many sportsmen in this State own property in the States where such unfriendly acts exist, or where such legislation is attempted, or are members of clubs owning or leasing property; and

Whereas, Such legislation has not secured much revenue, but has resulted as almost prohibitive to our sportsmen; and

Whereas, The sale of game in our markets would be free and uninterrupted but for the action of the members of the Illinois State Sportsmen's Association, which has for years devoted its best energies and its purse to prevent sale of game during the close season; now, therefore, be it

Resolved, That it is the sense of this meeting of sportsmen of the State of Illinois, held under a call from the officers of the Illinois State Sportsmen's Association, that any legislation in any State which makes requirements from sportsmen citizens of other States more restrictive than those required from its own citizens is unfriendly, unsportsmanlike, un-American and wrong; and we respectively ask the sportsmen of such States as have such unfriendly laws to cause their repeal, and such as are endeavoring to pass such laws to cause their defeat.

Resolved, That the sportsmen of this State, through their State Association, have done all in their power thus far to further the interests of game protection by legislation and enforcement of the laws, by preventing the sale out of season of game killed in other States; and we declare to still continue that good work; but we are continually menaced by the assertion, if not the fact, that those who destroy the game of any State are not non-resident sportsmen, but generally local residents or those who are temporarily residing in game districts, and that such persons are not prosecuted by local authorities as they should be.

Resolved, That this meeting is not advised as to the merits of all the bills now before the legislatnre of this State, as several bills which have been introduced have not as yet been printed; but we express our unqualified favor of such bills as will reduce rather than extend the open season, make penalties for violation of the laws greater rather than less, better secure their enforcement by increasing the number of game wardens, and in other ways; and also that we extend the right hand of fellowship to sportsmen of States wherein laws do not discriminate against their fellow sportsmen in this and other States. We favor also uniform laws as to open seasons, one State with another, where the same is compatible with longitudinal lines or climatic conditions. We also ask the women of Illinois to frown upon all fashions which include the wearing of plumage which cannot be secured except by the destruction of birds.

Whereas, The outrageous and brutal methods pursued for years by the authorities of this city in impounding dogs merits the condemnation of each and every good citizen, and should not longer be permitted; and

Whereas, The Illinois Humane Society have prepared a bill, to be introduced in the Legislature of the State, with a view to correcting and preventing such brutality; now, therefore, be it

Resolved, That we give to the passage of that bill our best effort, or to such other bill as will better secure that result, if one be offered.

E. Hough.

1206 Boyce Building, Chicago.

WISCONSIN INDIANS AND GAME.

Spooner, Wis.—*Editor Forest and Stream:* I notice in your valuable paper from time to time comments on the game laws in different sections of the country, except the State of Wisconsin, which is sadly in need of some law and its enforcement to protect game in this great game country from the market-hunters and Indians. I have patiently waited for some one to write of the slaughter of game, and of the protection game gets, but being disappointed I write you a few facts, trusting your paper will reach some of our legislators and show to them the immediate necessity of relief.

Who kills the game of Wisconsin? Not the white people, not the hunter that comes here from the different States to spend a vacation, targeting his rifle and trying for a deer; not the farmer, no. The Indian slaughters the game, especially the deer. The Indians kill the game because they are not interfered with. They kill it because agents of the various express companies have men who go to them and buy all the "saddles" they can get, offering them a few cents per pound for their venison, whether in or out of season, and paying them in money and wet goods. I know of there being 8,000lbs of venison bought by express agents on the Omaha line as late as the middle of January. This venison was killed by the Indians. It may seem strange to some why this goes on when there are game wardens, but the truth is the game warden is a side partner in this unlawful business. I don't mean to say all game wardens do this, but there are some who get the position for honor, while others get the position and try and do their duty.

What is the use of laws unless enforced? Stop the sale of game altogether. Give the game warden a salary. He may be a poor man with a family, and he can't afford to take the chances of leaving his position and hire a livery team to go in the country hunting for some one to make expenses and a living off of. He may arrest and convict, but if the party can't pay and is sent to jail, where does the game warden get his money? No money collected, nothing for his trouble. This, I say, is one of the reasons why the law is so rigidly enforced in the loafing places about town and around the fireside. Give the game warden a living salary, together with a per cent. of fines he can impose and collect, and stop the sale of game, and see how quickly our deer will multiply. The Indians say, "White man 'fraid to interfere with us; if he do we shoot 'em up."

There was a party of four Indians in northern Wisconsin this fall that killed and sold to market buyers over 240 deer. Now this is only in one locality, there being other sections where there have been as many killed as here, and all of which fell before the Indian's deadly aim. They kill them by the thousands. One Indian was known to kill fourteen in one day.

As to pheasants and grouse, they are rapidly going. The agent of the express company who bought the venison also bought and shipped 25,000 pheasants and grouse this season.

How long can any country stand this? Not very long.

I travel over the Omaha road often, and am well acquainted, and what I have just stated is fact.

In a recent issue of your paper I noticed an article signed Maine, which stated that there were no moose in Wisconsin. No doubt Maine is a sportsman and would like the information: that there are plenty of moose in northern Wisconsin.

Observer.

MAINE GAME INTERESTS.

Boston, Feb. 20.—After all, the fish and game protective and appropriation bill is not having the plain sailing it started off with early in the present session of the Maine Legislature. It seems the proposition to appropriate $40,000 a year for two years is causing the friends of other appropriations some alarm, since their beloved hospital, normal school, bridge and other schemes have all been split in halves as to appropriations, and they are getting even with the friends of fish and game who have dared oppose them. The bill has been called up in the House, where it was tabled, and amended by cutting the appropriation down to $25,000 each year for two years, instead of $40,000, as first proposed. The same amendment has passed in the Senate and the bill has been sent to its second reading. So it looks as though the Commission would get only $25,000 to spend for fish and game instead of the much desired $40,000. For two years past they have had $25,000 a year. The guide license part of the measure is also meeting with considerable opposition, and another hearing has been had before the committee, notwithstanding the House had already passed the bill to one reading. James Matheison, president of the Rangeley Guides' Association—seventy-five in number—appeared before the committee in opposition to the measure. He was faced by Commissioners Carlton and Oak, and though at a disadvantage is reported to have made a good showing. He told the committee that the guides did not desire to be registered nor to wear badges. It would be degrading and would be of no advantage to them. The law would not be generally obeyed, and it would only add to the work of the Commission to apprehend the breakers of the guide license law. He boldly asserted that Mr. Carlton was trying to "run things too fine." Mr. Carlton asked him sharply if the by-laws of his Association as first drawn did not favor breaking the game laws. Mathieson replied that they did not. Mr. Carlton charged that the guides had never aided the Commissioners in enforcing the game laws. Mathieson replied that the guides he represented were willing to do so, but did not desire to be under the ban of a license in their business. Other sections of the State might need a guide license law, but Rangeley guides did not. In the evening, after the hearing, Mr. Carlton is reported to have had several wordy interviews with representatives, guides Mathieson, Snowman and others. He intimated that threats from the guides would do no good. The measure is still on the table in both houses.

Representative Stetson, of Bangor, has presented a bill to help provide funds for the protection of fish and game in Maine. His bill provides that every non-resident who hunts in the State shall pay $25 for every bull moose killed, $15 for every caribou, and $5 for every deer; the money to become a permanent fund in the hands of the State treasurer for the protection of fish and game, the interest to be used only. Violators of the provisions shall be fined $50 and costs; this money also to go to the same fund. All game shipped shall be tagged by the Commissioners, stating that the law has been complied with.

Really the Commissioners would have to be numerous and present everywhere to put such a law in force. How would it do to hang every non-resident who dares to hunt or fish in Maine, seeing that his tribe is only willing to pay millions of dollars annually into the State, for which he gets a little game and a few fish? Inside of him there must be a mint of money hid, and if hanged by the neck till dead some of the money might drop out.

Some of the Boston lovers of the rod and gun are "swapping" fish and game yarns this winter in order to get ready for the spring campaign. In one business office, where considerable congregating is done, each man's name is posted when he tells a story. The biggest lie goes on top; that is, the teller's name. One man told the other day of a woodchuck which climbed a tree when frightened and the dog got between him and his den. Immediately the teller's name went up to the top of the list. But I confirmed the truth of the assertion and referred the disputants to the files of the Forest and Stream, where it has been established that a cornered woodchuck will take up a tree. Immediately Mr. J.'s name came down a peg. But he is not done with the boys yet, and tells of a squirrel, a red, that he clubbed in a tree when a boy. The squirrel's leg was broken. The next morning he was encaged in a box trap. But behold his broken leg was nicely wound with a tough blade of grass and ready to heal. The squirrel was allowed to depart and doubtless his leg did heal. Mr. J.'s name is up at the very top again. Can any of the readers of the Forest and Stream help him out? Do the squirrels set broken limbs?

Capt. F. C. Barker, proprietor of the Bemis and Birches camps, is always interested in keeping up the fishing at the Rangeleys. He has a spring, a couple of miles from Bemis, that is a natural trout hatchery. Naturally great numbers of trout thread their way up a little stream, through a meadow, to this spring to spawn. The stream and spring are closed to fishing, and over the spring Capt. B. has erected a building. During the breeding season hundreds of beautiful trout gather there and the eggs are deposited in the white sand and gravel in the bottom of the spring, which is some 15 or 20ft. broad. This is surely a natural hatchery, and is of great benefit, doubtless, to the fishing in Mooselucmaguntic Lake. Formerly net and spear fishermen were accustomed to carrying off the trout by bushels every fall. But now the spring is carefully guarded, a man staying in a little cabin there night and day. Capt. Barker was in Boston the other day with the matter in mind of buying 100,000 trout eggs of some one of the Massachusetts trout hatcheries, and putting them into his own trout hatchery. He is aware that many thousand eggs were deposited there last fall, but is quite certain that the capabilities of the spring and stream down to the lake are equal to many thousand more. Notwithstanding that the State is doing something for the Rangeleys in the way of landlocked salmon, he believes thoroughly in keeping up the supply of brook trout, the fish that are natural to those lakes and have given them so wide a name.

Mr. Fred C. Billings, Supt. of Buildings, of Somerville, had the good fortune to shoot a white fawn last fall in the Maine woods. He is having it mounted, and believes that he has a specimen that is rare. Certainly there is nothing of the sort in any of the museums in Boston, though one or two others have been captured in Maine in former seasons.

Now they are telling of a newspaper man, an amateur sportsman decidedly, who has just returned from a rabbit hunt among the hills of New Hampshire. He fired dozens of shots, banging away all day long at the cunning little white heads, but always just after the game had passed. Not a rabbit was secured for his bag, and he returned to his stopping place much disgusted. The next morning, as he was dressing, he happened to glance out of the frosted window into some trees in the lot. Great heavens! there were a couple of handsome birds right in the tree, in easy gunshot! He would not have to go back to Boston empty-handed now. Down stairs he rushed in his stocking feet, but with trusty shotgun in hand. He opened the shed door and bang! bang! went both barrels. One of the birds tilted slightly on its perch and then fell with a dull thud to the snow below. The other boldly stood his ground without so much as ruffling a feather. The hunter was only prevented from jumping into the snow barefooted to secure his prey by a laugh behind him. He had shot at a couple of old decoy ducks the boys had perched up in the trees. Already they were pretty well loaded with shot from other amateur sportsmen.

Special.

POISONING WOLVES.

Though never a wolfer by profession, I have learned a few things concerning the art of preparing poison baits for wild animals which may be of interest to those who live in the regions infested by gray wolves, and who are not already better posted in the business than I am.

The methods of the wolfer of the old days are unsuited to present conditions, for reasons which I will endeavor to give, and yet it is quite necessary for many a stock grower to understand the best method of procedure in his endeavor to destroy the ferocious brutes which prey upon his herd. The wolfer's business was to get wolf pelts, and his methods were not only very wasteful, but in the long run prejudicial to the business itself. Still we must give him credit for ingenuity and skill, for his plan of operations was the best for his time and circumstances, while we must look for a better one.

When a buffalo carcass was prepared for wolves by a skillful operator it was indeed a deadly affair, and a drove of the prowlers of the plains were sometimes turned toes up thereby in a single night.

But among other difficulties it was found that while some got just the requisite dose for quickly fatal results, others got their medicine on top of a gorge of good, nutritious food, and the poison being consequently a longer time in operating, the stricken animals galloped off over the plains, sometimes miles away, before death ensued; while, worst of all, some got only half enough to kill, and recovering therefrom were ever after shy of the wolfer and all his host. Some hunters were quite confident that these half poisoned brutes had a way of influencing other wolves to avoid the poisoned baits; so that the business seemed best on virgin soil and among unsophisticated wolves. The best plan for perfect work under present conditions seems to be to give each wolf just the necessary dose and on an empty stomach. This is a thoroughly practical scheme, though a laborious one. The best time is during cold weather, when food is scarcest.

The poison should be crystallized strychnine, first pulverized, and then an amount about equal in bulk to four or five grains of wheat placed in the center of a ball of lard a trifle larger than a hulled walnut. This should be done very carefully, not touching the lard with the fingers, in order that it be absolutely free from human scent.

In cold weather a mouthful of fat, lard or beef tallow is to the wolf what a piece of pie is to the urchin; and if there is nothing suspicious in the scent of it he will, urchin-like, take his dessert first. Consequently, when this little ball of frozen lard is dropped into his hot and empty stomach it is very quickly melted, and a fatal dose of poison has instant connection with the naked coat of the stomach. No fear of his eating now.

When everything is done just right it is really surprising how quickly this will kill. He must not have two doses, and if the bait be placed near open water it is best for the wolf which may have already eaten a hearty supper, thereby hindering quickly fatal results, for in that case a raging thirst is produced, the slaking of which is a death warrant.

Now take a fresh beef hide or a quarter of a dead horse or steer (if meat is used scorch it over a fire—it will smell further), chain it behind a light wagon, and travel. A few shreds of meat dropped occasionally—not too much—and the baits distributed along just so that each wolf will get but one, and where the bait is to be left let the hide or meat be dragged around a little extra, that the wolf will stop and smell around and not miss the bait, and you can rest assured that if your work is well done there will be mischief afoot.

In the Christmas number of Forest and Stream such an expedition is mentioned, resulting in the death of twenty-eight wolves and coyotes, but the plan of operations was not explained.

I was taught this plan, and witnessed its working upon red foxes in northern Minnesota about forty years since. The fate of one red fox is distinctly recollected. A light fall of snow kept record of his every movement.

He had taken the bait and apparently stood just long enough to lick his chops and pat himself on the shoulder over his good lunch when grief overtook him. Starting off for a dozen steps on a trot, his pace changed to three or four sidewise jumps, developing into a race of 200yds. in length and in the direction of a half circle, finishing with a few of the most prodigious leaps possible.

His last jump was his longest, and into this he threw all his soul.

This carried him across the road and head first into a big snowdrift, where stretched to his fullest length and buried to his hips, with hindlegs and brush projecting into the open air like the blaze of a camp-fire, we found him frozen solid.

Orin Belknap.

A Fox Hunt that Ends in a Lawsuit.

Pike Falls, Ont., Feb. 17.—On Monday morning last, as Mr. John Best was going to the woods to chop, he heard Red Tom Code's dog running a fox, so concluded he would take a hand in it himself. Returning to the house, he called his hound, and procuring his gun, started for the chase. The fox was running in Tom Moore's swamp back of the village, and in a very short time had no less than seven hounds after him, including Best's. Everybody keeps hounds around Pike Falls, as they are all fox hunters. After taking a couple of large circles the fox came Best's way, when he got a shot, wounding the fox, which by this time was hard pressed, as the running was good, about 2in. of soft snow on top of a crust. The fox on being wounded started directly for the village in hopes of something turning up so he could baffle the dogs. He had circled around the schoolhouse a couple of times when a son of Red Tom Code's sitting in a back seat heard the voice of Sport, his father's dog; and being a chip of the old block, could not restrain himself, but immediately, to the teacher's consternation, vanished out of the door, followed by the rest of the boys in school. The racket now began in earnest, and in less time than it takes to tell it the whole village, men, women and children, all joined in. The fox by this time had taken refuge in Ham Dunham's yard, where Miss Dunham eventually killed it with a pitchfork. Best came up and claimed and took the fox on account of having previously wounded it. When Ham Dunham came home his daughter related the circumstances of the killing, and he immediately started for Best's and demanded the fox, which Best refused to give up, and in consequence Dunham is taking it to the courts to find out who legally owns it.

The Colonel.

INTERCOMMUNICATION OF WOLVES.

Portland, Ore.—Forest and Stream, always replete with good things, presents something of unusual interest to sportsmen in its issue of Jan. 23

I have reference to the remarkable paper by Mr. Ernest Seton Thompson on Intercommunication of Wolves. It is a subject of great importance to all thoughtful sportsmen, and Mr. Thompson shows such a masterly knowledge of details and such a thorough study and investigation of the subject that I hope those of your readers who passed it by because they were not particularly interested in wolves will turn back and read it.

The fact that the paper is ostensibly devoted to an investigation of the instincts, habits and senses of wolves is not, to me at least, its most attractive feature. It is an able and scholarly introduction to the whole subject of intercommunication between the world of animate nature. For ages the learned have sought the "missing link" in the problem of life—the link next to man. For my part, I think there is no link missing in the matter of intercommunication between animals, and that it is not confined to varieties, species, classes or orders. From the oyster to mankind there is intercommunication, and those of different species and orders can and often do communicate, not by words or significant articulate sounds, nor by oral utterances, which usage has made the representatives of ideas among men, but by a more subtle, if more crude, method, which might be denominated a sixth sense. And while proud man, with his thousands upon thousands of words representing ideas, may communicate with his fellow man and even with some of the lower orders, he has no right to presume that he alone monopolizes the blessing of ability to communicate his ideas. It is my belief that without the ability in some form to communicate ideas, even among the lowest orders, life on this mundane sphere must soon cease to exist at all.

Who that has hunted and fished and observed will for one moment deny that he has discovered among all animate creation with which he has come in contact methods of intercommunication by which they are enabled to disclose to each other love, pleasure, fear, hunger, anxiety, desire and all the other sentiments and sensations fish, flesh and fowl are heirs to. Charles Darwin, Sir John Lubbock, Dr. McCook and others in their investigations of the ant discovered marvelous methods of intercommunication. And that daring professor who caged himself in the forest among the gorillas even discovered a language, not of words, it is true, but of sounds, which with the various inflections, intonations and accents enabled them to communicate their wishes and sentiments. Some of the Indian tribes are but little further advanced in their methods of intercommunication. There is the sign language by which nearly all tribes are enabled to communicate with each other. And too, among the Indians one word or articulate sound is made, by accent, intonation, etc., to express different ideas or modifications and variations of the same idea.

In the Chinook jargon, for example, the word *si-áh-may* may be so prononnced that it will indicate either near, far or very far.

Among the lower orders instinct plays a most wonderful part. In fact, instinct is a higher faculty than reason in many respects. But who can define instinct in that finer sense to which Mr. Thompson has called our attention? It has been defined as "the operation of the principle of organized life by the exercise of certain natural powers directed to the present or future good of the individual," but I think that Mr. Thompson has shown us that an element of reason is mixed in with the instinct that enables wolves to intercommunicate. That being true, it is probably likewise true to a greater or less degree in the intercommunications of all other animate existence.

S. H. Greene.

[As to "the daring professor," it is stoutly denied by persons cognizant of the facts that he did cage himself among the gorillas.]

Maine.—*Editor Forest and Stream:* In regard to my belief of intercommunication of animals, I think the ideas given by Mr. Thompson are quite correct in many instances, although I should very much doubt the ability of an animal that scented danger at one point to communicate it at another. But even in that he may be right, as oftentimes in still-hunting deer you will find that when a deer in company of one that is killed passes through a section where there are others, all will be on the alert. Many instances that he mentions are quite correct, although a man in the woods thinks nothing about it, as it gets to be as common an occurrence as the street car passing is to the city man. I do not think the power of intercommunication applies to animals alone, but the birds and fishes have to some extent the same power.

R. A. S.

Texas Notes.

Petty, Tex., Feb. 17.—*Editor Forest and Stream:* The presence of an unusual quantity of small birds in this locality during the winter has been noted with much pleasure by me.

Among those most abundant is the slate-colored junco or snowbird. He is a jolly little fellow and may be seen at times when all of his feathered kindred have disappeared to find shelter from the raging storm. He is rightly called "the winter king." There are also an unusual amount of chipping sparrows here this winter; also I notice a certain kind of small bird which I am unable to locate, in size he is between the junco and meadow lark, and very much resembles the latter in color and marking; he has the same olive bolsters, black crescent in breast, and walks one foot at a time, same as the lark or quail. The males have a small tuft of black feathers growing out of the sides of the head back of the eyes and about ½in. in length. I have observed these little fellows in bunches of from ten to thirty or forty in number. I would be pleased to know what their correct name is. [? Shore lark.]

We also notice an unusual number of crows this winter. There are great flocks of them, and their familiar cawing

almost makes one think they were in a timbered country.

I noted a couple of robins on the 13th in a small tree; this s an unusual thing, although I have seen them in goodly numbers in the upper cross timbers.

The much hated English sparrow has taken possession of our town and increased in numbers since 1893—when I first observed them here—until now they may be seen in large bunches. A large flock of geese passed near by town yesterday and I think they lit in a field near here.

The snows of last month proved very fatal to the rabbits cottontails), in that it furnished the farmers a leisure, and I am told that a great many were slaughtered. I know of one party of four persons who killed thirty-five of these little animals one evening in about two hours' time. I have also heard of some large bags of quail, a party of three shooters killed over 100 birds in one day. F. E. W.

New York Game Law.

Albany, Feb. 20.—The forty fish and game protectors in the employ of the Fisheries, Game and Forest Commission have just concluded a session of several days' duration. The meeting was called to discuss the best means for forest preservation and the protection of fish and game in the several counties in the State. The following are some of the amendments to the fish and game law approved by the protectors, and the Fisheries, Game and Forest Commission will be asked to cause the amendments to be introduced in the Legislature:

"That no device except angling shall be placed, drawn or used for the capture of any fish in the waters of New York and Raritan bays, nor in any of the waters of the State adjacent to the county of Richmond or the county of Kings, except that shad may be taken by shad nets between March 15 and June 15, but such nets shall not be allowed to remain in the water from Saturday at sunset to the following Monday at sunrise. A violation is to be deemed a misdemeanor, and in addition a fine of $100 is provided.

"No garbage, cinders, ashes or refuse of any kind shall be thrown from any vessel into the waters of Kill von Kull, Staten Island Sound, Raritan Bay, New York Bay, Great South Bay, or Long Island Sound, or into the bays and harbors opening into the same, west of a line drawn from Old Field Point, due north to the boundary line between New York and Connecticut, and within two miles of the shore; and no starfish shall be thrown into any waters of the State. Whoever shall violate or attempt to violate the provisions of this section shall be guilty of misdemeanor, and in addition thereto shall be liable to a penalty of $200 for each violation thereof.

"That the season of brook trout should close July 15 each year in the southern tier of counties and in Wyoming county.

"That no black bass shall be taken from any waters of this State between Oct. 15 and June 30, nor during the open season between 9 P. M. and sunrise the following morning.

"That a uniform date should be made for the opening and closing of the season for partridges, squirrels, hares, rabbits and woodcock.

"That muskallonge shall not be fished for, caught or possessed, except from June 15 to Dec. 15.

"Prohibiting the use of snares or traps of any kind for the catching of hares and rabbits.

"That wild birds shall not be killed, caught or possessed at any time.

"Entirely prohibiting the killing of deer in Sullivan county, as well as the other counties in the Catskill Park region, and in the counties of Otsego, Albany, Schoharie, Broome, Chenango, Rockland and Orange.

"That every person killing deer in the State shall report the same to the town supervisor where the deer is killed within ten days."

The following resolution was adopted:

Resolved, That our personal observation of the condition of the forests in northern New York and the extensive timber cutting now carried on there by the lumbermen and pulp wood operators leads us to firmly believe that unless the State acquires immediate ownership of that region these lands will cease to be of value as a reservoir for water supply, and that the thinning out and removal of the woods must result in the gradual extinction of game and disappearance of fish from our lakes and streams.

Resolved, That in the interest of guides, hunters, sportsmen and tourists who frequent the Adirondacks, and in the interest of all good citizens throughout the State at large, we earnestly recommend that the members of the Legislature give this subject their careful attention and appropriate the funds necessary in purchasing these forests by the State.

A resolution favoring an amendment to the law extending the open season for deer so that they could be killed from from Aug. 16 to Nov. 15, and to prohibit the killing of does for five years, was defeated.

One Warden to Iowa's 56,025 Square Miles.

Vinton, Iowa, Feb. 9.—*Editor Forest and Stream:* In Forest and Stream of Jan. 23 a correspondent says we have no game wardens in this State, and wishes to know if something cannot be done to have a game warden in each county.

There is one game warden, whose duty it is to look after ninety-nine counties with an area of 56,025 square miles. He lives in Estherville, in the extreme northern part of the State; and it may be that the game laws are respected around that town, but they are not here.

I think a law could be passed placing a tax on each gun Good wardens can be hired for $50 a month. Many a trustworthy man is working for much less than that. I believe that a tax of from 50 cents to $1 on each gun would in many counties amount to enough to pay that sum. I would let each warden appoint his deputies, and would have them paid with one-half the fines in cases in which they are the informants. I would have each fine include $5 to be paid into a general fund, and this to be used to help pay wardens in counties where the tax is insufficient; and if this should not be enough, then the balance made up from some other State fund.

I believe that the open season for prairie chickens, instead of beginning on Sept. 1, as at present, should begin on the opening day for quail, Oct. 1. During the month of September many late chickens are weak in flight and have no show before the gun. With wardens in each county, I think it would not be necessary to have a close season for rabbits, as suggested. Farmers are not yet ready for that, but will favor any game protection law that does not interfere with the peace, happiness and welfare of their homes.

Mount Tom.

Adirondack Winter Deer Hounding.

Two deer, killed by hounds, are now lying dead on the ice of Lake George opposite the Waltonian Island. A third one is in a clearing on the east side near by. A little herd of six or eight does and fawns selected for their winter home a favorable spot near Dark Bay, in the town of Putman. The spot was well chosen, except they did not realize they were locating among the most notorious poachers in the whole State. As soon as the snows of January betrayed their presence, the war of extermination began, and has ended with the last one dead.

Would that I could send to the committee on game laws (now considering at Albany what the law shall be for years to come) a photograph of these poor dead does, both prospective mothers, as they now lie on the ice in sight of our village. Will they still persist in the attempt to make a "happy family" of hounds and deer? Had one of these deer been killed by a wolf or panther the bounty on such animals would have been doubled at once, while the hundred times more destructive hound is petted for his cruelty.

This same cruelty is being enacted throughout the whole Adirondack country wherever deer are to be found; but not a case in a thousand is ever heard from. The owner of hounds will not conform to the law. As a general thing, he is too ignorant to read its meaning, and is influenced by petty gifts and praise for his zeal by an unprincipled employer, who will use him while he may, and is sure to desert him when his hounds, for lack of care, get him into trouble. —*A. C. C. in Glens Falls Republican.*

"Holland."

The grand sketch entitled "Holland," by Shadow, Hammond, is the finest sketch of New England woodcock and grouse shooting that I ever saw published and I am an old sportsman of forty-three years' experience in the field. It is lifelike and real. D.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

MEN I HAVE FISHED WITH.

XXXIII.—Benjamin Van Voast.

After the pirates returned to Albany they forswore piracy until the time should come for the next cruise to the bluefishing grounds. They dispersed, and were swallowed up in the whirlpool of civil life, just as the great armies of 1865 disappeared, without creating a ripple on the surface of society. Benny returned to his desk in my father's office, where I also held down a chair, the summer's tan faded from our cheeks, and if we held converse it was of invoices, vouchers, way bills, and things with which pirates have nothing to do. In fact a Western drover coming in to pay freight on several cars of cattle would never suspect us to have been pirates. Our disguise was perfect. It was only when we met at Billy Shaw's café that the past was mentioned.

Next spring, when the ice went out of the upper Hudson, there was the usual overflow of the bottom lands, and my naturally good constitution had repaired damages sufficiently to permit frequent trips to the muskrat grounds on the Popskinny with Port Tyler, who was after fur, while I needed the exercise which the sport brought. Perhaps it wasn't sport! I shot the little brother of the beaver, which we miscall a muskrat, for no other purpose than to exploit my marksmanship and kill something, to get out in a boat over the meadows and be in company with my beau ideal of a master of woodcraft, old Port Tyler. I did not want the game for food nor for its fur; yet the latter was utilized and life was not taken in vain. Not the highest form of sport? No, not the highest by long odds, but I spent every odd day in early spring at it, when business was not too pressing; and then there was always an eye out for black ducks and mallards when we were among the willows which marked the line where the creek was when the waters were down.

Benny wanted to go and see what hidden charm lay in shooting the musquash, and so we went down on the island one Monday night and slept in the hay of Rivenburg's barn with old Port. The questions that Benny asked about rats, snakes and other "varmints" showed that the whole business of camping was new to him. He was not at ease after we had eaten supper and had crawled under the hay.

"Mr. Tyler," he asked, "do snakes ever crawl up in the hay in these barns and bite people?"

"Not as I ever heerd of," Port answered; "the fact is that snakes never come out of their winter quarters until the days are warm, and even in the hottest weather they are quiet at night, an' besides, there's no harmful snakes about here anyway."

In order to soothe Benny I remarked: "What Porter says is true to a certain extent, but there are exceptions to all rules, and the snake that wallowed through the snow and killed the family which lived just below here, some ten years ago, was the exception; yet I hardly think any snakes will disturb us to-night, for the moon is in the south, yet we can't be sure."

In the morning Benny looked tired, and when Porter found a chance he said to me: "Your friend is afraid of snakes, and I tried to quiet him so's he'd sleep; but you went on about snakes wallerin' through snow, an' you know better'n that. There wasn't no family killed—now, honest, what'd you want to tell such stuff as that for?"

"To encourage and amuse Benny; that's what he came for. Fun is what he is after, and if he thinks that snakes are dangerous and are abroad while there's snow in the valleys, it's fun to let him think so."

After breakfast we started in three light boats over the meadows, making for every pile of driftwood where the game gathered for refuge after being flooded out in their houses and homes in the bank. Benny had not told me that he had never shot a gun, and his actions were funny. After giving him full directions about loading, for we used muzzleloaders in those days, he shot both barrels and then snapped a lot of caps at the swimming rodents, but the charges did not explode. In despair he rowed over to me to ask for advice and assistance. I snapped several caps on each barrel without effect, and then with the worm on the end of the ramrod drew the charges. In each barrel he had put the shot in first.

Porter remarked, "I guess your friend Benny ain't done much shootin', and if he puts his powder on top of the shot every time he won't get many rats. I'm a little afeerd to shoot with men as green as that, for there's no tellin' but you'll get a charge of shot into some part of your body where you don't want it. It's too bad that you drew the charges and show'd him how to load."

An apology was due to Port for bringing a man to shoot with him who had never handled a gun, but my excuse was that I had no idea Benny was so raw a recruit or I would not have brought him; for, like Porter, I knew that he was to be feared, and after this explanation we separated and kept our boats so far apart that there was no danger from Benny. He banged away all the morning, and when we assembled for the noon lunch he had three head of game, which he displayed in triumph as he joined us. "How many did you get?" he asked, and as the boats pulled up at the barn he looked at the piles in each and exclaimed, "Geewhilliken, what a lot!" He counted them and there were over eighty in the boats.

After a bite and a smoke we left Porter to "peel" his game, and Benny and I went forth again. In little bunches of sticks, straw, fence-rails and other flotsam which lodged against the willows, stakes and similar obstructions, the game would be found singly or in numbers, and would dive at our approach, leaving a wake that marked the course, but the necessity of their breathing gave opportunity to the gunner, and he must be quick or the breath would be snatched and his game be far away on the second stretch and out of distance. This, and this only, gave the shooting a slight claim to be called sport, if indeed it had any sort of claim to the title. It required a quick eye and a snap shot.

Perhaps two hours had passed and we had done much shooting around our district, for above and below us men were shooting, and it was not the correct thing to invade a neighbor's territory, and one could always return to a drift pile in half an hour and find it tenanted apparently with as many squatters as before, for these animals never take to the hills when drowned out of their homes, but remain near until the waters subside. I was floating, gun in hand, looking toward Benny waiting for a head to appear which I had hit once, when I saw him fire one barrel and then jump up and fire the other, while the frail boat slipped from under him and scooted away. He had somehow fallen on a pile of drift which kept him dry above the waist, and he evidently did not need the advice always given in the army to any fellow in difficulty: "Grab a root," which I involuntarily yelled as I went after and captured his boat. After getting him into his light scow again and bailing it out there was a gun missing, and after setting all the drift free from the old fence post which had collected it the water was too muddy to see the bottom, although only 30in. deep; but it couldn't go far, and I located it with an oar, and after many trials lifted the muzzle of the gun above water by clasping it with both oars, and we went to the barn, Benny very silent. There is no use in saying "I told you so;" it only exasperates the party of the second part. Let him alone to think it all over, and on this principle there was little conversation as we rowed our boats up to Rivenburg's barn, which stood on an elevation of some 2ft. above the highest flood recorded.

Porter was still at work and merely glanced at the game we brought, and I blew the water out of Ben's gun and snapped a lot of caps on it to help dry it, after wiping it inside as well as possible. "What's the matter with the gun?" Porter asked as he saw all this going on.

Before I could reply Benny broke in with: "Like a durned fool, I forgot that you both said that I mustn't stand up in the boat to shoot, and I went overboard, gun and all. I saw both of you stand up to shoot, and in the excitement of firing the second barrel I jumped up and went overboard." There was a pause. He had virtually said, "You told me so," without mental irritation at any one but himself, and we were still friends. He stood in his wet trousers, kicked a dead muskrat and continued: "This muskrat shooting isn't as much fun as I thought it was; let's go home." And so we took the largest boat, placed the skins in the bow, and Old Port and the unskinned game in the stern, while Benny with the bow oars after a while learned to keep a regular dip in unison with the stroke oar. Port kept on skinning and the dead (muskrats) steered by the dumb (Benny) went upward against the flood.

As soon as the ice dam at Castleton or above, on what the old Dutch settlers called the "overslaugh," breaks, the waters about Albany subside and the rich bottom lands emerge with a deposit of fertilizing leaf mould and other sediment which has come from the Adirondacks and the fertile Mohawk Valley. Then the perch begin to gather in those bayous which are called "creeks" on the upper Hudson, for the natives do not distinguish these from a brook, which is also a "creek;" the river herring run up to spawn in the cold waters, the bullheads emerge from the mud and the early fishing begins, or at least did begin before the railroad filled in the place which it formerly bridged and caused the filling of the creek by stopping the flow, and now there are few fish in the stream where we boys could in the early days catch more than we could carry.

Young Charley Bell, another of the amateur pirates, and I often went down there, and our tales of fishing awoke a desire in Billy Shaw and Benny to go along; so just as soon as the ice was gone, and the song sparrow began to rejoice that a portion of the springtime had come, even though not to abide permanently, we went down one pleasant afternoon and slept in the hay of Hotel de Rivenburg. Benny's mishaps had been fully related, enlarged and beautified each time they were told. "That's all right," said Benny, "I don't want any more shooting, but fishing is better sport. I'd like better to sleep home in a good bed, and come down here in the morning. What fun is there in sleeping in an old spook hole like this?"

"Fun!" said Shaw, "why, Benny, if you were at home you'd miss all this good company, you wouldn't hear the tree toads peeping, nor the owls singing, and besides all that you can study astronomy through the roof."

"Durn the peepers and the owls! The hay tickles my face, and the last time I was here a spider or a cricket walked over my face. Now, on the schooner last summer there were no spiders nor crickets to bother you after you went to sleep, and I like a civilized life."

"No," replied Billy, "there wasn't any spiders nor crick-

ets in the bunks on the Rainbow, but for choice I would have preferred them. How's that, Bell?"

"Well, yes, the crickets are larger and they sing; like you, I prefer the insect life of the barn, but tastes differ."

"Benny," said I, "to-morrow we will have breakfast and be fresh for the fishing by the time you could get yourself dressed and down at the Albany dock, and it gives us a good start. You talk as though you are sorry you came, and if so I'm sorry also."

This had its effect, and there was no more grumbling. He realized what a nuisance a grumbler is, and he and Bell sang, and we told stories of more or less probability and went to sleep. In the morning, as we stepped outside our hotel, there was Port Tyler frying a lot of perch and river herring. "I've got some gill nets down the crick," he said, "and I walked down the railroad, an' seein' your boat I took it and went down an' got some fish, for I ain't breakfasted yet. I see by the boat that ye hadn't been a-fishin' yet, and thought I might as well fry enough for all hands. An' there's Benny too, four on ye; well! if ther' ain't fish enough for all I'll go get some more. Why, Benny, I thought you'd got enough of the island creek on the last trip; goin' to try the fishin, hey?"

"Yes, I think I'm better at fishing than at shooting; but hold on! You've walked about four miles and then been down the creek after fish and cooked 'em; you sit down to breakfast and Bell and I will go to the nets and get more fish; he says he knows how to get them out of the net."

While they were gone we laid out our rations and breakfasted. We had calculated on hot coffee, but not hot fish, and on a chill March morning they were welcome. A little song sparrow warbled a melody from the willows, and we listened as it sang again and again. "It makes me feel bad now when I hear that bird," said Porter. "They used to sound cheerful like, an' I was allers glad to hear 'em, but since last week they make me solemn, somehow, an' I wish they wouldn't sing." No one made an inquiry, and after a pause the old man continued: "It was this way: When my nets are out in the spring I allers bring my gun along to pick up an odd duck or two or a muskrat, as long as their fur is in good condition. Well, I was a-rowin' down the crick, keepin' close to one side or the other so's to see around a bend afore anything sees me, an' I see a muskrat on a stump a-sittin' there an' a-cleanin' his face with his paws, jus' like there wasn't a gun within ten mile. He was a-kickin' in the mud afore he heard the gun go off, an' I rowed down an' reached him with an oar an' brought him in, washed him an' started on, when I see somethin' else a-kickin' in the mud under a willow beyond the stump. It was a little bird, and it had been in range of my shot, and there it was on its back, an' a-flutterin' its little wings in the mud. I lifted it on the blade of the oar and brought it to me, but there was blood in its nostrils, an' it died in my hand; it was one o' them pretty little singers." No remark was made, and he added: "Confound it! I wish I'd let that muskrat go; his fur wasn't any good, anyhow."

After the boys came back and had breakfasted we saw Porter lift his nets. He had three gill-nets across the creek, and took out several hundred "herring" (as the river alewife is there called), some perch, bullheads and two eels. These astonished me, as I had no idea that an eel could be caught in a gill-net, and his were of 2½in. mesh, made for the head of the herring; but Porter called my attention to meshes which were coated with eel slime where the fish had slipped through, "But," said he, "these eels have been a-fillin' up on angleworms durin' this high water, an' they're a leetle too stout to slip through easily, an' probably they ain't been in the net long. P'raps I'd a-got them other fellers if I'd a-been here a few minutes after they struck the net. Now these eels, they work along a gill-net to feed on the fishes that get caught in it, an' sometimes they get h'isted into the boat jes' like them two fellers, but mostly they eats the belly out of a herrin' or a shad an' leaves the rest. Now here's a herrin' all gone but his head and his upper parts. The eels seem to like the innards best, an' they'll spile a dozen herrin' in pickin' out the ch'ice parts, when I'd thank 'em to finish up one fish afore tacklin' another."

After this lecture on the habits of eels by a past master in fishology, while he removed the fish and left his nets to work for another day, we left him and went on. We fished from bank and boat, with both worm and minnow, and took a goodly lot of yellow perch, bullheads (catfish), and a few pickerel. It is the unexpected that always happens, and Benny Van Voast, the poorest fisherman in the lot—one who did not know how to put a minnow on a hook, nor how to cast it after it was put on for him—took the biggest fish of the day, a pickerel of 4lbs., which was 1lb. above any fish taken by the other pirates. I say "pirates," because we were all on that piratical trip to salt water the previous summer, and we had a right to the title.

As we rowed our boat back up the creek Shaw's attention was attracted by three gangs of poles, three poles in each, set with a noticeable regularity. "What are the poles for?" he asked.

"They're put out there to fasten boats to," answered Benny.

In an evil moment I was prompted to correct this false statement, or rather to enlighten Benny. That's my very weak point—the hope of enlightening the masses. They have never arisen in force and demanded enlightenment from me, and that's where they have missed it. I have tried to force knowledge upon them, and that's my failing. Benny had explained why the stakes were placed there. I did not know enough to keep my positive knowledge to myself, so I said, "No, Benny, those poles hold fyke nets in place; the two nearest together are the wings and the apex of the triangle is the bag of the fyke, or 'hoop net,' as some call it."

"Who sets that kind of net in the creek," asked Shaw, in a careless manner.

"They belong to Mr. Tobias Teller," said I. "He lives up here on one of the Teller farms, is a bachelor, but puts in his nets to get fish for his own servants as well as for the family of his brother, Mr. Jacob Teller, father of our friend Col. David, and it gives him fish in a fresher—"

"What!" exclaimed Shaw. "You don't say that these trap nets belong to Tobi' Teller! Turn around! We've got to see to them an' take 'em up, if we have to send all the fish we get out of 'em up to the almshouse." And, against my protest, I showed Shaw which pole to lift and how to untie the trap-cord and empty the fish into the boat. It was well that there were only three nets, or we would have been swamped with the weight of fish; but he emptied them all, and then tied to each bag-stake a card on which was written:

"This net was emptied by Billy Shaw, aided and abetted by * * *, members of the Society for the Preservation of Cruelty to Animals, for fear these fish might die in your net. If Mr. Tobias Teller will call on Mr. Shaw at his place of business he will receive all the satisfaction which he may get."

The load of fish from the nets, in addition to what we had, was a heavy pull after we struck the current in the river, but we reached Albany in time to send messenger boys with presents to every one we could think of, and left a lot to the man who took care of the boat. Mr. Tobias Teller dropped into Shaw's next day, as Benny expected he would, and there he saw a placard on which was painted:

"Fresh herring from the Teller farm.
Perch from Teller's fyke.
Bullheads skinned *à la* Popskinny.
Order quickly if you wish Tobias.
Tobi or not Tobi, that's the question!"

As he read it four of the pirates who had cruised Long Island Sound with the Jolly Roger at the fore, and who had lately extended their operations to the peaceful Popskinny, appeared from an ambush in an adjoining room, and gravely shaking hands with the old gentleman, asked in turn: "How's the fishing down your way, Mr. Teller?"

He bore the indignity like a Christian martyr and replied: "The fishing has been very good until yesterday. We have had enough for our families and farm hands as well as some to spare for the neighbors, but the fish must have deserted us, for the fykes were empty last night. But I just dropped in to eat a few oysters, and if you'll join me it will be a great pleasure. Waiter! five dozen raw and a bottle of Sauterne to begin with. By the way, boys, the next time you go down the creek on a fishing trip let me know and I'll join you, and if you don't get enough to suit you we'll raise the fykes."

"Not for me," said Benny, "I wouldn't eat a fish that came out of a net. I don't eat many fish, but those taken on my own line always have a flavor above all others." This sentiment met with a hearty commendation from the other three, yet in the "Song of Fairies" we read:

"Stolen sweets are always sweeter;
Stolen kisses much completer;
Stolen looks are nice in chapels;
Stolen, stolen be your apples."

Fred Mather.

"FOREST AND STREAM'S" BIG FISH RECORD.

A Provisional List of Big Fish of Various Species, Supposed to be the Largest of their Respective Kinds Captured or Possessed in America.

Salmon (*Salmo salar*), 54lbs.—Killed with fly in Cascapedia River by ex-President Arthur.

Small-mouth Black Bass, 10lbs.—Caught in Round Pond, Warren county, N. Y., by Nathaniel Parker, of Glens Falls, N. Y. Caught with rod and reel. The fish was 25¼in. long and 19in. in circumference. I put this fish first, as it was exhibited in public, and I weighed and measured it.

Reuben Seelye, town of Queensbury, N. Y., claims to have caught a small-mouth black bass in Glen Lake, Warren county, which weighed 11¼lbs., 25in. long and 21in. in circumference. Several people saw this fish, and in my opinion, after an exhaustive inquiry, there can be no question about the weight provided the scales were accurate, and the measurements of the bass seem to confirm the weight; but it was not weighed in public, as was Parker's fish.

Large-mouth Black Bass.—In the autumn of 1896, while I was making a call upon Gov. Morton in the Executive Chamber at Albany, he asked if he had ever told me about the big black bass captured in his lake at his country seat, Ellerslie, on the Hudson. I had not heard of the fish, and the Governor said that seven or eight years ago, soon after he bought Ellerslie, he had the lake on the property drawn down to clean it and find out what kinds of fish it contained. The chief capture was a large mouth black bass weighing 24lbs., and the Governor asked if I had ever heard of a fish of the species so large, and I said I never had from the waters of this State, although I believed that Florida waters had produced the large-mouth bass equaling or exceeding the Ellerslie fish in weight. He said I was not alone in never having heard of a black bass so large as 24lbs. from New York waters, because (and he laughed heartily) he had told the story a good many times to different people and none of them had heard of the like, and had even asked if he was sure of the weight of the fish. Mr. Walter C. Witherbee, who was present, told the Governor that he was entitled to the master degree as a fisherman, but he saw the point of the joke at once, and replied that he witnessed the weighing of the fish, and there was nothing fishy about the story except the fish, and when it was first placed before him he was prepared to believe most anything about its weight, as it was so large. The lake at Ellerslie has been in existence for more than 100 years, but Gov. Morton has no idea how the bass got into it, nor can I even guess when asked to do so. Last summer I noticed that the lake at Ellerslie was rich in fish food—particularly so—and probably the bass had little, if anything, to do but wax fat and large. I told the Governor that I should have to put his big black bass in the Forest and Stream big fish records, and I was particularly obliged to him, for I had no record of big black bass of the large-mouth species until he furnished one that would stand at the head for years to come.

Mascalonge, with hook and line, 47½lbs., caught in St. Lawrence River by John B. Spafford, Jr., and Capt. James Millward. The late Dr. Elisha Sterling, of Cleveland, O., speared a mascalonge in Sandusky Bay that weighed 80lbs.

Brook Trout (*Salvelinus fontinalis*).—The employees of the Maine Fish Commission netted a trout in Rangeley stream that weighed 12lbs. and returned it to the water after weighing it.

I am aware that a trout of great weight was recorded in this journal as having been caught by an angler in the Rangeley Lakes, but I was there that season and an investigation convinced me that the fish weighed only between 9 and 10lbs. The weight of the 12lbs. fish is authentic, as I got it from Commissioner Stanley.

Mr. Charles Hallock has written of a 16lbs. trout from the Nipigon River, and I told in Forest and Stream what I knew of the claim for a 20lbs. trout caught in the Wayagamack Lake in Canada.

New York State never equaled the Maine and Canadian waters in the size of their brook trout. The largest fish taken with hook and line of which I have record was a trout of 7¼lbs., caught in a lake in the town of Moriah, Essex county, in 1895. Previous to that the largest record brook trout was one found in a dying condition in Loon Lake, in the Adirondacks. The fish is now mounted in the Loon Lake House, and when found was credited in the newspapers with a weight of 6½lbs. I saw the fish this season, and was told by Mr. Stevens, of the Loon Lake Hotel, that the trout weighed a little more than the weight given in the newspapers. This is now of no importance, for this fall a trout was found dead in Loon Lake with a hole eaten in the side of its head, as though done by a mink or other animal, which when placed on the scales weighed full 8lbs. The fish is being mounted and will be placed in the Loon Lake House. This is the largest trout of which I have knowledge ever caught or found in the waters of New York State.

Lake Trout (*Salvelinus mamaycush*).—The largest trout of this species ever reported to me as having been caught in the waters of New York was a fish of 53lbs. caught in Lake Kush-a-qua. I have no information as to who caught the fish, although I tried to get some details of the capture while at the lake last summer. While it was admitted that such a fish was taken from the lake, I could not even learn the name of its captor.

Striped Bass or rockfish (*Roccas lineatus*).—The largest fish of this species taken with rod and reel of which I have record is 64lbs., caught by W. R. Renwick, of the Cuttyhunk Club.

Pike, commonly called pickerel (*Lucius lucias*).—35lbs., caught in Lake Le Bouef, Erie county, Pennsylvania, by Charles Phelps.

Yellow Perch or ringed perch (*Perca americana*).—5lbs., caught by Pick Squires in Schroon Lake, N. Y.

While these fishes may not be in all cases record fish, they will serve as starting points to correct the records.

A. N. Cheney.

Pike-Perch in New Jersey.

The stocking of streams and ponds with pike-perch fry by the New Jersey Fish and Game Commission has proved a success in at least two instances.

The fry were received from the Pennsylvania hatchery at Corey on May 12, 1896, and about noon of the same day 50,000 were placed in Cedar Brook, opposite the Lehigh Valley depot at South Plainfield, about three miles east of New Market Pond, into which the stream empties. Another lot of 50,000 was placed in a small brook three-quarters of a mile from the pond at Lakeside, a settlement one mile south of Metuchen. As soon as liberated, the squirming little transparent bodies, with their prominent, bead-like eyes, much resembling tadpoles in size, darted here and there, finally seeking shelter under the edges of stones and pebbles on the sandy bottom.

The brook being inaccessible for the greater part of its length on account of the thick underbrush and briers, the growth of the fry was not noticed until Sept. 12, four months later, when, upon my stepping upon a piece of overhanging bank near the junction of the brook and pond, a number of fish 5 or 6in. in length darted from beneath to the opposite side, their dark, irregular markings, and olive-colored sides being plainly visible in the clear, transparent water, which also undoubtedly slightly magnified their size By stamping along the edge of the brook many other pike-perch were driven from their hiding places.

The only other fish in this lake at that time were seventy-three Oswego bass, measuring from 9 to 18in., placed in the lake a few months previous to the pike-perch, and innumerable dace and other bait fish, all other fish having been lost two years previous by the breaking of the dam, a permanent dam having since been built and the lake refilled by its many springs and streams.

A few weeks later a trip was made to Cedar Brook in company with Thomas Lindabury, yard-master of the Lehigh road at South Plainfield, and many pike-perch were driven from beneath the banks of that stream, all showing the same growth as their kin at Lakeside.

One million fry of the pike-perch were planted by the Commission in different lakes and streams of the State on that date, May 12.

Wild Honey.

Potomac Bass Fishing.

There will be no fishing for bass in the Potomac River and its tributaries hereafter above the Little Falls between April 15 and June 1 of each year, and the fish cannot be taken at any time other than by means of a hook and line or a dip net. The use of the trot or out-line, by which the fish supply in the upper Potomac has been almost decimated in the past, will be also illegal hereafter. The penalty for breaking any of these regulations will be imprisonment for not more than six months or a fine not exceeding $200, or both fine and imprisonment. This applaudable result is due to the recently organized District of Columbia Game and Fish Protective Association, of which Commander Robley D. Evans, of the navy, is president, and whose membership comprises the leading gentlemen sportsmen in Washington as well as in the surrounding States.

When the Association was formed the States of Virginia and Maryland had already passed laws containing the provisions enumerated in the opening lines of this article. To become operative, however, it was necessary for West Virginia to adopt the same law.

The executive committee of the local association, which consists of fifteen well-known sportsmen, took immediate steps to secure the requisite action by the Legislature of West Virginia, and at a meeting held last Monday night delegated Dr. Geo. W. Massamore, a member of the Association, chief deputy game warden of Maryland, and secretary and treasurer of the Maryland State Game and Fish Protective Association, to proceed to Charleston and urge the passage of the bill. Dr. Massamore was courteously provided with strong letters to members of the West Virginia Legislature by Senators Elkins, Faulkner, Gorman and other influential gentlemen, and when he reached the West Virginia capital he found the bill sleeping in a Senate committee. He was received with pleasant welcome by the legislators, and out of courtesy to him the bill was taken up out of its regular order and quickly passed through both houses. Dr. Massamore had an interview with Gov. McCorkle, who is an ardent sportsman, and it is regarded as certain that he will sign the bill.

The effects of this measure cannot be overestimated. It will mean the placing around the bass and all varieties of game fish, which are also enumerated in the prohibitive clauses of the bill, of perfect protection from the forays of pot-fishers, which have been so constant in the past, and will especially protect them during the spawning season, from April 15 to June 1. Mr. George L. Nicholson, the manager of the Chesapeake and Ohio Canal, who is a zealous sportsman and always eager to help anything that will seek to promote sport in its proper sense, will have all the canal walkers of the system under his control appointed deputy game wardens at a very early date, and, as these wide-awake, alert men virtually patrol the Potomac from Washington to its source, the persons who have heretofore kept up predatory warfare on the game fish in its waters will be compelled to give up their business. Heretofore it has been impossible for the State authorities of Maryland and Virginia and West Virginia to stop the lawbreakers in the river, because when approached by the officers of one State they would seek the shore of the State opposite and evade arrest. Under the new law, however, they will have no chance to continue this system.

Immediate steps will now be taken to have Congress pass a law similar to the one described, extending the protection from Little Falls, where the District begins, to the east line of the District, below Alexandria.—*Washington Star, Feb. 20.*

The New York Bass Season.

RHINEBECK, N. Y., Feb. 22.—*Editor Forest and Stream:* I noticed some weeks ago the proposal of the New York State Fish and Game Commission to submit to the Legislature an amendment to open the season for black bass on July 1 and to close the same on Oct. 15. There seems to be good reason for extending the close term from May 30 to July 1, as the bass are at best only leaving their spawning beds during June, and during that month should be left undisturbed with their young; but as for putting the anglers of this part of the State into winter quarters on Oct. 15, I do not believe it should be done without a protest.

When I first noticed this proposition I wrote to Mr. Cheney, fishculturist, whose very interesting communications, under the head of angling notes, prove such a valuable acquisition to your paper; and he informed me that the contemplated change in the law was due to the fact that so many bass were slaughtered late in the autumn, after they had retired to the deeper waters for the winter. His reasons are fully set forth in the last issue of FOREST AND STREAM (Feb. 20). While such may be the case in northern New York, this condition does not obtain in Duchess county, nor do I believe it does in any of the southern counties. The finest fishing days are throughout October. The great heat of July and August makes it difficult to coax the bronze-backer, and it is only during September and October that he is in "fighting form." I will promise my friend Cheney something better than "a dead and salted codfish" on his book if he will then urge one of our black bass to the test, for in the frosty October mornings they take the bait with one grand rush, rather than with "nibble, nibble, nibble." There is no retirement to deeper water in October in this section, but the fish are taken in the same quarters as in summer, and never in large numbers. I am no advocate of pot-hunting, and am always content if three or four grown-up fish come to the boat, sending those under a pound and a half back whence they came to grow some more. If I mistake not, your paper contains each year reports from lakes Mahopac, Greenwood, Tuxedo, etc , of good sport—not slaughter—in late October, and it does not seem reasonable to so amend the law that fishing in all parts of the State must cease on Oct. 15. It occurred to me that the interchange of opinion on this subject through the medium of FOREST AND STREAM, a journal so devoted and loyal to the highest interests of the sportsman, might bring about the correct result in the solution of the problem as to the closing of the bass season. Should it not be extended to Nov. 10 or 15 rather than closed on Oct. 15? A. LEE WAGER.

THE OUANANICHE AND ITS HOME.*

THIS is by far the most beautiful angling book printed in this country devoted to an individual fish. The author is widely known to Canadian and American anglers as a writer on fishing in the Provinces; and in this work he has given us the result of long and loving study and preparation. The chapters deal with the description, classification and habits of the ouananiche; sketches of camping and fishing experiences in its pursuit; and well-written descriptions of the country and its surroundings, which after all constitute so much of the ever-renewing charm of an angling excursion. The text has worthy presentation in all that beauty of type and printing and picture and paper and binding can contribute.

It is pretty clearly demonstrated in Mr. Chambers's book that the Indian name of the fish was not always pronounced uniformly by the aborigines themselves, and it appears that *wananish* represents as close an approximation to the Indian sounds as the English language can be made to furnish. Common names of fishes have about as little permanence as names traced on a sand beach between tides, and people who go fishing take the liberty of selecting for their favorites whatever designation strikes their fancy. Even the author in his charming descriptions lapses into the synonym "fresh-water salmon," and at other times characterizes the red-spotted Marston trout as a "bewitchingly beautiful leopard of Northern water," while the brook trout becomes "the leopard of the brook." These are mere straws, but they show which way the wind of popular nomenclature blows, and after all the names of fish are among the least important of their belongings.

As for the scientific name of the *wananish*, or ouananiche, that is another matter, and one that is to be settled by more nearly precise methods. If it be established that the *wananish* of Maine, New Brunswick, Nova Scotia and Canada represent a single variety of the Atlantic salmon, it is more than probable that most ichthyologists will continue to associate with them the name *sebago*, first applied by Dr. Girard in 1854 to the little fresh-water form found in lakes in the southern part of Maine. It is useless to say, "There never was a variety *sebago*." That name was given to the *wananish;* the types of the description were preserved in the Smithsonian Institution, where they were examined and redescribed by Dr. Suckley in 1861. Both the original description and the account published by Suckley made mention of certain characters which will serve to distinguish the *wananish* from the Atlantic salmon.

The points of difference between grilse and *wananish* are well stated in Mr. Chambers's book by a quotation from Walter M. Brackett (page 17), showing that the eye of the *wananish* is much the larger, the profile rounder, the dark spots larger and much more numerous, the caudal peduncle broader and flatter, and the head larger in proportion to the body. On page 32 Mr. Charles G. Atkins still further distinguishes the *sebago* salmon from the sea salmon by (1) its diminutive size, (2) its leaner flesh, (3) its lower tone of color, (4) its less permanent sexual marks, (5) its greater liability to ovarian disease, (6) different habits of feeding, and (7) the larger size of its eggs and very young fry. Additional confirmation of the same nature is to be found on pages 20 and 21, whereon the author himself reviews the differential characters and quotes the excellent description by Mr. Creighton. The distinctive name is evidently based on some things that are more important than "different habits alone."

We cannot agree with Mr. Chambers in accepting the doctrine of the fresh-water origin of the common Atlantic salmon as if it were established by satisfactory proofs. This is distinctly debatable ground. As far as observations have been recorded the fish now reproduces in fresh water only, but it is impossible to tell how long that habit has characterized the species. Until the ancestral salmon has been found fossil in fresh-water deposits the origin of the common form in fresh water must remain an unproved theory. It is true that Prof. Cope has described a genus of salmons from a tertiary fresh-water lake, but it is not certain that the fossil belongs to the salmon family. It is also true that a museum in Canada has some undescribed fossil remains closely resembling the genus of Pacific salmons from tertiary clays of a river in British Columbia. But nothing is established with certainty upon this interesting subject and theories should not be too readily accepted. One thing, however, admits of no question: the name *Salmo salar* belongs to the sea salmon, and if a specific name be needed to distinguish the *wananish* from the migratory form, Girard's name is clearly available.

Why do the salmon go to sea? Perhaps most members of the family have possessed the sea-going habit from the infancy of the race as well as the infancy of the individual, assuming that reproduction has always taken place in fresh waters. It is certain that the sea provides abundant food and that the troublesome parasites and fungus, which make salmon life wretched in the rivers and lakes, disappear and cease to annoy in the salt water. There are serious drawbacks, however, for the marine salmon, in the form of seals, sharks and some of the large predaceous fishes which make life a constant struggle and render more endurable a periodical exchange of afflictions by a return to fresh water.

The pink color of salmon flesh appears to be poorly explained by reference to a diet of red crustaceans. Many fish of the family that never feed upon such animals still have pink flesh and many marine fish which are known to subsist chiefly upon red crustaceans have pale flesh. If observations count for anything the principal food of the salmon at sea consists of herring, capelin and sand launce. It is difficult to understand how such an explanation of the red flesh of salmon should have been so long accepted and repeated without contradiction.

It seems a pity that the author should have accepted so readily the idea that the golden trout, or Sunapee saibling, is an introduced species which should be looked for also in the St. Lawrence basin. A little closer search into the columns of FOREST AND STREAM, wherein the trout was very early and very fully described, should have satisfied him that the species is indigenous to Dan Hole Pond, N. H., and Flood's Pond, Me. That it will be found elsewhere is almost unquestionable; but there is no more reason for identifying it with the European saibling than there would be in considering it the same as the great red-spotted trout of Labrador or the Western Dolly Varden.

Since the author and the publisher have given to anglers and book lovers such a rare combination of entertaining text and superb illustration, it is an ungrateful task to call attention to some defects, which mar the beauty and to some extent destroy the usefulness of the work. The author should not have spoken of the "chub and other whitefish," for the first belongs to the *Cyprinidæ*, and the last, as he well knows, is a member of the salmon family. The brook trout is not *Salmo salvelinus*, but *S. fontinalis*. The doré is not a "near neighbor of the pike" in the sense of relationship, since it is a spiny-finned fish, while the pike belongs to the soft-finned order. *Unionidæ*, it seems needless to say, is a family name and not a "generic name." The whitefish of Hamilton River and other inland waters of Labrador, as also of the Décharge, may not be identical with the common whitefish of the Great Lakes. Judging from what is said of it by Mr. Chambers it seems more likely to be the Labrador whitefish (*Coregonus labradoricus*).

In "The Ouananiche and its Canadian Environment" the publishers have added another beautiful book to their long series of splendid publications. It is too bad, therefore, to see it marred by occasional examples of such proof-reading as, for example, *Salmo salvelinus marstonii* for *Salmo (Salvelinus) Marstonii* (pp. 255 and 270), David T. Jordan for David S. Jordan (p. 15), C. Brown Goode for G. Brown Goode (p. 334), Moutagnais for Montagnais (p. 114), Bastican for Batiscan (p. 277), *Exos lucius* for *Esox lucius* (p. 283), the Atlantic on the west instead of east (p. 122), *entomostracœ* for *entomostraca* (p. 81).

The utility of such a list of authorities consulted as the one beginning on page 331 is open to question. It is not an index of literature pertaining to the species mentioned in the book, and for the *wananish* it is far from complete. The student of the salmon family must search further and range more widely if he wishes to become possessed of an intimate knowledge of certain problems presented in "The Ouananiche and its Canadian Environment."

* "The Ouananiche and its Canadian Environment." By E. T. D. Chambers. Illustrated. New York: Harper & Bros. 1896.

"Angling Talks."

WE have a very few copies of George Dawson's "Angling Talks," a series of chapters of entertaining chat about men, fishermen, fish, fishing and fishing places. Cloth, 50 cents. Forest and Stream Publishing Co.

IN-BREEDING OF ENGLISH SETTERS.

A BELIEF has been steadily gaining ground among practical sportsmen that much of the old theory and practice of breeding English setters, in so far as it applies to breeding on certain old lines of in-breeding, was faulty and harmful. In the boom years of English setter breeding, when stud fees were high and one dog brought in a revenue equivalent to a good income, and when puppies had a fictitious value and were many times more valuable as a marketable product than they now are, the "science" of breeding was the pet phrase of all fashionable breeders, whether they were empirical in their practice, and beginners of yesterday as to experience, or whether they were wise and experienced. The native dog was designated as cold-blooded; the imported was blue-blooded or thoroughbred, both of which terms were used arbitrarily. The blue bloods became the fashion, and that, once established, no argument avails against it, and none is needed to maintain it. It lives till it dulls as a matter of fancy, then declines.

The "science" of breeding consisted chiefly in breeding to imported dogs, ones costing large sums and also commanding large sums for stud fees. Field trials and bench shows enhanced the value of the progeny. The commercial value of dogs was so great at that time that the matter of pedigree transcended all other considerations. Instead of selecting a pedigree with the sole object of producing really good field dogs, it was selected with a view to selling dogs. By breeding to dogs of a fashionable ownership and pedigree, the sale of puppies was assured if the bitch had any claim to a line or two of fashionable blood. The average purchaser seldom gave much attention to anything other than pedigree. Gradually, as the commercial value of pedigree became better recognized by many breeders, and as winners became more numerous, still more attention was paid to pedigree, and in particular to having the names of a large number of winners appearing in it. Some of the pedigrees so constructed were pleasing to look upon, though as to the dogs to which they referred so much could not always be truthfully said of them. The same sire might appear repeatedly in several generations. Such repetition was held forth as the multiplication of good qualities of the sire and the clinching of them in the progeny. Besides the good qualities, the matter of color was considered of prime importance; so much so that dogs other than black, white and tan were not approved, and some breeders went to the extreme of killing all puppies which happened to be of a color other than black, white and tan.

Now, there is no reason to disapprove of a fancy for color, or for the practice of breeding intelligently to winners. But either can be perverted or misapplied, or conducted in an unskillful manner.

The result of the in-and in-breeding was that many of the fashionably bred dogs were in time bred on very narrow lines of blood. The combination of breeding to construct a catchy pedigree, with a view to stud fees and the sale of puppies, resulted in the degeneration of certain families of dogs. Still it was difficult to secure a purchaser for any dogs, however good, if the fashionable pedigree were absent. It was much easier and incomparably more remunerative to deal in the dogs of fashionable requirement—goods already in demand and thoroughly well advertised—than it was to deal in dogs, however good their merit was, if it were unknown to the public or not desired by it. Dogs whose breeding was not fashionable were not profitable.

The effects of so much rank bad breeding under the shibboleth of "science" was that there appeared numerous undersized dogs, some mere midgets or weeds, many of them with extremely narrow heads and sharp noses. Many showed mental weakness, they being stupid, or whimsical, or, working with much diligence for themselves, they worked with little interest to the gun, even if they, ever understood its purposes. Many of them were weak in constitution, predisposed to disease, and with little power of resisting it when it attacked them. The mortality among the "scientifically" bred stock was enormous, yet so numerous were the breeders everywhere that the supply was equal to the demand; and notwithstanding the enormous losses from disease and death, the profits of setter breeding were great.

It need not be inferred that no good dogs resulted from such breeding, or rather, good dogs here and there were produced in spite of it. Such, however, were paraded in some instances as proof of the soundness of the "scientific" breeding. There might be one success and one hundred failures, but the one success was made to prove that the hundred failures were a part of good breeding. A native dog, though of pure breeding, sound constitution, high intelligence and great working ability, was considered a cold-blooded brute, while a dog, by virtue of a trip across the ocean, even though sent with the stigma of being a cull, was accepted on trust as being the true article.

Field trials, as they were run at that time, did much to perpetuate the incompetent dog, for the nursing and helping given him by his handler in a field trial were not properly considered as something apart from the dog's own performance, and sharp handling flourished for a while in consequence.

As the winner of every heat was announced after the heat was run, there was thus more available matter for advertising purposes; for John Doe could say that his dog beat Dick, which beat Sam, which beat Bob, owned by the illustrious sportsman, Mr. So-and-so, and as a matter of fact Dick, Sam and Bob might be of much or no merit, as the case might be. The short heats also helped out the inefficient performers.

The trials of the present day are run on much better and sounder lines. The judges generally give the winners a thorough test in an intelligent manner. Really good dogs are not run off their feet, as they were sometimes in the years gone by, and poor ones are dropped out on their own individual merit, instead of coming in on the inferiority of a competitor, as was the case when the heat system prevailed.

AN EIGHT HOURS' FOX CHASE.

The most exciting hunt of the season, if ever better, was had to day in Hack's neck, formed by the tributaries of the Chesapeake, Pungoteague and Nawadna creeks. These long, narrow necks of land, lying along the eastern shore of the Chesapeake Bay, formed by the many tributaries making up into the mainland, abound with small game, and especially the red fox, while in the creeks duck shooting is good.

There has recently existed quite a friendly spirit of rivalry during the hunting season between the Only and the Mappsburg clubs, each of which is known to have some very fine dogs, and to-day they threw their packs together, making a string of thirty, and assembled at the head of Hack's Neck to decide an unsettled question. Their combined packs started, and by 8 o'clock had reynard raised, and a little later under way. Off they went, at a terrific rate of speed, through swamps, over fields and meadows, well packed, giving the best of music in the world to the people of Hack's Neck, the 100 huntsmen and the surrounding country. The air being damp and still, the dogs might have been heard for miles away.

On they went, not making the shadow of a break or showing any signs of distress up until noon, when the fox, finding his case a hopeless one, and seeing that speed and endurance were unavailing, resorted to strategy, no doubt, by running a fence, leaving and making a cross double on his track in the rear of the dogs—a maneuver difficult for a pack to straighten up, and which occupied at least half an hour of time and gave reynard just so much rest. The old dogs, however, understood his tricks, and by making a broad circle again struck the trail, which by loss of time had become rather cold, and for a little while they had to work rather slowly.

This bother settled, the dogs were at once close on the heels of the fox, and for the next couple of hours the chase if possible became more intensely exciting than before. It was a sight fit for a king to behold, the fox many times running the public road, then in the open fields, giving constant view as he struggled to escape his pursuers, which would have been long before unavailing had the ground not been soft and muddy owing to the recent thaw; while the fox was an old coaster, not to be run down without a clear test of endurance. So the chase went on up to 2 P. M. with but one halt, to which we have referred.

Hack's Neck is twelve miles from the head to the extreme point adjacent to the bay, and this route had been made by the fox and dogs five times during the six hours already run (8 A. M. to 2 P. M.), during which time the pack had performed well, standing together and exhibiting fine qualities of blood and staying power.

The next two hours were very interesting, particularly in exhibiting endurance in the dogs. As we have said, the ground was in the very worst condition, especially in the fields, and now the pack began to strand, especially in dogs yet rather under age and those getting too old to stand a heavy strain, although the latter were still holding on, but far behind those of the pack yet going to the front.

The fox was reported with tongue out and brush dragging the ground, it being no hard matter to sight him at almost any time; the dogs still stranding until the pack was reduced down to eight or ten, three Black and Tans in the lead showing decidedly superior qualities of endurance. The club members were talking money on their respective dogs, now reduced to about equal numbers, riding right along with the remnant of the pack, yet holding on, cheering and forcing them to the front, ambitious whose should make the finish and be the first to tackle reynard, whose escape had long since been out of the question. Still a field for a mile and a half was dragged over, the fox being some little way ahead of the dogs, and could have been rode down very easily, if this were not against the rules of hunting; but on reaching the next woodland, where the dogs could get better foothold, the three Black and Tans brought the hunt to a close by the capture of an immense old dog fox, which no doubt had many times before evaded its pursuers.

The clubs of Only and Mappsburg may well be proud of having dogs of great endurance, which must be of a fine strain of blood. T. G. Elliott.

Keller, Va., Feb. 4.

AN UNKNOWN HERO.

Somerville, Mass.—*Editor Forest and Stream:* I scarcely knew him more than one brief hour. His history and name were unknown to me. He was unwashed, unkempt, scarred and wayworn, but since the hour when his poor unloved life was so suddenly blotted out I have felt that earth held for me one true, unselfish friend the less.

The little that I know of him can soon be told. One day in October, 1896, I had occasion to visit a country town some thirty miles from Boston. I had planned to take the noon train back to the city, but, owing to some unforeseen complications in the business which had called me away, was unable to do so, and to my vexation I found myself stranded at one of the most unattractive of country stations, with a long two hours' wait before me. To pass this time in the dull waiting room, odorous of stale tobacco smoke and kerosene, was not to be thought of. A short distance down the track, however, I found a tolerably comfortable resting place in the shade of a half-grown maple. Here I settled down to re-read the morning paper. As I had already abstracted everything of interest from its columns, however, some hours before, this was not a particularly absorbing occupation, and my mind soon wandered from the printed page before me to ponder over certain business puzzles which had been claiming my attention for some days past.

So great was my abstraction that I lost all remembrance of my surroundings, till, through the mists of my reverie, I became conscious of a continuous, cool, moist touch on my hand, and came back to the present with a start, to find that I had for a companion a large dog, who was licking my hand affectionately. He belonged to no particular type. So far as I could determine, he was 'jist dog;" but to whatever station in life he was born, his best days were evidently long past, for he appeared now to be scarcely better than a tramp. But the one eye that looked up into mine from the poor forlorn face instantly riveted my attention. It was the most pathetic, beseeching eye into which I had ever looked. It seemed to say to me, "Be my friend. I am alone and homeless. I am nobody's dog." My heart instantly responded to the silent appeal. Notwithstanding the unattractive outward appearance of my canine companion, in some mysterious way I felt irresistibly drawn to him.

"Good dog," I said, "nice old fellow," stroking and patting his shaggy head till he went into raptures of delight, frisking awkwardly about me with an evident attempt at emulating his puppy days, long past. Presently he settled down by my side, seemingly perfectly content, with his head on my knee and his mournful eye looking gratefully up into mine. Every few moments he would give my hand an affectionate lap. Somehow I felt strangely drawn to the poor old creature, and really began to consider the possibility of taking him home with me, resolving to ask the agent, when I returned to the station, whether he knew anything of his antecedents, and if he were in truth as friendless as he appeared.

Suddenly upon the stillness broke the whistle and shriek of a locomotive close at hand. My friend, for as such I shall always remember him, who had been lying on the side furthest from the track, gave one leap to my other side, pushing me further away from the approaching train as he did so; then, without an instant's pause, sprang directly in front of the locomotive. A moment more, and the train was gone, speeding away into the distance, but my late companion, where was he? Gone forever from the world which had held so little of comfort for him, his poor life crushed out in an instant's time by the cruel iron monster. My eyes were unused to tears, but a strange blur came over my vision, blotting out the country landscape, and mercifully hiding from me the cruel red stains on track and wayside, and the mutilated remains of my poor lost friend. The station agent came leisurely down the track toward me.

"What's the matter? Dog killed?" he remarked coolly. "Well, he's better off; didn't belong to nobody hereabouts, just picked up a livin' here an there; a mighty poor livin' too, I guess 'twas, sometimes. I'll send Jim out to clear up the carcass," and he was gone again.

"Clear up the carcass!" How the words rankled in my sore heart! The carcass of what? Of whom? Of him who had nobly given his life to save mine. For so I believed then, and so I shall always believe. My theory is that when the train came upon us so suddenly he was seized with a quick terror for my safety, and that is why he sought to thrust me further from what he believed to be the oncoming danger. But when, my safety assured, he sought also to save himself, his poor blind eye played him false, the leap was taken in the wrong direction, and in an instant's space all was over for him. His death, coming in this way, touched me as deeply as though it had been that of some human friend, and, resolved that he should have a resting place worthy of his hero soul, I again sought the station agent, and arranged that he should be placed in a quiet corner of a little cemetery whose white turrets I could see gleaming in the distance. Over his grave now stands a plain white stone bearing this simple inscription:

AN UNKNOWN HERO,

Died October 13, 1896.

To this day I cannot think of him without feeling a choking sensation in my throat, and for his sake I always have a friendly feeling for all dogs who are homeless and friendless as he was, till the day when a painful death opened up for him a way into everlasting rest. E. Mayfield.

Amateur and Professional.

Louisville, Ky.—*Editor Forest and Stream:* In Forest and Stream of Feb. 6 I notice your remark that the amateurs who competed in the Combination Stake, which was for professionals and amateurs, have by so doing become professionals. I profoundly regret it if such is a fact. On looking up the names of the amateurs who competed, I find they were Messrs. Philip M. Essig, Natchez, Miss.; J. H. McIlhenny, Avery's Island, La.; W. F. McCarley, Jackson, Tenn.; and from my knowledge of those gentlemen I am absolutely certain that they never intended to become professional handlers. If they have become professionals, the U. S. F. T. C. was very careless, to say the least, in so arranging an amateur stake that it would make professionals of all who engaged in the handling of it. So improbable does it seem that I am inclined to think that there is some mistake about the matter. Surely the club would not arrange an amateur stake which would make professionals of the gentlemen who compete in it; and on the other hand, if a stake were so arranged, the gentlemen would not compete in it. A sportsman who runs dogs for pleasure and not for profit dislikes to be classed as a professional handler. If he makes his livelihood by some other business, he should not be classed as a professional. He may be classed as such on a mere technicality, but it is an injustice to him if the technicality does him a wrong. My own opinion is that, though running in an amateur stake which was run in the All-Age Stake, they remain amateurs still. Fair Play.

Manitoba Field Trials Club.

A regular meeting of the Manitoba Field Trials Club was held at Winnipeg on Feb. 8. All the members were present. The resignations of the Second Vice-President, G. B. Borradaile, and Sec'y-Treas., John Wootton, were read and accepted. John Wootton, of Manitou, was elected First Vice-President; W. C. Lee, of Winnipeg, Second Vice-President; G. B. Borradaile, of Winnipeg, Secretary-Treasurer. It was voted that the club offer the following prizes to be competed for at their annual trials at Morris, Manitoba, on Sept. 6, 1897:

Derby Stake, for setters and pointers whelped on or after Jan. 1, 1896. Entries to close July 1, 1897. Purse $250. First, $100; second, $75; third, $50; fourth, $25. $10 forfeit, $5 for starters.

All-Age Stake, for setters and pointers who have not won first place at any recognized field trials in any previous year. Entries close Aug. 1, 1897. Purse $250. First, $125; second, $75; third, $50. $10 forfeit, $5 for starters.

Amateur Stake, for setters and pointers (dogs eligible must be the property of amateurs residing in Canada; the following are barred: dogs having won first place at any recognized field trials in any previous year or whose owner may have trained for money; all dogs to be handled by owners or other amateurs). Entries close Aug. 1, 1897. $3 forfeit, $2 for starters. Prizes will be announced later. Pres. F. G. Simpson, Second Vice Pres. W. C. Lee and Sec'y-Treas. G. B. Borradaile are a committee to secure a judge. G. B. Borradaile, Sec'y-Treas. M. F. T. C.

POINTS AND FLUSHES.

At the annual meeting of the American Fox Terrier Club, held in Copley Square Hotel, Boston, on Feb. 2, a list of governors for 1897 was elected as follows; Messrs. Rutherford, Cobb, Belmont, Rathbone, Ritchie, Belt, Carnochan, Foote and Hunnewell. Eight new members were elected. The present membership numbers forty-six. The next annual meeting will be held at the New York show in 1898. In the future the challenge cup will be put up during the year at the three shows that the governors consider most desirable, and the dog winning it twice will be proclaimed the American Fox Terrier Club Champion for the following year. In 1897 the cup is to be competed for at Boston, New York and Chicago. The Stud Dog Stakes will be left open till June 1 of each year. The Yankee Stakes have been changed to read from July 1 to July 1, instead of from Jan. 1 to Jan. 1. The Homebred Stakes, in case the N. E. K. C. in 1898 holds its show in February, is to be transferred to some other show and some other stakes substituted for it. Ten per cent. of the Stud Dog and Grand Produce stakes will annually be reserved by the club to pay expenses incurred by all the stakes.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

NAMES CLAIMED.

Mr. A. B. Hughes claims the name Jim II for Irish setter, whelped Nov. 7, 1896, by Paddy P.—Borstal Norna.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

Packing on Bicycles.

In the current *Outing* Lieut. James A. Moss gives some details regarding the method of packing bicycles employed by the 25th United States Infantry Bicycle Corps, of Fort Missoula, Mont. It will be recollected that on the Yellowstone Park trip made by the corps an average of about 80lbs. of equipment and supplies to each bicycle was carried.

In describing the method employed, Lieut. Moss says:

"One of the first problems to be solved was a system of packing, which was devised as follows: The knapsack was strapped to the handle bars on the front of the bicycle; on the knapsack was carried the blanket roll, containing one blanket, one shelter tent half and the tent poles; the haversack was carried either on the front of the knapsack or on the horizontal bar, well to the front; the tin cup was secured under the saddle, and protected from mud and dust by a cloth bag; the canteen and cartridge belt were on the body of the soldier; every other soldier carried a rifle strapped horizontally on the left side of his bicycle; those not so armed carried revolvers, and had canvas luggage cases in the diamond of their wheels; every man carried thirty rounds of ammunition.

"To facilitate the packing of the rations, the flour, salt, sugar and coffee were carried in rubber cloth bags about 8in. by 20in., and stored away either in the knapsacks or the luggage cases; the bacon was cut into small chunks and wrapped in cloth. Can goods, such as corn, baked beans, jelly, deviled ham, etc., were generally carried in the knapsack.

"The cooking utensils, consisting of three dripping pans, one patented baker and one large coffee pot, were carried in a tin case attached to the front of the bicycle and resting on a frame.

"Every soldier carried in his knapsack one summer undershirt, one pair summer drawers, two pairs summer socks, one towel, two handkerchiefs, one winter undershirt, one pair winter drawers, one pair winter socks, one tooth brush and powder, one cake soap, one blanket, toilet paper. Every other man carried a comb and brush, and everyone carried in his haversack a knife, fork, spoon and meat can.

* * * * * * * * *

"On Aug. 15 we left for Yellowstone Park, *via* Fort Harrison, Mont., where we were to draw a fresh supply of rations. The following is a list of the provisions with which we started out: 5lbs. prunes, 25lbs. flour, 14lbs. sugar, 4lbs. ground coffee, 16lbs. bacon, 3 cans milk, 1½ cans syrup (18lbs.), 4 cans baking powder, 1 box pepper, 5lbs. rice, 2 cans jelly, 3 cans deviled ham, 10lbs. bologna sausage, 1 jar Armour's extract of beef, 2 cans chocolate, 4 cans corn, 6 cans baked beans, 5 cans salt.

"Besides this we carried medicines, tools, repairing material, tents, blankets, extra underwear, cooking utensils, arms, ammunition, extra bicycle parts, one pair extra tires, and a number of personal effects."

New York's Good Roads Bill.

Senator Higbie's Good Roads Bill, which has the support of the League of American Wheelmen and all who are interested in securing a uniform system of good roads throughout the State, provides for the appointment of a "State Highway Commission," to consist of three members, to be confirmed by the Senate, one of whom shall be a civil engineer. They shall serve for three, four and five years respectively, as the Governor shall order. Each commissioner shall receive $5,000 annual salary, and the commission shall have $10,000 for office expenses annually.

The commission shall determine upon the best method of constructing roads, and shall advise county, city, town or village officers of their conclusions. The commission shall hold a public meeting at least once a year in each county of the State and coöperate with highway officers throughout the State, and furnish plans and directions for improving public highways and bridges.

The road construction contemplated by this act being for a substantial and permanent roadway, the State Highway Commission shall cause plans and specifications of such roads or sections of such roads to be thus improved, to be made either for Telford, macadam, or good gravel roadway or other suitable construction, taking into consideration climate, soil and materials near by where the road or section is to be built or improved, and the extent and nature of traffic likely to go upon such road, specifying in each section or subdivision the kind of road a wise economy there demands. The improved or permanent highway or roadway of all roads so improved shall not be less than 8 nor more than 16ft. in width.

The commission shall designate what road improvements shall be subject to State aid. A Board of Supervisors, by a majority vote, or upon the receipt of a petition representing

two-thirds of the value of property, shall determine whether roads approved by the State Commission shall be improved. Upon the receipt by the State Highway Commission of a board's approval of any road improvement, there shall be advertisements for bids.

This proposed law is to take effect immediately, and provides for the levying annually of a State tax of one-tenth of a mill, to be known as a State highway tax. The money thus raised is to pay the State share of the expense of highway improvement. The tax provided in the bill would raise annually $436,000.

L. A. W. Measures.

AT the recent convention of the National Assembly of the League of American Wheelmen, held at Albany, matters of considerable importance were acted upon. A strong effort was made to have Sunday racing legalized, which took the form of a motion to allow divisional option in the matter. Representatives from northern California and some of the far Western States were particularly active in support of the measure. The motion was, however, defeated by a decisive vote, more than three-quarters of the delegates casting their ballots against Sunday racing.

An attempt to induce the league to admit professional wheelmen to active or associate membership, though supported by President Potter and ex-President Willison, was lost. A motion was, however, carried providing for both amateur and professional championships under league auspices. It was urged in support of the amendment that such a division was essential to satisfactorily determine the real champions in their respective classes each year.

Another important measure which was carried was the adoption of a resolution that all contests at closed college and school meets be decided under the rules of the Intercollegiate Athletic Association.

This amendment simplifies the relationship of the college organization with the league and removes a snag in the way of harmony that resulted from the allowance of certain stated expenses to college athletes contrary to the rules of the L. A. W.

An experiment, the results of which will be watched with interest, is the creation of a loan committee, consisting of the executive committee and the secretary and treasurer of the league, for the purpose of loaning funds from the big divisions to any of the smaller ones, with the object of aiding the latter in recruiting their membership and aiding in road improvement work.

Ex President Sterling Elliott will continue the publication of the league *Bulletin* for 1897. The next meeting of the National Assembly will be held in St. Louis in February, 1898.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

AS A most timely comment upon the hypocritical protestations of regard for the interests of the poor American workmen that have accompanied the arguments for the passage of the Payne bill, comes the interesting news that two of the great American shipyards are now preparing to build torpedo boats for the United States Government from English designs. The proposals for bids called for designs from the builders, without stipulation as to where such designs should be obtained, and two of the successful firms have managed to procure their designs in England, being unable to make them in their own drafting rooms.

Further than this, as a mere matter of economy, arrangements have been made by at least one of these firms to have all the drafting done at Southampton, England, where the wages of skilled draftsmen are much lower than in this country.

The FOREST AND STREAM has no objection to offer to the purchasing of designs abroad if better ones can be obtained there than at home. Such a policy is absolutely necessary in many branches of naval design, notably at present in ocean steamers and steam yachts. There is absolutely nothing to be gained by a nation in building worthless vessels. The first thing is to secure good designs, abroad if they cannot be made at home. What we do object to is the selfish and cowardly attitude of those American shipbuilders who are back of the Payne bill, who demand that the yachtsman shall be compelled to purchase at a high price at home what he wants, while they are allowed free access to the markets of the world for what they want. If the American yachtsman must not purchase a yacht on the Clyde, why should the American builder be not only permitted but encouraged by the Government to buy both brains and labor on the Solent?

The Payne bill will do nothing whatever for the American designer, the American draftsman or the American mechanic. Under such laws as now exist, and with the manner in which they are enforced, the shipbuilder is free to employ foreign labor of all grades, from that of the eminent naval architect, who makes long visits to this country when important new work of purely American design is under consideration, down to the riveter and caulker in the yard; in every department—the office, the drafting room, the shops and the yards—the foreigner has at least an equal footing with the native American. It is the men who are responsible for and who profit directly by this state of affairs who presume to dictate to American yachtsmen as to where they shall spend their own money. The most disgusting part of the whole business is the canting cry of patriotism and protection to American labor.

THE conditions of steam yacht building and torpedo boat building in the United States to-day are radically different. The American builders have proved by a series of costly failures that up to the present time they are unable to turn out a first-class steam yacht, regardless of cost or time; yachtsmen who wish a really satisfactory article being compelled thus far to go abroad for it.

In torpedo vessels such is not the case; one American firm, the Herreshoff Company, has for many years made a specialty of this class of work, increasing the speed and size in answer to the very moderate demands of the Government. Now that these demands have increased, the firm has shown itself quite capable of meeting them, as is proved by the recent remarkable success of the new No. 6, designed entirely by N. G. Herreshoff and built at the Bristol works.

Under the circumstances it would seem in every way both reasonable and just to discourage the purchase abroad of torpedo boat designs, when equally good ones can be produced at home; and, on the other hand, to permit yachtsmen to purchase abroad what they cannot obtain at home. The exact reverse of this is actually the case—the American builder is permitted by the Government to purchase what he wants where he can get it the cheapest, while at the same time he is granted an absolute monopoly in his dealings with his customers.

On Feb. 17 the Sandusky Y. C., of Sandusky, O., a member of the Interlake Y. R. A., held a meeting and decided to challenge for the Canada's cup, provided that the Royal Canadian Y. C. would waive the ten months' notice. It is proposed to challenge in the 32ft. class. There is little doubt that the holders will consent to waive the notice and make a match.

YACHT DESIGNING.—XV.

BY W. P. STEPHENS.

[Continued from page 135.]

THE reader should by this time be fairly familiar with the nature and use of a marine drawing, enough so at least to enable him to study one intelligently. In order to enable him to make one, it is necessary to describe the various instruments and appliances of the mechanical draftsman, and their uses. Before doing this, however, we shall continue the present portion of the subject a little further in outlining the general method of constructing such a design as that shown in Plate II. This series of operations will demand a detailed and elaborate explanation later on, after the student has made good his claim to the title of draftsman, and is prepared to claim that of designer; but a brief review now will be of assistance in that it gives a broader view of the entire subject treated in these papers.

As stated in the opening chapters, the first step toward making a design of a yacht is to decide what sort of a craft is desired, of what rig, class and general type, and the principal dimensions. In this work the designer must be guided by his knowledge of vessels and by such actual yachts and published designs as are accessible as a basis of comparison.

These preliminary points being once settled, the next step is to make a sheer and sail plan to a small scale, from ⅛ to ½in. to the foot. A base line is drawn near the lower edge of a sheet of paper, and parallel to it, at a distance above it equal to the draft assumed for the yacht, a second line is drawn, the L.W.L. The proper length of L.W.L. is laid off on this line, leaving sufficient distance on the right hand for the projection of fore overhang and bowsprit, and on the left hand for the after overhang or counter and the boom. Vertical lines are drawn through the points denoting the ends of the L.W.L., the L.W.L. is divided into twelve equal parts, and other vertical lines are drawn through the points of division and at equal intervals in the overhangs. The lowest point of the side, the least freeboard, will be somewhere about Station 7, and at this point a light pencil line is drawn, parallel to the base line. The length of the fore overhang is then set off along the L.W.L. to the right from Station 0 and a perpendicular line drawn; on this latter is laid off the intended height of the stem above water. Similarly, the length of the after overhang is laid off on the left-hand end of the L.W.L., a perpendicular drawn, and the height of the taffrail is plotted. The sheer line may now be drawn in, after which the outline of the counter, usually a straight line, and the line of the sternpost, also straight. The round of deck amidship is laid off from the sheer line and the centerline of deck drawn in. Now the stem above water is sketched in, and the curve is carried down to the forefoot and then on to the keel, finally touching the base line, which represents the extreme draft. The rudder is next drawn in and then the centerboard, if there be one.

Now, by methods which will be explained later on, the area of the immersed portion of the sheer plan, the *lateral plane*, with that of the rudder and the centerboard, and the center of area of each, are calculated, and the common center of the three, the C.L.R., is plotted on the plan. The center of the hull alone and of hull and rudder without centerboard are also marked.

The next step is the construction of the spar and sail plan above the hull. The center of the mast, measured from the fore end of the L.W.L., is marked on the center line of deck, and a perpendicular is drawn. If the mast is to rake a little, as is often the case, a second line is drawn through the same point, on the center line of deck, but at a slight angle to the first, for the true center line of the mast. The rake of a mast is usually calculated at so much per foot of length; ¼in. per foot, or 3in. in 12ft., is quite moderate; the extreme, such as was seen in the original rig of the schooner America, as well as in the pictures of pirate craft that thrilled us in our boyhood, is about 2½in. to the foot.

The two sides of the mast (or rather of its projection) are now drawn in on each side of the center line, with the appropriate taper from deck to masthead and then up to cap or truck. Similarly, the bowsprit is drawn in, with the line of jib or forestay and bobstay. The outline of mainsail and jib are then drawn, and the areas and centers calculated, alterations being made in the dimensions of the two sails and possibly in the position of mast and length of bowsprit until the necessary area is obtained, with its center, the C.E., in the proper relation to the C.L.R., generally a little forward. In deciding on the total area of sail, the position of mast, length of bowsprit, boom, hoist and gaff, the designer will be guided by the dimensions and qualities of certain known vessels of about the same size, some of which perhaps carry even more sail and are amply stiff, while others may be overcanvased with a smaller sail plan.

Assuming that we now have about the correct amount of sail, and this suitably balanced over a hull with adequate freeboard and good ends, the next step is to complete the picture, for such this preliminary drawing really is. The double lines of the rail may be drawn in, the line of gold stripe, finished out with a light sketch of the carved trailboards at stemhead and on the quarter, the cabin house, companion, skylights and similar deck fittings may be sketched in, and the full details of boom, gaff, shrouds, halyards, etc., added. The idea of this work is to get at the outset as correct a picture as possible of the yacht as she will look when under way. As the picture nears completion, a close scrutiny will show where changes may be made to advantage; the sail plan may not be a graceful one, properly fitting the hull; perhaps some slight changes of proportion, making no material difference in area or balance, may greatly improve the looks. The sheer and the lengths and outlines of the overhangs, though seemingly fair and true when seen alone, may now demand some alteration to fit them to the other parts; and so through the whole design. The more accurate this drawing is, and the more complete in all of its details that appeal to the eye, the better may all parts be adjusted and harmonized to produce a handsome and symmetrical ship in both hull and rig.

It is sometimes the case that sufficient space is left on the right hand of the drawing, between the bowsprit end and the margin of the paper, for an end view of the yacht, showing the mast and the spread of the shrouds, the spinaker being dotted in, overlapping the mainsail plan. Space may also be left at the bottom of the paper for a full-breadth deck plan, on which the actual outlines of the entire deck may be sketched in and altered until the corresponding sweeps of the two sides appear satisfactory to the eye.

It is also convenient, perhaps on the back of this same sheet of paper, to sketch in the No. 6 or the midship section to a larger scale, ¼ or 1in. to the foot. To do this the base line is drawn as before, a little longer than the beam of the yacht, and a perpendicular is erected at its middle. The L.W.L. is drawn parallel to the base line and at a distance above it equal to the draft. The height above the L.W.L. to the top of the rail and top of deck are taken from the first drawing and set off to the proper scale at each end of the L.W.L., a line is lightly penciled through each, and the half beam at deck, as originally decided on, is set off along this line on each side of the vertical center line.

The width of keel at the bottom is next decided on and set off on the base line on each side of the center line. If the yacht has a metal keel, a rough calculation of its bulk and consequently of its weight will be necessary. If the extreme beam is greater than the beam at deck, it is measured off on the L.W.L. on each side and perpendiculars drawn upward from the L.W.L.

Starting at the deck, the outline of the section is now sketched in, continuing until it meets the bottom of keel. The outline of one side is next copied exactly on the other, the deck with its appropriate round is drawn in, also the cabin house or skylights. After an inspection of the drawing we can decide how far down the floor may be located, with due regard to space beneath for knees, deadwood, etc., for "footroom," in the form of breadth of floor clear of frames, locker fronts, etc., and for headroom under the deck, trunk or skylight. After the floor is thus located, the seats or lockers and any other necessary furniture may be sketched in.

Returning now to the sheer plan, we will sketch in very lightly in pencil the floor line, top of lockers, bulkheads, cockpit, etc.

We now have a craft of fairly good appearance and certain definite accommodation; on inspection it may appear that the latter may be further improved by small alterations to the midship section or sheer plan, and the work is continued until generally satisfactory results are obtained, when this drawing may be laid aside for some time.

The preliminary drawing has been made to some scale, ¼ or ⅜in. to the foot if it is a yacht of under 30ft. l.w.l., that will call for a sheet of paper about 24in. square. The main drawing, similar to Plate 2, will be to a larger scale, perhaps 1in. to the foot, from 3ft. to 4ft. long and of width in proportion. The base line is first laid off an inch or so from the lower edge of the paper; the ends of the L.W.L. are marked on it, also the extreme ends of the over all length, as taken from the first smaller drawing; the L.W.L. is divided into twelve parts and the necessary stations are drawn in at the points of division. The extreme half breadth is then laid off on the end verticals and a line drawn parallel to the base line. Just above this line is drawn the base line of the sheer plan, with the L.W.L. above and parallel to this. The heights of the sheer line and the keel line above the base line are now measured on each station of the small drawing and plotted to the proper scale on the large one. The outline of the sheer plan—that is, the sheer line, contour of keel and stem, sternpost, rudder and line of counter—are now drawn, care being taken to make all the lines perfectly fair. The deck line in the half-breadth plan is next drawn; if the deck plan has been drawn in the first drawing, the breadths at each station will be taken from this, otherwise the line will be drawn in by eye on the main drawing tangent to the line marking the extreme breadth at about Station 7, unless the topsides tumble home.

The midship or the No. 6 section is next drawn at the extreme left of the paper, where the body plan is placed in Plate II. The various level lines are now ruled in at the proper distances in the sheer and body plans, and the bow-buttock lines are ruled in at distances of one-eighth the extreme beam in the half-breadth and body plans.

The next step is to draw in the half-breadth plan the half-breadth of the fore edge of stem, bottom of keel, sternpost and rudder, the *side line*. The breadth at the bottom of keel is determined usually by the amount of lead or iron which it is desired to carry; the wider the keel, the lower the weight. The fore edge of stem is thinned down as much as possible, allowing for a stemband proportionate to the size of the yacht. The thickness of the sternpost adjoining the counter is usually governed by the size of rudder stock necessary to insure ample strength.

The side line being thus drawn in the half-breadth plan, it is next set off on the body plan, the height at each station being taken from the sheer plan, and the half breadth from the half-breadth plan. In this way a number of points are determined in the body plan: Stations 6, 5, 4, 3, etc., on the right side of the center line, and Stations 7, 8, 9, etc., on the left. The projection of the side line in the body plan is next drawn, a fair line through these different points.

Now we go up higher and deal with the deck line precisely as with the side line. The height, as at Station 6, is taken from the sheer plan and set off near the right edge of the body plan. The half breadth on the same station is taken from the half-breadth plan and set off at the height already marked, on the right of the center line in the body plan. Every station is thus dealt with until we have a row of dots on each side of the center line in the body plan. Through each of these rows of dots a fair line must be drawn; as the line of the rail should show perfectly fair when seen from dead ahead or astern, as well as from the beam and intermediate points. It will probably happen that a few of the dots—we shall henceforth give them their proper name of *spots*—will not accommodate themselves to a fair line passing through all the others. In this case we must make a small alteration in the sheer line of the sheer plan or the deck line of the half-breadth plan so as to alter the height or distance out of the *spot* in the body plan and bring it on the line. By this process of fairing we shall finally have the projections of the edge of the rail in all three plans show as fair lines.

We have now the general outlines of our solid figure, but there are many lines to be filled in. The first of these is the L.W.L. in the half-breadth plan; we already have it as a straight line in the sheer plan and also in the body plan. We have in the half-breadth plan the two ends of the L.W.L. at Stations 0 and 12, and we can get another point, its half breadth at station 6, from the midship section; this we transfer to Station 6 in the half-breadth plan, and through these three points we draw a long line, probably of very easy curvature forward and much more abrupt aft. The exact amount of fullness throughout the length of the line must be determined by the judgment of the designer and by inspection of known designs.

Having the L.W.L., we find two other steps open before us. In the fore body we will take No. 4 station; its upper and lower ends are already plotted on the body plan; we can obtain the half breadth on the L.W.L. from the line just drawn in the half-breadth plan, and this we will transfer to the L.W.L. on the right of the center line in the body plan. We now have three points on the frame at station 4, and through them we draw a curve somewhat similar to the midship section, but of course smaller in every measurement.

Now we will take the middle bow-buttock line in the body and half-breadth plans, straight in both, and we find, starting forward, that we have six spots: one where the bow line intersects the deck line and one where it intersects the L.W.L. in the half-breadth plan, both of which we project upward on to the sheer line and the L.W.L. respectively in the sheer plan; one where the bow line intersects Station 4 in the body plan, and one where it intersects Station 6, both of which are transferred to the respective stations in the sheer plan; and one where the buttock line in the half-breadth plan intersects the deck line, and one where it intersects the L.W.L., which we project upward on to the sheer plan. Now we can draw a fair line, full forward and much finer aft, through these six spots, the middle bow-buttock line in the sheer plan. The fore end of this line will probably be incorrect and require subsequent alteration, but that is of no consequence; the after end is most useful to us. It runs out fairly, showing a good shape to our counter, as can be seen by the eye; and this much being secured, we will go to Station 10 in the body plan, where we will set off first the half breadth on the L.W.L., as taken from the half-breadth plan, and next the height on the middle buttock line, as taken from the sheer plan, drawing the complete section through the four spots: at deck, L.W.L., buttock line and keel.

We are now rapidly building up a solid form from the many separate elements; the next step, after we have perhaps run in Station 2 in the body plan, is to draw the traces of two or three diagonals in the body plan and to plot from the various intersections the three expanded diagonals. If the preceding work has been done skillfully the diagonals will merely call for some minor alterations by way of fairing.

Following the diagonals, we will run in B level line in the half-breadth plan, and then W2, using every possible intersection in both body and sheer plans, on both stations, and bow-buttock lines. If these fair up properly we can run in the two remaining bow-buttock lines, and when they are faired, no easy matter in the bow, we can take all of the remaining stations of the body plan, running them in from the distances in the sheer and half-breadth plans, using all the intersections.

We have dealt only with the drafting processes; it is necessary in the course of this work to keep the run of the amount and disposition of the displacement, involving the position of the C. B; if this is done properly as the work proceeds, now that the drawing is finished the full and final calculations can be made with a certainty that they will result satisfactorily.

The main drawing being thus completed, we will take up the preliminary drawing; any alterations of the original plan that may have proved necessary in the course of the work are now made also in the smaller drawing, and it is finished up as a spar rigging and sail plan. The spars, standing and running rigging, blocks, cleats, tiller, turnbuckles, etc., are shown in their places in the sheer plan and also the deck plan below it, and the drawing is finally inked in and a tracing made.

It is not unusual, after making a rough sail plan to ascertain the general balance as compared with that of the hull, to begin with the main design, leaving the sail plan and similar details until this is completed. It will be found more satisfactory, however, to work as we have indicated, making the complete sheer and sail plan, if not the deck plan as well, to a small scale, and doing the thinking, sketching and most of the altering on this drawing, only taking up the principal drawing after all ideas have been thoroughly matured. The pictorial side of the drawing is no small aid in the production of a shipshape and sightly vessel; it is not enough that every line should be fair in itself, in the flat drawing, but each must do its part toward the production of a harmonious whole in the solid yacht.

The construction of a reasonably perfect design calls for a thorough familiarity with yachts and their qualities, a carefully trained eye, a knowledge of drafting instruments and appliances, and no small amount of skill and dexterity in their use. These last, at least, may be acquired by study and practice, and to them we shall next turn our attention.

The Payne Bill.

From The Yachtsman, Feb. 4.

THE passing of the Payne bill by the Senate can hardly be considered likely to benefit American yachting, though no doubt it is intended to have such an effect. The bill has it that a yacht built outside the United States, and owned, chartered or used by a citizen of the United States, must enter and clear at the custom house of every port that she may visit in the States. That the measure is not retroactive is its single small redeeming feature. Henceforth no orders for steam or sailing yachts will be given to British builders, nor will any of our yachts be bought or hired, save for foreign cruising perhaps.

How this is to benefit America is a matter best understood by protectionists, but of one thing we are certain, viz: that had this law always been in force in America, the great America's Cup would have been in direful jeopardy when Sir Richard Sutton took Genesta out to race for it. The lessons learned by American designers from Madge, Clara, etc., were learned well, and the result to-day is manifest. It is not, however, among sailing yachts so much that the effect of the bill will be felt as among steamers; and it is precisely in steam that America is deplorably astern of England, for the specimens of her steam yachts that we are accustomed to see in our waters are such as to readily explain the preference notably shown by wealthy citizens for British-built vessels.

How are American builders to have their wits sharpened by being prevented from seeing and studying the superior work of foreigners? And unless yachtsmen, or would be yachtsmen, have the opportunity of inspecting well-appointed and handsome vessels, it is not probable that they will be tempted into giving the protected builder an order.

The rush to the Clyde for steam yachts of late has, we have no doubt, been mainly due to the admiration excited for the work turned out by the Scotch designers and shipwrights—work with which America has absolutely nothing to compare, and which, in fact, she is incapable of producing.

The citizens of the States cannot be forced into throwing their dollars away among the builders, and it is questionable, therefore, whether the bill will have any effect in encouraging the industry that it seeks to cultivate. Men will be rather apt to say to themselves that, seeing the impossibility of getting the really good article that other nations have, they prefer to go without altogether.

It requires a strong and, if we may say so, a misguided sense of patriotism for an American to have a large steamer built at home, and the capacity of the builders to turn out a handsome and well-appointed craft is not likely to be increased by the knowledge that they have no competitors abroad.

The Payne bill has little indeed to recommend it. Even the builders find themselves hampered by the duties which they have to pay upon many of the most important materials required in yacht construction, and a better kind of Governmental help would surely be to relieve them of these burdens. At all events, this would be a real support, whereas the prevention of foreign competition can at the best be considered only a problematical boon.

But the thought of the millions of dollars which travel over the Atlantic to the pockets of British builders is one that no American legislator can regard with equanimity, and the Payne bill is a specimen more of short-sighted financial considerations than of far-seeing legislations. It will do the British industry little harm, but the same cannot, we think, be said of the American.

One-Design Classes.

ONE of the most instructive phases of British yachting is the rapid development of the one design classes in all parts of England, Scotland and Ireland, yachtsmen in each locality abandoning the existing rule and substituting some special regulations of purely local influence. Under such regulations there are growing up many separate families of small craft, most of them of excellent design and well adapted for their special locality and the demands of their owners.

It is much to be regretted that as good boats cannot be built under the regular measurement rule, as it is evident that the special and one-design classes appeal to the great majority of yachtsmen, even those who place racing among the chief charms of yachting. There is no avoiding the obvious moral of the success of the one-design classes: that comparatively few yachtsmen of to-day are really desirous of attaining the fastest yacht at the sacrifice of all other qualities, and that if all be restricted alike in the use of extreme features there will be more yachts and better racing.

One of the most important of the special classes thus far produced can only be regarded as a direct protest against the course of unrestricted racing on the Solent, where an extreme of design and construction has held full sway for several years Last year an effort was made by some of the Solent racing men, who had tired of building a new and more costly and less useful yacht every year, to establish a restricted class, to one design, and with rigid limits on extreme features both of design and construction. So successful was it that over a dozen boats were built by Messrs. White Bros., of Cowes, to their own design, the dimensions being: Over all, 32ft. 8in.; l.w.l., 25ft; beam 7ft. 6in.; draft, 5ft. The result was a fleet of smart little keel yachts of lasting construction and good accommodation. They have raced throughout the season and have proved most successful, the class being good for an indefinite time.

This year a similar, but smaller, class, to be called the Redwings, will be established, the yachts now being under way at the yard of Camper & Nicholson, Gosport; Mr. Chas. Nicholson, of the firm, being the designer. The dimensions are: Over all, 22ft. 3in.; l.w.l., 16ft.; beam, 5ft. 5in.; draft, 2ft. 11in. The boats are staunch little cutters, as shown in the accompanying drawing. The conditions under which the class has been created are as follows:

RULES.

1. A one-design small boat class has been established in the Solent, with the object of affording class racing that is not expensive, and giving the owner of a boat an opportunity of exercising his skill in designing her sails and rig. Sail area is limited to 200sq. ft., actual measurement of sails only. No spinakers are allowed in class racing as separate sails, but jibs may be boomed out.

2. Each owner will be provided with the sheer plan of the boat, with the C.L.R. marked.

3. Each owner will have to pay £1 a year to defray necessary expenses, any balance being devoted to the prize fund. There will be an entrance fee of £1 after twelve boats are ordered, which will also go to the prize fund. Applications for boats and for membership are to be addressed to the hon. secretary, and the names of applicants will be submitted to the members of the class for election. In such elections one black ball in five to exclude; five owners of boats to form a quorum, one vote one boat.

4. In all cases of voting there shall only be one vote per boat, except in committee, and no alterations and additions to these rules shall be made without a two-thirds majority.

5. A captain of the class shall be elected annually, who shall undertake the duties of hon. secretary.

6. The committee of management shall consist of seven owners or joint owners of boats; two to retire annually, who shall not be eligible for election for one year. They shall be responsible for the entire management of the class, and their decisions shall be final and binding on all owners. Two shall form a quorum to decide minor questions which may arise, and all vacancies shall be filled by general meeting.

7. There shall be no limit to the number of persons on board, but no paid hands are allowed in class racing.

8. The committee shall be responsible for the measurement of sails, and also that the sails are made of uniform material, which has been selected by the committee and is of red cotton; the hon. secretary will give information as to where it may be obtained.

9. No boat is allowed to have any alteration made to her hull or ballast, and any alteration rendered necessary by change of rig must be notified to the captain of the class.

10. No boat shall be allowed to start unless her sail area is certified by the committee.

11. Each boat shall carry when racing an anchor weighing 20lbs., and not less than twenty fathoms of 2in. grass rope cable and sufficient life-saving apparatus for her crew.

12. The following form the committee: Col. Moreton, Mr. F. Hardcastle, Capt. du Boulay, Mr. Gerald Fitzgerald, Mr. G. H. Harrison, Mr. H. C. Sutton. Mr. B. O. Cochrane, captain and hon. secretary, "Oakleigh," St. John's Park, Ryde.

13. The ownership of boats will be decided by lot.

SPECIFICATION OF BOATS.

Planking, yellow pine, ½in. full when finished.
Keel, English elm, 4in. thick, about 8in. wide.
Stem, English oak, 4½in. moulded, 3in. sided.
Stem timber, English oak, 3in. moulded, 4in. sided.
Bent timbers, American elm, ¾in. moulded, ⅞in. sided.
Clamp, yellow pine, 3½in. moulded, 1½in. sided.
Beams, white pine, 2½in. moulded, 1½in. sided.
Cockpit carlines, 2¼in. moulded, 2in. sided.
Coamings, English elm, 4in. above deck, fitted with outside capping.

Stern finishing chock, pitch pine. Covering boards, teak, 1½in. thick. Deck, white pine, ½in. thick, painted, and covered with unbleached calico painted two coats.

Six wrought iron galvanized floors.

Twelve oak beam knees, mast partner 3ft. long, and all timbers in this length to be 1in. × 1¼in., to take chainplates where required. One knee to be fitted where required for chainplates.

Rudder, English elm, blade with wrought iron straps and stem working in iron tube. Galvanized tiller fitted to head of rudder stem, with nut and screw.

Cast iron keel, 10cwt., fitted with 1in. and ¾in. through bolts, with nuts inside. Topsides and inside to be painted three coats, and bottom black varnished. All fastenings of copper.

White pine platform to be fitted where required.

Eyebolts each end of keel for hoisting out.

Boats to be delivered afloat in Portsmouth Harbor.

Length over all, 22ft. 1in.; length l.w.l., 16ft.; beam, 5ft. 5in.; draft, 2ft. 11in. Price £45.

The Royal Mersey Y. C., of Liverpool, has a class of centerboard boats, not of one design, but all built to certain rigid restrictions, as follows:

RULES FOR THE CLASS OF ONE-RATING CENTERBOARD BOATS.

Rating—Not to exceed 1-rating, as per Y. R. A. rule of 1895.

Time—No time allowance.

SPECIAL RESTRICTIONS.

1. The length on L.W.L. shall not exceed 22ft. nor be less than 20ft.

2. The draft of water, independently of centerboard, shall not exceed 3ft.

3. The centerboard shall be of iron or steel, not exceeding ⅜in. in thickness, and the exposed area not exceeding 10sq. ft.

4. The ballast, including C.B., shall not be less than 16cwt.

5. No fin or bulb, or any combination of either, shall be allowed. The sternpost shall be of wood, solidly attached to the keel and deadwood, and otherwise form part of the shape and structure, in every respect as in an ordinary vessel; and the longitudinal (or profile) section of the immersed portion of the vessel shall show a solid straight line from where the sternpost leaves the counter or truck to the after end of the lower edge of the keel, and from the after end of the lower edge of the keel to the fore end of the L.W.L. shall be either a straight line or show outside such straight line in a fair, continuous curve, without break or hollow from end to end.

6. The fore part of the rudder shall closely follow and be hung to the sternpost, and extend down to within not more than 2in. of the after end of the lower edge of the keel; but no part of the rudder shall project below the line of the lower edge of the keel.

7. The area of the deck shall not be less than 70 per cent. of the deck plan, and the waterways on each side shall not be less than 16in.

8. The planking shall not be less than ¾in. carvel or ½in. in clencher-built boats, and the deck planks shall not be less than ⅝in. thick, these in all cases finished sizes.

9. The framing shall not be less than 1½in. by ⅞in., or equal sectional area thereto.

10. The spacing of the frames shall not be more than 7in. in the clear.

11. The boats shall be measured with three hands on board, or a weight of 448lbs., at the measurer's option.

12. The owner (or his representative) shall submit to the measurer a public weighing machine weight note, certifying the weight of ballast and centerboard carried by his vessel.

Crew—No boat to carry more than three hands, all told, in any match of the club.

Helmsmen—To be members of the Royal Mersey Y. C. or Cheshire Y. C.

Life Belts—Every member of the crew while racing shall wear a life-saving apparatus, to be approved by the measurer.

Measurer, to be appointed by sailing committee, to measure and inspect the boats, and grant certificates of rating and qualification. Should the measurer not consider a boat to conform to these rules, the matter to be referred to the sailing committee, whose decision shall be final.

One of the accompanying cuts shows Ethilda, built and raced last year under these rules. She was designed for Messrs. Chas. Livingston and Geo. H. Warren, the latter at one time a member of the Eastern Y. C., of Boston, and owner of the cutter Stranger. At present the yacht is owned by Mr. Harold Forwood, until recently a resident of New York, and a member of the Seawanhaka and other clubs. The other picture shows a boat built for the similar regulations of a restricted class on the Menai Straits.

On the other side of St. George's Channel, at Kingstown, the Dublin Bay Sailing Club has just started a new class, to be called the "Colleens," to one design by the local builder, James Doyle. They are 22ft. over all, 17ft. l.w.l., 6ft. 6in. beam, carrying 250sq. ft. in a lug mainsail and jib, no spinaker. They are clinker-built and well put together, with floors of steel or gun metal, and all fastenings of copper or Muntz metal. The price of a boat complete is not to exceed £52 ($260).

Gilbert's Bar, Fla., Y. C.

THIS club was organized in October, 1895, with eighteen members. It now has a membership of forty-five. The club house is situated on a narrow strip of land, with the ocean on one side and Indian River on the other. It is one-half mile south of Gilbert's Bar House of Refuge and two miles north of Santa Lucia Inlet, and opposite Gilbert's Rocks as marked on the chart.

The club holds a field day every month, when there is a regatta and other amusements, followed by dancing in the evening.

The results of the last regatta, held Feb. 13, are as follows:

BOATS 12FT. AND OVER.

	Corrected.
Albatross	40 42
Zingan	37 59
Joker	38 28

Winner, Zingan.

BOATS UNDER 12 FT.

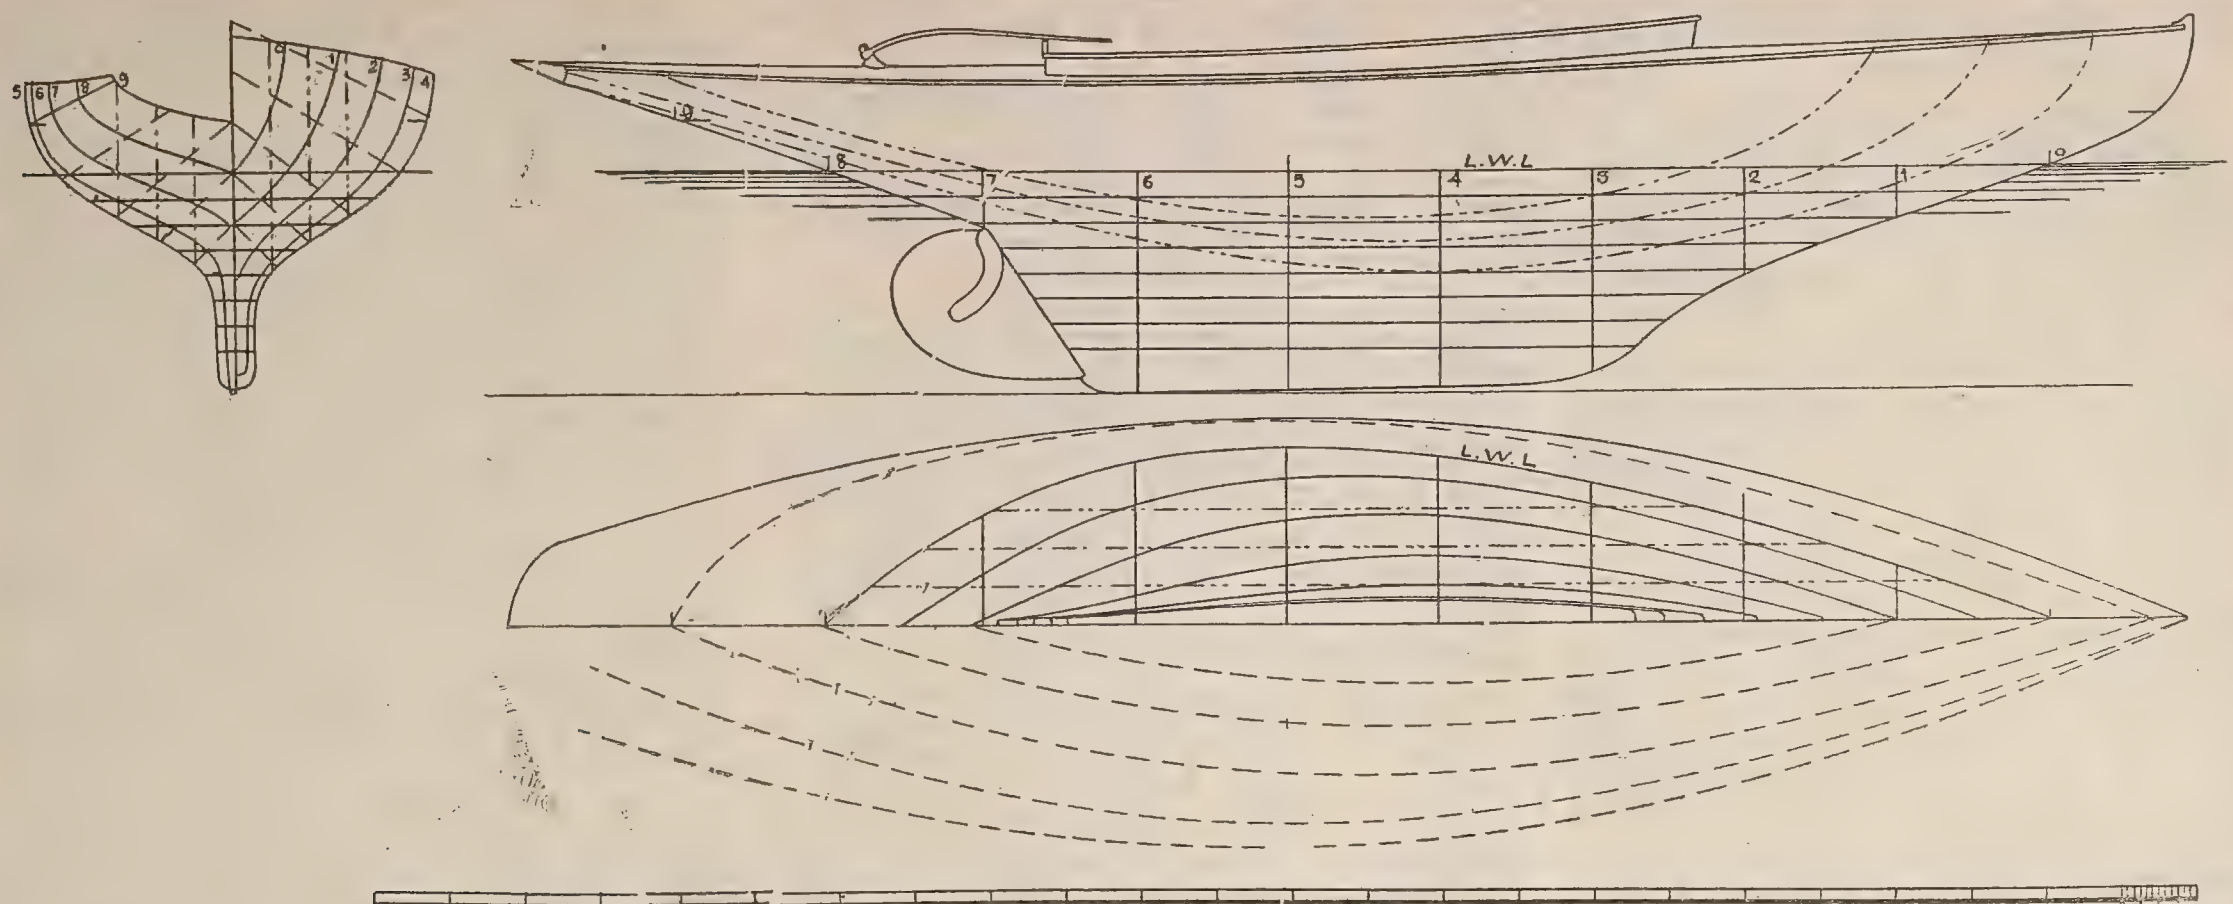
	Corrected.
Gull	48 43
Swallow	41 13
Belle	46 [illegible]
Ilderim	40 54
Eclipse	43 45
Beatrice	[illegible] 24

Winners: first, Beatrice; second, Ilderim.

The following are the officers of the club: Com., Hon. H. E. Sewall, Sewall's Point, Fla.; Vice-Com., E. C. B. Tyndall, Esq., Waveland, Fla.; Sec'y, Paul M. Astor, Esq., Waveland, Fla.; Treas., C. H. Racey, Esq., Waveland, Fla.; Meas., Capt. H. W. Bessey, Sewall's Point, Fla.

Chicago Yacht Matters.

CHICAGO, Ill., Feb. 19.—Columbia Y. C., of Chicago, holds a smoker this evening at its commodious rooms. There will be plenty of good music and other entertaining features, among which will be some sparring matches of a purely amatuer sort. Columbia Y. C. has about 150 members, and is much of an athletic organization.



The First Battalion Naval Militia of Illinois offered an interesting entertainment at Central Music Hall on the evening of Feb. 17; Mr. H. G. Peabody, of Boston, Mass., delivering a lecture, finely illustrated with stereopticon views of yachts, Government warships, marine views, etc. On Feb. 24 Mr. Peabody lectures on "Historic Boston."

The yacht Tartar, the Peterson boat which trimmed up everything on Minnetonka and the White Bear chain last fall, has been bought by Walter Dupee, a young gentleman of this city, and will be sailed on Oconomowoc waters, Wis., next season.

Further word from the young Chicago yachtsman who talks of bringing a boat East for the Seawanhaka races indicates that he thinks more and more strongly of the idea. It is all a question of ability to get a design and a builder in time to turn out the boat. The gentleman is looking for both, and though by no means sure of success, is still hopeful he may get the work under way soon. There is talk that he may go yet further West before he settles on his plans, as he wants to see what is the last thing out Minnetonka way. There is nothing definite as yet determined in regard to the matter.

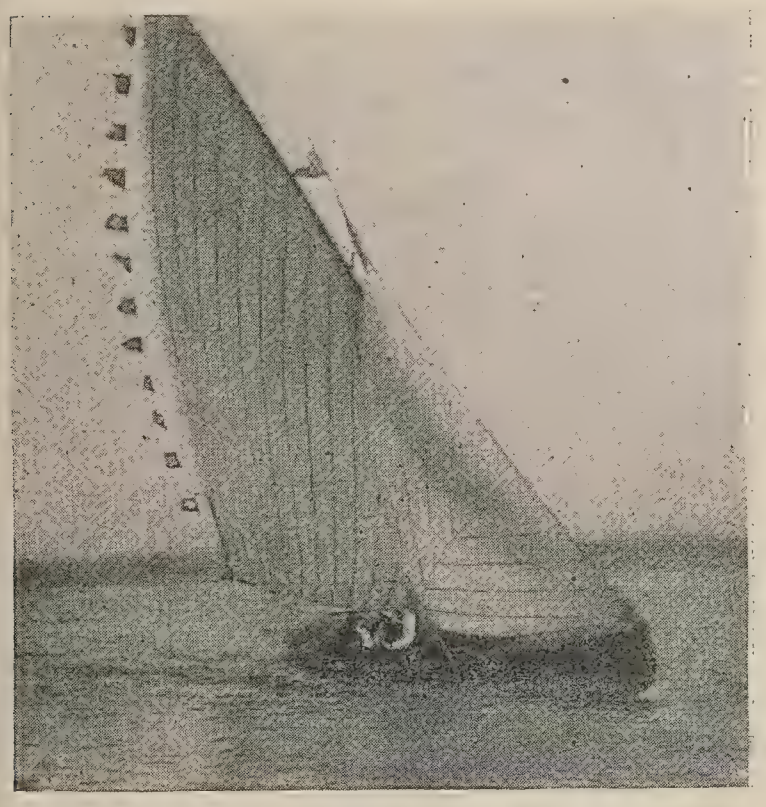
E. HOUGH.

1206 BOYCE BUILDING, Chicago.

RED WING—"ONE DESIGN CLASS." DESIGNED BY C. E. NICHOLSON.

The Payne Bill.

DEPARTMENT CIRCULAR NO. 24.



TREASURY DEPARTMENT, Bureau of Navigation, Washington, D. C., Feb. 10.—*To Collectors of Customs and Others:* The attention of the officers of the customs is invited to the act of Feb. 8, 1897, printed below. Under the statute foreign-built yachts owned, chartered or used by citizens of the United States, if the ownership or charter was acquired on or after Feb. 8, 1897, are subject to tonnage tax in the United States in the same manner as vessels engaged in trade. Action will be taken by you accordingly, whether or not the yachts are documented under the laws of any foreign country.

EUGENE T. CHAMBERLAIN,
Commissioner.

Approved:
S. WIKE, Acting Secretary.

Racing Records.

IN 1896 Mr. J. A. Brand sailed his new 18-footer Spruce IIIII. in fifty-four races, winning twenty eight firsts, eighteen other prizes, valued at £57 5s. 6d. The best record of the season in British waters is that of Kismet, Linton Hope's 18-footer, with forty-five starts, forty firsts, and five other prizes, valued at £315. The Sibbick 30-footer Tatters, owned by H. Welch Thornton, started in fifty-seven races; Phillippine started in fifty five, Satanita in fifty-nine, Britannia in fifty-eight, Ailsa in sixty, Penitent in fifty. Niagara started forty-three times, winning twelve firsts and eight other prizes, £340 in all. Penitent, for her fifty starts, won fifteen firsts and fourteen others, valued at £278; Saint, also in Niagara's class, started forty-two times, with twenty firsts and seven others, value £400. Ailsa won twenty-one first prizes thirteen others, and £2,020. Britannia won fourteen firsts, ten others, and £1,562. Satanita won six firsts and six others, value £545 Meteor II. started twenty-two times, winning thirteen firsts, four others, and £1,465.

ETHILDA.
Mersey Restricted One Rater.

A Racing 80-Footer.

THE *Field* says: "Mr. G. L. Watson has been intrusted with a design for a new racer, to come out about 80 linear rating, for the Duke de Abbruzzi, Italy, and to be built by Messrs. D. & W. Henderson. She is expected to be ready to make her debut at the opening of the Clyde fortnight. It is said that the duke will become a member of the Royal Clyde club, and be nominated for the Royal Yacht Squadron. Capt. Sycamore is to be in command, and the boat will probably be raced to the end of the season. Count Biscaretta di Ruffia will represent the duke on board the new racer, which is to be named the Bona." On the strength of the above, positive and exclusive information as to a new challenge for the America's Cup is now in order from American journals.

YACHTING NEWS NOTES

The Baltimore Y. C. has elected the following officers: Com., E. L. Bartlett; Vice-Com., R. Ramsay; Rear Com., D. S. Fitzgerald; Sec'y, Dr. W. G. Foster; Treas., J. A. Smyser. Board of Governors—E. L. Bartlett, R. Ramsay, D. S. Fitzgerald, J. A. Smyser, M. G. Gill, Dr. W. G. Foster, W. Ancker. House Committee—I. T. Norris, M. G. Gill, F. T. Redwood. Regatta Committee—W. Ancker, E. D. Booze, F. W. McAllister. During the past year the club has made substantial improvements in the grounds and house at Curtis Bay. The membership is about 150, with a fleet of thirty yachts.

The Manchester Y. C., of Manchester, Mass., has elected the following officers: Com., R. C. Robbins; Vice-Com., W. A. Tucker; Rear Com., H. Blanchard; Sec'y, A. W. Stevens; Treas., G. N. Whipple; Meas., D. Fenton. Executive Committee—Ex-Com. A. M. Merriam, W. Burgess and G. Prince. Regatta Committee—G. M. Morgan, E. A. Boardman, Jr., J. L. Bremer, R. F. Tucker and A. H. Higginson.

The Eastern Y. C. has elected the following officers: Com., H. W. Lamb; Vice-Com., G. F. Fayban; Rear-Com., A. Hemenway; Sec'y, W. S. Eaton, Jr.; Treas., P. T. Jackson; Meas., H. Taggard. Members of Council at Large—F. E. Peabody and G. A. Goddard. Regatta Committee—H. H. Buck, T. Nelson, R. E. Forbes, A. N. Rantoul and H. Taggard. Committee on Admissions—C. F. Adams, 2d, T. Parsons, G. Dexter, W. C. Loring and W. S. Eaton, Jr., secretary (*ex-officio*). House Committee—F. E. Snow, J. P. Loud, R. Saltonstall, F. Brewster and W. S. Eaton, Jr.

The Riverside Y. C. has elected the following officers: Com., George G. Tyson, schooner yacht Nirvana; Vice Com., William A. Hamilton, launch Alcedo; Rear-Com., Frederick Gerken, steam yacht Wabeno; Treas., J. E. Peck; Sec'y, John G. Porter; Meas., E. Frank Lockwood. Trustees, to serve for three years: Charles E. Diefenthaler and William H. Fischer. Regatta Committee: Frank B. Jones, George B. Clark and Edwin Binney. Entertainment Committee: Walter G. Buxton, J. Cabot Varian and C. F. Stewart. Chaplains: Rev. George C. Houghton, Rev. Rufus S. Putney and Rev. F. R. Sandford. Fleet Surgeon, H. H. Tyson, Jr., M.D.

Messrs. R. Kidney & Son, of West Pere, Wis., issue a catalogue of steam and gasoline launches, skiffs, sailing boats, canoes, oars, etc.

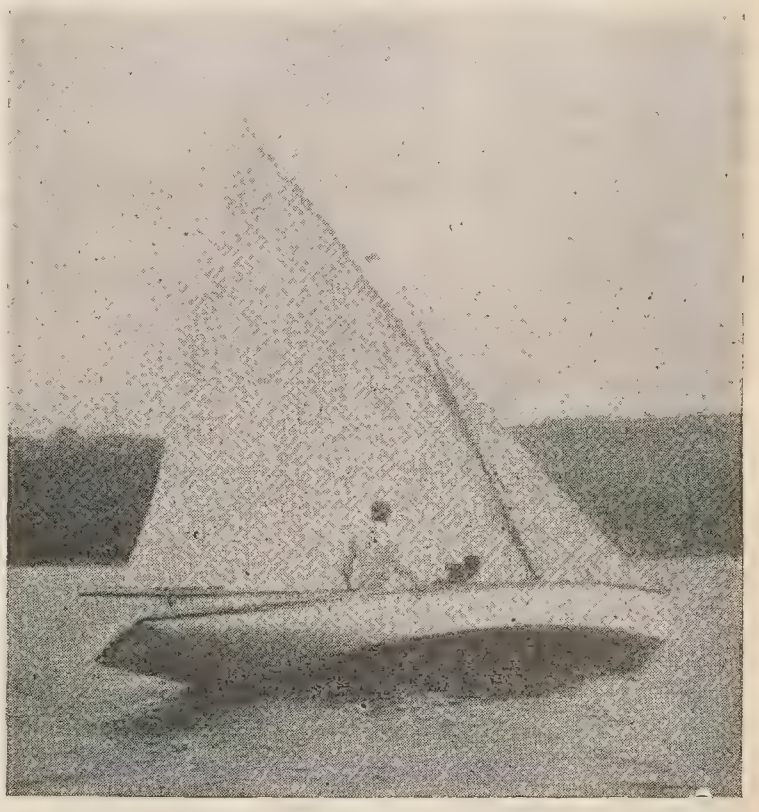
One of the most interesting lectures yet given before the Seawanhaka C. Y. C. was that of Theodore Roosevelt on "The Lessons of the War of 1812," delivered on Feb. 9.

The yachtsmen of Lake Minnetonka are busy this winter with plans for a new class of boat, similar to the Seawanhaka 20-footers, and some half dozen at least will be built. Owing to the lessened expense it is quite probable that the new boats will supersede the old "first-class" sloops with large crews.

Coronet, schr., Messrs. James, arrived at New York on Feb. 7, after a voyage of 114 days from San Francisco. The yacht sailed from New York on Dec. 5, 1895, for San Francisco; then left for Japan with a party to observe the solar eclipse of August, 1896, returning to San Francisco on Oct. 12 and sailing for New York on Oct. 15. Capt. Crosby, who has been with the vessel since her keel was laid in 1885, is still in command.

The racing two and one-half-rater of a few years ago, Manx Cat, Lieut. H. G. Tipping, has recently been converted into a steam launch.

At the annual meeting of the Corinthian Y. C., of San Francisco, on Jan. 27, the following officers were elected: Com., Alex. J. Young; Vice-Com., Carl Westerfeld; Sec'y, E. B. Lathrop; Treas., C. L. Barrett; Port Capt., John H. Keefe; Meas., H. H. Gorter. Directors: A. J. Young, Carl Westerfeld, E. B. Lathrop, C. L. Barrett, F. R. Cook, W. F. Fisher, J. H. Keefe. Regatta Committee: J. H. Hopps, P. J. Martenstein, T. J. Kavanaugh.



On Feb. 17 Nourmahal, steam yacht, J. J. Astor, sailed from the Erie Basin, Brooklyn, for New Orleans, where her owner will join her for a cruise to South America. On the same day Lasca, schr., Gen. J. S. Watson, sailed from New York for the Mediterranean, where her owner will join her.

The annual meeting of the Corinthian fleet was held on Feb. 17 at the Murray Hill Hotel. The following officers and committees were elected: Com., Charles W. Browne; Vice-Com., Clark A. Miller; Rear-Com., Guy Standing; Treas., Charles Chamberlain; Sec'y, William R. Corwine; and Meas., G. S. Pelham. Regatta Committee: Clark A. Miller, W. Irvine Zerega, W. B. Sutton. House Committee: Guy Standing, Samuel L. Smith, A. M. Hunter. Entertainment Committee: Guy Standing, E. Hanford Sturges, J. K. Pauw, Frederick Paulding, W. W. Hollingsworth. The secretary reported a membership of 100 and a fleet of seventy-one yachts. The annual dinner will be held at the Hotel Manhattan on March 1.

Last year the Pantasote Co. furnished a complete equipment of its upholstery to the cutter Meteor II. An order has recently been received for an outfit for the cutter Britannia, including everything in the way of cushions and similar upholstery. Pantasote has been thoroughly tested under all extremes of heat and cold, moisture and dryness, and found particularly suitable for yacht furnishing.

The annual meeting of the Larchmont Y. C. was held on Feb. 17, the following officers being elected: Com., Clarence A. Postley, schooner Colonia; Vice-Com., Edward S. Hatch yawl Huron; Rear-Com., Charles F. Ulrich, schr. Carlotta; Sec'y, Edward J. Greacen; Treas., William Murray; Meas., John Hyslop. Trustees: Harry M. Gillig, Augustin Monroe, to serve three years; Eugene L. Bushe, to serve two years; Oswald Sanderson, to serve one year. The membership is 561, with a fleet of 303 yachts. Various amendments to the constitution and by-laws were proposed, but not adopted. On motion of John F. Lovejoy, a committee of five was appointed to consider the invitation of the Y. R. U. to join that body.

The annual meeting of the Interlake Yachting Association of Lake Erie was held at Sandusky, O., on Feb. 13. The following officers were elected: Com., S. O. Richardson, Toledo; Vice-Com., Henry Look, Detroit; Sec'y-Treas., O. K. Schimansky, Sandusky; Rear-Com., George T. Bliss, Erie; Fleet Captain, W. L. Otis, Cleveland; Meas., J. W. Hepburn, Toledo; Fleet Surgeon, Dr. E. Beeman, of Cleveland. Regatta Committee: R. D. Potter, Toledo; Otto Barthel, Joseph Blessier, W. G. Bean, Detroit; and G. F. Anderson, Sandusky. The annual race meet will be held at Put-in Bay at a date to be fixed by the Regatta Committee. The rules of the Y. R. U. of the Great Lakes were adopted. E. W. Radder, Cleveland; F. B. Hower, Buffalo; and S. H. Jones, Detroit, were elected delegates to the Yacht Racing Union. The Detroit Boat Club was admitted to membership.

Rifle Range and Gallery.

Small Calibers at the Exposition.

PLANS FOR THE COMING TOURNAMENT.

THE Tournament Committee empowered by the Sportsmen's Association with the carrying out of the rifle tournament, to be held at Madison Square Garden during the week of the Exposition, March 13-20, has not let the grass grow under its feet. Though called together less than a month ago, all details as to ranges, programme, etc., have been arranged, and we are now in a position to give in full the plans of the committee.

FOR .22-SHORTS ONLY.

Owing to the conditions under which this tournament will be held, only .22 short caliber rifles will be allowed on the ranges, which are 100ft. in length. As there will be four targets, it is only fair to assume that these will be kept busy during shooting hours, 3 to 11 P. M. on March 13, 15, 16, 17, 18 and 19. On March 20 all shooting will cease promptly at 9 P. M., in order that the committee may figure up the winners and distribute the prizes. Shooting on the bullseye target will close on Friday evening, March 19. All riflemen will readily understand why this is done.

VALUABLE PRIZES OFFERED.

From a perusal of the programme it will be seen that the list of prizes offered is a valuable one. Over $500 in cash will be distributed, and in addition to that sum two handsome trophies will also be donated.

The Zimmerman Trophy Match is one around which special interest centers. In this match Mr. Gus Zimmerman offers a very handsome trophy, a perfect work of art, to the winner. The conditions are special ones, and were drawn up with a view to placing it in the power of anybody to go in and win. No re-entries will be allowed in this match; only five tickets can be shot, each ticket being good for three shots; the two best tickets to take the trophy. The entrance fee is $2 for the five tickets. There is another feature about this contest that will attract the shooters. The special target to be used in this match is one which has never been used in gallery work in this country, but has, we understand, been tried on the continent of Europe. It is elliptical in form, the rings in consequence being slightly wider above and below the center than they are at the sides. In all other respects it is like the 25-ring target.

THE TOURNAMENT COMMITTEE.

The committee that has charge of the tournament is constituted as follows: H. D Muller, Chairman; Edward Banks, Secretary; Gus Zimmerman, C. G. Zettler, B. Walther, G. W. Plaisted, R. Busse, R. W. Dewey, H. Mahlenbrock, William Dalton, C. Boag, A. Ludwig, D. Meersse, Wm. Hayes and Ignatz Martin.

Further information as to rules, particulars of the various matches, etc., will be found in the

PROGRAMME.

INDIVIDUAL CHAMPIONSHIP MATCH.—Open to all, 100 shots, off-hand; 25-ring target. To be shot in strings of 10 shots. Only one entry allowed each competitor. Any .22 short caliber rifle allowed. Entrance $5, including season ticket of admission to the Sportsmen's Exposition. Competitors can shoot their strings of 10 shots as they desire. Distance, 100ft. exact.

Prizes: First, a handsome trophy and $20; second, $25; third, $20; fourth, $15; fifth, $12; sixth, $10; seventh, $10; eighth, $9; ninth, $8; tenth, $5. Each winner can take either his cash prize or its value in a trophy.

CONTINUOUS MATCH.—Entrance for tickets of 3 shots each, 50 cents per ticket; off-hand. Re-entries unlimited, but only one prize obtainable by any one competitor. Two best tickets to count. To be shot on 25-ring target. Any .22 short caliber rifle allowed. Distance, 100ft. exact.

Prizes: First, $50; second, $35; third, $25; fourth, $20; fifth, $15; sixth, $12; seventh, $10; eighth, $10; ninth, $9; tenth, $8; eleventh, $8; twelfth, $8; thirteenth, $7; fourteenth, $7; fifteenth, $7; sixteenth, $6; seventeenth, $6; eighteenth, $6; nineteenth, $5; twentieth, $5; twenty-first, $5; twenty-second, $4; twenty-third, $4; twenty-fourth, $4; twenty-fifth, $3; twenty-sixth, $3; twenty-seventh, $3; twenty-eighth, $2; twenty-ninth, $2; thirtieth, $2.

Premiums: For the best five tickets, $5; for the second best five tickets, $4; for the third best five tickets, $3.

ZIMMERMAN TROPHY MATCH.—Open to all, five tickets of 3 shots each, entrance $2 for the five tickets; no re-entry. Two best tickets to count. To be shot on the Zimmerman special target. Distance 100ft. exact. Any .22 short caliber allowed.

Mr. Gus Zimmerman will present a handsome trophy to the winner of this match.

BULLSEYE TARGET.—Open to all, 3 shots per ticket, entrance 50 cents per ticket; re-entries unlimited. Any .22 short caliber rifle allowed. Distance 100ft. exact. Best single shot by measurement to count. Only one prize obtainable by any one shooter

Prizes: First, $20; second, $15; third, $10; fourth, $8; fifth, $7, sixth, $6; seventh, $5; eighth, $5; ninth, $4; tenth, $4; eleventh, $3; twelfth, $3; thirteenth, $3; fourteenth, $2, fifteenth, $2.

Premiums: For most bullseyes, $5; for second greatest number of bullseyes, $4: for third greatest number of bulleyes, $3.

All shooting on this target will close on Friday night, March 19.

RULES.

A shot must *cut* the ring to count.

All targets will be counted and entered by the official scorer, and will be returned to the shooter in case there is no dispute. The referee committee will decide all matters pertaining to doubtful scores.

Any sights, except telescope sights, allowed.

All questions in dispute, not covered by these rules, will be decided by the referee committee.

(Note—Messrs., Zettler Bros. will have charge of the ranges, and will furnish rifles and suitable ammunition free of all charge to competitors. All kinds of .22 short ammunition will be on hand.)

OFFICIALS.

Tournament Committee: H. D. Muller, Chairman; Edward Barks, Secretary; B. Walther, C. G. Zettler, G. W. Plaisted, R. Busse, Gus Zimmerman, R. W. Dewey, H. Mahlenbrock, William Dalton, C. Boag, A. Ludwig, D. Meersse, William Hayes, Ignatz Martin.

Referee Committee: Gus Zimmerman, Chairman; C. G. Zettler, R. Busse, H. Mahlenbrock, William Dalton.

Official Scorer: G. W. Plaisted.

For programmes, etc., address

EDWARD BANKS, Sec'y Tournament Committee,
FOREST AND STREAM PUB. CO., 346 Broadway, New York City.

Police Revolver Scores.

The following scores were made by the police teams from the first and second platoons at their regular weekly shoot.

WILLIAM A. JONES,
Roundsman in charge, school for pistol practice.

SECOND PLATOON TEAM—FEB. 17, 1897.

Brown	5	2	7	5	3	5	5	3	4	4—43

W. A. KIDD, Sec'y.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Feb. 27.—HACKENSACK, N. J.—Contest for the E. C. cup, on the grounds of the Bergen County Gun Club. C. O. Gardner, Sec'y.

March 4—YARDVILLE, N. J.—Inaugural handicap, 20 birds, $15, birds included, at 25 cents each; handicaps 28 to 33yds. Open to all.

March 16-19.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed. Open to all. Nobody barred.

March 23-25.—NEW YORK.—Interstate Association's fifth annual Grand American Handicap (live birds), at Elkwood Park. $1,000 guaranteed in the main event, all surplus added. Entries close March 20.

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open-to-all tournament.

April 7.—HACKENSACK, N. J.—Third contest for the Recreation cup, under the auspices of the Bergen County Gun Club, Cup contest at 12 noon sharp. C. O. Gardner, Sec'y.

April 14-16.—BALTIMORE, Md.—Tournament of the Interstate Association, under the auspices of the Baltimore Shooting Association.

April 15.—YOUNGSTOWN, O.—First tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

April 21-23.—SAN ANTONIO, Tex.—Second annual meeting and tournament of the Texas State Sportsmen's Association. O. C. Guessaz, Sec'y.

April 27-30.—FONDA, Ia.—Tournament under the management of Geo. E. Hughes and C. R. McCord. Live birds. $800 added money.

April 28-29.—RICHMOND, Va.—Tournament of the Interstate Association, under the auspices of the West End Gun Club.

May 5-7.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 11-13.—PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club. First two days, targets; last day, live birds.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

May 19-20.—SAVANNAH, Ga.—Tournament of the Interstate Association under the auspices of the Forest City Gun Club.

May 19-21.—CANTON, S. D.—South Dakota Sportsmen's Association annual. C. S. Seely, Sec'y.

May 20.—GREENVILLE, Pa.—Second tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

May 26-29.—EAST ST. LOUIS, Ill.—Annual tournament of the King's Smokeless Gun Club.

June 2-4.—SPRINGFIELD, O.—Annual tournament of the Ohio Trap-Shooters' League, under the auspices of the Springfield Gun Club.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 10.—NEWCASTLE, Pa.—Third tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June (third week).—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Paul North is great on books. His latest work is an essay on the magautrap, a prettily gotten up affair, with a picture of Paul in bicycle costume, mounted on a magautrap to show the elegant contour of his pneumatic calves, as an embellishment for the cover. And, speaking of the magautrap, we would like to say something about what we take to be the correct pronunciation of that awful word which has been precipitated upon the trap-shooting world by Mr. North: The word is compounded from the following three words: *maga*zine *auto*matic *trap*, the italicized letters in those words forming the whole. Hence as we read it, the word is magautrap, not "morgatrap," as it is often called. Anybody who wants to know anything about the "bicycle trap," or who wants a picture of Paul North, should write to that gentleman at Cleveland, O., and ask for a copy of his last book

While on his way home from the San Antonio shoot, Plumber Read, of Omaha, Neb., stopped off in Kansas City and took in the monthly five-bird shoot of the O. K. Gun Club, of that city, scoring 13 out of his 15 birds. But this is not what we started out to tell, which was this: While in Kansas City Mr. Read suggested that a team of eight men from the Omaha Gun Club would stand a good show of defeating a team of like number chosen from the ranks of the O. K. Gun Club. The members of the O. K. Gun Club seemed to think well of the proposition, and it is said that the first match is liable to come off about March 1 on the Kansas City grounds, the return match taking place a month later at Omaha.

The following incident occurred in the seventh round of the Grand Prix at Monte Carlo, Feb. 2 (we quote from the London *Field*): "Among those who killed well being Mr. A. Blyth (a very quick bird from No 4), Mr. Robinson (who grassed a quick bird with a fine second barrel), and Count Trauttmansdorff. The last named, however, had luck as well; for, after stopping a wonderful bird from No. 1 trap with his second barrel, the pigeon dropped sitting on the boundary fence, and it was just a toss as to which side of it he would fall. Fortunately for Count Trauttmansdorff the bird was gathered." The expression "dropped sitting" is rather a hard one to decipher, and opens up a world of conjecture.

The account we give in this issue of the shooting for the Grand Prix du Casino, at Monte Carlo, will prove of interest to all who care anything about live-bird shooting. It seems somewhat strange that with all the good amateur shots that this country can boast of, only two—Mr. Robinson, of California, and Mr. J. O'H. Denny—were on hand to do battle for the Stars and Stripes in the biggest and most international live-bird contest in the world. Mr. Denny killed his first three birds, but lost his fourth and fifth. Mr. Robinson stayed in until almost the last, ending somewhere around the 14 hole, with eleven ties for first place. Mr. Lorillard, who won the first contest for the Grand Prix (1872) is the only American who has finished first in this event.

Three times within the past week we have received letters from as many different correspondents asking us which set of live-bird rules limits the weight of guns. Rule 25 in the Interstate Association's rules is the only one so far as we are aware that limits the weight of gun. It says: " * * * No guns larger than 12-bore, or over 8lbs. in weight, shall be allowed." A. S. A. rules state positively that "the weight of all guns shall be unlimited." Neither Hurlingham nor the Gun Club rules limit the weight of the gun, but both sets of rules prohibit guns of larger caliber than an 11-gauge. The Grand American Handicap will be shot under Interstate rules, hence no guns over 8lbs. in weight will be eligible.

To the ingenuity of a Frenchman, Paul Giffard, says an exchange, is attributed a "miracle gun," a repeating rifle which requires no gunpowder. The projecting force is liquefied air, obtained under pressure at a temperature of hundreds of degrees below zero, thus representing an enormous expansive power. This rifle is much lighter in weight than the ordinary one, and the steel cartridge, 9in. long and as thick as one's thumb, contains 300 bullets, which may be discharged as quickly or slowly as one likes. There is no smoke, no flash, and only a sharp and low report. As soon as one cartridge is empty another can be screwed on instantly, 300 shots costing but 2½ cents.

As a direct outcome of the Ross-Greiff match, shot on Feb. 12 at Baychester, N. Y., when Ross scored 93 to Greiff's 78, a match has been arranged between Ross and Aaron Woodruff, of Elizabeth, N. J. When Ross meets the Elizabeth left-hander he'll know he's been in a shooting match by the time he gets through. Woodruff is about one of the best shots in this part of the country, although he has never yet been matched against any of those who may lay claim to the title of crackerjack.

A 100-target handicap race will be shot on the grounds of the Bergen County Gun Club, Hackensack, N. J., on Wednesday, March 3. The conditions will be 100 targets, unknown angles, handicap allowance of extra targets to shoot at, $2 entrance, targets extra at 1 cent each. Optional sweepstake of 50 cents on each 25 targets. The event will be started at 12 noon sharp.

Mr. J. H. Babcock, of McKee's Rocks, Pa., writes to us under date of Feb. 16 that a gun club has been organized at McKee's Rocks under the title of the Chartiers Gun Club. Mr. Thos. Dickson was elected president and J. H. Babcock secretary. The club has an enrollment of twenty-one members, with prospects for a large increase of membership.

The Osoma Valley Gun Club, of Salem, N. Y., sent us an invitation to be present at its opening shoot, to be held on Washington's Birthday, when pigeons and sparrows are to be trapped. FOREST AND STREAM makes its bow to the Osoma Valley Gun Club, and trusts to make the acquaintance of its members on some future occasion.

By the time this issue appears on the news stands most of the wanderers who went to San Antonio and to Hot Springs will have come home. Some few will have tales to tell of victories won, but the vast majority will only have excuses; and as for excuses, any old thing 'll do.

We hear nothing but favorable criticisms of the programme for the Grand American Handicap meeting. The arrangement of events, together with the system of dividing the moneys, seem to meet the wishes of those who shoot live birds.

The Knoxville (Tenn.) Gun Club has been doing good missionary work in the line of game and fish protection. Roger Van Gilder has something to say on this point in a communication given elsewhere in these columns.

Pittsburg, Pa., has a bad attack of what may be termed the "Grand American Handicap fever." The way the boys out there are talking, it looks as if Pittsburg would have about a dozen entries in the great event.

The contest for the E. C. cup will occupy the attention of the members of the Bergen County Gun Club and its friends at Hackensack, N. J., on Saturday next, Feb. 27.

No date has so far been set for the return match between Louis Duryea and G. S. McAlpin. The match, when shot, will come off over the Elkwood Park traps.

The eighth annual meeting and banquet of the Eureka Gun Club, of Chicago, was held at the Sherman House, Washington's Birthday, Feb. 22.

FEB. 23. EDWARD BANKS.

The Cost of Trap-Shooting.

FOREST AND STREAM is always alive to the best interests of its readers. Every week its columns are full of good things, articles that fairly reek with life, and that take one back into the forests and to the banks of trout streams with a reality that makes a chained-to-business man forget his fetters for a few hours.

All such articles, alas! fall to the lot of other departments. In the Trap department we have to use our best endeavors every week to make the figures 1, 2 and 0, not to mention little black dots for "dead out of bounds," appear in the latest Paris styles, so that they will attract and hold the attention of the readers of that special department. Such being the case, it is easy to imagine what a perfect godsend such a "good thing" as Paradise Lost's essay on the decadence and cost of trap-shooting is to our department. The essay in question appeared in last week's issue of one of our cotemporaries. So refreshing is it in many of its essentials that we have thought it no discourtesy to our cotemporary to extract the letter *verbatim* and give it to *our* readers:

PARADISE LOST!

"WORCESTER, Mass.—Manufacturers and dealers must change their methods. They have done indirectly—and not so very indirectly, either—just what they have spent thousands of dollars not to do. They have killed public and general personal interest in trap-shooting, while all the time trying to encourage it. They have sent men out all over the country whom they have paid from $100 to $200 per month—traveling and hotel expenses included—to arrange tournaments and introduce their products, powders, shells, guns, etc., getting large crowds together to promote interest in the sport. And what have these men done? They have attended tournaments far and near; they have visited every gun club wherever opportunity offered, and have soon become more expert as shooters than any member of any club who did not devote his whole time to it. They have fostered the idea that there could be no enjoyment of the sport without sweepstakes, and then they have fleeced all comers. They have killed the goose which laid the golden egg. We have had a taste of it here. About a year ago a tournament was arranged which was largely attended by shooters from various parts of the country as well as by many local shooters, as many, in fact, as could be accommodated. The traps were kept going from early morning until dark. One man is said to have made $127 in one day. Of course those who went to see the crack shooters and get some of the sport themselves were out of pocket. If one gained so much, others must lose. Then they began to reflect. Another tournament was arranged a few weeks since. Under favorable circumstances it should have been as large as the first. When the time came only four persons were present. Three of those came from a distance to see how much more money they could make than at home; the other was the manager of the tournament. These men who travel on a salary, with all expenses paid, with guns and ammunition furnished free, can lose nothing as long as interest in the sport continues, and they have every chance to make much while it is the fashion to shoot for money.

AN EXPENSIVE SPORT.

"Another reason for the falling off in interest of shooters is the high cost of targets at tournaments. The managers say that targets cannot be thrown for less than 2 or 3 cents each, and when the price of the targets is taken from the amount won by any except those at the top there is nothing left. One Worcester club has maintained the price of 1 cent each for targets thrown for its members for the last six years, notwithstanding the cost has been at times nearly or quite double what they can be bought for now. Another club in the city reduced its price a year or two ago, and last year the oldest and leading club brought its price of targets down to 1 cent for each target thrown. Now, if shooters can have targets trapped for them at 1 cent each every week in the year, they feel that they ought not to be called upon to pay two or three times that amount on a few special occasions, when the cost should be less rather than more. They are not willing to pay the price, and they will not do so. The best loaded shells now cost 2 cents each, and if the target costs 2 or 3 cents more $5 is easily gone in a short afternoon, even if no sweepstakes are shot, and this is quite too large a draft on a poor man's pocketbook. Yet the poor man enjoys shooting quite as well as his more fortunate and more opulent neighbor, and will do quite as much of it if it be not too expensive.

PRICE OF TARGETS MIGHT BE LESS.

"The price of targets is now quite reasonable, but it might be less. It cannot cost as much to make a thousand targets as a thousand bricks, either for handling or material, and still a brick costs less than a target in most parts of the country, both in small and in large quantities.

"The price of ammunition must be reduced, too, before trap-shooting will again be as popular as it has been. One reason why the price of loaded shells has not been more largely reduced than it has is that too many persons have to make a profit on them. One firm manufactures the powder, another the shot, a third perhaps the wads, a fourth the case they are packed in, while still another must have a profit for loading. Then the dealer who sells to the shooter does not do the business for nothing. Taking all this into consideration, the wonder is that the price is as low as it is. Still, with the rapid-fire system, it is no trouble at all to use up 100 shells in an afternoon, and it is not impossible that we shall have to go back to the old-fashioned way of shooting: unknown angles, one man up, which, after all, afforded a great amount of enjoyment. PARADISE LOST."

The writer of the above letter has unfortunately for the welfare of his cause only taken into consideration purely local conditions. He states as a broad fact that applies to the whole country the conditions that exist in his immediate vicinity, and therein he makes a great

mistake. He should read the trap columns of each issue of FOREST AND STREAM and learn how every week new gun clubs are springing into existence, and how old clubs are being revivified by means of trap-shooting tournaments given under their auspices or in their immediate neighborhood. There is more target shooting going on to day than at any previous point in the history of the sport. There are more gun clubs in full blast, more targets are thrown every day, more shells are shot away each week, than at any time in the past that Paradise Lost can mention.

Instead of plunging into print, he should have first consulted the chief manufacturers of factory-loaded ammunition. They would have informed him that never before was there such a demand for "factory-loaded" ammunition. We refer to the U. M. C. Co., the W. R. A. Co. and the Chamberlin Cartridge Co. He should also have written to Paul North, W. Fred Quimby and other manufacturers of targets. The replies he would have received would have set him thinking as to where on earth so many millions of targets were shot at. Letters to the Du Pont, Hazard, E. C., Schultze, Walsrode, etc., companies, as to the output of smokeless powders, would have afforded him so much food for thought that he'd never have had time to sit down and write the above letter. He would have learned also that the proportion of smokeless powders loaded for the purpose of being used in the field was a mere drop in the bucket compared to the tons of that article loaded for trap-shooting purposes only.

LACK OF LOCAL INTEREST.

In short, Paradise Lost argues from a single failure of a local club in the line of tournament giving that trap-shooting has been killed all over the United States. As a matter of fact, the failure may really be traced to lack of local interest in the sport. Local interest can only be infused into any sport by the presence of one or two enthusiastic hard workers, for on one or two persons everything that goes to make the life of a club depends. And that one or those two will ultimately get tired of doing everything, with the natural consequence that trap-shooting locally suffers until a new Moses arises to lead the band.

Paradise Lost also argues that it has been the presence of paid experts at tournaments that has "killed the goose." We have had the pleasure of being present at many "amateur" tournaments, and have seldom found that they were much of a success. Of course there were exceptions, but we can name one or two clubs who have stated positively after trial of the "amateur only" tournaments, that nothing goes with them in future but "open to all." The reason for this action is not far to seek. There are plenty of amateurs, pure and simple, who are just as expert as the paid man—the professional. Those expert amateurs carried off the money just as the paid experts did; the "novice" got left, as usual, and the entry list dwindled to a pitch that became a farce.

The real keynote of the whole letter is struck when Paradise Lost states that "when the price of the targets is taken from the amount won by any except those at the top *there is nothing left.*" (The italics are ours.) The moral seems to be, "Get to the top; don't get what is left," or else don't shoot unless you can afford to lose, and lose with a good grace.

EXPERTS HAVE PAID FOR EXPERIENCE.

One point always seems to have been overlooked by men like our friend Paradise Lost: experts have paid for their experience, and in most cases—we speak feelingly—have paid dearly. It is the case in every walk in life, and will always be the case unless human nature alters greatly before the end of the world.

The man who knows a good horse when he sees it, and who also knows how to train it when he has bought it, is the man who gets the best of the persimmons; but he has paid for his experience. It's the same in yachting, athletics, everything, even in business. There will always be a select few on top, with a vast majority below them; and many of that vast majority can't or won't see why they shouldn't have just as much of the good things of this life as the select few.

KNOWS SOMETHING ABOUT BRICKS ANYWAY.

Paradise Lost is in his element when it comes down to bricks. He says: "The price of targets is now quite reasonable, but it might be less. It cannot cost as much to make a thousand targets as a thousand bricks, either for handling or material, and still a brick costs less than a target in most parts of the country, both in small and in large quantities." We have never been in the brick business, neither have we had any capital invested in targets, and cannot therefore speak with that authority which seems to be Paradise Lost's prerogative. We would, however, point out to Paradise Lost that in all business transactions the questions of supply, demand and competition are very large factors in governing prices.

We quite agree with Paradise Lost that 1-cent targets will return enough profit to clear the expense of tournaments where no added money is offered. On that point we are glad to shake hands with him, because we have always been openly in favor of 1-cent targets at all club shoots and at tournaments where there is no added money.

NOT A POOR MAN'S SPORT.

The last portion of the second paragraph in Paradise Lost's communication to our cotemporary is written evidently under a misapprehension of the case. The dragging in of the poor man as a plea for increased cheapness of the sport is done by force. The poor man has actually no status in the matter. We have no right to mulct the manufacturers out of their means of livelihood and make poor men of them simply for the benefit of other poor men who want to indulge in a sport that is beyond their means. Trap-shooting is an expensive sport; it is one that costs money to its devotees. If a man cannot pay for 100 targets and 100 shells without depleting his pocketbook, he should divide that number in half or less if he *must* shoot.

There are many poor men who are just as fond of fast horses as any of those who are able to enjoy such privileges by reason of their wealth. But it would be just as reasonable to urge that 2:10 horses should be reduced to 10 cents apiece, and pneumatic-tired sulkies sold at the rate of 2-for-5, as to demand that manufacturers reduce the prices for guns, shells, targets, etc., in order that a poor man might enjoy a sport his purse cannot afford. Suppose some one should demand that boats like the Defender should be built and rigged for 49 cents each, or steam yachts like the Nourmahal sold for $1.99, in order that the "poor man" could go yacht racing! The crews would have to be paid in proportion, say engineers and captains at 5 and 10 cents a day respectively. Wouldn't there be a kick?

Surely Paradise Lost has lost himself indeed! "The price of ammunition must be reduced, too, before trap-shooting will again be as popular as it has been." Yet—"the best loaded shells now cost 2 cents each!" He must want the earth. EDWARD BANKS.

Calumet Heights and Eureka Records for 1896

CHICAGO, Feb. 20.—*Editor Forest and Stream:* I send you the following interesting showing of what some of our Chicago trap-shooters have been doing:

MONTHLY TROPHIES FOR YEAR, WON BY:

April—A, F. P. Stannard; B, O. J Buck; C, W. A. Jones.
May—A, Ed Steck; B, John Glover; C. Dr. C. E. Morton.
June—A, F. P Stannard; B, O. J. Buck; C, W. A. Jones.
July—A, Ed Steck; B, W. D. Stannard; C, none eligible.
August—A, H. F. Carson; B, none eligible; C, Dr. C. E Morton.
September—A, Paterson and Steck tie; B, W. D. Stannard; C, H. B. Morgan.
October—No one qualified.

E. C. cup won by Deering in June, Morgan in July, and W. D. Stannard in August, September, October, and so absolutely.

Chicago Traps.

CHICAGO, Ill., Feb. 19.—Eureka Club, of Chicago, will hold high banquet and general good time next Monday evening, Feb. 22, at the Sherman House. Some business matters will be taken up at this the annual club meeting. The many trophies won by Eureka Club and its members this past season will be displayed, and an evening of fellowship will be enjoyed.

On Saturday (to morrow) and on Washington's Birthday (Feb. 22) the new shooting park at Evanston, under charge of J. J. Smith, will be put in use. Mr. Smith will run a live-bird and target park for the convenience of shooters who live in the upper part of the city and for the use of all comers.

Mr. W. L. Wells, of this city, author of the "Clover Leaf Field" design which was shown in FOREST AND STREAM early la t fall, soon after the big Du Pont shoot here, is wondering whether the clover leaf field of Elkwood Park, which is described in the Interstate Association handbook as the place for the holding of the Grand American Handicap, could possibly have been contemplated before the publication of his design. The park is spoken of as being so improved "in the fall of 1896," which might have been after Mr. Wells had made public his plan. Mr. Wells and myself may have been remiss in not seeing it, but so far have not noticed any credit given to him for the design; so probably it was a case of anticipation, or of two parties thinking of the same thing at once, independently of each other. Mr. Wells is a thinker, a man of ideas, and a very pleasant gentleman, though not seen at the traps. I think I violate no confidence when I say that though he has no patent on the clover leaf scheme, he was surprised to see it in actual use so soon. I reckon we might as well claim it for Chicago anyhow, and state once more that it is hard to get ahead of Chicago, which has ideas to burn, from each idea dependent a long forelock, which whoso runs may swipe and welcome. For instance, a lot of men from New York were out here last week looking at our electric elevated roads. I understand they are talking of putting in elevated railroads in New York. Naturally they came out to Chicago to see how it was done. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Boston Gun Club.

WELLINGTON, Mass., Feb. 10.—The Boston Gun Club's third serial prize shoot was held this afternoon at Wellington, and was attended by eighteen shooters, all eager to take part in the programme of events. A better day could not be asked, just a little wind and not particularly cold, altogether the reverse of weather encountered on the previous meeting. The shoot developed into a partial reunion of the "winter crowd" of a year ago, and it was noticed that good-natured rivalry was as rampant as ever. Mr. Sawyer was the recipient of many congratulations on his reappearance after suffering a severe injury to his arm on the ball field some months ago. Winters was high in the match with 17 out of 21, knowns, unknowns and doubles, standing at 18yds. rise, gun below elbow. Events were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	10	6	10	10	5	6	10	10	10	10	10
Gordon (17)	6	6	2	9	6	4	2	5	6	5	..	..

Feb. 17.—Wednesday afternoon, Feb. 17, emerged bright and smil- from the general moisture of the previous week, and twenty shooters met on the Boston Gun Club grounds at Wellington to celebrate accordingly. The events progressed with the usual celerity and dispatch, and the misses appeared as frequently as of yore. Mr. Spencer placed a good 19 to his credit nobody else approaching his total to-day. Other shooting:

D.

John F. Weiler Gun Club.

ALLENTOWN, Pa., Feb. 15.—Below are the scores made to day on the grounds at the Duck Farm Hotel. Both targets and live birds were used. A special feature of the day was the 50-bird match between Frank Class, of Morristown, N. J., and J. Rehrig, of Lehighton, Pa. Scores:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	10	25	10	10	Targets:	10	25	10	10
Brey	10	..	10	..	H Acker	..	16	..	..
Hope	8	..	9	..	E Jeans	..	..	7	..
Miller	7	..	..	..	A Weiler	..	..	8	..
Acker	6	..	..	..	Erdman	..	..	6	..
Kramer	7	..	..	..	M J Hoch	..	..	..	8
Ulmer	7	..	8	..	W Barrall	..	..	..	6
S Weiler	..	19	..	..					

The two live-bird sweeps were shot as below:

No. 1, 10 live birds: O. Acker 8, J. Weiler 8, E. Ulmer 7, B. Hufort 6.

No. 2, 6 live birds: H. Mohr 6, J. Weiler 5, O. Acker 4.

The score in the Class-Rehrig match was as below:

F Class.....2200222220121222222202222—20
22222222220202202202122222—21—41

22201212221220212101011 20—20—40

A. GRIESEMER

Arkansaw Traveler's First Annual.

HOT SPRINGS, Ark., Feb. 17.—Little of interest remains to be told concerning the tournament which closed here yesterday. The attendance was hardly such as the promoter had reason to suppose—especially after the number of letters he had received from shooters all over the country assuring him that they would most certainly attend, and further would lend their hearty coöperation toward making the tournament a success, but nevertheless in this respect the shoot was hardly such. True, there are numerous causes that brought this about, but none of them figure so much in the result as the bad weather experienced at the Midwinter tournament at San Antonio, which was conducive of no little sickness among the shooters and a great deal of dissatisfaction; many who had intended to come from there to Hot Springs became disappointed and returned home. Then again that class of shooters who may appropriately be designated as the *sure thing crowd* did not like the handicap. The $500 added event looked alluring enough, and at first they displayed considerable avidity to have a try at it, but as the time approached for the event to take place, and furthermore as some of them failed to gather in the shekels they had anticipated at the Midwinter, they sniffed at the bait several times, backed away, and then crawled into their holes until something more easy should turn up. An even break with the producer is not what this crowd is looking for; they want at least 30 per cent. the best of it. Well, notwithstanding that the attendance was rather slim the tournament came off just the same, and the programme was carried out to the letter, just as though there had been a hundred entries. Financially this tournament was like its predecessor, the Midwinter at San Antonio. In addition to the time and labor spent, the promoter, John J. Sumpter, Jr., will have to make up a deficiency of about $300; and yet he is not cured, but speaks of holding another next winter on a more elaborate scale, of two weeks' duration—one week of targets and one week of live-bird shooting. Fortunately for Sumpter, he shot in great form and quit several hundred dollars ahead of the game. This in some measure will help make up the deficit. That 25 straight alone in the Eastman handicap, and again that remunerative 23 in the Arkansaw Traveler's Handicap, went to make up the bulk of his winnings.

WHITTINGTON PARK.

The place where the tournament was held is very suitable for this kind of shooting, but has one drawback: that of not being large enough to permit of the use of two sets of traps should such have been necessary. The background for pigeon shooting is good, except that on the left as the shooter faces the score there is a high mountain, on which the brush and rocks make a very deceiving background for brown or chocolate-colored birds, and also any dark colored bird that should choose to fly that way late in the evening. This very thing was responsible for several ciphers in the last round of the Arlington handicap. Aside from this, the grounds are perfectly level and afford a good view from all other directions. King's traps were used, and the trapping was done much faster than is usually the case at tournaments of this kind; something over 100 birds an hour were trapped without any special effort.

THE BIRDS.

Collectively they must be classed as a good lot; true, there were some poor ones and some exceptionally fast ones; such is always the case where large numbers of birds are trapped. About 4,500 were used during the shoot, a number which could have been much increased had the management desired. But trapping birds in Hot Springs at 25 cents apiece is like swapping dollars. Nearly all of the birds were bought in St. Louis and were shipped in hundred dozen lots, and each one of these consignments amounted to from $240 to $250. This includes express charges and coops. This left a very narrow margin to cover trapping and losses occasioned through dead birds and those lost in trapping, as well as those refusing to fly. Very little was realized on the dead birds, and only about forty dozen were disposed of at $1 a dozen. The balance had to be given away, as no place could be secured to store them. It has always been customary to charge 30 cents apiece for birds in Hot Springs, but so that no one should have any cause to complain that the management was charging too much they were trapped at about what they cost.

The first part of the tournament the weather was very disagreeable, but later on it turned out fine, and the last four days it was all the shooters could wish for.

VISITORS.

R. O. Heikes, Dayton, O.; B. A. Bartlett, Buffalo, N. Y., and J. A. R. Elliott, of Kansas City, Mo., were the Winchester Repeating Arms Co representatives present. Then there was John Parker, Detroit, Mich., and Tom Keller, of Plainfield, N. J., representing the King's Powder and Peters Cartridge Cos., of Cincinnati, O. Herbert Taylor, of St. Louis, Mo., took care of the interest of the Du Pont and Hazard Powder Co. A. W. Du Bray, of Dayton, Ky., and O. R. Dickey, of Boston, Mass., were shooting Parker guns and talking about them. Then there was J. L. Winston, of Washington, Ind., to take care of the Austin Powder Co's interest. Tom Callender, of Nashville, Tenn., representing Laflin & Rand Powder Co. and shooting W-A. Then there was G. W. Sergeant, of Joplin, Mo.; Peter L. Murphy, of Philadelphia, Pa.; the one barrel champion, John Ellis, and George Hutchings, of Galveston, Tex.; W. F. Norman, of Greenville, Tex.; Houston, of Chicago, Ill; Bennett Charles Thompson and Wallace D. F. McClure, of St. Paul, Minn.; Dr. W. C. Portman, Jackson, Minn.; L. B. Schindler, Windom, Minn.; Wirt W. W. Peabody, Jr., and Emile Work, Cincinnati, O; W. H. Settle, Madisonville, O.; Richard Merrill, Milwaukee, Wis; Chauncey M. Powers, Decatur, Ill.; F. S. Parmelee, Omaha, Neb.; A. E. Leach, Tripp, S. D.

Sixth Day, Saturday, Feb. 13.

This was another blank day in so far as programme events are concerned, though it was by no means an uneventful one. Winston and Murphy shot another match, and once Murphy took a fall out of his opponent. Then Norman and Winston shot two target races, which resulted in each winning one. The first one each shot 50 targets, unknown angles, and this was won by Winston with a score of 41 to 38. The next time Winston allowed the first 10 of Norman's to be scored dead, or in other words shot at 50 while Norman only shot at 40 and then added 10 to his score. This one Norman won by 44 to 42. There was also a team match between Heikes and Bartlett on one side and Winston and Parmelee on the other. The conditions of the match were 50 singles and 25 pairs per man, and at this kind of game the Winchester men proved too much for the other combination, the final score being: Heikes Singles 46, doubles 42, total 88; Bartlett—Singles 45, doubles 34, total 79; team total 167. Parmelee led the other team by scoring—Singles 47, doubles 38, total 85; Winston—Singles 43, doubles 32, total 75, making their team total 160. This was purely an exhibition shoot, with nothing at stake. Heikes and Bartlett gave an exhibition of rapid and fancy trick shooting. Heikes broke 100 targets with five Winchester guns in three minutes and twenty-one seconds. Then Bartlett did his usual acts and several new ones. The trick of making kindling wood with a Winchester is a new one. Bartlett tosses up an empty box, as shells are shipped in, and he and Heikes cut it all to pieces with loads from their Winchesters, so that fire could readily be started with the splinters.

MURPHY VS. WINSTON.

The weather conditions were superb for a pigeon match, and this time Winston had really succeeded in selecting a good fast lot of pigeons, which were further favored by the weather conditions, as there was a good stiff wind blowing away from the score. Murphy was the first one to miss; this occurred in the 4th round, when a very hard fast one from No. 5 trap got away with the loss of a few feathers. Winston had a narrow escape on his 3d bird, which was missed with first and brought down by a great second within a few feet of the boundary line on the right. When 10 birds had been shot, Winston was straight, while Murphy had but a single loss to his credit. The 11th round brought disaster to Winston, as he lost a very fast left-quartering driver from No. 5 trap that fell about a yard out of bounds; his next bird, also an excellent one, was scored with the second, much to the surprise of all. Then followed another fast one, though it had an incoming tendency; it towered as soon as the trap was opened, missed clean with the first, but closed up like a knife with the second. Then came a fast driver that was well killed; but the next, similar to the previous one, though a twister, carried the shot that struck it over the boundary only by a few feet. All this time Murphy was not drawing duffers by any means. The 15th, which he missed, was an extra fast low driver. When Winston lost his 17th, it put Murphy 1 in the lead, but he evened up matters when he missed his 18th, a low twisting driver that was out of bounds with three beats of its wings. Up to the 23d round matters were even, but it was the 23d that lost Winston the match. This bird was a circling incomer, apparently an easy one, that got away unharmed When Murphy killed his 24th, one that was as hard as the best, Jack's chances went a-glimmering, as Murphy's last one was an incomer, and landed him a winner by 1 bird, the final score being Murphy 22, Winston 21.

The conditions of the match were 25 pigeons, for $25 a side, loser to pay for the birds, Murphy at 28yds. and Winston at 30yds. This concession virtually cost Winston the match, for 2yds. nearer would have scored all 3 of his dead out of bounds, neither of which was more than 10ft. out.

Here are the results, the number of the trap and the flight:

Monday, Feb. 15—Seventh Day.

This was an ideal day for shooting, and as the target traps were still in position, also to vary the monotony, a couple of sweeps at this game were shot. Winston and Norman again got together; this brought about two matches, both at targets, in each of which Winston conceded the first 10 dead to his opponent. The first one resulted in a win for Norman by 46 to 39, and the other one was a tie, each having 46 to his credit; $5 a side was at stake oneach. Winston also matched Powers with Sergeant for $10 a side and the price of the targets, 50 targets each. This Powers won by 46 to 44.

The scores in the target sweeps were as follows:

No. 1, 20 targets, four moneys: Sumpter 20, Sergeant 20, Dickey 19, Powers 18, Norman 17, Winston 17, Merrill 17, Hughes 17, Leach 16, W. Wirt 15, Murphy 15, Settle 14, Bennett 14, McDonald 7

Event No. 2, same as above, three moneys: Powers 18, Dickey 17, Winston 17, Sumpter 17, Norman 17, Merrill 17, Sergeant 16, Wirt 14.

The programme events consisted of a 7-bird event, $5, four high guns, and a 10 bird race, $10, four moneys.

Dickey did the best shooting at live birds, scoring all of his birds, while Powers lost but 1. Hutchings, of Galveston, Tex., was a new arrival to day.

No. 1:

Tuesday, Feb. 16—Eighth Day.

ARKANSAW TRAVELER'S HANDICAP.

Up until Monday night John J. Sumpter, Jr., the promoter of the tournament, had confidently expected to see a number of new shooters arrive to take part in the handicap to-day and to contest for the $500 added money. This was the day that the Arkansas shooters had promised to put in an appearance, especially those from Little Rock and Pine Bluff, as well as the Memphis and Texas shooters. Not a single one came from either place, and yet there has not been a tournament at any of these places within the last four years that has not found the "Arkansaw Traveler" present and shooting through the entire programme.

Regardless that there were only twenty-three entries, the handicap was shot just the same, and the $500 were added as advertised. Therefore those who stayed for the big event had nothing to regret, and those who shot into a place received more than they put in.

As there were a number of shooters who wanted to leave on the 5:45 P. M. train, the event was started promptly at 10 o'clock, and was finished by 5 P. M. Sumpter was the first to the score, and spoiled the anticipations of his friends by losing his first bird dead out of bounds. This was a rank easy one that flew like a carrion. 147's good luck held out, and he drew a screamer as a starter that had just enough vitality to struggle out of bounds The 2d round was productive of four ciphers; Murphy, Elliott, Du Bray and Bennett all fell down on good birds. Round 3 put Wirt and Houston in the mourners' class, while Du Bray added one more goose egg to his score, Houston lost an incomer that looked easy, Wirt's was ordinary, but Du Bray's was one of the star birds of the race.

Fourth round Ellis missed a good one, and Houston increased his losses one more. Werk, Hughes and Callender were the straight men who lost in the 5th round, and each had a good bird. Li Hung Chang was the unfortunate in round 6, a fast outgoer proving too much for him from the 32yd. mark. Du Bray again drew a screamer and missed his 3d one. Dickey, Parker and Wallace failed to score in round 7. Dickey's was a slow incomer and got over the dead line, while the other two lost good fast birds. Leach now missed a very fast one, as did 147. Elliott missed a duffer of a circling incomer; so ended round 8. Round 9 saw Norman's prospects for first money spoilt, while 147 and Elliott missed their 3d, making two in succession. Parmelee and Bennett also had a loss chalked up to them. The 10th round found Dickey all but shot out, as he scored his 4th miss. Parker, Dickey and Hughes dropped their second one, and Hutchings marred his straight. Parker, Dickey and Hughes's were all incomers, but Du Bray and Hutchings's were corkers. Everybody got over the 11th round without a skip, but Houston and Hutchings could not survive the 12th. The unlucky 13th was fatal only to Wirt and Ellis, the former being dead out of bounds, and Ellis let an incomer get away.

Though Murphy had a bird scored to him that was clearly lost, he slobbered a slow quartering incomer, and as it was about to cross the dead line one of the boys who load the trap made an effort to stop it, but let it get by, though he succeeded in knocking it on the ground, where it would have crossed the dead line had not another boy grabbed it. This was a lost bird, and the referee at first decided it so, but changed his decision when Murphy protested. Eventually this proved very costly to the men who scored 24. Ellis missed again in the 14th round, but this time it was a fast driver that quartered slightly to the right. 147 went all but out, as he scored his 4th miss. Dickey got his 3d one, another incomer By the end of the 15th round Norman and Wallace had two misses, Hughes three, and Houston four. Hutchings lost the only birds in the 16th round, which made his total three. At this juncture the trappers sprung a lot of home-raised birds on the shooters, which brought grief to several of them; Sumpter, the first man on the list, got a screamer and sat down with a smile that was rather sad. Merrill was straight up to this point, but one of this lot threw him down; the best that he got was a strike. Werk got his 2d goose egg, Bennett his 3d, and Dickey and Hutchings their 4th. In the 18th round Powers, one of the few remaining straight men, lost a very fast towerer; Callender got a dead out of bounds, which made 2 for him; Werk got a cipher, making 3 lost for him; Houston got out of the money by having one die out of bounds, as this made 5 lost for him. The 19th round Settle, one of the two remaining straight men, mi-sed a driver, so this left Sergeant in for first all alone, with but 6 more to shoot at. Parker lost his 3d, Hughes his 4th and Hutchings his 5th, putting him out of the money too. Round 20 shows a dead out of bounds for Wirt and Houston, and a zero for Ellis and Hutchings, making 3 lost for Wirt and 4 for Ellis. Parker got his 4th loss and Hughes his 5th one, and all supposed this would put him out of money; thus closed the 21st round. The 22d saw Leach lose one dead out of bounds, and Wallace, Callender and Bennett missed. The expected happened in the 23d round, as Sergeant, the only remaining straight, missed a little easy bird that flew straight away and then circled, coming back from the dead line. The shooter ran from the score and tried to head it off, but it had plenty of life left, as it had been hit but slightly, and sailed over the grand stand This gave Hughes, who had lost 5, a chance for money if he killed out, which he did. Houston lost his 7th bird. Dickey missed his 5th one, and the loss of Werk's dead out of bounds made a like number for him; Hutchings, who was shot out of the money, also lost another one in this the 24th round. The final round brought on more trouble. Leach got a screamer from No. 4 trap that beat his 1st, but went down from the 2d; he started to retrieve it himself, then decided to let the boy go after it, but when the latter was yet some distance from the bird it gathered itself up and struggled out of bounds. Callender drew a high towerer that fell dead out of bounds, Parker missed a slow, easy one, Dickey had a good, strong bird fall dead out on the hillside, Werk too missed his last one, which put each of them out of money. Nobody made a straight; Settle, Powers, Merrill, Sergeant and Murphy scored 24 and divided first, $322.50, making $64.50 each; Sumpter, Parmelee and Norman finished with 23, and cut up $268 75, which made each one's pro rata $89 50. Leach, Wirt, Elliott and Wallace were those in the 22 hole; third money was $215.25, and paid each one $53.75 Twenty ones were more plentiful, no less than five Callender, Bennett, Ellis, Du Bray and 147—finishing with this total. Fourth money was $161.25, and each got $32 25. Two went out with a total of 20, Hughes and Parker; this paid better than 21 and exactly the same as 22; as fifth money was $107 50, each drew $53.75.

After the 10th round Du Bray did some great shooting, up to which time he had lost 4 birds, but finished out with an unbroken string of 15. 147 had to kill his last 11 straight to finish with the total he did. Neither he nor Du Bray drew many easy birds in the race.

The weather conditions were beautiful, though a trifle too pleasant, while the wind that prevailed was also very fitful, coming first from one direction and then another.

CONDITIONS OF ARKANSAW TRAVELER'S HANDICAP.

Twenty-five live pigeons each, entrance $25, birds extra, five moneys, class shooting, handicap rise from 25 to 33yds., $500 added money; 23 entries at $25 made up the purse of $1,075.

For the benefit of the statistical fiend the score, the flight and the number of the trap are given in the detailed score appended:

PAUL R. LITZKE.

Trap Around Pittsburg.

EAST PITTSBURG GUN CLUB.

PITTSBURG, Pa., Feb. 16.—The all-day shoot of the East Pittsburg Gun Club, held to-day on the club's grounds, was a thorough success. There was a large attendance of shooters, and a good day's sport was enjoyed. In addition to the eight 15-target events, several 10-target events were shot; in these events Black Cloud made three straights, Hartmann two, and Prof. Briggs, Oliver, Nimrod, Mack, Motz and Born, one each. Scores in the 15-target events were as below:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

HERRON HILL GUN CLUB

Feb 17.—The regular monthly practice shoot of the Herron Hill Gun Club, held to-day at Davis Island, was well attended. The scores were not as high as usual, but some good work was done by the shooters. Scores in the five events decided as were follows:

	No. 1.	No. 2.	No. 3.

Milt Lindsley removed to Ohio ostensibly to take charge of the manufacture of King's Smokeless at King's Mills. Such was his excuse to us for leaving the generous soil of New Jersey. It seems, however, that the manufacture of powder is not all that he is doing in the Ohio Valley; he is shooting live birds, and having whittled his gun stock at last into a shape convenient for his right cheekbone to repose upon, has struck a gait that has not only paralyzed his Cincinnati friends and rejoiced the hearts of those he left behind in New Jersey, but has also aroused every member of the handicap committee for the Grand American Handicap to the really sterling merit of this coming shooter. In a match at Hartnell, Ind., in company with some shooters from Cincinnati, he ran 25 straight without falling dead. In consequence of this work he has been challenged to shoot a match by W. Fred Quimby for a "steak," a private championship that does not conflict with either the Kansas City *Star* cup or the Cast Iron badge, and also for the price of the birds. The match will be shot the latter part of this month at Goodman's shooting park, Cincinnati.

The Grand Prix at Monte Carlo.

AT the present time, when the shooters of the United States are thinking about the coming Grand American Handicap, a few facts and figures about the twenty-sixth annual Grand Prix at Monte Carlo, shot Feb. 1 and 2, will be of more than ordinary interest. As told in last week's issue, the winner was an Italian, Signor G. Grasselli, who won out in the shoot-off, miss-and-out, with ten other competitors. The conditions of this great event are given again for the better understanding of the manner in which the event was shot:

"Grand Prix du Casino of £800, added to a sweepstakes of £8 each; second received £160 and 25 per cent. of the entries; third, £80 and 25 per cent.; fourth, £40 and 15 per cent.; 4 birds at 26 meters, 8 at 27 meters; the winner in 1896 to stand back 2 meters, previous winners 1 meter; three misses to put out; 118 subs.

Out of 118 entries there were nine who had previously won the Grand Prix: Mr. Roberts (1883), Baron de Dorlodot, Signor Guidicini (1886, 1890, 1893), Count L. Gayoli (1891), Count Trauttmansdorff (1892), Signor Benvenuti (1895), and M. Journu (1896); while Count L. Gayoli, who divided second and third prizes last year with M. Scribot, and two of the three who shared fourth prize—Signor Calari and Signor Oliva—were also among the competitors.

Of the above number, therefore, M. Journu, last year's winner, had to stand back 2 meters, the other eight previous winners being penalized 1 meter. Four birds are shot at 26 meters, that is about 28yds. 14in; the last are shot at 27 meters, or about 29½yds. On such birds as they usually have at Monte Carlo, an addition of 1 meter is something to take into consideration, while 2 meters is a heavy handicap. The boundary, which is a wire fence 40in. high, is 17 meters, or 18yds. 21¼in., in a straight line from the center trap.

That the Grand Prix is gaining in popularity is proved by the fact that this year's entry list of 118 beats all previous records. Up to this year the entry list of 105 in 1895 was the record; last year's list was 102. It seems to have been almost a matter of regret that the entries were so numerous, as the men who had to shoot toward the end of the list on the first day suffered a serious disadvantage in having to shoot in a poor light at the end of the 4th round. Four rounds only were decided on the first day, Feb. 1. The birds were "generally good, and there was just enough wind to help them, especially on the first day."

It is interesting also to note that the general average made on the 718 birds shot at in this event was a fraction under 67 per cent.; 237 out of the 718 were scored "lost." (These figures are exclusive of the birds shot at in the ties.) This will be specially astonishing to shooters of this country who are so accustomed to 25 straights. It is necessary to see the birds and grounds to properly appreciate the conditions.

On the first day the three first rounds were shot with 118 men on the list; but the 4th round, also shot on that day, had only 81 shooters, 37 having dropped from the list, either under the rule of 3 misses out, or retiring to facilitate matters with 2 misses against them. In the 1st round 39 of the 118 lost their birds; in the 2d round there were 41 lost birds, and 42 in the 3d round. In the 4th round 26 of the 81 still in lost their birds, 13 of that number retiring from the contest, leaving 68 to continue the shoot on the second day.

When the 5th round had been shot on Feb. 2, 22 additional ciphers were added to the score out of the 68 shot at, and 11 more men dropped from the roll. This left 57 in for the 6th round, and in this round 18 lost birds were recorded, 13 names being crossed off the list in consequence. In the 7th round 12 more men retired, 16 out of the 44 shooters losing their birds.

This narrowed things down considerably, only 32 out of the original 118 starters being in at the commencement of the 8th round. In this round 10 lost birds were scored and five more names dropped from the list. The 9th round started with only twenty-seven shooters and only 7 lost birds were scored, but those losses were fatal to the chances of six men, their names being taken from the list. This left only twenty-one to shoot in the 10th round. The birds about this period of the shoot were decidedly below the average, the correspondent for the London *Field* stating in connection with this round: "The 10th round brought out twenty-one shooters, but of these Signor Sani was put out of court by a second miss, his bird (a quick rising one), going clean away, and his was the only failure, the birds still being so bad that little credit attached to the killing of them. But Mr. Blyth, M. Moncorgé and Count Trauttmansdorff had their work cut out for them, as they got birds of better quality than most of the others."

In the 11th round, with only twenty left in, 8 misses were recorded, as "the pigeons were much better." These 8 misses were fatal to the hopes of six men who were dropped from the list. The other 2 lost birds were scored to Mr. Izzard, an Englishman, who is said to be one of the best inanimate target shots in that country, and to M. Moncorgé, a Frenchman; these misses were their first, each having killed 10 straight up to that round.

For a description of the 12th round, in which only fourteen took part, we must again quote from the report of the London *Field:*

"The 12th round was entered upon with every probability that the first prize would, as last year, not fall into the ties, but that, just as M. Journu then killed 12 running, one or more of the four who had not yet missed would again bring down their bird. But a regular 'funk' set in, for out of the first six who shot all but one missed, the failures including M. A. Poizat, to a bird flying low near the boundary; Count Trauttmansdorff, whose bird, a rising one, fell dead just over the rails; and Mr. Erskine, who failed to touch a low-flying bird from No. 4. Signor Danielli had not yet shot, so he had only to kill for the prize to be his; but the emotion was, no doubt, too much for him, as he clean missed a very easy bird. The excitement which ensued may be readily understood, for, with these 4 misses, the 7 others who had only failed once came in again, and here we were left with 11 good men and true who had killed 11 out of 12. They comprised 3 English (Mr. Erskine, Mr. Izzard and Mr. Berridge), 4 Italians (Signor J. Grasselli, Signor Riva, Signor G. Grasselli and Signor Danielli), 2 Frenchmen (M. Poizat and M. Moncorgé), a Russian (M. Horodetzki), and an Austrian (Count Trauttmansdorff)."

The miss-and-out to decide the contest was very short, Signor Grasselli winning at the end of the 5th round as follows:

Signor G Grasselli (first prize of £803 and objet d'art)	11111—5
Hon F Erskine (divided second and third prizes of £712)	11110—4
M Horodetzki (ditto)	11110—4
M A Poizat (fourth prize of £181)	11100—3
Mr Izzard	110 —2
M R Moncorgé	110 —2
Count Trauttmansdorff	10 —1
Signor Riva	10 —1
Signor Danielli	10 —1
Mr Berridge	10 —1
Signor J Grasselli	0 —0

A good idea of the excitement that prevailed at the close of the 12th round will be gathered from the following from the London *Field:* "The twenty-sixth contest for the Grand Prix du Casino was brought to a close about 4 o'clock this afternoon, amid a scene of excitement rarely if ever exceeded, for although up to the 12th round it did not seem probable that the competition would present any feature of exceptional importance, the collapse in that round of the four men who had alone killed all their 11 birds had an electrical effect upon the onlookers, and for a few moments the shooting was suspended, people scarcely realizing what had happened, or what would now be the course of events. The effect of the startling collapse was of course to let in the seven others who had killed all but 1, and so the contest ended in a brilliant 'barrage' (as the French call the ties) among eleven of the 118 original competitors."

Below are the scores of those who stayed in up to the 12th round:

Signor G Grasselli (Italian), Greener, Walsrode	111011111111—11
Hon F Erskine (English), Boss, S	111111111110—11
M Horodetzki (Russian), Russian gun, S	111111101111—11
M A Poizat (French)	111111111110—11
Count Trauttmansdorff (Austrian)	111111111110—11
Signor Danielli (Italian)	111111011111—11
Signor J Grasselli (Italian)	111111111101—11
Mr Izzard (English)	111111111101—11
Signor Riva (Italian)	111111110111—11
Mr Berridge (English)	111111011111—11
M R Moncorgé (French)	111111111101—11
Mr W Blake (English)	111101111110—10
Signor Fadini (Italian)	111110111110—10
Mr A Blyth (English)	111110111110—10
Signor Asti-Cesare (Italian)	11101111110 — 9
Mr Robinson (American)	10111111110 — 9
Signor S Lugli (Italian)	11111110110 — 9
Capt Brooke (English)	11101111110 — 9
Signor Castaldi (Italian)	11011111110 — 9
Signor Pederzoli (Italian)	11111010110 — 8
Signor Sani (Italian)	1111110110 — 8

The order in which the other 97 retired is given below in rounds as numbered:

Ninth round, 6: Signor Galetti (Italian), Signor Marino (Italian), M. de Villaviciosa (Spanish), Mr. Mackintosh (Australian), Count Lambertye (French), Signor Garabaro (Italian).

Eighth round, 5: M. de Maubenge (Belgium), Count de Montesquiou (French), Mr. Heygate (English), Lord Savile (English), Signor P. Nava (Italian).

Seventh round, 12: Col. Boswall-Preston (English), M. Desmonts (French), Baron Bianchi (Italian), Count Voss (German), Count Sibrick (Austrian), Mr. Anderson (English), M. Drévon (French), M. Journu (French), M. Verdavaine (French), Mr. Watson (English), Count de Robiano (Belgium), M. Lonhienne (French).

Sixth round, 13: M. Léon (French), Mr. Wingrove (English), Hon. W. Beresford (English), Grand Duke Peter (Russian), Signor Grandi (Italian), Count du Taillis (French), Baron de Montpelier (French), Mr. V. Barker (English), Signor Vaccari (Italian), Count L. Gajoli (Italian), M. Lebreton (French), Mr Hannay (English), M. D. Urzaiz (French).

Fifth round, 11: Signor Marconcini (Italian), Mr. Bullets (English), Count Dolfin (French), Mr. Oakeley (English), Mr. Walters (English), Baron de Brouilly (French), Signor Bellusci (Italian), Mr. J. Denny (America), Signor Majno (Italian), Signor Calari (Italian), Signor Bernaroli (Italian).

Fourth round, 13: Mr. Roberts (English), Herr Schœnbœrn (German), Mr. Nixon (English), Lord Lovat (English), Signor Peloso (Italian), Signor Oliva (Italian), Mr. Harding Cox (English), Signor Soldi (Italian), M. Pinson (Belgian), Signor Briasco (Italian), Signor Fantachiotti (Italian), Signor Casapiccola (Italian), Earl of Carnarvon (English).

Third round, 37: Signor M. Guida (Italian), Mr. Hall (English), Count Erdody (Austrian), Signor Bergogna (Italian), M. R. Gourgand (French), Signor Memmi (Italian), Mr. Chase (English), Herr Hans Marsch (German), Count Esterhazy (Austrian), Signor Guidicini (Italian), Mr. Thomas (English), Mr. Kennedy (English), Mr. A. Court (English), M. A. Ginot (French), M. A. Brasseur (French), Prince Schirinski (Russian), Baron de Dorlodot (Belgian), Signor Benvenuti (Italian), Mr. Callander (English), Signor Quairolo (Italian), Signor Colongo (Italian), M. Hoth (French), Count Le Marois (French), Signor Paolo Gazelli (Italian), M. Lo (French), Signor Fiachetti (Italian), Signor Ralto (Italian), Prince Poniatowski (French), Mr. Haydon (English), Signor Verri (Italian), M. Paccard (French), Signor Mainetto Ghido (Italian), Mr. Howard (English), Signor Crespi (Italian), Prince Bariatinsky (Russian), Mr. Yall (English,) Baron de Heeckeren (French).

Signor G. Grasselli, this year's winner, is one of three brothers who have been shooting at Monte Carlo, on and off, for several years, but he himself did not distinguish himself last season, though he killed 82 pigeons out of 117 and accounted for five out of seven in the Grand Prix.

The previous winners of the Grand Prix since its creation in 1872 are as under:

1872. Mr. G. Lorillard (U. S.).
1873. Mr. J. Jee (England).
1874. Sir W. Call (England).
1875. Capt. A. Patton (England).
1876. Capt. A. Patton (England).
1877. Mr. W. A. Yeo (England).
1878. Mr. H. C. Pennell (England).
1879. Mr. E. R. G. Hopwood (England).
1880. Count M Esterhazy (Austria).
1881. M. Camáner (Belgium).
1882. Count de St. Quentin (French).
1883. Mr. J. Rober's (England).
1884. Count de Caserta (Italy).
1885. M. L. de Dorlodot (Belgium).
1886. Signor Guidicini (Italy).
1887. Count Salina (Italy).
1888. Mr C. Seaton (England).
1889. Mr. V. Dicks (England).
1890. Signor Guidicini (Italy).
1891. Count L. Gayoli (Italy).
1892. Count Trauttmansdorff (Austria).
1893. Signor Guidicini (Italy).
1894. Count C. Zichy (Austria).
1895. Signor Benvenuti (Italy).
1896. M H Journu (France).
1897. Signor G. Grasselli (Italy).

It will be seen that since its foundation the prize has been won ten times by the English (but not once since 1889), eight times by the Italians, three times by the Austro Hungarians, twice each by the French and the Belgians, and once by the Americans.

Two other events were shot on Jan. 29 and Jan. 30 respectively. That on Jan. 29 was the

GRANDE POULE D'ESSAI.

For this event the number of entries exceeded all previous records for the same event. A total of 105 entries was obtained. The conditions were: Grande Poule d'Essai of £80 and a gold medal, added to a sweepstake of £4 each; second received £20 and 25 per cent. of the entries; third £12 and 20 per cent., fourth £8 and 15 per cent.; 25 meters, ties at 26 meters; 105 subs.

Mr. Robinson, the Californian, who finished 14th in the Grand Prix three days later, finished fourth in this event. The winners were: 1st, M. Horodetzki, Russian gun and Schultze powder, £187; M. Journu, Purdey gun, French powder, and Signor Calari, Scott gun and Schultze, divided second and third moneys, a total of £221; Mr. Robinson, Smith gun and Schultze, won fourth money, £71. M. Horodetzki scored 13 straight; M. Journu and Signor Calari, 12 out of 13; Mr. Robinson, 9 out of 10

LA PRIX D'OUVERTURE

Was shot on Jan. 30. As in the Poule d'Essai, the number of entries beat the record in this event, 106 entries being on the list. As the scores of the winners are something out of the way for Monte Carlo, it may be as well to quote from the London *Field's* report in regard to the quality of the birds trapped on this day: "The birds—which, as on Thursday, were English, and were trapped by Roberts—were (as a rule) good, and though the wind was not particularly strong they proved too good for a large proportion of the competitors, as may be gathered from the fact that forty missed in the first round, twenty-four in the second, and twelve in the third; the 106 competitors being thus reduced to thirty in a short space of time."

The conditions were: Prix d'Overture of £120 and a gold medal, added to a sweepstakes of £4 each; second received £30 and 25 per cent. of the entries; third, £20 and 20 per cent.; fourth, £10 and 15 per cent.; distance, 26 meters, ties at 27; 106 subs.

Count Trauttmansdorff lost his bird in the 11th round after he had run 10 straight, thus leaving only four in for the prizes. These were M. Verdavaine, Mr. Mackintosh (an Australian), Signor Calari and Signor Riva. Signor Riva lost his bird in the 16th round and took fourth money, £74. Signor Calari hung on to the 18th round, when his bird got away; he won third money, as on the previous day; his share was £105. Seven more rounds were needed before a decision was come to, M. Verdavaine and Mr. Mackintosh killing their birds until the 25th round. In that round the Australian lost his bird. This gave the gold medal to M. Verdavaine, the two shooters dividing first and second moneys, £344.

The guns and powders of the winners were: M. Verdavaine, Purdey and E. C.; Mr. Mackintosh, Greener and Schultze; Signors Calari and Riva both used Scott guns and Schultze powder.

Leroy Gun Club.

LEROY, Pa., Feb. 12.—The members of the Leroy Gun Club had a little shoot this afternoon, ten shooters taking part in the five events shot. No. 1 was at 15 targets, 50 cents entrance; first prize, a woollen sweater; second prize, 1lb. can of King's Smokeless. A. Kelly won the sweater and C. McCrawey the powder. Nos. 2, 3, 4 and 5 were at 10 targets each, 50 cents entrance, two moneys. The scores show some improvement, and all the members seem to be interested in the sport. The club will hold monthly prize shoots.

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	15	10	10	10	10	Targets:	15	10	10	10	10
T H Morse	6	..	..	..	..	C McCrawey	10	4	..	..	6

A Kelly	11	6	7	5	7	S D Lloyd	5	4	5	6	4
A Percival	7	..	..	..	..	R Holcomb	7	6	8	7	6
C Holcomb	9	..	8	9	7	Chas Mott	4	7	..	5	6

B. F. Smith did not take part in any of the sweeps, but shot at 50 singles, unknown traps and angles, and at 25 pairs just to show the boys what he could do with King's Smokeless. He broke 39 out of the singles and 45 out of the doubles. For the singles, the targets were thrown very hard; some low, some high, and up and down the screen. Scores:

Fifty singles, unknown traps and angles, and 25 pairs:

B F Smith.....11101111011111101111011011011100111110011111111011—39

On Feb. 22 B. F. Smith and C. E. Armstrong, of Troy, Pa., will shoot a match at 50 live birds, $100 a side, loser to pay for the birds. Smith stands at 30yds., Armstrong at 28yds. The match will be shot at Troy, and will commence at 2 P. M. There seems to be quite a lot of interest taken in this match, and Armstrong, who is well known around here, appears to be the favorite in the betting. S. D. L.

South End Gun Club, of Troy.

TROY, N. Y., Feb. 16.—Owing to the heavy snow and the unfavorable weather only four members turned out to take part in the regular monthly shoot of the South End Gun Club, of this city. The conditions of the contest for the gold badge are 25 targets per man, unknown angles, handicap allowances of misses as breaks. Capt. W. H. Jackson and J. E. Costello were scratch men and succeeded in breaking 16 and 18 respectively. H. B. Tucker, with 3 misses as breaks, scored 19 in all, while J. Sholan, of Watervliet, with 6 misses as breaks, scored 16. Mr. Tucker thus won the gold medal. All four shooters exceeded their averages for 1896 and obtained one point each. The executive board of the club has decided to award prizes to the members getting the largest number of points in 1897. Scores were:

H B Tucker (3)	01110110111000110111100111—16+3—	19
J Sholan (6)	11111111001100000000110000—12+6—	18

W. B. CHRISTOPHER, Sec'y.

The Knoxville Gun Club.

KNOXVILLE, Tenn., Feb. 13.—The plan of our club contests for 1896, briefly stated, was as follows: The general average of each member of the club was determined from the preceding year. Taking this as each member's basis of shooting, the club offered to each member one-half of his target money in each club contest (consisting of two 20-target events) if he equaled said average. If each or any member exceeded this average basis the club offered as a special premium a certificate of merit valued at 25 cents, and to be redeemed by the club at the end of the year. Said certificate was subject to challenge by any member holding a certificate. To win the same each contestant must exceed his average base, and failing in same they tied regardless of scores made. Under these conditions the following members were the winners of the club contests for the year ending Dec. 31, 1896:

	Average base out of 20.	Target credit wins.	Certificate wins.	Shell.	Powder.	Gun.
J Cannon	18	10	4	Leader	E. C.	Daly Ejector
S Van Gilder	18	16	7	Leader	Du Pont	Smith Ejector
R Van Gilder	18	20	10	Leader	E. C.	Smith Ejector

De Pew	12	1	0	Blue Rival	E. C.	Smith

WORKING FOR THE GAME AND FISH.

The club has been very active during the last three years, working to educate the people to the proper understanding of game and fish protection. And to this end, that a fish hatchery has been located, about 100 miles from our city, convenient for the distribution of game fish in the pure mountain waters of adjacent territory. Laws making dynamiting and fish poisoning a felony have been enacted after many hours of labor by the active and zealous members of the Knoxville Gun Club.

The club also bought, April 10, 1896, ten hen and five cock ring-necked pheasants, planting them out on a preserve of some 2,000 acres. We have secured from the Legislature now in session laws protecting them against killing or capture for five years. The birds have propagated freely and give indications of prolific breeding.

The club also bought and liberated this month 200 live quail for restocking, so that the near future promises the members of the club the delights of the rod, dog and gun, such as but few are permitted to enjoy. This Legislature, we are now assured, will pass the non-export law, and prohibit the netting, trapping or snaring of quail. Much time, labor and zeal have been employed to accomplish such results, and we doubt not that the rewards for these endeavors will be rich when the good old dog makes a point.

R. VAN GILDER, Sec'y.

Glen Echo Gun Club's Shoot.

ROCKVILLE, Md., Feb. 13.—The third day of the Glen Echo Gun Club's tournament was the most successful of the shoot. The attendance was good, while a number of spectators were on the ground to view the shooting. Among those who took part were: Dr. Lupus and Charles Bond, of Baltimore; William F Wagner, of Washington, etc. The shooting was hard, so high scores did not prevail, but were rather in the minority. Mr. Bond was the only one to make a straight. Scores were:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

ORIOLE.

Shooting at Memphis.

MEMPHIS, Tenn., Feb. 9.—Great interest in pigeon shooting is being manifested by members of the Memphis Gun Club. We are practicing on the sly in the hopes that we may develop a Grand American Handicap winner before that important event occurs. Our old-time friend and genial sportsman, Irby Bennett, has been spending a few days with his Memphis friends, and we endeavored to entertain him with a live-bird shoot to-day, with following results:

	No. 1.	No. 2.	No. 3.	No. 4.

Callendar (28)	11111—5	1●1111●11●011●●111●1—13	0111110101— 7	11111—5
Neely (28)	10111—4	11101111101●10000111—13	1●11●w	.....
Bennett (27)	11110—4	●011111110111111110●0—15	1111111110— 9	11011—4
Robertson (27)	11110—4	0110●1110111100110 11—13	1111111011— 9	01110—3
Duncan (28)	11011—4	1●1111111111111011—18	.....	.....
Graggs (28)	.....	.....	1101111110— 8	11111—5
Weaver (27)	.....	.....	1111111011— 9	11101—4

No. 5 was a miss-and-out, $1 entrance. In this event Bennett, Callendar, Graggs, Weaver and Porter all killed 3, and had to divide up. Robertson lost his first bird.

Of the above events, No. 2 was a team race; Poston, Duncan and Robertson shooting against the other three. Poston's team won by 49 to 41. In the scores the second-barrel kills were not marked.

We will have another shoot on Feb. 13, and will report results. Chief interest centered in the team race, which was thought to be about an even match, but the result was such as to fool the best posted. We have a number of good live-bird shots in Memphis, and can, we believe, make a good showing with any club in this section.

MEMPHIS.

Baltimore Shooting Association.

BALTIMORE, Md., Feb. 13.—The Maryland handicap, which has been postponed for two weeks, was shot to-day on the grounds of the Baltimore Shooting Association. The conditions of this event were 20 birds per man, $10 entrance, birds extra, handicap rise. C. A. Macalester, Du Pont and James Malone tied for first place with 19 each, Coe taking second place with 18. Another 20-bird race, for the price of the birds, was shot between Macalester, Kingsbury and Whistler; Whistler had to pay for the birds.

A $2 miss-and-out was also shot, with the following result: Du Pont 7, Brewer and Macalester 6, Whistler 5, Kingsbury and Thomas 1.

In a 10-bird race the following scores were made: Macalester (30) 7, Thomas (28) 8, Green (27) 8, Kingsbury (26) 6, Whistler (25) 6, Du Pont (29) 9, Malone (29) 9, Hawkins (29) 10.

Scores in the other events were:

Rising Sun Gun Club.

RISING SUN, Md., Feb. 9.—The Rising Sun Gun Club held its monthly shoot this afternoon. Keen won the medal with 24 out of 25. Scores were as below:

A. B. Keen 24, Hartenstine 20, J. Gifford 19, S. Terry 13, England 23, Clayton 12, Martindale 18, Worthington 17, Alexander 19, C. Kirk 16, Sterrett 15, Letts 17.

H. L. WORTHINGTON, Sec'y.

ON LONG ISLAND.

ROCKAWAY POINT ROD AND GUN CLUB

Feb. 15.—The regular monthly shoot of the Rockaway Point Rod and Gun Club was held to day at the club's grounds, Rockaway Park. The attendance was small, and only eight events in all were decided. Tom Lewis and Frank Baxter did the best shooting. Scores:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

EMERALD GUN CLUB.

Feb. 16.—The last monthly shoot of the season of 1896-7 for the Emerald Gun Club, of New York, took place this afternoon at Dexter Park. The attendance was not as large as usual, but was still large enough to show that the Emeralds can turn out a goodly number of members at the finish of the season Five men went straight, among them Dick Phister, who thus lands in first place with the total of 93 kills out of 100 shot at in the ten monthly shoots that he has attended. The scores as a whole ruled high, and very few pigeons escaped the cracks. Below are the scores, showing the flight of each bird:

NEW YORK GERMAN GUN CLUB.

Feb. 17.—The regular monthly shoot of the New York German Gun Club was held at Dexter Park to day. The attendance was very good, twenty-two members taking part in the club event, which was at 10 live birds. The birds were a more than ordinary lot and the consequence was that only one man of the twenty-two scored 9 out of 10, five others scoring 8 each. John Schlicht was the one 9, and he lost his first bird, but ran straight to the close. Scores:

John Schlicht (6½)	0121211112—9	J H Boesenecker (5)	1102120202—6
Dr Hudson (7)	0121022211—8	M Bondon (5)	0010121011—6
J Wellbrock (7)	2102110112 8	A Le Moult (5)	0103202020—6
F Sauter (6)	1010112122—8	P Garms, Jr (6)	1102111000—5
J P Dannefelser (6)	0112110121—8	H Thamford (6)	0001012020—4
Hy Oehl (5½)	1120220222—8	E Radle (5½)	1100002100—4
H Leopold (6)	10 1220010—6	B Koenig (6)	2010002100—3
F Kronsberg (5½)	0221200110—6	H Nobel (6)	0000010120—3

New members, unclassified:

Phil Moersch	1020101102—6	Rob Debacher	1100001001—4
Edward Hotz	0120120 20—6	Henry Meyer	2100000202—4
W G Meisenholder	1220000202—5	Jacob Bissinger	1020020000 3

Feb. 18.—The committee appointed at the annual meeting of the New York German Gun Club to apportion handicaps for the ensuing year made its report to-night, the list of handicaps reading as follows, all shooters standing on the 18yds. mark:

Seven points—Dr. Geo. V. Hudson, John Wellbrock, S. Julian Held, Philip Leibinger and Eugene Doeinck; 6½ points—P. J. Eppig, Geo. H Smith and John Schlicht; 6 points—J. P. Dannefelser, J. F. C. Elfess, Peter Garms, Jr., Bernard Koenig, Charles Lensus, Henry Nobel, W. H Pye, Fred Sauter, August Schmitt, Henry Leopold and Henry Thamford; 5½ points—Fred Kronsberg, August Lucas and Ernest Radle; 5 points—J. H. Boesenecker, Michael Bondon, Dr. Klein and A. Le Moult; 4½ points—Henry Oehl; 4 points—Jacob Bauer, Henry Greitner, Martin Goetz, Fred Huff, Edward Hotz, Wm. Kurzer, George Loewer, G. A. Leutheusser, John Racky, Hugo Sedlacgsk, Emil Stradtmann, Jacob Bissinger, Robert Debacher, Wm. G. Meisenholder and Philip Moersch.

FOUNTAIN ROD AND GUN CLUB.

Feb. 18.—There were good birds trapped at Dexter Park to day for the members of the Fountain Rod and Gun Club to shoot at. The club event is at 10 live birds per man, but W. H. Lair and Dr. Adfur Eddy were high with 8 out of 10. Dr Wynn was second with 7. The scores were as below:

W Lair (30)	2212202126—8	W R Selover (30)	2100211002—6
Dr A Eddy (28)	1120221110—8	W R Allen (29)	0022200224—6
Dr W Wynn (30)	2110202101 7	J E Lake (28)	0111002210—6

NEW UTRECHT GUN CLUB.

Feb 10.—The New Utrecht Gun Club held its first shoot of the season at its old grounds, Woodlawn. The members turned out in good force, thirteen taking part in the club event at 10 live birds per man. C. Furgueson was the winner in class A with 9 out of 10; Gaughen in class B made the same score, being the winner in that class. C. D. Lohmann was an easy winner in class C. W. H. Thompson shot as a guest of the club. Scores in the club event and in the sweeps shot during the afternoon were as below:

Class A.

Cor Furgueson (30)	2222220222—9	W F Sykes (30)	2222211202—8
C M Meyer (30)	0222022222—8		

Class B

* Guest.

Sweepstake, 5 birds: Conny Furgueson 5, Gaughen 5, Jones 5, J. A. Bennett 4, F. A. Thompson 2.

Sweepstake, same: F. A. Thompson 5, Bennett 4, Jones 3, Conny Furgueson 3.

Sweepstake, same; C. M. Meyer 5, Conny Furgueson 4, F. A. Thompson 3, Jones 4, Cornelius Furgueson, Jr., 4, J. N. Meyer 4, W. H. Thompson 4, J. A. Bennett 3, D. C. Bennett 3.

CRESCENT A. C., OF BROOKLYN.

Feb 20.—In weather that was unfavorable for high scores, owing to the high wind that prevailed, seven members of the Crescent Athletic Club had a little practice preliminary to its two matches next week. On Washington's Birthday the club meets a team from Columbia College, and on Saturday, Feb. 27, a team from the Princeton College Gun Club will visit the Bay Ridge grounds. Scores to-day were as below, the events being shot as follows: No. 1, unknown angles; Nos. 2 and 7, known angles; the others, expert rules.

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
D G Geddes	19	19	13	..	19	..	15	..	G Notman.	..	18	10	12	..	11	..	8

H Werleman	7	6	..	6	..	..	13	5									

BROOKLYN GUN CLUB

Feb. 20.—The grounds of the Brooklyn Gun Club are hard enough even in fine, still weather. With a wind blowing like it did this afternoon high scores were almost an impossibility. This not being a regular shooting day of the club, only a few members showed up for practice work. Scores were:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
T Baron	6	8	8	5	4	7	..	6	..	4	5	4
J W Williams	5	5	5	2	3	2	..	5	..	2	2	4
T B Bartlett	2	2	1	2	1	..	5	..	3	..	..	2
F Patterson	..	1	1	0	1	..	3	..	2	..	..	..

No. 12 was at 5 pairs. All events 10 targets.

IN NEW JERSEY.

AT ELKWOOD PARK.

Feb. 12.—The heavy storm of snow and wind put a stop to any chance of a big entry in to-day's events. Only two shooters were on hand: L. T. Duryea, of New York, and E. Walters, of Saginaw, Mich. These two shot at 65 birds each, The first event was a 25-bird match, Duryea conceding his opponent 2½yds. as a handicap. Duryea won this event with 22 to 21. In the second match, under the same conditions, both tied with 24. They agreed to settle the tie by shooting off in strings of 5 birds; in the first string it looked as if Walters had it sure, but he lost his last bird. In the second string each scored all 5 birds. In the third series Duryea scored his 5 birds, while Walters lost his third. Below are the scores:

No. 1:

L T Duryea (29)	2222222220222215220111220—22
E Walters (27)	2201222221212222220010222—21

No. 2:

Duryea (29)	2222220212112121111112111—24
Walters (27)	2222121112112222220021112—24

Shoot-off in strings of 5:

Duryea ..... 22021 11112 11122 Walters..... 22120 22212 22022

Feb. 3.—The chief event on the programme for to-day was the Asbury Handicap, 15 birds per man, $15 entrance. Duryea, Morfey and Hank White tied with 14 each, and shot off miss-and-out; White lost his second bird in the shoot-off, and the other two divided the purse. It will be noticed from the scores that the handicaps were changed every event, winners being penalized, and losers being put forward. This is the rule at Elkwood Park, and it is one that is bound to encourage the weaker shots. To-day's scores were:

	No. 1.	No. 2.	No. 3.	No. 4.
T W Morfey (29)	12 (30)	1 20 (30)	0 (29)	2222002222—8

Morfey (29½)	1222221112210	.....	.....
Duryea (29)	20	.....	.....
Marshall (28)	20	.....	.....
Daly (28)	0	1022122221—9	1122122222—10
Walters (28)	1112211222210	2011212101—8	1121212111—10
Conklin (28)	2222211121220	.....	.....
Daly (re-entry)	21212222222212	.....	.....

Walters and Daly decided the tie in No. 9 by a $5 miss-and-out. Daly won on the second round.

TERRY VS. DAVIS.

Feb. 15.—There was quite a large attendance to-day on the Oakwood Inn grounds, Nate Astfalk's new shooting grounds, to witness the live-bird match between William Terry and George Davis, both of Westfield. The conditions were 35 live birds each, $50 a side, 30yds. rise, A. S. A. rules. Terry was the favorite, but he could do no better than tie his opponent, each losing 12 out of the 35 shot at. The tie was not shot off, although Terry was very anxious that the match should be decided. Both men had plenty of chances to win; Davis lost his last 2 birds and Terry his last Scores were:

W Terry	1022222002122202022020 0220022022120—23
G Davis	2121220 2022022022202011201100 200—23

N. A.

M'ALPIN AND HOEY AT HOLLYWOOD.

Feb. 19.—G. S. McAlpin and Fred Hoey met this afternoon in a 100-bird race on the grounds at Hollywood, near Long Branch. The Hollywood boundary is less than 21yds., and in addition to this short boundary a strong wind blew directly from the shooter to the traps, carrying many a driver that was killed stone dead out of bounds, without the shadow of a chance for the shooter to have done better or quicker work. The scores are decidedly ragged and plainly show the effect that this short boundary had on the shooters. The birds, of course, were extremely fast, but five misses in succession, five losses out of six shot at, and five out of eight, seem to talk of something else besides fast birds, short boundary and dead out of bounds. It looks like the result of extra hurry to get in the second barrel if needed. McAlpin had 12 drop dead out of bounds and Hoey 11.

At the end of the 25th round McAlpin led by 2 birds. Then came a break on his part, 5 successive pigeons being scored lost; Hoey lost 2 of the 5 also, but ended up the 30th round with 1 to the good of McAlpin. Out of the next 4 birds Hoey lost 3, while McAlpin killed all and took the lead by 2 birds at the end of the 3 th round. When 50 birds each had been shot at the score stood 37-36 in favor of McAlpin. Both scored 19 out of the next 25, Hoey losing 5 out of his last 8 birds in this string. They thus entered upon the last quarter with McAlpin 1 in the lead.

The last quarter was a curiosity. Both lost their 76th birds, but McAlpin also lost his 77th and with it the lead, the score being a tie. Out of the next 8 birds Hoey lost 5 to McAlpin's 2, the latter again getting the lead, but this time being 2 ahead. The 85th and 86th rounds saw no change, both scoring their birds. Then McAlpin lost his 83th, 90th and 93d birds, the score being again a tie, as Hoey killed all his birds. Both scored their 89th birds, and they entered the 90th round tied. From this point McAlpin ran 6 straight, but Hoey lost his 91th, 91st and 93d birds, and with them the match, by 3 birds. Scores were:

South Dakota Tenth Annual.

CANTON, S. D., Feb. 13.—*Editor Forest and Stream:* The tenth annual tournament of the South Dakota Sportsmen's Association will be held at Canton, S. D., on May 19-21, under the management of the Canton Gun Club. Open to amateurs only.

C. M. SEELY, Sec'y.

The return match at live birds between the Endeavor Gun Club, of Jersey City, and the East Side Gun Club, of Newark, N. J., takes place on the grounds of the East Side Gun Club on Thursday next, Feb. 25. The first match was shot at Marion and resulted in an easy win for the East Sides.

Trap Around Buffalo.

BISON GUN CLUB

BUFFALO, N. Y., Feb. 9.—The Bison Gun Club gave a most enjoyable shoot to-day on its grounds, Walden avenue. It was an all day shoot, with a programme varied enough to please anybody; sparrows, targets and pigeons were trapped during the day. Below are the scores in tabulated form:

	5 sparrows.	10 targets.	10 targets.	5 sparrows.	5 sparrows.	5 sparrows	10 pigeons.	5 pigeons.		5 sparrows.	10 targets.	10 targets.	5 sparrows.	5 sparrows.	5 sparrows.	10 pigeons.	5 pigeons.

AUDUBON GUN CLUB.

Feb. 13.—The regular weekly shoot of the Audubon Gun Club was well attended. In the club badge shoot, event No. 3, E. W Smith won the Class A badge; Story, the badge in Class B, and W. H. Woodbury the Class C badge. Capt Alex Forrester, who has been on the sick list for some time, took part in to-day's events. Scores were:

RAVELRIGG.

Auburn Gun Club.

AUBURN, N. Y., Feb. 18.—The Auburn Gun Club has held its first practice shoot over its magautrap, with electric pull attachment, and is well satisfied with the scores made. In a team race, 8 men to a team, the scores were as follows:

No. 1 team: Corning 24, Garrett 24, Barnes 23, Whyte 22, Church 20, Gilmore 19, Cattle 17, Kennedy 17—166.

No. 2 team: Knapp 24, Hunter 23, Carr 22, Bris'er 21, Egbert 20, Goodrich 19, Tuttle 18, Steel 14—161.

The records made in all the other events figure up as follows:

	Shot at.	Broke.		Shot at.	Broke.
Tuttle	105	83	Cattle	50	32
Carr	110	96	Whyte	95	82
Knapp	85	79	Corning	85	79

Brister	40	31	Garrett	100	88
Steel	25	14	Barnes	60	46
Hunter	60	48	Alexander	36	29

K.

O. K. Gun Club, of Kansas City.

KANSAS CITY, Mo., Feb. 11.—The O. K. Gun Club, of this city, held its monthly medal shoot to-day at Washington Park. The weather was very unfavorable, but it did not appear to have much effect on the attendance. Eighteen shooters took part in the main event at 15 live birds, among the number being J. C. Plumber Read, of Omaha, Neb., who was on his way home from the San Antonio shoot. Hickman and McDonald both made clean scores. Gottlieb, McCurdy and Lamb each losing one bird. Scores in to-day's race were:

Hickman	2221122122221122—15	Ferguson	2120121011101112—12
C Herman	1012100111(2211—11	Everingham	1110111110121111—13

PUBLISHERS' DEPARTMENT.

What a .30cal. Winchester Will Do.

THE Winchester Repeating Arms Co., New Haven, Conn., has printed for free distribution a leaflet descriptive of the powers of their new smokeless powder repeaters.

Mr. S. M. Emery tells of shooting deer at distances up to 425yds. without changing his sights, and probably not elevating a great deal from the point blank. No more wonderful advance has been made in the present century than in this matter of trajectory. It is only a matter of sixty years ago that as a result of experiments undertaken with the English service arm the soldiers were instructed to aim 1.0ft. above a man at 600yds. if they wished to hit him!—*Adv.*

The Savage Arms Co. Calendar.

THE Savage Repeating Arms Co., Utica, N. Y., has published a handsomely lithographed calendar, 10×14in. in size, entitled "Six Shooters." The six shooters referred to are six swarthy little savages (no pun intended), who, armed with bows, are executing a war dance about a pyramid composed of three stacked Savage rifles. A dusky maiden meanwhile plays an accompaniment on a tambourine.

Good reproductions are given of the Savage smokeless powder canister and Savage cartridges, of which latter four different styles are available in the same rifle.—*Adv.*

Lancaster's Guns.

CHARLES LANCASTER, 151 New Bond street, London, England, publishes a catalogue of high-class guns and rifles that is well worth sending for. This includes descriptions of Lancaster's famous single-trigger guns, ejectors and other hammer and hammerless guns for pigeon shooting, wildfowling and general shooting, as well as guns with one, three and four barrels, combined ball and shotguns constructed on the "Columbian" plan, and single and double-barrel rifles of various types.—*Adv.*

ANSWERS TO CORRESPONDENTS.

O. F., Philadelphia.—To answer your question in full we would need to write a lengthy article on dog training. "Training vs. Breaking," price $1, or "Modern Training," price $2, will give you the information in full. We can furnish them.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MARCH 6, 1897.

VOL. XLVIII.—No. 10. No. 346 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page vi.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

FOREST AND STREAM *will be glad to meet its friends at Space 73 in the Sportsmen's Exposition, at Madison Square Garden, on March* 13 *and the following week.*

But the scarcer the fruit, the more prized it is; and seldom have I experienced greater pleasures than when on the Florida Keys, under a burning sun, after pushing my bark for miles over a soapy flat, I have striven all day long, tormented by myriads of insects, to procure a heron new to me, and have at length succeeded in my efforts. And then how amply are the labors of the naturalist compensated, when, after observing the wildest and most distrustful birds, in their remote and almost inaccessible breeding places, he returns from his journeys, and relates his adventures to an interested and friendly audience. Audubon.

BIRD PRESERVATION ON THE FARRALONS.

IT will be a matter of congratulation to all who are interested in the matter of the preservation of our bird life to learn that the Lighthouse Board has acted on the suggestion made to it last October in FOREST AND STREAM, and has given orders that the traffic in birds' eggs on the Farralons shall cease. In the editorial referred to we said: "It would seem as if the simplest and most natural way to act in the matter would be for the Lighthouse Board to issue instructions to its subordinates all over the country to protect rather than to destroy the birds which may breed or have their homes near the lights kept by the various keepers."

The traffic in eggs carried on by the Greeks and Italians of San Francisco, who for many years have made a business of visiting the Farralon Islands and collecting the eggs by permission of the light-keeper, threatened to exterminate several of the species which formerly bred in countless numbers on these islands, and within the past few years a marked decrease has taken place in the abundance of several sorts of birds. It was high time that this destruction should cease, and the Lighthouse Board is entitled to great credit for the promptness with which it has acted in the matter. The Bird Protective Committee of the American Ornithologists' Union has also been active in the matter.

There was no good reason why orders such as have now been issued by the Lighthouse Board should not have been given at once, but we are so accustomed to have any dealings with the Government occupy years before any definite point is reached that it is encouraging to find now and then a body that is willing to act with reasonable promptness.

This was a question to which there was only one side The gathering of the eggs by the lighthouse keeper and his helpers was a perquisite—a business which they carried on at certain seasons in addition to the work of tending the lights. The light-keeper, however, is hired to do certain work; he and his assistants are paid for their time and their labor by the Government, and should not be allowed to engage in any outside avocations.

In the course of a year or two we may now hope to see the seafowl occupying the Farralon Islands in something like their old-time abundance. The action taken by the Lighthouse Board in this specific case is altogether to be praised. It may be hoped, however, that a general order of like tenor, applicable to all lighthouse stations on both coasts, will be issued before long, and when this is done a very effective force of bird protectors will have been appointed. The subject is one which is constantly growing in interest, and the United States Government should not be far behind the public in its action in this matter.

WHILE FISHES SLEEP.

SOME time ago, while Prof. Verrill was working with the United States Fish Commission at Wood's Holl, he made some very interesting observations on fishes while asleep, which have just been made public in an article in the *American Journal of Science*. These studies were unfortunately interrupted before as many observations had been made as was intended, yet the facts published are of very high interest. Perhaps the most interesting of the discoveries made was the quite unexpected one that a number of fishes have the habit of changing their colors at night and while asleep.

It can easily be understood that it was not easy to make the observations to be described. Most fishes sleep very lightly and are readily awakened by the least jar, or by anything which causes the water in which they are resting to vibrate, and the utmost care had to be taken not to awaken them. The fishes were in the Fish Commission's aquariums, and were observed usually between midnight and 2 o'clock A. M., after every one else had retired. The gas jets near the tanks were turned low, and it was necessary for the observer to use as much caution in studying them as the hunter exercises in approaching a moose. A heavy footfall, a sudden movement, or the sudden turning up of a gas jet was enough to awaken the fishes.

In many cases it was noticed that the change of color mentioned consists of nothing more than an increase in the depth and intensity of coloring, the pattern of the colors remaining the same. This is the case with several kinds of flounders. Those that are spotted or mottled with dark color show these dark markings in much stronger contrast with the ground color by night than they do by day. Several species of minnows, which are marked either with longitudinal or transverse bands of dark color, show these markings as a decided black at night. The same is true of the kingfish, in which the obliquely marked transverse stripes of dark color come out much more strongly and better defined at night than by day. The same thing is true of the black sea bass and of the sea robin. Several examples of the common brook trout were observed to become much darker at night than by day, but Professor Verrill was not sure that these fish were really asleep.

It is a well-known fact that trout, flounders and some other fishes have the power of measurably changing their colors even in the daytime to adapt them to the color of their surroundings. This power is possessed by other animals, as some frogs and toads and some reptiles. For this reason a darkening of color at night would be expected, even if the fishes were not asleep. All such changes are undoubtedly of a protective character.

There are certain fishes, however, which change their colors while asleep in a way much more remarkable than those already mentioned. Among these is the common scup or porgy. This fish, when active in the daytime, has a bright silvery color, with iridescent tints. At night when asleep its ground color is a dull bronzy hue, and the body is crossed by about six transverse black bands. As this fish rests in nature among eel grass and water weeds, this coloring, assumed when sleeping, is obviously protective. But when one of these fish was awakened by suddenly turning up the gas to its full height, it immediately took on the silvery colors of its daylight dress. This experiment was repeated many times on many individuals, and always with the same result.

A common filefish showed a change in color pattern when asleep. By day this fish is mottled with brown and dark olive green, and the fins and tail are a little darker than the body. But when asleep at night the body becomes pallid gray or nearly white, while the fins and tail change to a decided black. Among the rocks and weeds, where the filefish lives, these colors are in a high degree protective.

Besides his observations on color changes in fishes at such times, some odd positions in sleeping are mentioned by Prof. Verrill. The filefishes, for example, usually rested when asleep on the bottom, with the back resting at a considerable angle against the glass of the aquarium or against a stone.

The common blackfish or tautog has the odd habit of resting on one side, half buried among the gravel or partly under stones, and is often curved in strange positions. It is suggested that the flounders might have originated from some ancestral form, symmetrical like most fishes, that, like the tautog, had acquired the habit of resting upon one side, at first only while sleeping, but afterward continually, owing to the greater protection that this habit and its imitative coloring afforded. The one-sided coloring of the flounder and the changes in the positions of the eyes would gradually follow, in accordance with well-known laws.

On several occasions the common squid was observed while asleep. At such times it rests in an inclined position on the tip of its tail and the bases of its arms, which are bunched together and extended forward. The head and the forward part of the body are thus raised from the bottom to give room for breathing. The siphon tube is then turned to one side. At such times the color is much darker and the spots more distinct than when active.

THE NEW FOREST RESERVATIONS.

ON Sunday last, six days after the issuing of the proclamations setting aside the thirteen new forest reservations, the United States Senate adopted an amendment to the Sundry Civil Appropriation Bill nullifying these proclamations, and opening to settlement the lands (some 21,000,000 acres) set apart as a forest reservation by executive proclamation of February 22.

This step on the part of the Senate seems difficult of satisfactory explanation. President Cleveland's action in this matter, following the report of the forestry commission of the National Academy of Sciences, was universally approved by the press and the public as wise and far-sighted. It is impossible that the Senate should know any more about the subject than the public does, and naturally it cannot know so much as the President, who by his action approved the recommendations of the forestry commission. The haste shown by the Senate by this attempt to nullify the President's action seems, therefore, extremely undignified, and by many persons will be attributed to a feeling of irritation toward the President. No such feeling should be allowed to interfere with the general good of the country. No harm can possibly be done by permitting these tracts of mountain and forest to lie reserved until the subject can have proper deliberation, and until the facts concerning the land reserved and the uses to which it can be put shall be considered in a calm and temperate way.

A large proportion of the Senate know little about the needs of the dry West, so far as water is concerned, and those who are ignorant on this subject are assuming a serious responsibility when they throw obstacles in the way of an improved supply of the water so greatly needed by the inhabitants of our arid lands.

It is earnestly to be hoped that the amendment inserted in the Sundry Civil Bill will be stricken out in one House or the other, and that these reservations may be allowed to stand until such time as the subject can have fuller consideration.

WHAT IS HE READING?

WHAT is he reading? What is your boy reading? It is a question to which is given attention for the most part spasmodic and brief; rarely does it receive the serious consideration and the careful thought it demands. Just now there is some discussion in the journals of the day respecting the influence of young people's literature upon plastic minds and characters; and in its degree and importance this formative influence can in no wise be over-estimated. Manly reading will work to the end of making a manly boy and a manly man. For a boy who is some day to be a man there is no better literature in all the world than that of the field, and the recreations of the field and the world of nature, with its charms, joys and delights. If a boy likes to read of shooting and fishing and camping and woods life, there is no need to worry about him. And most healthy boys do take to forest and stream literature. If your boy has such a taste, cultivate it; if he has not, do your best to instill it into him.

The Sportsman Tourist.

MUD TURTLE.

BY ROWLAND E. ROBINSON.

In the morning, when eating breakfast, no plans were laid for spending the day, and after the meal no one made the usual preparation for departure, but all idled about the camp as if without a present object in life but the mere pleasure of existence.

The day was one to invite indolence, the sun bathing the earth in such a mellow warmth that it soon dispelled the morning chill and left no use but pipe-lighting for the fire, which burned with a lazy flicker of transient flame and lazier drifts of smoke jets from snapping embers and brands.

Unruffled by the breath of the sleepy air, nor broken at all save where some waterfowl languidly cleft its surface with a silent wake, lake and creek bore the motionless doubles of painted shore and reedy margin, and the deeper azure of far peaks and cloudless sky; while from the tranquil scene arose no busier sound of life than the lazy call of a duck or the faint noises of farms so remote that they seemed beyond it. Near at hand, but no more obtrusive, there was a drowsy hum of warmed flies and the slow chirps of crickets and the light scurrying of a chipmunk among the leaves.

"Wal, seh, boys," said Antoine, breaking the silence of the circle as he arose and stretched himself with a yawn, "dis was too pooty day for lose it. What all you goin' do wid it, hein?"

"It is a turrible neat day an' that's a fact," Joseph declared with unwonted decision, after a slow and careful contemplation of earth and sky. "An' I be thankful 'at we hain't obleeged tu waste it a-workin'. It allus did kinder seem tu me as 'ough 's if it was a sorter heavin' away o' the Lord's blessin's tu spend a ri'daown pleasant day a-workin'. Some 'at I misused that way years and years ago lays heavy on my conscience yet."

"Naow, Jozeff, don't be no harder on yourself 'an what other folks is," said Uncle Lisha, in mild sarcasm. "You must have an almighty tender conscience an' an almighty good mem'ry. I can't remember but precious few such misduin's tu lay up ag'in ye."

"Wal, the's more'n I wish't the' was," said Joseph, staring retrospectively into the smoldering embers as if they represented the cold ashes of the past. "It does seem 's 'ough it was weeked, most 'specially 'long in the fall an' winter comin' on, when the' won't be no rale pleasant days aou' door tu speak on, for a feller tu be a-breakin' of his back diggin' taters, a-humpin' up ag'n the blue sky, with his nose an' eyes tu dead tater tops an' naked sile, when ev'ything looks so putty all around, an' it a'most the last chance o' seein' o' it, or putty nigh, mebby. Then take it in the winter when the' does come one o' them kinder stray days 'at got left over aouten fall, er comes afore its reg'lar time in spring, a feller do' want tu be a-tunkin' at a tree julluk a woodpecker, an' lose all the good on 't, 'ceptin' what sunshine soaks intu his back. When ag'in come spring you jest wan' tu thaw aout an' git the good on 't yourself, an' not be tapped julluk a maple an' have your sap b'iled daown for other fo'kses benefit. Take it in summer, it's tew hot most o' the time tu work, anyway, an' when the' is a comr'table day it seems 's 'ough a feller ort tu jest lay in the shade an' see things blow an' grow an' git ripe erless go a-fishin', which I wouldn't in no boat of nary sect, not for ri'daown enj'yment, don't seem 's 'ough I would, not if they bit faster 'n you c'ld yank 'em."

"Dat was de bes' comfortable Ah'll can took in dis worl', me," Antoine remarked, while Joseph took breath, "jes' for feesh, an' hab de feesh do hees half."

"I don't s'pose it's sca'cely right," Joseph continued, "but sometimes it 'most seems 's 'ough I putty nigh wanted tu cuss the man 'at invented work; he sartainly did begin a tormented sight o' trouble."

"Not no gre't for you, Jozeff," Uncle Lisha commented, and went on to say, "I do' know as I hanker arter work, but if I hed me my tools here on a shoe tu mend, jes' for knittin' work, I cal'late I sh'ld enj'y myself tol'able well."

"Work kinder goes ag'in the grain when it interferes wi' huntin'," Sam said, thrusting a cedar twig into the dying embers and watching its tardy kindling, "but then the work gives a better relish tu the huntin' when you git it."

"Onc' Lasha spikin' 'baout de shoe mek me t'ink prob'ly Ah'll bes' was gat mah t'read-needle an' men' mah traowser," bending to inspect his frayed knees, "bah gosh! Ah wish mah clo's was grow up jes' sem lak you' skin w'en you tore it. Ah do' know all what Ursule goin' said w'en he see mah traowser all wore off so. Ah guess Ah goin' tol' him it 'cause Ah'll been pray for him an' de chil'en so much. It take good many pray' for go 'raoun' all of it, a'n't it? Wal, Ah guess Ah embroider mah knee." Then having got needle and thread and lighted his pipe, he sat down to the uncongenial task.

"Dis mek me rembler one—" he began, and then interrupted himself with a sharp indrawing of breath and an imprecation. "S-s-s-p, Sa-cre!" as he jabbed the needle point into his knee. "Dat mek me rembler one man Canada."

"Good airth an' seas! I was a-hopesin' you'd forgot him for oncte," Uncle Lisha shouted with such emphasis that it arrested the flow of anecdote. Antoine suddenly became silent and plied his needle with sullen diligence.

"Wal, you might as well trot him aout, Ann Twine," the old man said, moderating his tone, "th' won't be no gettin' red on him naow."

Thus encouraged, Antoine went on with his story, while his audience listened with more interest in the manner of his telling than in the matter.

"Yas, sah, dey was one man Canada, one tam, an' if you'll a'n't b'lieved it Ah can tol' you nem de place w'ere he live, honly Ah'll fregit now. One tam in de fall his waf was mek it new pair clo's all over, new shirt, new coat, new traouser, everyt'ing. De hwomans he feel putty plump 'cause he'll weave it all heese'f, an' cut it all up an' sew it togedder heese'f, an' he lak for look at hees mans w'en he gat all on for go on de market.

"One day w'en he go, jes' 'fore he'll ready for start, he'll hear hees leetly dog bark very hard in de hwood not more as leetly way from de haouse. He was terribly hunter mans, an' t'ink prob'ly de dog was tree up a coon. So he'll took hees hol' fusee an' run off for shot it a minute, an', bah gosh, w'at you t'ink?

"It was pant'er, hol' big feller, hugly lak meat-axe. But de mans he'll a'n't scare for run. He p'ant hees gaun an' pull it an' de flint jes' go 'pluck.' An' de pant'er jomp on de man, 'scroonch,' an' tore off all dat new clot's not more as two ninches wide. Oh, bah gosh, Ah'll tol' you haow dat hwomans was feel bad w'en she see it all spile up dat clo's she was be so troublesome for mek. Dat was too bad.

"Dar, sah," he said as he regarded his needlework with proud satisfaction and caressed the grinning stitches, "Ah'll b'lieved dat was mos' as han'some as if Ah'll had quiltin' party work mah knee. All Ah'll 'fraid for was Ursule t'ink Ah'll gat some oder hwomans for sew me up."

"Did the man get hurt much, Antwine?" Joseph inquired.

"De man? Oh, he was be keel, Ah b'lieve so. Wal, Ah guess Ah'll goin' han'some mah oder knee so hees brudder a'n't be shem of it. Onc' Lasha, if you want it Ah'll sew you clo's. Ah'll was be preffic tailor man, me."

When the last stitch was taken he sawed off the thread with his tobacco-clotted knife, put the needle carefully away, and then studied all the landscape with an undecided air as he said:

"Wal, Ah do' know if Ah'll go feeshin', or pick some wa'nut, or borry some happle, or go 'long up de crick for see wat Ah'll see. Ah guess Ah do dat," he said, coming to a decision as his eyes dwelt on the shaded level shore. "Any of it goin' 'long to me?"

"I guess I'll jes' laze raound tu-day," Uncle Lisha said after a little consideration, and Joseph after larger deliberation concluded to stay and help him, for "it seemed 's 'ough it was a consid'able of a hefty job o' sittin' raound for a man o' Uncle Lisher's years tu ondertake alone."

"If I had Drive here I'd set some o' these Lakefield foxes tu dancin' tu a Danvis tune," Sam said, studying the lay of the land with a careful eye, "jest tu see haow nigh I've guessed the runways. As it is, I believe I'll poke along up tu Mr. Bartlett's, an' take 'em a pair o' ducks."

Failing to induce any of them to accompany him, Antoine shouldered his gun and set forth alone along the shore of the creek, making stealthy approach to every marsh-locked pool that offered harbor to a duck, and searching every nut tree for squirrels. But the waterfowl were abroad and the squirrels at home, so he continued his quest beyond the imperceptible junction of the shores of creek and Slang. Now and then he was startled by a bittern springing in awkward haste from the marshy covert, or by a heron launching himself to stately flight from some still pool; but he did not care to chance the uncertainty of a flying shot on such poor game, nor did he discover anything worthy of capture till he came near the log causeway that formed the approach to the Slang bridge.

There he came upon a monstrous turtle scrambling along in a ponderous haste, the eldest patriarch of the marshes, bearing moss of a century's growth upon his venerable back. Antoine rejoiced at the discovery of such noble game and hastened forward to secure it, but the wary old turtle immediately faced him, and pivoting on its hinder legs met every attempt of his assailant to seize him by the tail with quick out-thrusts of the head and vicious snaps of the ugly jaws.

"Bah gosh, you'll a'n't felt very good-nachel, dis morny, a'n't it, Onc' Mud Turkey?" cried Antoine, with growing respect for his venerable antagonist. "Wal, Ah'll goin' give you somet'ing for bit a'n't so soft Ah was," and laying aside his gun he went in search of a suitable stick.

Taking advantage of this cessation of hostilities, the turtle retreated to the bare border of the marsh and began burrowing into the soft muck with such speed that he was more than half his length out of sight in it when Antoine returned after a very brief absence.

Laying hold of the turtle's tail, the stout Canadian tugged with might and main before the creature's obstinate resistance was finally overcome and he was drawn forth and laid sprawling helplessly on his back. One end of a stick was now offered him, which he seized savagely, and was dragged thereby well up on to the mossy bank, where Antoine took counsel with himself concerning the present disposal of his captive.

"'F Ah'll took you home jes' you was, you a'n't han'some for look, an' prob'ly dey a'n't t'ink you was fit for heat. But meat jes' han'some anybody, so Ah'll jes' honly took dat for mek you 'quaint of de boy. Ah'll was very sorry for you, Onc' Mud Turkey, but Ah'll obleege for cut you necks. You was took you' las' ride on you' hown foots, an' you'll a'n't pull some more leetly dauks by hees leg of it an' bit hole on hol' homans geeses prob'ly. Oh, a'n't you shem for do so gre't weeked?"

Thus hardening his heart for the execution, he drew out the turtle's neck to its fullest extent by the unreleased grip on the stick and severed it at one stroke, with little apparent effect on the creature's vitality, and proceeded to dress the meat, using the broad shell as a trencher whereon to bestow it.

Having completed this task and washed his hands, he felt need of the refreshment of a smoke and made preparation therefor, but then discovered he had neither matches nor punk, though he was provided with flint and steel for firing the latter. In this extremity, with appetite whetted the keener by disappointment, he looked about for the means of relief and discovered in a bushy clearing at no great distance a forlorn little cabin.

A whisp of smoke writhing from the low chimney promised fire enough to light a pipe and Antoine made toward it, bearing his spoils till he came to a safe place of deposit in a fence corner.

It was a squalid habitation, indicative of shiftless poverty. A path led to it, bordered on one side by some stunted rows of frost-bitten corn, on the other by hills of weed-choked potatoes, and close to the threshold a starved heap of pine roots, the sole miserable representative of a woodpile in the midst of the abundant forest. The place of missing panes in the single sash of the only front window was filled by a weather-beaten straw hat and a faded, tattered remnant of calico in some sort emblematic of the occupants, Antoine thought, when he entered after knocking on the sagged door that could neither be quite opened nor quite shut.

A tall, gaunt, hollow-eyed woman and a tallow-faced boy of similar habit and features sat smoking short pipes by a scant open fire, and turned their listless faces toward him without surprise, scarcely with curiosity, as he accosted them.

"Good morny, ma'm, dat was very nice day dis morny."

"Hm, I s'pose so," the woman assented dubiously in a dolorous, monotonous tone, "for them 'at's well 'nough t' enjoy it. We hain't, me an' Jul'us."

"Ah'll very sorry you a'n't felt better," said Antoine, with an expression of deep concern in his voice; "'f Ah could lit mah pipe Ah'll was felt better, me. Ah'll a'n't gat some fire."

He held forward his pipe to indicate his need, and the old woman poked the embers with a stick, hitching her rickety chair aside to make room for him. Antoine scooped up a coal and puffed diligently a moment before he asked:

"What was be de matter of it, ma'm?"

"O, it's the rheumatiz in my limb, an' Jul'us is peaked. No appetite for nothin' but terbarker. I s'pose it's me a-growin' old an' Jul'us a-growin' so fast—grows lak a weed, he does; la'ge of his age, an' sma't as he is la'ge."

She regarded her son with stolid admiration, while he, sucking his black pipe persistently, as stolidly received her praise of physical and mental growth and the visitor's hearty confirmation of it.

"Yas, ma'm, he'll was smart boy, lak steel traps, an' he beeg lak hosses. Ah'll b'lieved he be man 'fore you was, ma'm."

"I do' know haow in this livin' world he grows so, without no more nourishin' victuals," the fond mother continued. "We hain't had nothin' but pertaters an' johnnycake an' green corn t' eat for a fortni't. My limb has pained me so't I wa'n't able to arn nothin' duin' for the neighbors, an' he hain't able to work no time—it takes all his stren'th a-growin'—so we hain't hed no meat victuals."

"Dar was plenty dauk an' feesh," Antoine suggested.

"Haow be you goin' to get ducks without no gunner, nobody to shoot it?" she drawled, without changing her monotonous tone. "Er ketch fish when you ain't able? Fish hain't no nourishment neither, if you hain't no fat pork to fry 'em in."

"Dar was a lot of mud turkey," Antoine further suggested.

"Mud turkles!" the old woman exclaimed with expression of intense disgust in voice and features. "D' you s'pose we'd eat mud turkles? H'mp'! I'd livser eat snake!"

Antoine felt indignant at the starved crone's contempt of what he considered a choice delicacy, but inquired blandly:

"Prob'ly you'll a'n't lak cheekin pooty good, a'n't it?"

"Why, yes, me an' Jul'us can eat chicken, the white meat, if the' hain't no skin on't."

"Wal, naow, Ah'll tol' you, ma'm, dat was purty good lucky, 'cause you see Ah'll was gat some cheekin all dressed up dat Ah'll was carry to mah frien' on de camp, an' Ah'll be glad for give you some of it 'f you len' me dish for fetch it."

The old woman nodded assent, and pointed over to the table with the air of begrudging a favor. Taking a broken blue-edged plate from the table that was scant of everything but untidiness, Antoine went to bring the alms.

"Ah'll can't help it," he sighed as he knelt before the improvised trencher, and reluctantly selected a generous portion of the lightest colored meat.

"'F Ah'll goin' taught it for heat mud turkey Ah mus' beegin wid de bes'. A'n't he look jes' lak cheekin. Bah gosh, he was cheekin, honly he grow on mud turkey."

He carried his gift to the cabin and presented it to the old woman, who, after a critical inspection, began preparing it for the pot; while her son awoke to such interest in the prospective repast that he sauntered out doors, and with the dull axe pounded some pine roots into suitable lengths for the fire, which being kindled he sat down again to the restful enjoyment of his pipe and the growing fragrance of the seething stew. Antoine wished he might stay and see with what relish it was eaten now he was sure his half kindly deception was not suspected, but he could find no excuse for tarrying longer.

"Wal, ma'm," he said, as he dallied long over the fire with the relighting of his pipe, that he might inhale the odor of the pot, "you cheekin smell very good, an' Ah hoped he tas'e more better as he smell, prob'ly, an' Ah'll hoped you'll gat over your limb. Ah'll had one of it one tam in mah knee, an' he was very bad t'ing for had. An' Ah'll hoped you' boy grow long an' wide. Good morny, bose of it."

"Thank you, an' I'm obleeged to you," the old woman said, with some cordiality. "I s'pose you couldn't fetch a drawin' o' tea if you come this way ag'in?"

Julius withdrew his wrapt gaze from the steaming pot to cast an inquiring glance on the departing visitor, who went his way pretending not to hear the request.

Antoine took up the precious burden, which had been somewhat lightened by his generosity, and bent his careful steps campward, praying that he might fall in with nothing worth shooting, and compelled an answer to his prayer by refusing to see a chance for a shot. He would not look to the right when a partridge clucked and stirred the leaves with deliberate footsteps among the undergrowth close beside his path, nor to the left when an unsuspicious squirrel barked and squalled in the nearest hickory, nor turn his eyes toward the marsh to seek the cause of the bickering and splashing that was going on behind the screen of sedges.

So, without interruption, he came to where he saw the white tent shining like a welcome beacon among the trees. He presently found Uncle Lisha and Joseph basking in the sifted sunshine, the one trying to content himself with idleness, the other making no effort for the full enjoyment of it.

Antoine set down the shell of meat before them and exclaimed as he pointed proudly toward it:

"Dar, sah, Ah'll fetched you somet'ing for heat dat was victuals."

"Good airth an' seas!" cried Uncle Lisha in surprise, "where did ye git some fresh meat? You be'n where they was a-boocherin'? I ain't heard no squealin', an it ain't no pork nuther. What is 't?"

"No, sah, Onc' Lisha, Ah'll be'n butchy mase'f, an' he'll a'n't squeel nor beller, an' he was pork an' beefs, an'—wal, dey was fave kian's of it, but Ah'll fregit toder, 'cep' cheekin; Ah'll guees he was all gone prob'ly. A'n't you mek aout you min' of it, Zhozeff?"

"Wal, I don't seem to make aout ezackly," said Joseph, deliberating on all fours over the heap of meat and swaying and crouching in various points of observation. "Meb by it's beef, but I guess it's pork, an' I do' know but it's veal, some on't, an' like 'nough 't hain't nary one. I do' know."

"An' you'll was gat him 'baout raght, an' it was more better as all. It was mud turkey!"

Joseph recoiled upon his haunches aghast at the revelation, and Uncle Lisha exploded a snort of disgust.

"You'll a'n't want for stick you' nose up 'fore you gat it in you mout'," said Antoine, as he set about his cookery. "You a'n't w'en you smell heem, an' w'en you heat you be happy."

His companions watched him in a silence that was a protest against his operations while he put the meat in the pot and set it on the replenished fire, when after a final approving glance he relegated to them the further care.

"Ah b'lieved Ah'll goin' keel dauk over on de bay, me, an' if you'll was goin' loafer 'raoun' here you can jes' well keep de kittly bile, Zhozeff, an' Onc' Lisha keep you from heat all up of it," and when Joseph after pondering awhile did not refuse the duty, Antoine shouldered his gun and strolled out of sight among the trees.

When the sound of his departing footsteps could no longer be heard, Joseph started up with unusual agility and whispered wheezily, "Say, Uncle Lisher, it don't seem 's 'ough we orter eat that dumbed hejus riptyle jes' tu please him, does it naow?" The old shoemaker shook his head in decided negative, and he went on, "Wal, then, I tell ye what, le's take an' empty aout the consarned mess an' put in some duck meat in place on't; he won't never know the diff'ance. Seem's 'ough it wa'n't no more 'n sarvin' him right, seein' what a heaowdelow he made 'baout me a cookin' that bowfin an' wouldn't let me cook my own mud hen, which if it was of the mud specie was 'nough sight better lookin' faowl an' what a mud turkle is."

"I hain't no objections," Uncle Lisha said, "for I don't like the idee o' bein' 'bleeged tu eat what I don't want tu. But we won't heave it away; we'll jest hide it till we git aour dinner eat, an' the critter c'n sit up nights an' cook an' eat his'n if he wants tu."

The conspirators at once set about carrying out their plot, emptying the present contents of the pot into a pan which they hid inside the tent, and substituting therefor the fraud. Wings, skin and larger bones were rejected, and no flagrantly incongruous member put in except one gizzard, which Joseph popped into the bottom layer. When all this was accomplished in haste and fear of discovery, and the pot again set to boiling, the two sat down to tend it with more leisurely care, but were hardly settled in their seats when they heard cries of distress arising from below the cliff.

"Oh, Unc' Lasha! Here, Zhozeff, come fas' you can! Oh, Ah'll broke off mah leg, bose of it! Ah guess mah arm, prob'ly. Come, quick!"

Greatly alarmed, they hurried down the steep path with a speed so unwonted that it endangered their own limbs. They searched the foot of the cliff, expecting at every step to come upon the helpless form of their comrade.

"Ann Twine! Ann Twine! where be ye? Grunt if ye can't speak," Uncle Lisha called loudly, but no response came.

"Wha' d' the dumb fool wantu go an' tumble off o' there for? He might ha' knowed it 'ould pooty nigh kill him. Mebby he is dead, poor cre'tur'; I wish't we'd ha' let his turkle be jes' as he fixed it."

The most careful search failed to discover Antoine or any trace of him, and after a meditative silence Uncle Lisha broke out:

"Consarn his pictur', he be'n a-foolin' on us wi' his dumb French cadidoes. 'T wouldn't no more'n sarve him right if we hove him over the rocks an' his mud turkle after him."

"Er make him kerry us up on his back," Joseph suggested, as they toiled up the path. "Seems 's 'ough that 'd suit me tol'able well."

They rested themselves while they watched the pot, and in the middle of the afternoon Antoine returned, tired with tramping and sharp set for the aldermanic feast.

"Darned cunnin' caper, wa'n't it, a-hollerin' bloody murder the way you did?" cried Uncle Lisha, and wondered at the innocence of the Canadian's face as he answered in surprise:

"Me? Ah'll a'n't holler, but Ah'll felt holler all de tam, an' de more Ah'll smell dis de more Ah'll felt so. Ah guess it was loon you hear, Ah'll see one of it. Or wal' geeses, prob'ly; dar was big drove of it roos' on de lake 'tween de li'thaouse."

"Ann Twine," Uncle Lisha said sadly, "you be the lyinest sarpent I ever see."

The others watched Antoine furtively as he eagerly sniffed the steaming pot and peered into it, but they saw no shadow of suspicion on his intent face.

"Dar, sah, Onc' Lasha, an' too you, Zhozeff, a'n't you'll cure you foolish all de tam you been smell dat mud turkey git ready for heat? Oh, Ah tol' you he grea' deal more better as dauk an' he jes' tendry as cheekens," he continued, as he prodded the contents of the pot with a fork and then lifted it from the fire to the center of the table. 'Naow, Zhozeff, brought de plate an' de bread an' de pettetto, an' git ready for beegin. Come, Onc' Lasha."

"I can't help a spleenin' ag'in it, Ann Twine, but I'm goin' tu try it a hack, jest tu please you," said Uncle Lisha, taking his place with feigned reluctance, and Joseph followed in like manner, after performing his part in furnishing the table.

Each helped himself sparingly and took tentative morsels, while Antoine fell to with unquestioning faith and good appetite. The latter was so fully shared with him by his companions that they soon forgot their pretense of aversion and vied with him in the onslaught, and exchanged knowing winks when he extolled the excellence of the dish and smiled upon them in benignant triumph.

When hunger was appeased, Joseph began to be uneasy under the burden of his secret and troubled to know how to relieve himself of it, when Antoine gave him the opportunity.

"Dar, sah, Onc' Lisha, Zhozeff, naow you was be heat it, a'n't you willins for hown he was putty good, hein?"

"Wal, tol'able, when a feller's hungry 'nough not to be p'tic'lar," Uncle Lisha admitted, "but I don't call it nothin' stror'nary."

"Tu tell it jest 's 't is, Antwine," said Joseph, after due deliberation, "it r'ally don't seem 's 'ough it was a turrible sight diff'ent f'm duck."

"O, he a'n't, a'n't he?" cried Antoine. "O, Zhozeff, what for you a'n't talk sem you heat? You was heat more as you was in two day 'fore. Naow, what for you'll a'n't hown dat mud turkey was grea' deal more better as dauk, hein?"

"You won't go tu r'arin' up and gittin' mad 'f I tell ye?" Joseph asked, swelling with suppressed laughter and hitching a little nearer to Uncle Lisha, who was chuckling audibly.

"No, sah, Ah'll a'n't never git mad raght after dinny, 'special w'en he was mud turkey. Dat always mek me good-nachel," Antoine magnanimously declared.

"Wall, you hedn't ortu, 'cause you know you was consid'able uppish abaout me a-cookin' my mud hen an' haow you went on consarnin' a bowfin 'at I fried one time, an' it don't seem 's 'ough ary one looked wus'n a mud turkle or a eel, so it don't seem 's 'ough you'd ortu rare up much when I tell ye it haint nob'dy nor nothin' but duck we be'n a eatin'."

"O, he'll a'n't, a'n't he? Wal, he was putty good dauk," Antoine remarked, with imperturbable coolness.

"It wa'n't nothin' else, an' the way on't was, you see, me and Uncle Lisher kinder spleened ag'in that 'ere turkle so it didn't seem 's 'ough we could eat it, hungry as we was. So, arter you was gone, we jest emptied it aout'n the kittle an' filled it up wi' duck, which it is what you be'n a-eatin'. But we didn't heave away your turkle meat. It's in the tent yender, an' you c'n eat the hull caboodle on't."

The two conspirators curiously watched their victim, with the expectation of seeing him burn with wrath or wilt with shame, but he calmly continued the careful cleaning of his pipe without speaking until he assured himself of a free draft by vigorously blowing and sucking. Then grinning benignantly on them while he whittled and ground a charge of tobacco, he said:

"Wal, naow, Ah'll goin' tol' yo'. Ah was mek four peoples heat mud turkey to-day, an' dey a'n't know it. Fus', w'en Ah dress him up Ah'll fan' hol' hwomans an' hees boy; dey a'n't mos' got not'ing for heat, but dey can' heat mud turkey, oh, no. De good meat walkin' all 'raound a'n't quat good 'nough for it; dey mus' had cheekin, an' de hol' hwomans an' hees boy, dey was very satisfy. Den Ah'll brought de res' an', bah gosh, you was very kin' for cook it an' help me heat it, w'en Ah'll know you'll a'n't lak it for heat mud turkey."

"I tell ye, Ann Twine, it wa'n't turkle!" Uncle Lisha cried in some heat. We wouldn't eat the dumb stuff, an' so we changed it, jest as Jozeff says."

"Dat was so, for Ah'll see you do it, me. Yes, sah," he continued, complacently regarding their astonished faces. "W'en Ah go 'way Ah'll fregit mah pipe an' Ah'll come for gat it an' see you an' Zhozeff was fuss wid de pot, an' Ah'll hid behin' dat bush till you gat it all fix as you want it. W'en you'll hear me holler you'll a'n't fin' me, a'n't you? Dat tam Ah'll come back here quick an' Ah'll swap de meat ag'in, an', bah gosh, sah, you'll gat lot of dat mud turkey inside of you."

"Ann Twine, you're a-tellin' one o' your lies," said Uncle Lisha, incredulously. For answer Antoine brought forth the pan of duck from the tent and set it before them.

"Dar," he said, pointing to the gizzard conspicuously displayed on the top, "has mud turkey gat gizzar'? A'n't Ah'll see you put heem on de pot, Zhozeff? A'n't Ah'll see you poke for it when you heat, hein? Oh, you was lak de gizzar' very much, Zhozeff, but you'll a'n't fin' it honly but jes' de chip Ah'll put in for improve mah storee for be true," and after a moment's search at the bottom of the pot he fished out a cedar chip on the point of his fork and held it triumphantly before their faces, whose expression of blank amazement broadened to imbecile grins, while Antoine laughed uproariously.

"Oh, Onc' Lasha! Oh, Zhozeff! A'n't you putty smart for foolish me an' gat foolish you'se'f more as Ah was," and he pranced about in an ecstasy of triumph, while Uncle Lisha groaned in disgust.

"The dumb thing makes me feel crawly. I shall be a snappin' at ye fust ye know."

"Wait, Ah'll look see if de moss beegin for grow on you back, Onc' Lasha. Oh, don't you go crawl on de ma'sh," as the old man stumped down the path to the landing.

"Say, Antwine," Joseph said confidentially, "it don't seem 's 'ough the'd be any use o' tellin' Samwil. If you won't say nothin' I won't, an' we'll come it on him."

But when Sam came he stumbled upon the fresh turtle shell, and remarked as he kicked it aside:

"Hello! be'n a-havin mud turkle, hev ye. Wal, gi' me some if you got any left. I al'ays be'n wantin' tu try it."

Natural History.

SOME MORE ABOUT WOLVES.

Editor Forest and Stream:

I am very glad to see the life history of wolves come so prominently before your readers. There are several points that I should like to know more fully about.

In my experience the gray wolf is the only predaceous mammal in America that organizes in bands to circumvent a quarry too swift or strong for it. A partial exception to this is the coyote, our American jackal, which often hunts in pairs; but I never saw a case of more than two coyotes hunting together.

The ordinary howl of the gray wolf is its rallying cry; it means: "I've found meat, but it's more than I can handle alone; come on."

When wolves howl around a house at night, it is an attempt to drum up force enough to meet any emergency that the attempt to get food may give rise to.

The short yelping howls of the hunting wolves are to notify their friends that game is afoot, and also to drive said game, just as beaters shout in driving a cover.

The rallying cry of the wolf is sometimes described as discordant. To my ear it is a most melodious note—far finer and smoother than the tongue of the best hounds.

Those who consider the fox the acme of cunning have probably never had any wolf experience. The reason a fox maintains his existence in settled country is that he is a small animal and is subterranean in habits. If the wolf with its cunning were to adopt the underground habits of the fox, it would swarm wherever the country is rough, wooded or mountainous, in spite of settlers.

YUKON RIVER (ALASKA) MOOSE HEAD, OWNED BY W. F. SHEARD, TACOMA, WASH.

Mr. Sheard supplies these dimensions: Spread, 73¼in, with 40 points (three not showing in photo).

Firearms are the only things a wolf greatly dreads, and it is this dread, combined with the knowledge that all men in the West carry them, that makes the American wolf avoid a meeting with man.

In Europe, where it is the exception for men to go armed, the wolves abound and are dangerous to human beings in every country. This excludes only Holland; in every other country, even in France, a number of persons are reported each year devoured by wolves. In that country bounties on about 200 wolf heads are paid each year, and there is no perceptible diminution of the numbers.

In America I have never known an authentic case of wolves killing a human being, speaking, of course, from my own knowledge.

A map of the present range of the American gray wolf would no doubt coincide with the range of the deer—*i. e.*, the whitetail, or Virginian, in East and South; the mule and blacktail in the West; and the caribou in the North.

Aside from such purely artificial preserves as that on Long Island, I doubt if there is any deer country in America to-day without its due proportion of wolves.

In the woods near Tappan, N. Y., one dark night last autumn I several times heard a howl, which, if not that of a gray wolf, was a dog voice of the most exceptional kind.

It is extremely difficult to get measurements of our large wild animals. The will and the opportunity are rarely combined. But valuable service might be rendered if some of your huntsmen would record a large number of weights and dimensions. It is desirable to have:

Actual weight on a reliable scale or steelyard.

Total length from point of nose to end of bone in tail.

Total length of tail from insertion to end of bone.

Length of hindfoot from top of hough to point of longest claw.

Height at shoulder standing.

Length of head from tip of nose to point of occiput, or failing this, from the point of the nose to the tip of one ear, when the animal is quite dead.

There are three other measurements of value, to the artist at least:

Girth of chest.

Length from top of elbow to point of longest fore claw.

Length in a straight line from the point of the breastbone to the ischium, or bone which reaches the surface an inch or so below the insertion of the tail to one side.

As a rule the more measurements the better.

One point more: While there are numerous records of dogs and wolves crossing, did anyone ever know the hybrids to reproduce, either *inter se* or with either parent stock? I

have known this to happen in coyote cross dogs, but not with gray wolf hybrids.

I inclose a wolf story from the pen of E. H. Hickey. It appeared in the *Leisure Hour*, 1892-3. It bears all the internal evidence of truth, and is, I think, about the best wolf story ever written. I hope you will reproduce it.

ERNEST SETON THOMPSON.

A Wolf Story.

Instinct or reason, which, good sir? Oh, instinct in brutes, you say,
And reason only in lordly man. Well, think of it as you may,
I'll tell you of something not unlike to reason I saw one day.
Is it only men that are makers of law? Perhaps, yet hearken a bit.
I'll tell you a tale—say you if e'er you have heard a stranger than it.

It was many and many a league away from the place where now we are,
And many a year ago it happened in the land of the Great White Czar.
It was morn—I remember how cold it felt—but under a low pale sky,
When we moored our boat on the river bank, my companion Leigh and I.

And the plunge in the water unwarmed of the sun was less for desire than pluck,
And we hurried on our clothes again and longed for our breakfast luck;
When all of a sudden he clutched my arm and pointed across, and there
We stood up side by side and watched, and as mute as the dead we were.

We saw the gray wolf's fateful spring, and we saw the death of the deer.
And the gray wolf left the body alone, and swift as the feet of fear
His feet sped over the brow of the hill, and we lost the sight of him
Who had left the dead deer there on the ground uneaten, body or limb.
So when he vanished out of our sight we rowed our boat across,
And lifted the carcass and rowed again to the other side. The loss
For you, good Master Wolf, much more than the gain for us will be.
'T were half a pity to spoil your sport, except that we fain would see
The reason why with hunger unstanched you have left our quarry behind;
Red-toothed, red-mawed, forgone your meal; Sir Wolf, we'll know your mind.

Hungry and cold we watched and watched to see him return on his track;
At last we spied him atop of the hill, the same gray wolf come back,
No longer alone, but a leader of wolves, the head of a grewsome pack.
He went right up to the very place where the dead deer's body had lain,
And he sniffed and looked for the prey of his claws, the beast that himself had slain.
The deer at our feet and the river between and the searching all in vain.
He threw up his muzzle and slunk his tail and whined so pitifully,
And the whole pack howled and fell on him—we hardly could bear to see.
Breaker of civic law or pact or whatever they deemed of him,
He knew his fate and he met his fate, for they tore him limb from limb.

I tell you we felt as we ne'er had felt since ever our days began—
Less like men that had cozened a brute than men that had murdered a man.

—*E. H. Hickey in Leisure Hour.*

THE PANTHER IN BRITISH COLUMBIA.

THE range of the puma or panther (*Felis concolor*) in British Columbia is confined almost entirely to the coast, including Vancouver Island, where its center of abundance seems to be located. It is found but sparsely east of the Cascades, where in many localities it was never known until a few years ago; and the Indians there who have seen one have no name for it, and hold it in terrible dread. It ranges along the coast of the mainland from our southern boundary to about 52° north, but is extremely rare in the northern portion of its habitat. On account of the great damage done by this brute to the farmers' flocks, the Government has increased the bounty from $2.50 to $7.50, and I here present a table showing the number of panthers on which the bounty has been paid for the last six fiscal years:

Years.	Panthers.	Years.	Panthers.
1890-91	47	1893-94	122
1891-92	71	1894-95	115
1892-93	89	1895-96	166

These figures do not represent the full number killed, as not a few are taken by sportsmen, who prefer to keep the skin intact rather than have it mutilated for the sake of the bounty.

I have never known a single instance where a panther has attacked a human being—that is, where such instance could be traced to a reliable source. Courage is no part of a panther's composition; as a matter of fact, he has no courage, as the animals he lives on are not taken in open combat, but by stealth and quickness of action—two qualities which no animal in the mountains possesses to such a degree as does the American panther. He is simply built on springs, and the ease with which he can cover distances is marvelous. The young are said to be spotted, but not always so, as I received two about a year ago that could not be over two months old that had no spots; and again I handled one about a year and a half old which showed the spots quite plainly.

According to our newspaper reports, few panthers are killed in British Columbia measuring less than 7ft, while 8ft. and 9ft. would not be unusual. I have kept a record of the lengths of panthers measured by me during the last seven years; of this number—118—the greater portion of which came under my notice in the matter of paying the bounties, one measured 7ft. 6in., while only ten reached the 7ft. mark. I have been very anxious to procure one of those big panthers, and five years ago I made an offer—which is still standing—of $20 to any one who would bring me a panther in the flesh, killed in British Columbia, measuring 8ft. This reward has been claimed twice, but in each case the measurement fell short from 1ft. to 10in.

Two years ago at Beecher Bay, about eight miles from this city, two girls, one fourteen, the other twelve years, were returning from school along a woodland trail, accompanied by a collie dog, when a panther sprang out in front of them and trotted on ahead. The dog immediately gave chase, and the nearest tree was not any too near for the panther, who tore up to a place of safety out of reach of this terrible little dog. The elder sister, who is an expert rifle shot, left the younger girl with the dog to guard the panther while she went to her home about a quarter of a mile distant for her Winchester. Returning, she killed the big cat with the first shot. It measured 7ft. 3in., and is now mounted in the Provincial Museum.

It is more than probable that panthers prey upon pheasants, though I have no evidence that such is the fact.

JOHN FANNIN.

ANOTHER GREAT MOOSE HEAD.

WE have received from W. T. Sheard, of Tacoma, Wash., two photographs of a moose head which far exceeds anything yet recorded. The horns are shown in one case with a tape line stretched across them, and in the other with a man standing by them. The tape line shows a measurement of 73¼in. The horns appear to be very even and as nearly as possible of the same length, the figure 37 in the photograph coming near the middle of the skull, between the two burrs. The horns are also about as wide in front as they are behind. On the whole, these antlers are most remarkable and ought to be seen by naturalists. We infer from Mr. Sheard's letter, which accompanies the photographs, that the horns are supported on the natural skull, for he distinctly says that the skull has not been cut.

YUKON RIVER MOOSE HEAD.

We illustrated the other day a moose head in possession of Mr. Hart, of this city, measuring 70¼in. spread. It is an interesting fact that both these large heads come from Alaska, but no hasty conclusions should be drawn from this fact. In all probability it means nothing more than that Alaska is the home of the moose, and a home in which it is but little hunted. For this reason the males have time to grow great horns—horns, as shown by the specimens in question, which are so large that they closely approach the Irish elk (*cervus megaceros*), that giant of the deer tribe which flourished in Europe so recently that its bones have not yet had time to become petrified.

A Submarine Contest.

ONE of the most novel and amusing contests ever recorded was a race between two edible crabs, each drawing an eel skin to which was attached the head of an eel.

The members of a club whose house boat was then moored at Spermaceti Cove, Sandy Hook, had caught a number of eels during the previous night, and while the tide was out and the sand flats bare the eels had been skinned and the refuse thrown over the side to be carried away by the incoming tide. With the tide came innumerable crabs (our scavengers, as they were called) looking for and carrying away every particle that would serve them for food, and it was very little that they ever left behind.

The tide had covered the flats to the depth of a foot when two crabs of apparently equal strength were noticed in the clear water wrestling with eel skins some 18 or 20in. in length. The attention of the several members upon the upper deck was attracted simultaneously and all interest was centered in the struggle.

The eel skins, after a few moments' exertion on the part of the crabs, were pulled clear of some clam shells which had fallen upon them, and the crabs, one darkly colored and the other of a lighter shade, started for a large patch of eel grass at the rear end of the house boat, about 40ft. distant. The struggle was against tide and the start was even.

Each crab held by its claw the tail of the skin; the head, forming a bunch at the far end, waved from side to side with the "swirl" of the current.

So much interest had now been taken in the race that the members began laying wagers as to which crab would reach the dark line of the grass ahead. The crabs seemed to be aware of the great attention paid them and they apparently put forth their best efforts to reach the line a winner.

Now and then the current would swing the head end of the skin against a small tuft of grass, the crab would then bury its legs into the sand and with a mighty pull clear its burden from the obstruction.

Thus the race continued for nearly twenty minutes, sometimes the dark crab would be in the lead and then the other would forge ahead. The interest grew apace and the wagers were doubled and trebled. The noise of the excited members on the upper deck had attracted the whole company before the race was half over, and those who witnessed the latter part of the contest became as deeply interested and excited as those who were in at the start.

When about 10ft. from the finish line the dark-colored crab was obliged to cross a small soft bottom patch, which lay directly in the path, and it could get but little foothold, its legs sinking in the mud.

The light crab here had the advantage and gained a lead of several feet before the dark crab again secured a good footing.

The finish line was only a few feet distant, and the backers of the light crab were in high glee over the position it had gained over its rival, and those who had staked their money on the dark colored racer were about to acknowledge their defeat, when a big blue-clawed crab paddled out of the eel grass and, seizing the head of the skinned eel, yanked the light crab and its burden several feet backward over the course it had traveled, while the dark crab unmolested slid sideways through the edge of the grass a winner.

If the pieces of coal and bits of wood hurled at that blue-clawed crab could have reached its back, its shell would have been crushed beyond recognition. WILD HONEY.

Flight of the Flying-fish.

Editor Forest and Stream:

In your issue of Feb. 20 Mr. Frank M. Chapman wishes to know if flying-fish really fly. I am aware that there is a difference of opinion among naturalists in regard to this question, owing perhaps to the difficulty in being able to observe them at close quarters.

During many months' experience with the flying-fish fleet off Barbadoes I saw them rise from the water in all kinds of weather, and I emphatically assert that they do fly. They break from the surface at any part of the wave in calm or windy weather, in a billowy sea or a flat calm. If, however, they get up in the hollow of a wave they do not fly, and are often unable to surmount the impending crest.

I have taken them immediately from the net and placed them on the palm of my hand, from which they would fly to a distance of 300ft. or more with no impetus from me whatever.

If they get up in the teeth of the wind they invariably wheel and scud away before it. The end of their flight is caused solely by a cessation of the motion of the wings, and is simply a settling down or sailing like that of a pigeon.

I know that the flying-fish also vibrates its tail while in flight, and it is my opinion that he derives part of his motive power from this source. I have clipped the tail before starting them from the palm of my hand, and found that their flight is seriously interfered with in consequence.

One can also test the sustaining power of the wings by holding the fish suspended from the hook and line, and watching its movements. The motion of the wings is very rapid and extends through an arc of 45 degrees. The fish is exhausted by this motion in from ten to twenty-five seconds.

It is my belief that the moistening of the wing membrane has nothing to do with the flight of the fish. I have thrown them perpendicularly into the air to a height of 40ft., but this elevation did not prolong their flight, as they would always fall again swiftly when the wing motion ceased.

I do not wonder at Mr. Chapman's interest in this little fish, for he possesses many attractions in his flight and habits to delight and instruct those who can observe him.

HARRY HIGGINS.

Are Maine Moose Degenerating?

ONE of the stock arguments of those who favor a close season for a period of years on moose in Maine has long been that all the big bulls have been killed off, and that nothing but small moose remain, thus proving that the stock is nearing extinction. Without entering at all into the general discussion of whether absolute protection is needed at the present time or not, it might be well to submit a few figures which indicate that large moose are still met with in Maine While in Bangor last week I asked Mr. Crosby, the taxidermist, how the size of the heads which he received for mounting averaged as compared with previous years.

He replied that they were larger individually and in the average, and for curiosity's sake I got him to measure twenty of the largest heads, with the following results:

No.	Spread.	Points.	No.	Spread.	Points.
1	60in.	..	11	46in.	..
2	58in.	36	12	48in.	24
3	55½in.	39	13	50in.	..
4	60in.	28	14	48in.	..
5	54in.	24	15	49in.	..
6	52in.	..	16	48in.	..
7	59in.	25	17	52in.	..
8	48in.	24	18	45in.	..
9	57in.	..	19	56in.	..
10	59in.	..	20	47in.	..

This gives an average spread of over 52½in. for twenty heads killed in the hunting season of 1896. Argue from this any way you like. It may mean a round-up of the last moose in the State, but it certainly proves that the argument so freely used before the last hunting season, that the big bulls were all gone, is without foundation. J. B. BURNHAM.

Wild Life on Sandy Hook.

THE Sandy Hook country is a United States reservation, but I am sorry to say that no attention is paid by the authorties to gunning or trapping, either in the closed or open season I have destroyed a number of rabbit box traps, and most generally they were found in the vicinity of the life-saving stations.

There are more rabbits on Sandy Hook than in any other portion of the State, yet many are destroyed by cats which have been carried there by residents of the mainland. These cats have bred and become quite numerous, and are as wild as some of their kin of the West.

I have asked the State Commission as to my authority on a United States reservation, and the question has not as yet been satisfactorily answered.

Most of the violators of the game laws reach the Hook by means of boats, from New York as well as New Jersey, and the only way to capture them would be to arrest them within the reservation limits.

There are hundreds of large patches of ground that snow never reaches, and should the wind be blowing a gale the only evidence of that fact would be the roar of the surf, such is the protection afforded the birds by the thick cedars and sandhills. During the different seasons all the berries and fruits of this climate can be found growing there in abundance, the seeds having been dropped by the birds.

WILD HONEY.

Game Bag and Gun.

A BIT OF GOOD COVER.

GIVEN a bright, beautiful morning in late October, a fair retriever and plenty of time to accept the invitation that smiling nature held out, and a sportsman ought to have been happy. This was my opportunity in October, 1896, and I proceeded to improve the situation. I had looked in vain for cock in some favorite haunts, and had about abandoned hope of finding any until the fall flight, which in this locality, the Western Reserve, Ohio, does not usually take place until about Nov. 1. It was Nov. 3, I think, when I shot the first flight birds in '96. I had in mind a rough bit of second growth, perhaps eight acres in extent, where I had shot quail late in the season, but never had visited it early enough for woodcock. This ground was about three miles from the house, so I went up by way of the river bank, thinking I might pot up a stray duck, in which surmise I was disappointed, however. Occasionally a gray coat could be heard barking in the tall oaks, but I was not out for squirrels that day and did not molest them.

After about an hour's tramp the ground was reached, and I thought my pointer Ace looked ruefully at me after surveying the almost impenetrable thickets of scrub oak and blackberry bushes, several feet higher than one's head. In fact it was about the toughest cover I ever tried to hunt, and especially tough for a short-haired pointer. The long bushes had a very frequent and loving way of twining themselves about my neck at critical moments or leaving a bloody trail across my ungloved right hand. About two minutes after striking the cover Ace had a point, and as I urged him on a grouse rose clucking and perched on a limb over my head. I watched her a few moments, then flushed and was compelled to watch her go away unharmed (as the Ohio law of '96, while not prohibiting the shooting of grouse at this time, did forbid their possession before Nov. 10). We (Ace and I) then worked down the west side, where the ground seemed moist and suitable for cock, but not a bird did we find here. We then turned back and went up on the slope, where the ground was as hard and dry as a bone. This seemed to promise better, however, for Ace soon had a point in the thick bushes. I tried to urge him on to flush, but he would not budge, and I had to smash into the tangle myself, flushing a pair of cocks that went out on the other side unseen. I had their general direction, however, and soon had one in my pocket, but his companion gave us a longer chase. I finally flushed him from a brush heap covered with bushes and he joined his companion in my coat.

The next bird went out up the further side of a thicket without giving opportunity for a start. I marked him down in some ferns in short brush, and it was an easy matter to add him to the bag. I then called the dog and went over to the east side, where the brush was thicker if possible, but briers were less numerous. Ace soon discovered a taint in the air that interested him, and after roading some distance stiffened to a point. On walking in ahead of him a large bevy of half-grown quail rose, flying but a short distance, however. I let him work up a few singles to see if he possessed his good quail nose still, but he seemed thoroughly disgusted with me for not improving the many chances to break the law. After having our fun with the quail we started for the low fence running east and west and dividing the patch in two parts. Before reaching it I bagged another bird which rose wild and tried to get away over the tops of the trees. After crossing the fence we worked without reward for some time. I was following down the side of a small swale, keeping Ace on the other side. Finally I flushed a wild bird on my side, which went on ahead and crossed the swale, where I thought I marked him down in a jungle, I should call it. This was one of the worst places in the cover, and about the only way I could get through was to hold my gun above my head and push my way through like a snow plow in a drift. There was no such thing possible as a cautious approach, and I soon saw a brown body in the air, hustling for the woods on the west side. I did not "raise my gun," but lowered it from above my head and pulled both barrels in quick succession, but seemed to accomplish nothing but to accelerate the speed of the bird, which I watched out of sight. This I thought was the bird previously marked down, but it proved not to be, for I had taken but a few steps (or pushes) when the bird rose within easy shot and was gathered with his friends. I then coaxed Ace into the bushes and got out where I could see a little better, soon walking up a bird which gave me a straightaway shot which was duly improved. Just as this bird fell, another flushed by Ace attempted to cross in front of me, but was stopped with the remaining shell. In trying to mark down both birds as they fell I was a little uncertain of either, and they gave us a weary hunt before both were located. Ace did his best, but it is hard for a pointer to work in briers that a rhinoceros would shun. This seemed to be the end of birds in this vicinity, and as I was due at home at an early hour that day, concluded to take a look for the bird that escaped and then strike for home. The search was unsuccessful and I was soon homeward bound, promising myself an early return.

A few days later this promise was fulfilled, and we started in on the east side this time, getting a point on a pair of grouse almost as soon as we reached the grounds. I was obliged to let them fly away unharmed, but promised them my attention later in the season. Ace worked the ground thoroughly for a long time with no sign of birds when finally I heard the familiar whistle behind me and turned to see a cock heading for the fence and giving me a good cross shot. I swung in a little ahead of him and at the crack of the gun saw the top of a small tree topple over and thought the bird was lost. I was happily disappointed, however, as Ace soon came trotting out with the bird.

This reminds me of a day with grouse this fall, when I did not get the bird, or rather birds. I started in with three shots at grouse, and each time cut off a small tree in line with the birds, and they all got away. But that is another story. This solitary bird was all we could raise on the north side of the farm, so we crossed, and soon Ace had a point in the thickest kind of a brier patch. I tried to make him flush the bird, but he was immovable, and I had to crawl in ahead of him. The bird rose right at my feet and went back over my head too close to shoot, even if I carried one of those 20in. "bell-muzzles" which seem growing in favor with meat hunters of late. There was no such thing as marking down a bird in this cover, but I followed the direction of his flight. He rose wild the next time, and I scored a clean miss, but bagged him when he rose again. I put up another while going back where this one started, and bagged him with the second barrel. We found another up the swale that cunningly waited until I had passed him and then tried hard to get away behind me, but was a little too slow in his movements. Soon after Ace flushed one in some ferns at my right. I dropped him, but needed the second barrel to do it. He was only wing-tipped and fell in a villainous patch of briers, where, after a long, unsuccessful search, we were obliged to leave him. I secured one more down in the woods, and then thinking the ground all worked over, started for home. The only neglected spot was in the N.E. corner, and cover there was so light it did not seem thick enough to hide a quail. We swung around that way, however, on our way out, and were rewarded by bagging three woodcock in about as many minutes. This made eight this day, and seven the day before, which with the one lost was a total of sixteen for small cover of seven or eight acres. This may not be many when cock are thick, but was the best patch I had found in many moons.

Why cannot we have a little more grouse and cock shooting in our favorite paper, FOREST AND STREAM? Rise up, brother sportsmen, and give us your experience.

ADIRONDACK.

CAN HOWL TO FOOL A WOLF AND A WOMAN.

WASHINGTON STATE, January 27.—*Editor Forest and Stream:* While mining on the Clearwater in 1868, one Sunday morning about the first of May I took my revolver and went over to the cabin of my partners, and proposed to go up on to the hills and kill some grouse. They got their revolvers and we started.

Here the blue grouse come every spring to raise their young, and as they were so plentiful, we did not consider that spring shooting was so bad as we do now.

While going up the hill we saw where a very big wolf had gone along very recently, and it had kept in the trail until we came to where the trail forked. It had taken the trail leading up the river. We stopped for a few minutes, and while we were standing there speculating on what the wolf could be doing there that time of the year we were startled by its howling. It was not very far away. I shall not attempt to describe the feelings of other people, but when that dismal wail broke out it made me shiver from head to foot. When the echo had died away I mocked it, and the echo of my howl had not ceased before the wolf answered me, this time with renewed vigor. Then I again answered it.

I said to the boys that if we would wait here a little while the wolf would come. They ridiculed the idea, and we started up the ridge after grouse. Soon I flushed one, which went up into a big fir, and we were trying to locate it when we were startled by the wolf's howling back to our left. It had come to find its mate. We ran up on to a small mound and sat down, and I howled—but low, fearing that the wolf might be able to detect the fraud. This time it did not answer, but in a few minutes we saw it coming, trotting through the small brush on the ridge. It came to where there was an old pine lying on the ground with the limbs rotted off, jumped on to the top and trotted down to near the root, and stopped and looked toward us. It had hardly come to a stand when I shot at it, and at the crack of my revolver it tumbled off from the log. We ran up to where it was, and as soon as it found it could not get away it sulked, wolf like. The boys finished it with their revolvers. We took the skin, and although it was not first-rate it would make a tolerably fair rug. On cutting the wolf open, we found several large pieces of venison that showed but little signs of digestion.

About a year after that time, going from Mount Idaho one morning, I had gone but a short distance when I saw where a very big wolf had come into the trail and had kept down the way I had to go for about a mile, then it had gone down into the fir thicket at the head of the cañon. Here my trail kept to the left, and when I got around halfway of the thicket I stopped my cayuse and howled, just to see if I could get an answer. The echo had not died away before the answer came, and such a howl! While I knew I was perfectly safe, there was that same feeling of dread that always passes through my frame whenever I hear a wolf howl, no matter where I am, and I started on and had come out on to the ridge in the open timber and was intending to howl again when I reached the divide; but just before I got to the divide my horse threw his head around and looked back. I stopped him, and turning around in the saddle I saw a very big gray wolf not more than 150yds. behind me. When I stopped it stopped too.

I started on; then it gave a howl, and I answered it rather low. On looking around I saw it coming, but it was very suspicious. Down on my trail there was a small branch to cross, and if I could get the wolf to follow me as far as that I could get close enough to shoot with a certainty of killing it. Every little while it would howl and I would answer it low. When I came to cross the branch it was about 200yds. behind me. When I got out of the brush and just over the turn of the hill I jumped off and ran back to within about 20yds. of where the trail came up out of the brush, and to one side, and here I sat down and waited. I did not have very long to wait when the wolf came out of the brush and stopped and looked ahead in the direction the trail went

I had my revolver ready, and it had hardly come to a stand when I fired. At the crack of the revolver it fell, tried to rise, but could not. I had shot it through the heart. I ran up and shot it through the head, and then went back and brought my horse and skinned the wolf.

One day a short time after this, when I had gone after our express, a big wolf came on to the opposite side of the river near the house and howled. The boys thought it was I, and called to me to come on, that I could not fool them. My wife said she knew that was a wolf. Her brother-in law asked her if she had ever heard Lew call a wolf. "No," said she. "Then," said he, "you can't tell." After dinner the boys went to work, and they saw where a big wolf had been along on the ditch; so when they came over that night she laughed at them about my howling. When I came home she told me that she knew it was a wolf. A few days after that, while up on the ditch, I gave two howls just to see if she really could tell the difference. When we came over to our dinner the women wanted to know if we had heard the wolf howling up on the hill. I asked my wife if it was really a wolf. "Yes, indeed it was," said she. "Then," said I, "madam, you cannot tell the voice of the big wolf from that of

LEW WILMOT."

FOR SUNDAY'S DINNER.

Editor Forest and Stream:

After numbers of sportsmen have read in your good paper so many stories about hunters getting big game, such as moose, bears and deer, and of others getting big bags of quail, partridges, ducks and geese, an account of such a little event as a squirrel shoot must seem to them rather small potatoes; yet still there may be some who, like myself, don't often have a chance to get a whack at anything big in the line of game, that might be a trifle interested in an account of a New Jersey squirrel hunt, so for such I have written up the following:

One warm, still day in the latter part of last November I shouldered my rifle and struck off out west of Asbury Park some four miles distant and came to a big tract of swampy land covered with a heavy growth of pines, with a few large chestnut and oak trees scattered among them.

Not seeing any signs of squirrels there, I kept on through the woods about half a mile further and came to a slight knoll in the swamp heavily timbered with oak, chestnut and a few hickories, the knoll surrounded with many large gum trees with considerable underbrush among them; a good place for grays, thought I. While stealthily going along, all at once I heard one jumping among the leaves and soon saw it as it ran up the trunk of a big tree and stopped 6 or 8ft. from the ground.

Taking deliberate aim, I made a good shot and it dropped. Before I had time to gather the game, I heard the limbs rattle up in a tree at quite a distance away and saw another squirrel among the branches, running for all it was worth. Taking a shot at it, I made a clean miss. Then going on, I came to two bed trees standing some distance apart. Taking a position among the bushes so as to watch both trees, I waited perhaps twenty minutes or so, when all at once three big fellows put in an appearance on a gum tree about 100yds. away—too far for me to be sure of a hit; so I waited a little while longer, thinking that perhaps at least one of them might come near enough so that I could bag him. Just then out came a big fellow from one of the holes I was watching and sat on a limb, making a splendid mark against the blue sky. It was a lovely shot, being just about the right distance away, and one that I was not long in taking. Having neatly dropped that squirrel and put it in my pocket with the other, I took a look after the three, but of course found them missing. Then I sat down behind a big tree at a good shooting distance from where they were seen and waited a half hour or so, when on looking from behind my tree I saw one running on a limb of the gum. Carefully bringing my rifle to bear on him, I waited until the squirrel just stopped a moment, then pulled trigger and he tumbled, and he proved to be by far the largest one that I ever saw.

Having now three squirrels, all big fellows, enough for a first-class stew for Sunday's dinner, I concluded to put in a little time tramping through the woods, and if possible locating some other bed trees and places where the grays would most likely be found, so as to know where to strike for should I go in that vicinity on another hunt.

After strolling around for a while I found another place that looked rather promising; so seating myself on a partly decayed log, I watched and waited for a few moments, when along the ground came a squirrel and began to dig among the leaves at about the right distance for another splendid shot, which I deliberately took and got the game, thus making four big ones gotten with five shots. With the game in the pockets of my hunting coat, I started for home, and arrived there before night—in time to dress the game for Sunday's dinner—after having run the gauntlet of guying from my acquaintances, just the same way that nearly every hunter does while coming home and carrying game through a thickly settled place, something like this: "Lyon, how much did you give apiece for them squirrels?" "Say, which market did you buy them at?" "Did somebody give them to you or did you find them dead?" "Have they many more where you bought them?" and such like. Fellow hunters, we have all been there. On arriving home I felt as well pleased as if I had shot a much larger number.

By the way, my squirrel rifle is a Winchester single shot, No. 2, weighing 8½lbs., .32cal., rim-fire, long, with knife-blade and buckhorn or Rocky Mountain sights. I like a heavy rifle much better than a light one—seems as if one can hold it much steadier. The .32cal. is large enough for small game like squirrels at even quite a long distance away; besides, the ball doesn't tear the game like one of a larger caliber. I have also another rifle of the same pattern for target shooting, having Lyman sights, and takes a much larger cartridge.

Rhode Island Ducking.

PROVIDENCE, R. I., Feb. 22.—*Editor Forest and Stream:* Samuel Hollaway, of Wakefield, caught a black bass in Worden's Lake through the ice last Wednesday that weighed 5½lbs.

According to the annual report of the Park Commissioners of this city, there have been presented to the menagerie at Roger Williams Park during 1896 one American white rabbit, four opossums, one steel-gray pony, one black goat, and a pair of moose. The last-named animals were captured in their native wilds.

Last Thursday Judge Bliss, Senator David S. Ray and Henry J. Pickersgill, of East Providence, went to the reservoir in Swansea to fish for pickerel, and succeeded in capturing but eight, but they were very large. Recently in the same pond Leon Donance, of East Providence, captured six pickerel which weighed 19lbs.

Capt. George H. Covo and Solomon H. Tyler, of Warren, made a successful duck-hunting trip to Rumstick Point Thursday morning and secured a large bag of black ducks. Capt. Covo employs live decoys, which he secures to the rocks by a string about 15ft. in length, which allows them to swim about the rock. The decoys, by their lively quacking and constant motions in and out of the water, attract the wild birds, which are shot from a boat on the shore covered with white canvas, resembling the snow-covered shore. Thursday morning an event occurred which is seldom experienced by a sportsman. Tyler had just tethered a decoy to the rock on the Point when a live duck alighted on the rock by his side, so close that he could have killed it with a club, and then deliberately waddled down the side of the rock and was slowly swimming away when it was shot by Capt. Covo. Hundreds of the birds passed the Point Thursday morning from all directions, attracted by the loud and constant quacking of the decoys, which are necessary aids in the prosecution of the sport. The decoys espy the wild birds a long distance off, and attract them by a continuous and vociferous quacking, seemingly knowing the object of their work.

A PARRY SOUND DEER HUNT.

Editor Forest and Stream:

About a year ago I sent you an account of a deer hunting expedition to the Parry Sound district, and as the game laws of Ontario have been amended since then, the experiences of my party and myself under the changed conditions may interest some of your readers.

The amendments are as follows: The killing of deer in the water or immediately after leaving it prohibited; each hunter to procure a license, in which he is described as far as age and color of hair and eyes are concerned, the license to cost $2; two coupons to be attached to each license and to remain so attached until the holder ships his deer after his hunt, when they are to be detached and one used as a shipping tag (they being of a suitable shape) for each deer. The licenses are signed by the licensees when issued and the coupons signed when about to be used, so that the signatures can be compared. The season remains as before, from Nov. 1 to 15, both days inclusive, and each hunter is limited to two deer, no questions being asked of a party as long as its total number does not exceed two per man. The fund raised by the license fees, or at least a large proportion of it, was used for the payment of deputy wardens, a large number of whom were sent into the deer hunting districts. A close watch was kept on the hunters and a good many convictions of transgressors were secured, so many that the chief game warden at Toronto has quite an armory of confiscated rifles in his office.

Though the law was violated here and there, decent hunters, of course, respected it, and the amendments were followed by the desired effect, as the following, clipped from the Toronto *Globe*, the organ of the Provincial Government, will show:

"Chief Game Warden Tinsley says that judging by all the reports to hand the new regulation forbidding the shooting of deer in the water has resulted in the diminution of killing this year by more than one-half as compared with last season. He does not think more than 1,500 to 2,000 deer have been killed, all told, while more than double that number of licenses were issued. From one station, Bracebridge, only forty-two carcasses were shipped out, while in 1895 there were more than 200."

I may add to this that many a hunting party, the members of which had formerly killed most of their deer in the water and had been very successful season after season, went home with very few deer or none at all. I know of four parties of four men each or over who did not get a single deer among them.

My party, as usual, was composed of six members, three of the original ones, Ed, John and myself, who had hunted together for seven seasons, and three new ones: Wales, who had had some experience, and two novices, Moore and my fifteen-year old son Kenneth, a very large and strong boy for his age. Moore was a good rifle shot and Kenneth a fair one. We had six dogs—four foxhounds and two beagles.

Notwithstanding the changes in the game laws, we were as successful as usual, partly because we had never made a specialty of canoe hunting and had nearly always killed as many deer by stil-hunting as by the help of dogs, and partly because we went further into the woods than most hunters, and deer were particularly plentiful in the neighborhood of our camp, which was twenty-three miles from the steamboat landing at Alunic Harbor

We reached Alunic Harbor on Oct. 29 at about 1 P M., had dinner at the tourists' hotel at that point, and about 2 P. M. set out for our camp. Our outfit was conveyed in the wagon of a German settler, Charley Lorentz, who lived about six miles from our camp and who had come to meet us. We walked the roads being too rough for comfortable or expeditious traveling in any kind of a vehicle, and walking was not particularly pleasant either, as it rained steadily all the afternoon. At about 6 P. M. we reached a small hotel, thirteen miles from our starting point, and put up for the night. We were off again bright and early next morning, the weather having cleared up, and reached our camp of the previous year within a couple of hours. It was situated on a lumberman's "cadge" road, one and one half miles to the west of the Government road, by which we had traveled most of the way and which ran northward. The cadge road ran parallel with and about a mile to the south of Pickerel River, but we found that some one had been kind enough to burn down our old shanty and also the bridge across the river on the Government road.

Though we had with us a tent large enough to accommodate our party, we preferred a shanty, and struck for another deserted lumber camp two miles to the west on the cadge road. On reaching it we found that some of the buildings had been burned, but that one inhabitable one had been left. We took possession of it, and went to work to prepare beds, set up our sheet iron stove, and make ourselves comfortable generally.

By Monday morning, when the season opened, we were ready for business, and went to work with the understanding that no fawns were to be killed except by Moore and Kenneth, who, having never killed deer, might commence with a fawn each if they could do no better. As it was raining hard, we left our dogs in camp and went out for a still-hunt between the cadge road and the river. Within five minutes after we left the road Kenneth had a fairly good chance at a large buck, which he jumped out of the edge of a small swamp about 50yds. away, and at which he fired two shots without effect. He saw the flags of four more deer before noon, but had not time to fire at any of them. No one else saw as many and no one got a decent shot except Ed, who killed a spike-horned buck.

A couple of fairly fine days followed and we were able to use our dogs—Kenneth and Moore each killing a fawn ahead of them, and Wales shooting another while still-hunting. Wales was put on trial when we reported at camp for breaking our rule *re* fawns, but he explained that when he fired he could see nothing but a head and neck, which he imagined were those of a doe. As he had shot the fawn through the neck close to the head, the verdict was "not proven" and he was let off with a caution. A very wet day following the fine spell, we crossed the river for a still-hunt in the burnt lands, or rather racks, on its north side. The "burn" was of some miles in extent and was a very rough piece of country. Here were alternate huge ridges of almost bare granite rocks and deep gullies. The timber in some of the latter had escaped the fire and was very thick. Moore jumped a large buck in one of the gullies and fired a snap shot at him, but missed; and Ed saw the deer a long way off making for the top of one of the highest ridges. Just at this time I happened to be ascending the ridge from the opposite side. I knew nothing about the whereabouts of the buck, but I was moving slowly and carefully, and keeping up a sharp lookout. When I got my head on a level with the top of the ridge I stood and watched for a few minutes, and finally saw something move behind an upturned root in a slight depression about 75yds. away. I was uncertain whether it was a deer or some dried ferns shaking in the wind, but I waited and was rewarded at last by seeing the head and shoulders of a large deer emerging from behind the root, but owing to the mist I could see no horns. I aimed behind the shoulders, fired, and then I could see nothing of the deer, but on going up to the root I found that I had dropped the buck in his tracks, my bullet having struck him close behind one shoulder and gone out through the other. He had a fine eight-point head and weighed 170lbs., dressed. I called Wales and Ed to my assistance, and we dragged him down toward the road, which was only a few hundred yards away, and hung him up.

We had no more luck that day, but on the following one, the weather having cleared, we put out our dogs and ran a large doe to Ed, who waited until she was quite close to him and then dropped her with a shot behind the shoulder. In the evening I went out still-hunting in the thick bush near the river. Finding a crossing where tracks were numerous, I sat down on a log to watch. After some time I saw a large doe approaching about 60yds away. When I attempted to raise my rifle she saw me and stopped. I stopped too, and we stared one another out of countenance for some time. At last she seemed satisfied that she was looking at nothing more dangerous than a stump or a rock, and again began to advance She passed behind a large tree, and I raised my rifle to my shoulder and waited for her. When she appeared on the other side I fired, but stupidly aimed behind her shoulder instead of at it, forgetting that owing to the angle at which she was approaching my bullet would range too far backward. When it struck her, she plunged through a thicket up the side of a ridge, and I fired a snap shot at her and missed. I went to her track and followed it up the ridge, finding that she was bleeding on both sides, my bullet having gone through her. Tracking was slow, as there was no snow, and I kept at it until dark without seeing her Next morning John and I resumed the tracking, but failed to find her; and just as we were making up our minds that she was lost, John saw from the top of a high ridge a spike-horned buck standing in a gully about 125yds. away, and shot him through the shoulders. The buck dropped, but struggled a good deal, and John gave him another bullet through his head, which settled him.

The buck made up for the loss of the doe, but I was greatly disgusted with myself. The shot I had at her was an easy one, but I would have felt better if I had missed her clean instead of wounding her fatally and losing her.

A couple of days later we had the best luck of our hunt. A few inches of snow had fallen, and the weather was rather cold. John put out a pair of dogs and made for the high ridges near the river. Just as he reached the place where I wounded the doe he jumped a grand buck and paralyzed him by a neat shot through the neck. Ed was close by, and helped to hang up the deer. Kenneth and I were posted on crossings in a deep gully which ran from the road down to the river He was near the river and I some distance above it on a comparatively high point between two swamps. A log road ran through the gully to the river. I shivered at my post until after 11 o'clock and was thinking of starting for camp, when a buck ran out about 5yds. from a thicket 50 or 60yds. away. He had apparently been scared by the dogs, but they were not running him, and he was keeping a better lookout ahead than he would have done if that had been the case. He saw me at once and turned back, and I had just time to fire a snap shot at his flag—evidently without effect. I stood where I was for a few minutes in a rather unpleasant state of mind, and happening to look down the gully was astonished to see the buck standing on the log road 125yds. away in the middle of the swamp. I could not see his head, but he appeared, from the way in which he stood, to be looking away from me and down the gully. I was shivering with cold, but managed to hold on him behind his shoulder, fired and he disappeared among the alders. From the way in which he plunged I knew I had hit him and went down to look for his track. Before I reached it Kenneth appeared, coming toward me. We struck the track almost together, found plenty of blood, and after following it about 40yds. came upon the buck, stone dead. My bullet had hit him about 10in. behind one shoulder and had gone out close behind the other. Kenneth explained that he had been on his way out to the road to go to camp when he heard my first shot, had stopped, but hearing nothing more had come on, and was about as near the buck when I shot it the second time as I was. The deer, being headed off on the runway, had evidently cut across the swamp rather than go back toward the dogs, had heard Kenneth just as he reached the log road, and was standing watching for him when shot. This was a rare piece of luck. Moore turned up just as we had got the insides out of the buck, and helped us to hang it up. While we were doing so the dogs came quite close to us with another deer, but apparently it heard us at work and turned off. Both bucks had ten-point heads. John's weighed exactly 200lbs. dressed and mine 185lbs.

During the next couple of days we had no luck. The weather became mild and wet, so that we could not use our dogs, and the snow crunched so loudly under our feet that still-hunting was useless, though we stuck to it faithfully, the only result being that John wounded a buck which he declared was larger than the one he had killed. It was scared toward him by Bob Lorentz, a brother of the German settler, who came in to have a day's hunt with us, and he had a long shot at it running through some undergrowth. He did not know where he hit it, but found that it was bleeding. He and Bob tracked it for some time, but the bleeding appearing to have ceased, they made up their minds that the wound was slight and gave it up

The weather clearing up, we got to work again with our dogs. Moore shot the largest doe of the hunt on a runway just in rear of an old camp. The dogs ran it within 50yds of him, and he made a neat running shot, boring it through the ribs from side to side. It fell when hit, but got up again and ran about 50yds. before it dropped, to rise no more. Wales killed a spike-horned buck, also on a runway, and Kenneth wound up the hunt by shooting a large doe at his stand in the deep gully below the place in which I killed my second buck. He saw the deer running toward him, and waited until it was opposite, when he bleated at her and she stopped, but with her hindquarters toward him and her head turned to look in his direction. Fearing that he would spoil good meat if he shot her through her hams, he aimed at her neck and only grazed it across its top. Away she went and he fired at her body, putting a ball through one of her hams and breaking the bone. This stopped her about 60yds. away, and he put two balls close together through her ribs and another through her head. This was shooting her full of holes with a vengeance, but the only hit that damaged any meat to speak of was that in the ham, and the performance was not bad for a fifteen-year-old.

It will be noticed that each member of our party killed the two deer allowed him by the game act, thus carrying out the letter of the law. As long as its spirit is respected and the members of a party kill no more than an average of two each no questions are asked, but whenever that average is reached it may be considered almost certain that some one has exceeded his limit and some one fallen short of it. We have reached the limit repeatedly in my party; but, though we have always tried to give the best stands to those who have been behind in the score of kills, we never succeeded in making it anything like even until last season, nor do I know of any other party that has done it in any season.

We had no time to spare to hunt anything but deer. There were bears in our neighborhood, but none were seen, except a small one that the dogs ran near Moore one day. He got only a glimpse of it and had not time to get his rifle off, and he did not think of following it to see whether the dogs treed it, which it is possible that they did.

Ruffed grouse were numerous and remarkably tame, but we did not get very many of them, as we shot at them only when we got chances to cut their heads off with rifle bullets. There would have been grand sport among them with a dog and a shotgun. We had a few of them hung up in one of the camp buildings in which we kept our provisions, and Wales, finding that something had meddled with them, got a mink trap, which Kenneth had brought with him, and set it below them. Next morning there was a mink in it and on the following one a skunk. It was an awkward customer to capture within a few feet of our grub. All except Wales were in favor of shooting it where it was, but he insisted that if not unduly hurried it could be led out of the building by the chain attached to the trap, and that it would do no damage. He persuaded us to let him try it, and he unfastened the chain and walked off, dragging his skunkship first out of the shanty and then down to the creek which ran through the gully. The skunk behaved beautifully until Wales put it into the creek and smote it on the head with a club, being careful the while to keep out of range of its business end. On being smitten the animal gave up the ghost, but not until it had given us proof that its perfume atomizer was in perfect working order, though it had forborne to put it into operation as long as it was handled quietly. We did not linger to admire it, but left it in the creek. Wales caught nothing more in the shanty, but Kenneth captured another mink by the creek, and besides them we killed nothing more except a couple of porcupines.

Ravens were very numerous, but though our deer were generally hung up where they were shot and not collected until shortly before Charley Lorentz came for them with his team, none of them were damaged except the buck which I shot on the burnt rocks. After snow had fallen Kenneth and I crossed the river to drag it out along the Government road to the remains of the burnt bridge. On nearing it we saw ravens flying away and found that they had just commenced operations on it and had eaten a small hole in one of its hams. Two or three of them followed us to the bridge, apparently to see what we did with the deer, but after getting it across the river and hanging it up with two others, which the balance of our party dragged to the same point, we fastened a handkerchief to a pole and set it above them. Though they were left there for some days, the wary birds did not meddle with them Charley Lorentz came to our camp a couple of days before we were ready to leave and took out a wagon load of deer, which he left in a storehouse at Alunic Harbor, so that when we broke up camp he was able to take the balance of our deer and our camp outfit in one load.

We were favored with fine weather on our way out, and reached Alunic Harbor without accident, and found Deputy Game Warden Labrash, a most efficient officer, on hand to see that none of the returning hunters, of whom there were several parties besides ourselves, had exceeded the limit. He examined all baggage for smuggled venison. In a box belonging to a party of three hunters he found a fawn, but as they had only five other deer, nothing came of it except that the fawn was ordered to be taken out and expressed in the manner laid down in the game act, which I have explained above.

Having passed inspection, we had our deer tagged and expressed and started for home, all hoping for another outing on the banks of the Pickerel River. W. P.

MILTON, Ont.

MAINE GUIDE LICENSE.

BOSTON, Feb. 28.—The Maine guide license bill is meeting with still more opposition. It is now plain that the matter came very near to being "sprung" before the guides were generally aware of its nature. It came up again before the Committee on Inland Fisheries the other day at the State House. At this hearing the Rangeley guides had two able attorneys to represent them—John P. Swasey and J. F. Holman. Holman argued that the bill was not called for, and put the guides under unnecessary restrictions and degradation. He put upon the stand Capt. F. C. Barker, of Bemis; Mr. Fuller, of Eustis, and Mr. Richardson, of Kennebago. The testimony all went to show that the guides are all opposed to the law. A remonstrance of 150 guides' names was presented from Moosehead and Aroostook county. The claim was that the names were nearly all guides; but the Commissioners, on examining the petition, declared that the names were those of only twenty-six guides. This brought out some bad feeling, and may lead to more. Witnesses were also put on by Commissioner Carlton to show that the guides are not all opposed to the measure. Mr. Nichols, of Foxcroft, declared that the guides in his section are now in favor of the bill and willing to have it passed. Altogether the chances of the bill being passed in its present form are growing less. Some new game protection measures have been proposed. The moose season will undoubtedly be shortened one month—December. Caribou may be included, but the deer law will doubtless remain as it is. Fines for illegal hunting and killing will be increased and imprisonment added. There are no propositions yet introduced to change the season on grouse, but it is proposed to increase the fine from $5 to $10 for each bird illegally killed or had in possession.

Joshua G. Rich, the veteran hunter and trapper, died at his home in Bethel, Feb. 17. His age was about seventy-seven years. In 1844 he went to Rangeley and made a home for his family at Haines's Landing, on Mooselook-

meguntic Lake, where he hunted and trapped for two years; then moving to Metalluk Point, on Mollechunkamunk Lake, where he remained for a number of years. Mr. Rich built the first public camp in the lake region. It was at Middle Dam, and he named it "Anglers' Retreat," which still clings to the resort there. Probably no hunter in Maine was better known than Mr. Rich. Later in life he studied a great deal, and delighted in writing admirable hunting and fishing adventures for publication. The readers of the Forest and Stream will long remember his very readable articles. The report of his death says that he is the last of the old Rangeley trappers to pass away. This is an error. R. B. McAlister, of Andover, is still hale and hearty, though nearly eighty. He has hunted many seasons with Mr. Rich, and can relate many thrilling adventures. Mr. Rich had a good legal mind and was greatly respected by his townspeople. He was for many years a justice of the peace, I believe. Special.

A NEW ENGLAND FOX HUNT.

A Newspaper Man Tells of his First Day After the Hounds.

BY HERBERT L. JILLSON.

The night's work was done and the boys upon the reportorial staff of the *S*—— sat about the dingy editorial room lazily, save for two who were over in one corner playing at chess The smoky incandescents shone brightly from under their heavy green shades, revealing a floor strewn with newspapers, crumpled manuscript, cigar stubs and burned matches. Upstairs the "chunkety-chunk" of the linotypes broke the stillness, and occasionally the bell above the night editor rang three times for copy. From below the sound of escaping steam and the smell of the stereotype room gave warning that the hour for printing the paper was not far distant. Outside the main thoroughfare was practically deserted. The last electric had whizzed down to the barn, and only a few midnight strollers attracted the attention of the cabmen who had night stands; but as yet none of the men in the newspaper office had begun to think of going home. The city editor had finished wielding the blue pencil upon the stuff that the new man had turned in. He came out of his den in his shirt sleeves and exclaimed, as he sank into a chair with a yawn: "We'll have a mighty good paper to-day."

All was quiet for a moment. The man who had brought in a "scoop" looked proudly about as he puffed his cigar. The man who hadn't done anything took the opportunity to tell how hard he had worked as he filled his cob pipe. Conversation began and drifted from one thing to another, and finally to fox hunting. The editor, who had been quiet, roused at this, and a funny smile overspread his face as he remarked: "How well I remember my first fox hunt in these old New England hills."

The fellows pulled up their chairs, relit cigars and pipes, and placed their feet upon the desks as the chief went on: "It was the fall following the summer that I became a member of the editorial force of this paper. I was full of enthusiasm for the business and hopes for the future. It was the time when I covered the whole city without exhaustion and traveled a mile to secure what could as well have been obtained by going one-quarter of that distance; when I carried one coat-pocket filled with note books, the other stuffed with daily papers, and had my vest-pockets bristling with pencils. I took occasion to inform every possible person that I was a representative of the *S*——, thought that reporters should be provided with a badge or uniforms to distinguish them from the ordinary people, and did many other things that a new man in the business takes such delight in.

"Well, upon the night in question I was just preparing to go home. It was midnight (I went home early in those days) when the city editor called out from his little room: 'Have we got anyone here who can hunt?' There was no response. The boys were all very busy grinding out copy. After a moment's hesitation I ventured the information that I owned a gun and had done some shooting.

"'You are just the chap,' said the editor, coming out. 'I want you to go with the Fur Company to morrow. It's the day of the annual fall hunt. Men and dogs will be here from all parts of New England. They start from the Lincoln House at 5 in the morning. Be there and the president will look out for you. Give them a good story.'

"Hastily gathering enough note paper to last a year or to cover a Democratic convention, I started home, delighted with the prospect of a day afield and the opportunity to write a big story, and way down deep in my heart I felt that it would not be at all strange if I should come back from the hunt with a pelt dangling from my belt.

"I hardly shut my eyes that night, fearful of oversleeping, and long before the hour for starting was up preparing for the trip. I was the possessor of quite an outfit beside a gun: a brown corduroy suit, canvas leggings, a cartridge belt and a sweater, which I donned A short time later I was down town eating a sirloin, with French fry and coffee, in the restaurant that kept open all night chiefly for the accommodation of the newspaper men. Some of the boys were there reading the morning papers. They looked my rig over in an amused sort of a way and poked a little good-natured fun at me. Hurrying through my meal, I went to the hotel The hunters were astir. Guns were being cleaned and polished, cartridge belts filled, lunches stowed away, and dogs fed and groomed. It was not long before several big barges rolled up to the doors and the hunters gradually piled into them. I got inside in company with several other scribes, men of experience. They looked my suit over, enviously, I thought. They wore ordinary business suits, and one was without a gun. It seemed absurd to me. They were busy getting notes; I was watching the hunters.

"A blast from the horn, and we were off for the meet. The barges rolled clumsily over the rough pavements, while the private teams sped off ahead. The city was quiet. Few people were astir; but now and then a newsboy or some sleepy workman with a dinner pail, oblivious to all about him, would hurry by. Out we moved into the country, further and further away from the city. Pass the busy farmhouses and up the hill, from which, away off in the east, the glowing sun could be seen struggling through a mass of purple clouds, tinging them with gold and making the dewdrops upon the grass sparkle like gems. The crisp, fresh, invigorating morning air sent a thrill through my veins. It seemed contagious. Men who had been snugly tucked away in corners roused themselves and looked about eagerly. The hounds sniffed the air, their eyes brightened and they yelped expectantly. The horses sped on over the road and we were soon at the farmhouse which was to be the headquarters of the hunt during the day. Everybody was astir. The genial host and his hired men were assisting the drivers in unharnessing the horses from the barges. The hunters were taking guns from cases, while the hounds tugged at their leashes and yelped impatiently. It was a splendid sight, I tell you; and it must have been magnified to my uninitiated eyes—the picturesque corduroy and canvas suits of the hunters, the gleaming guns, the blooded hounds with their glossy coats and mellow voices; all against a background of timber that, for aught we knew, held so much sport in store. Suddenly the president of the club got hold of me and called:

"'Here, Fuller! take this man in with you. He is from the *S*—— and is to follow the hunt.'

"Mr. Fuller drove up, and I was soon upon a rear seat of his light wagon, behind a spanking pair of bays.

"'We'll hurry down the eastern road,' said Fuller. 'The hounds are to be put in back of the house, and if they start a fox in that growth, as I think they will, he will run in that direction,' and with that we were off at a clipping gait. Hardly had we rounded the curve which hid the farmhouse from sight when a sharp yelp broke the stillness of the morning air. A chorus of yells followed it.

"'I told you they'd start a fox there,' said my host, and down came the whip on the backs of the bays. They jumped madly forward and we grasped our seats to keep from falling out as on we sped like the wind. The baying of the pack, now in full cry, came to our ears. It was great sport, I tell you!

"'The road is lined with good stands,' called Fuller; 'I'm going to drop you fellows out along the way, and if you wait patiently some of you are sure to get a shot, for the fox must come in this direction and cross this road.'

"Suddenly the horses were reined up with a jerk. 'Here, you, newspaper man!' called Fuller, 'get out and make for that oak on the hillside which stands just north of the cover. It's one of the best stands hereabouts. Nate Harrington has shot eleven foxes there.' So out I tumbled and started for the tree, loading my gun nervously.

"'Get where you won't be seen, keep your eyes open and be ready to shoot,' shouted my companion as he drove away.

"The grass was wet with dew and quickly soaked my shoes, but I heeded it not, for the baying of the hounds kept growing louder and nearer. I hurried on, stopping occasionally to listen and look. Reaching the oak, I concealed myself behind a neighboring bush. The baying was now loud and clear. At times it seemed to me that the fox must be in sight, so close did it sound. Then the voices would die away, only to come nearer again. This sort of thing continued for five, ten, fifteen and twenty minutes without change. I peered into the cover until my eyes ached, and held my gun ready to shoot until my arms were lame. There was apparently no change in the situation, and getting discouraged, I looked around. All along the road the hunters could be seen, some were hidden behind stone walls, others standing erect against trees. The hill was bristling with guns. They seemed to be waiting patiently for something and I wondered what, having come to the conclusion some time ago that there was no fox ahead of the hounds. The baying at my right continued, now strong, now weak, Frequently the sound of the dogs as they thrashed about in the dead leaves could be heard, so near were they; but no fox could be seen, and, knowing nothing of the nature of the animal to play about in an endeavor to throw the pack off the scent, I left my stand and started down the hillside for the road, determined at least to be where there were other hunters and some companionship. I had crossed the first stone wall and started through the opening field adjoining. The baying grew louder and louder, but I paid no attention to it, so frequent had been the change. Down in the road the hunters seemed greatly agitated. They were waving their arms frantically and seemed to be beckoning me. Thinking they wanted me to hurry, I started forward on a run, but they motioned to the rear, and stopping I turned slowly about.

"The fox had broken cover within a few rods of where I had been waiting so impatiently, and was dashing down the hillside, with the pack in full cry running at sight. Chagrined, I lifted my gun to fire, but realizing the folly of such an action lowered it and stood watching the magnificent sight, forgetting for a time my disappointment. Down the foot of the hill went the fox, a bit tired, to be sure, from his turning and twisting in the cover, but nevertheless in good condition for a long run yet. His tongue was out, and his handsome brush swayed to and fro as he jumped from hillock to hillock. Some twenty rods behind the pack was thundering along, frantic with delight at sight of the game. They looked more like a flock of bees than a pack of hounds, so closely were they massed. At the head ran a little black rascal—Dick Luther's Nigger—more fleet-footed than the rest. The dogs were gaining! Hunters forgot all about concealing themselves in the excitement, and jumped to their feet. They stood all along the path that the fox surely must go. There was no possible way of escape Turn which way he might now, and he would run under the barrels of half a dozen guns. On, on went, the dogs and the fox like the wind. The excitement increased as the chase drew nearer the hunters. Suddenly the little animal turned sharply and started up the hill under cover of a stone wall straight for a bunch of hunters. A rod more must be his last. Half a dozen men raised their guns to shoot. There was a puff of smoke from behind a rock at the left, and the report of a gun. Reynard staggered for a moment, but pulled himself together and leaped on up the hill. The dogs, now close at hand, were wild with frenzy. Another puff of smoke and report from the same location, a falter, a fall; but as the hunter started out from his ambush the fox regained his feet, and with a final supreme effort gained a rift in the ledge and disappeared. A score or more of hunters, most of them within gunshot, looked stupid. The baffled hounds bayed frantically at the hole; but the sly creature had escaped the hands of its executioners, probably to die beneath the earth.

"The hounds were leashed and a little chat ensued We learned that a fox had trotted out into the road near the farmhouse just after we left, and, while he stood gazing in wonderment at the unusual signs of activity, was knocked over. A short time after a trio of hunters had kicked a fox out of the corner of a pasture, which they shot easily.

"Then the hunt was resumed and the foxes were soon going in all directions; but the balance of the day, good sport as it was, offered no such excitement as the first chase. As the moisture dried upon the grass the sport grew dull, and an hour or more of uneventful riding was followed by a jolly lunch, after which came a cold bottle, cigars and fox hunting stories galore. The day's sport ended with a series of splendid drives at sundown. The hunters gradually found their way back to the barges and the city. In the evening came the hunt dinner. Six foxes lay upon the table at the head of the hall. And the dinner! Such a delicious spread I never hope to taste again. No man who has not spent the day afield can have any conception of how good the things were.

"My story? Well, it didn't contain as complete a list of the hunters and the dogs as the other fellow's, and the city editor asked how I happened to get left on them; but we reported that particular drive to the Queen's taste. I did many a hunt after that," remarked the editor as he put on his coat preparatory to going home, "and learned to love the quiet of the woods and the music of the hounds more than anything else on earth in the way of outdoor sport; but I never hope to as thoroughly enjoy a hunt as I did that one."

Then he lit his pipe, took his lunch basket, and with a cheery "good morning" went out as the newsboys were tumbling downstairs into the street with the morning papers.

THE X PLACE.

Texas, Feb. 22.—Snevets, with whom I usually go hunting, was mad because I had asked another party the time before. Snevets is sensitive, and didn't want to go, but when I told him that I had permission to go to the X place he reconsidered his determination and forgot that he was offended.

Snevets was pessimistic. All the way to the X place he contended that it would rain, he knew it would rain, and expatiated at great length upon the unpleasantness of shooting in the rain—but it didn't rain and we had a great day.

"Good mawning, sah!" said Mr. X, as I knocked at his door. "Good mawning! Come up to shoot my birds, have you?" Mr. X has very decisive views in regard to the first clause of the game law that we are trying to pass in this State, *i. e.*, that all game shall be considered the property of the State, and that killing thereof shall be construed to be a privilege, not a right. He says, "The game on my place is not the property of the State and never will be; it's mine, and I'll kill it in or out of season, as I like."

From which it will be seen that, in order to get the desired permission to shoot on his place, our game law proclivities had carefully to be suppressed, and our friend to be placated by reference to the fact that at any rate he kept market-hunters out.

"Just follow the hedge that begins here at the house until it comes back—this being a quadrilateral, it does—and by that time I will be ready and take you down in the valley," he continued.

We followed directions and the hedge, and we found the birds, two large, strong coveys of quail that looked as if they had not had a shot fired at them that season; and when we had worked the hedge round to the house again we found that we had—no, I won't say how many, as we did not have nearly as many as we should have had, but we had enough for a starter.

Then our friend Mr. X took us, or rather we took him, in our buckboard down in the valley. It was beautiful country to us, for most of this section of the State is flat, with hills rising all around the valley, from whose tops we could see the city, twelve miles away, with the sunshine glinting on each house top and projection of the roofs, the whole hallowed and softened by distance. "'Tis distance lends enchantment to the view," says the poet, which one I really have forgotten; but if the poet had been with us he would not have lingered o'er the view, he would have done as we did—chased himself down into the valley to the hedges and the birds. We found them. Oh, didn't we find them! They would get out of the hedge in coveys that seemed, without exaggeration, to have 200 birds in them.

And we would shoot, and shoot, and shoot, and sometimes get one and sometimes not. Once I did actually kill three on the wing with a right and left; and then too, on one glorious occasion never to be forgotten, I wiped Snevets's eye, and Snevets almost had the sulks about it, until by some unforeseen accident I missed a bird which he killed.

This was because I had much the longer shot, and because I stumbled, and because I didn't see the bird soon enough, and because the gun was too dirty. I had several other reasons at the time, but I have forgotten them now.

Then we had dinner, consisting of breakfast bacon cooked on the end of a stick held in the flame. This would seem a rather unappetizing mess to the uninitiated, but to those who know there would be no mystery as to why we steadily cooked bacon, put it between two slices of bread, ate it and repeated the operation till we could hold no more.

Up to this time we had had fair success, but in the afternoon after trying the quail again we stumbled on to a pond full of jacksnipe—and then we had more fun. So did the jacksnipe to a certain extent; then Snevets wnaled his puppy most unmercifully because he wouldn't retrieve them, and I guyed him, and we had some more general good time.

And then we went home and distributed thirty-one quail and sixteen jacksnipe. And we hope we may go again.

Marion Warner.

Pennsylvania Game Laws.

New York, Feb. 21.—*Editor Forest and Stream:* Your this week's issue contains notice of proposition to change game laws of Pennsylvania. I believe the woodcock season is a curse to the ruffed grouse. Why not make the woodcock season uniform with that of the ruffed grouse? I have hunted in Monroe county, Pa., for the past thirteen or fourteen years, and never have seen but one woodcock; neither have I seen any woodcock shot by any other hunter. I believe the woodcock (?) hunters of July and August shoot the young ruffed grouse.

Is it intended to prevent a hunter from bringing his game home with him? I reside in this city but always hunt in Monroe county, Pa

Why not limit the number of ruffed grouse which may be shot by one person in a season? F. W. S.

Brant Killed by a Lighthouse.

Keller, Va., Feb. 26 —After a dense fog on last Sunday night the keeper of Hog Island Light was pleased, on sauntering from his habitation at early dawn, to gather up 115 fine brant that had fallen within the grip of his luminous rays during the night. Thirty of the birds were wing broken, while the rest were stone dead. This beats gun practice out of hollow.

We quote from Chincoteague Bay: "Wildfowl, especially ducks, never so plentiful in our waters. Mr. Daniel Bowdoin killed 105 redheads this week, which he sold for $100."

T. G. E.

CHICAGO AND THE WEST.

Game Law Matters.

CHICAGO, Ill., Feb 27.—To-day I met Mr. H. D. Nicholls on the street and interviewed him in a doorway. Mr. Nicholls is a member of the Cumberland Gun Club, a sportsman well known in the city and recently elected to the State Legislature. Asked as to the prospects of a sportsmen's game law this season, he said that there was never a better chance for one, as all the various opposing elements were in a fair state of reconciliation for the time being. "It all rests with the sportsmen of the State, and more especially of the city of Chicago," said Mr. Nicholls, "as to what the future of a good game bill may be. If you men here in Chicago will agree as to what you want I think it not too much to say that there is a good opportunity to get the measure through at the Legislature. If there is any strong game dealer lobby at the Capital this year, I have not seen or heard of it. As to the game warden, I don't know who will be put up for that office; but I am assured that Gov. Tanner (our new Governor) will listen very attentively to what the sportsmen may have to say, as he realizes that they have studied this situation carefully and have the facts better in hand than anyone can have to whom the subject is entirely new. It seems that there is some divergency of belief among the Chicago sportsmen as to what the desirable features of a new bill should be, but if there should ever seem to be a consensus of opinion on these subjects, I can only say that I will do all in my power to further the measure agreed upon. There seems to be a better understanding of these matters in the Legislature now than there was a few years ago, and I think we have more than a fighting chance to get a rational game law enacted."

What the State of Wisconsin will do at this session of the Legislature is still a problem. All sorts of weird propositions are before the lawmakers. There is a bill up which would put a $30 license on all non-resident deer hunters, and a license of $25 on all hunters pursuing anything else but deer. This is not yet in a forward condition, but there is a strong feeling for a non-resident license act similar to that enacted by Michigan. Spring shooting is decried by certain sections of the State, but there is every probability that Wisconsin will hold to the childish, dog-in-the-manger position of allowing certain forms of spring shooting so long as Illinois does so. Should this be the case, it is altogether likely that many years will elapse before Wisconsin stops spring shooting. Do the gentlemen of that State reflect upon the difference in climatic conditions between the southern end of Illinois and the middle portion of Wisconsin, for instance? It will be a work of many years before the country precincts of southern Illinois will agree to a spring shooting law. Is it for that reason rational that the men of Wisconsin should deprive each other of their own shooting by the wasteful methods of shooting breeding birds in the springtime? This does not seem wise. The Wisconsin men should remember that the sportsmen of Illinois are not the ones who oppose most strenuously the passage of a spring shooting law, but that it is the shooters who are less entitled to the claim of sportsmanship. It does not appear rational for them to injure each other in their own State for the sake of waging war against men who do properly classify with themselves. The sportsmen of Wisconsin have for some time had far greater weight in the State Legislature than have the sportsmen of Illinois. They should remember their good fortune in this matter and not seek to wage retaliatory war against the sportsmen of Illinois, who are not the ones really to blame for the state of affairs, and who certainly are not to be accused of the geographical arrangement of the State, with its hundreds of miles of north and south extent, covering a variation of thirty days in shooting seasons, on more birds than one. The sportsmen of Chicago are always looked up to in the matter of game laws, and are criticised for not securing better laws, but do all the critics know the conditions under which the efforts at better laws are made by the Chicago men? They have to fight the whole lower end of this State, which is solidly arrayed against Chicago and the upper part of the State, and moreover they are obliged to fight the game dealers, those heathen near at home who constitute the chief menace to the Illinois game and the game of every Western State. Is it logical or right that the sportsmen of Wisconsin should "retaliate" against the sportsmen of upper Illinois? If Wisconsin had Chicago and "Egypt" on her hands, both at the same time, she might know grief. If she had a great game market, such as Chicago, Boston or New York, within her confines, she might better understand the difficulty of attaining what she knew was a desirable game law. The thing for Wisconsin to do is to pass just as strict a game law as she can get through, and not to make it any easier on account of what Illinois does or does not do. This is business, and business for her own men, who are the ones most benefited. There does not exist upon the statute books of the last State of the Union, not even among all the mass of freaks and absurdities of game law legislation, a more absurd and more puerile law than that which says Wisconsin will stop all spring shooting as soon as Illinois does. This is emphatically cutting off one's nose to spite one's face.

Ducks Coming In.

The question of spring shooting will come up for individual settlement very soon now for this season. The ducks have made their appearance in this latitude already. At Swan Lake Club they were observed in some numbers this week, and they have also been seen on the Kankakee in some numbers. A few parties have gone out for an early scout, and within the week, if the weather should remain mild, there will be many guns taken from their cases. A friend of mine says a game hog is the man who kills the game one wants to kill himself, and a spring shooter is a man who does what we would all like to do ourselves. How about this cynical look at good old human nature?

Shot in the Field.

Mr. Harvey McMurchy, of the Hunter Arms Co., is in Chicago this week, having thus got this far north from the San Antonio Midwinter shoot. It is now thought that Mr. McMurchy will not be forced to suffer amputation of the leg which he had frozen in the Sunny South last month. While at San Antonio Mr. McMurchy and Mr. C. E. Willard dropped down to the gulf coast for a little shoot at ducks, quail, etc. At Rockport they met a friend, Mr. Suydam, late of Denver, who has discovered Rockport to be the place he long has sought, and who has settled there for a life of ease and healthfulness. Mr. Suydam took out the two Northern men and gave them a rare touch of sport which extended through duck and goose shooting, quail shooting, dove shooting, and angling for redfish at Aransas Pass, in all of which branches of activity they were very successful. Finally they went out for a quail shoot on the Coleman-Fulton Pasture Co.'s ranch, being joined in this by still another Northern man, an Ohio gentleman who is spending the winter in this Southern paradise. The latter gentleman proved a little bit excitable, and found occasion during the first fifteen minutes of the hunt to shoot a load of bird shot into the front part of Mr. McMurchy's form. The main portion of the charge, which was fired at a very close range, fortunately struck in the ground close at Mr. McMurchy's feet. A few pellets of shot dented his gun stock and a few struck him on the arm, penetrating his heavy corduroy shooting coat. Of these a portion went in to the bone of the elbow, but were extracted on the spot without trouble. One or two other pellets are carried as souvenirs of the occasion. It was very fortunate that the charge of shot did not strike Mr. McMurchy in the face, for had that been the case his eyes must surely have gone It is perhaps unnecessary to make comment upon an incident of this kind.

Personal.

Mr. A. Hirth, mentioned earlier as forced to leave his work at the tackle counter of Spalding's by reason of serious illness, is still a very sick man, though he has struggled down on two different occasions to his place at the store. Mr. Hirth is much pulled down, and will need many weeks of rest and recuperation before he will be himself again. There is no man in this city who could take his place, for his personal hold on the high-class tackle and gun trade of this city is something no other salesman of the West has ever approached. Both customers and friends, therefore, wish his speedy return to the place he has hardly left for a number of years preceding.

Mr. Thos. H. Keller, of the Peters Cartridge Co., Cincinnati, is in Chicago this week, working on East after his Southern trip. Mr. Keller expects to save two or three of the fingers on the hand which was frozen during the blizzard in the Sunny South. He stopped for a look in at the Hot Springs, Ark., trap tournament, and then went out into Iowa for a business run.

Mr. Harry McKinney, of Janesville, Wis., one of the best canvasback shots around Lake Koshkonong, was in Chicago for a short time this week and called at this office for the purpose of offering confirmation of facts stated in regard to the artesian canvasback well on the Bingham homestead.

Dull Times.

There is general talk among the gun men and other traveling men that times were never so dull all over the country as they are this season. Gun stocks are allowed to run lower than ever was known, and all similar lines of sporting goods are equally inactive. It is hoped that warm weather may liven things up a bit and relieve the traveling representatives somewhat of the blue feeling they now experience.

Good Otter Season.

I have word from Fay L. Buck, a hustling young trapper of Manitowish, Wis., that the present winter has been a very good one for fur in his country. He says he trapped one month before Christmas and caught four beautiful otter, but has done no trapping since Christmas. Had he not been taken sick and laid up he thinks he could have caught at least a dozen otter this winter, for he has never seen them so plentiful as they were early in the winter. Fay is now running his line again and expects soon to have a little shipment of fur on hand.

Western Game Law Views.

At first sight it seems a far cry from Congress to Chicago, but really there was a bit of Congressional action recently which has a certain significance to Chicago men who have kept track of the game law movements of the day. Mention has been made in these columns of the proposed Baird amendment to the interstate commerce laws regulating the traffic in game so that it shall be unlawful for one State to receive game which was unlawful in the State from which it came, with other and further restrictions not at this time needful to recapitulate. In the debate on the oleomargarine bill in the House on Jan. 14 some features came up which are almost identical with those involved in the Baird amendment. The oleo bill was finally passed, 126 to 96.

"The bill says that all articles known as oleomargarine, butterine, imitation butter, or cheese not made exclusively of pure, unadulterated milk or cream, upon arrival within the limits of a State or Territory shall be subject to the operation and effect of the laws of such State or Territory in the same manner as though such articles had been produced in the State or Territory, and shall not be exempt by reason of being introduced in original packages or otherwise."

If Congress can do thus with the product of a State, why can it not do so with another? Why will these provisions not extend handsomely to the shipments of game made from one State to another? That is interstate commerce, and there is a good deal to it. Is it necessarily folly to suppose that a like amendment cannot be made to the interstate commerce laws as regarding game?

A Cry from Minnesota.

There comes to this office of FOREST AND STREAM a letter from Mr. G. W. Millhouse, of Minnesota, which properly belongs in the editorial rooms of FOREST AND STREAM, but which I take great pleasure in stealing. It is one of the strongest proofs yet offered of the wisdom of FOREST AND STREAM's editorial platform plank, now famous: "Stop the sale of game." It is an easy promise that the paper will do anything it can in furtherance of Mr. Millhouse's plans, and anyone who can help in this pioneer Western movement for the establishment of the "plank" will be doing good for sport in one of the few remaining Western States which have any game left. Mr. Millhouse's letter follows: "Reading the FOREST AND STREAM, I have become convinced that the only solution to the question of saving our game was your idea of stopping the sale of the same at any and all times, and any and all kinds of game; I firmly believe it and have been talking to Senator H. J. Miller, of this place, relative to the introduction of a bill to prohibit the sale of game in Minnesota.

"During the session of 1895 and 1896 he sounded some of the senators upon this subject and found quite an opposition from those districts in the northern part of the State where a great many of the poorer class reside, because they can partially subsist on the money obtained from the sale of the State's ducks, chickens, quail, partridges, etc. Now Senator Miller is strictly in line in this matter, he is himself an ardent and fair sportsman and believes this thing should be brought about. He has asked me to prepare argument in favor of this measure, and I, fearing that I cannot get all the reasons why in the best possible manner, turn to you, whom I know to be deeply interested, and ask that you prepare and send to me your very best effort to bring the Northern senators in line, and your strongest plea for the passage of this act. Will you help us? G. W. MILLHOUSE."

Planting Cottontails.

Mr. L. Kennedy, of Janesville, Wis., who deals in furs and that sort of thing, writes me that he has just received an order from Winters & Suess, of Negaunee, Mich., for 200 live cottontail rabbits, which are to be turned loose in the Michigan forests. Mr. Kennedy says he will send some rabbits, but hardly expects to fill the entire order. He says: "I have twenty cottontail rabbits in brush houses made for them. They are not inclosed by tight fences, but still they do not leave. I feed them corn and clover hay, and they seem satisfied where they are."

This is the first time I have ever heard of shipping cottontails for the purpose of putting them down as game. The winters in upper Michigan are very severe, and the big hares do better than the cottontail, but perhaps the little fellows will thrive in the Negaunee region. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

A MARYLAND WEEK.

PHILADELPHIA.—*Editor Forest and Stream:* In January I made a trip to Stockton, Md., where I was the guest of Mr. O. D. Foulks, and enjoyed a week of quail shooting far superior to what one could expect in these days of depleted covers. There were birds everywhere, and good-sized coveys at that, but they were not "easy"—quite the contrary, being large, strong, educated birds—seldom found in the open, and when so found taking to the densest cover at once, making the shooting of the most difficult order and testing the dog's nose and bird-sense to the fullest extent, all of which is the very acme of sport to one who goes for sport alone. The pot-hunter could hardly earn enough to pay for his shells in this country, as it is a succession of marsh, cornfield, rank sedge, cat-brier thickets, woods, and all that affords the quail the safest cover and a natural preserve. Nothing will prove disastrous to the birds here except the hardest of winters.

The people so far have been very generous in allowing sportsmen to shoot over their grounds; but how long this may continue is a matter of conjecture, though as a class they are the most generous, frank and unselfish people it has been my fortune to meet.

I enjoyed some of the finest shooting of my life over my pointer puppy Sam—now fourteen months old—a thoroughbred, and the gamest puppy I ever saw afield. Mr. F. raised and trained him for me as a personal favor, and with such success that the pup found all our coveys, all singles—and some in places where it looked impossible—and retrieved every bird shot; dead, wing-tipped or apparently lost, it made no difference, he found every one. He hunted day in and day out and made a practically errorless record. Needless to say, I now envy no man his field trial winner nor his meat dog. Mr. F. does not train dogs for the public, but he could do so with credit and profit to himself.

Mr. F.'s house faces Assateague Bay, famous for geese, brant and ducks, and where I have enjoyed many days of good duck shooting, as all the facilities are at hand for that sport in the way of sink box, decoys, blinds, etc.; but the wildfowl shooting has been poor this winter, for what reason none of the old gunners seem able to tell. Can it be that ducks are getting scarce? We were out one day and killed four, but could have done much better had it not been for the drifting ice. The bay is planted with the choicest of salt oysters, a goodly portion of which belong to my genial friend and thorough sportsman, Mr. Alfred Child, so that the best the bay afforded was none too good for us. Home comforts in the leisure hours, with a friendly acquaintance with all the neighbors, helped to pass all too quickly the bachelor's vacation—a week that will live long in memory as a time of pure and unalloyed pleasure, due to the untiring efforts of Mr. Foulks and his interesting family. And, best of all, I have the invitation to "come again." That is luck good enough to report to FOREST AND STREAM. BACHELOR.

Florida Hunting and Fishing.

PUNTA GORDA, Fla., Feb. 16.—Mr. Chas. A. Dean, of Boston, who has been cruising along the Florida West Coast in his launch Myakka, with headquarters at Hotel Punta Gorda, returned last night from a short hunting trip near Myakka. He came back with a snake story which I think will interest readers of FOREST AND STREAM. Just about noon, after a morning of fine sport, he raised a covey of quail. He wounded one, and his dog, a young pointer, followed the flock. Immediately after he heard a rattler, and soon saw the snake in a clump of bushes. It had been hunting too, and had its fangs fastened in one of the quail. Mr. Dean tried to call off his dog, but Jack was after quail. He ran in and pulled the bird right out of the snake's mouth. As soon as he could get a chance, and while it was coiling for another spring, Mr. Dean blew off the reptile's head. Later in the day he shot another rattler, even larger than the first. Mr. Dean usually carries with him materials for treating snake-bites by hypodermic injection. This day he had left his outfit at the hotel, and those were the first rattlesnakes he has run across this season.

Mr. Dean reports the game and fish as very plentiful along the West Coast this season. He and the other hunters keep the hotel larder well stocked with these delicacies, which are served at their tables nearly every night. As one Nimrod remarked, "That is half the fun of hunting from the Punta Gorda."

Mr. D. H. Moore and wife, of Ohio, got back the other day from a week's camping under the Florida pines. They were out in one or two severe rain storms. The last night for a little while it blew a regular gale, so that Mr. Moore and the two guides were obliged to hold on to the tent in order to keep it over Mrs. Moore. In the morning they found themselves in the midst of a veritable lake, and water within 2in. of the bottom of their cots. It quickly drained off, however, so they were able to get out without any difficulty. But this was only an incident and an experience. Both Mr. and Mrs. Moore thoroughly enjoyed their camping out, and only regretted that business called them home so soon. They brought in one deer, nine wild turkey gobblers and quail by the dozen. B. M. D.

New York Deer Laws.

Editor Forest and Stream:

The present game laws of New York that pertain to the deer seem very unsatisfactory in their present form, and the universal opinion is that they will be changed by the present Legislature; and it would seem to me that suggestions in the FOREST AND STREAM from sportsmen, giving their views of the matter, might be of great benefit to themselves as well as to the deer. There is no question that a law can be made that will in five years increase the deer in the Adirondacks tenfold or more, and at the same time not deprive the true sportsman of any of his pleasure, and also be of great benefit both to the hotels and guides. Have open season from Sept. 1 to Nov. 10, and hounding from Oct. 1 to Nov. 1, all inclusive, with a penalty of $100 or more for any person having a deer in his possession without head on or without horns, or for killing more than two deer in the same season.

Now we only get estimates of the number of deer killed each year. Have a law compelling each person killing a deer to report the same, with date and his place of residence, to the town clerk of the town in which the killing was done within ten days after killing, or pay a fine of $25 for neglect; the town clerk of course to receive recording fees for his services, and he to make a full report to the Commissioners of Fisheries, Game and Forests within thirty days after the close of the season. About one-third of the deer killed in 1895 (by Mr. Fox's report) were killed night hunting, all of which was practically over with by Sept. 10, and of the 1 233 deer reported killed a very large per cent., fully 75, were does that had young, and the killing of the mother was really killing two fawns at the same time; for at this season of the year they were too young to maintain themselves, so that the report of 1,233 killed night hunting in 1895 should read 3,081 if the real truth was known.

Stop killing the doe and you more than double your flock every year. R. F. MEECH.

The Sum of it is that it's a Pretty Good Country to Live in.

WABASHA, Minn., Feb. 24.—*Editor Forest and Stream:* There is one chapter in Mr. Robinson's book, "In New England Fields and Woods," that I wish everyone who hunts might read; not that I think it would have any effect on some of the blood-seeking butchers who thirst for gore and the noise of a gun, but it would help to set a large number of young shooters to thinking and older ones as well I refer to Chapter XXXI.: "A Plea for the Unprotected." It fulfills to the letter my idea of the matter. I have for years made a practice of never killing or destroying anything from mere wantonness, and I have built my camp-fires for thirty consecutive years. The Bible says, "Let man have dominion over the fish of the sea and over the fowl of the air, and over the cattle and over the earth, and over every creeping thing that creepeth over the earth." How few there are who do not abuse the blessed privilege of this law.

If there was only some one who could or would write as delightfully of scenes, events, birds and animals pertaining to our Northwestern States, it would also be intensely interesting; but writers having the characteristic talent of Mr. Robinson are rare indeed. But we must admit that there is a certain charm about old New England not equaled by any other section of the country, more particularly to those who passed their youthful days among the hills, as I did; for I caught big trout and shot squirrels in Massachusetts and New Hampshire before I was in my teens. However, for a right up and down hunter's paradise, as I have seen it for thirty odd years back, give me old "Star of the North" and the badger. WAPAHUSU.

In the Chicago Wilderness.

I READ with much interest the thrilling account of brother Hough of his adventures with his companion among the sandhills back of Michigan City. It was really sad to read of the sufferings of Hough and "Patti" on account of not having sufficient water in their camp while Lake Michigan was so near them. "Patti" has ceased to be a hero to me since he was unable to get sufficient water from the big lake for drinking purposes. Why did he not scoop out a hole in the sand and let the incoming wave fill it, and then he would have had sufficient water to fill his vessels. Or supposing that the waves froze as fast as they came in, why did he not take his little hatchet and chop off a piece of that big cake on which he was standing and carry it to camp? He could not spill it, and it is well known that melted ice produces water; besides, hot ice water in camp is a great luxury.

ABERDEEN.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

Pike Fishing in Long Lake.

CAN it be possible that there are no longer trout to be found in Long Lake in the Adirondacks?

Has the introduction of pike, the pickerel of New York, into that famous lake been the means of exterminating the last of the brook and the lake trout which once swarmed in the lake? It would seem so, judging from several newspaper items that I have read, or the fish law of the State has been violated openly, and the violation of the law widely advertised. Section 104 of the law forbids fishing through the ice in any waters inhabited by trout, salmon trout or landlocked salmon except in certain named waters, and Long Lake is not one of them. Whoever violates this law is guilty of a misdemeanor and is also liable to a penalty of $25 for each violation thereof, and $10 for each fish caught or possessed.

Mr. J. C. D. Kitchen is a "citified man" who is spending a portion of the winter at Long Lake, and he "writes to his friends in the city" much as an explorer would write home from a strange land: "The natives resort to bickering, deceit, lying, stealing and pettiness of every description, for cause if there be any, and if there is none simply to pass away the time." To give cause and to stir up the depths of this iniquity generally, Mr. Kitchen arranged a fishing contest, offering small prizes for the biggest fish and for the largest quantity caught by any one man. The narrative continues: "The fishing on the Adirondack lakes is done by drilling holes in the ice with a crowbar, through which the baited line is dropped and attached to a tip-up or arrangement of cross-sticks which causes a miniature flagstaff to arise and flutter a signal in the wind when there is a tug at the line. * * * These natives aren't a bit afraid of work," writes Mr. Kitchen, "not a bit! Why, they will lie right down beside it in this particular instance."

As an example of the aforesaid "bickering, deceit, lying, stealing and pettiness," Mr. Kitchen relates that it was found that the claimant for the prize for the largest fish had filled his "pickerel" with shot.

I do not know what Ed. Butler, Jerry Plumley, Dave Helms, Charlie Hanmer and other friends at Long Lake will think of Mr. Kitchen's analysis of the Long Lake natives, but that is a matter entirely aside from the fact that as a result of the fishing contest inaugurated by Mr. Kitchen he came into possession of 34 pickerel (let me see: $25 for each violation and $10 for each fish makes $365—quite a tidy little sum in these hard times, but that is what it figures, provided the trout have not all been caught out or eaten out of the lake to make Sec. 104 inoperative), weighing 170lbs., and sent them to the Knickerbocker Athletic Club in New York City.

Dr. John Todd.

Rev. Dr. John Todd, writing of the people of Long Lake in 1841, said: "Nearly in the center of the wilderness we came to a beautiful sheet of water, the Long Lake, which is about twenty miles long and from half a mile to three miles wide. It is studded with islands and surrounded by a heavy forest, and in the warm sky of summer seems like a fairy land. Scattered along toward the head of the lake we found a little community of eight or nine families. They are here alone, shut out from the world. The hunter's axe alone had marked the trees when they came. They lived in their little log houses, and their little boats were their horses, and the lake their only path. A pocket compass was used as frequently as by the sailor. They were skillful in taking the moose, the deer and the salmon trout, and these were their world." These people are no longer shut out from the world, now that fifty-five years have passed, and they may protest that the picture that Mr. Kitchen has drawn of them is not a true one.

The book from which I have quoted is entitled "Long Lake," and was published in 1845. Hallock first told me of it, and I searched so long and fruitlessly for it that I thought Hallock was mistaken; but I found he was not when a friend sent me a copy. I was particularly anxious to get the book, for I first met Dr. Todd in the woods. I was at a lumber camp on the Cedar River fishing, I think it was in 1859. One evening Dick Birch, the guide, came to the camp with a man he called Doctor. For some reason I assumed that he was a doctor of medicine and not a doctor of divinity, but why I do not know, except at that time perhaps the former were much more likely to be in the woods with rod and gun than the latter. That night I had a little misunderstanding with Dick Birch, which he did not know about for some time after. I had made a deer lick not far from the camp and one of the men spoke about it. Dick, without consulting me, said he would go out that night and watch the lick and perhaps get some venison for the camp. This did not meet with my approval, but it was my father's lumber camp and I could not say no without violating the laws of hospitality; so when Dick loaded his rifle and placed it in the storeroom shanty I drew the ball out of it and replaced it with a wad of paper well rammed down. Dick and the camp keeper went to the lick, and the Doctor, my boy friend and I went to bed.

Fishing in the Dark.

Our beds were over the storeroom shanty, and there were seven or eight in a row. The Doctor selected one, pulled the sheets over his face and began to snore. Such snores I had not heard up to that time, and it was more than I could stand, added to Dick Birch's attempts to kill my deer. There were two beds between the Doctor's and mine, and from my tackle box under my bed I got a lake trout line used for fishing at a buoy. The hook was a big one made by a blacksmith from a rat-tail file, and I unwound the line and crawled over the two beds, and hooked the hook through the bedclothes on the Doctor's bed. When I was back in my own bed I began to pull gently on the line until all was taut, and then gradually I pulled the bedclothes from the bed of the snorer. Suddenly the snoring ceased with a violent snort, and while I could not see, I could feel that two hands were making desperate clutches for bedclothes dissolving in the cold night air. It was evident that the bedclothes were secured and replaced in proper position, for the snoring was resumed at the old stand with unabated vigor. Then I pulled in the slack in the line, and finally pulled off the clothes as before. The snoring ceased, only to be resumed when the bedclothes were again captured. This was repeated over and over. Once the Doctor seemed to be feeling in the next bed toward which the clothes continued to slide, but he found nothing but undisturbed bedclothes. Another time after awakening with the usual snort it took him longer to arrange the clothes, and I heard a jingling of metal like a bunch of keys; and when the snoring was resumed it continued until morning, for when I pulled in the slack in my line I had lost my fish and my hook, for the line was parted by the cut of a knife blade.

The Round-up.

Remorse did not sit on my neck next morning when I heard Dick say he shot at a deer, but had no ball in his rifle; that it was the first time in his life that he ever did such a thing; that he could almost swear that he remembered taking the patch from the patch box, and putting the ball on it, driving it down; that he could not understand how it happened, etc. I could not face the Doctor at breakfast, for his case was different, and I was not sure but the laws of hospitality had become a little warped in the dark hours of the night. A few years later I was sent away to school, and my first Sunday in Pittsfield, Mass., I marched with the school to church, and when from behind the pulpit rose the head and shoulders of a man with short, stiff, gray hair, standing straight up, homely but kindly face, with keen eyes looking out through spectacles, I knew that Dr. Todd was not a doctor of medicine, and remorse not only sat upon my neck, but jumped on me with both feet. I patched it all up with the Doctor afterward, but not with the patch that Dick Birch thought he drove into his rifle around a rifle ball to kill my deer, as I considered the animal he shot at with a charge of powder.

Artificial Floods.

The English sportsmen's papers have recently been discussing the feasibility of producing floods in the salmon streams in summer by storing the water in the spring, when the snow from the hills about headwater lakes, particularly in Scotland, is melting and producing an over-abundance of water, and when the streams are low, and the salmon will not run, to let the water from the lakes down to create an artificial flood. Opinions on the subject seem to be about equally divided. One writer says that there will be no difficulty in storing the water and letting it down at times of drought through sluice gates, but it will avail nothing. "The red deer and the grouse might be rather astonished to see rivers running brown and flooded when the land was parched for want of rain, and none had fallen for weeks; but they would be about the only creatures to witness so strange an event except the sportsmen who caused it."

If he means by this that fish will not run on an artificial flood he is in error, for fish will run whether the flood is made by rain or by "tripping a dam" in time of drought. It is not so many years ago that good trout fishing could be had at times on the upper Hudson River, from The Glen north to the mouth of the Boreas River, but the best fishing was in the tributary streams when they were flooded by the lumbermen for driving logs into the main stream. At such times the large trout would run up into the tributary streams from the river, but the fishing was not good at the height of of the flood. When the water was falling after a flood was the time to fish for big trout. Thirteenth Creek, the outlet of Thirteenth Lake, which comes into the Hudson just north of the hotel at North River P. O., was famous for its flood fishing, and the trout caught were river trout. A man who lived just at the mouth of the creek was fond of fishing, and being on the ground, and knowing just when the flooded stream would be at its best, he was able to make some wonderful catches of big trout. I was once wading the upper Hudson with Dick Birch and fishing for trout, and when we got to the man's house Dick took me to see the live trout he had in a tank, and it was a sight worth seeing. To fish a flooded stream one must be on hand at the proper time. A friend, the proprietor of a stage line running to Schroon Lake, came to me late one afternoon to say he had just heard that a creek flowing into the Hudson had been flooded. He telegraphed for relays of horses along his line and we started about sundown and made a record drive to the creek that night, and early next morning we were fishing it; but the flood was over and we got only a few small fish, while others, two days before, caught large river trout.

A. N. CHENEY.

Still Harping on Carp.

ST. LOUIS, Mo.—In the Bulletin of the United States Fish Commission for 1895 will be found a long article on the introduction of carp on the Pacific coast. In connection with this history the report gives many complaints of people in California, who state that these fish destroy the wild celery beds, which are the food of ducks, and destroy the spawn of game fishes. It is well to state in connection with these complaints that no evidence was produced to prove the truth of these statements, but the disappearance of the celery was laid to the carp without any investigation. The same is true in regard to the spawn of game fishes. The United States Fish Commissioner himself expresses doubts in the Bulletin as to the truthfulness of these reports, and intimates that a thorough examination of the stomach of carp is required before the question can be considered settled.

The Fish Commissioner states that the white bass introduced into the Pacific coast has flourished and is now very abundant. He also says that almost their entire food in fresh waters consists of carp, and hundreds of bass have been opened to make examination of their stomachs. Now, if the white bass will feed on carp, why will not the black bass do the same?

In this same report of 1895 will be found an illustration of the German carp, showing the peculiar arrangement of the scales. This recalls to mind the statement made by an Illinois correspondent of a Chicago paper, in which he told how the carp and the buffalo had crossed, and the result was a mongrel fish, with very few scales and a sort of leathery covering. Of course what he had seen was the German carp, and his reasoning is a fair sample of the other complaints made against this fish. As for myself, I have nothing particular to say in favor of the carp, but am anxious that the truth should be found out. Let some facts be given and not all theory. ABERDEEN.

Fly-Casting Indoors.

AT the third annual Sportsmen's Exposition, March 13 to 20, at Madison Square Garden, will be held an indoor fly-casting tournament. The committee in charge of this unique feature consists of P. Cooper Hewitt, chairman; William C. Harris, sec'y; James L. Breese, H. C. de Rham, Edwin Clark Kent, Robert B. Lawrence, William Kent, Charles Bryan, Frederick Engle, C. G. Levison, John G. Heckscher, Nathaniel S. Smith, H. W. de Forest, William B. Williams, P. Lorillard, Jr., W. R. Garrison.

Those who desire to enter the tournament will be furnished with the rules, entry blanks and all necessary information by applying to the Sportsmen's Exposition, Madison Square Garden. The fly-fisherman will cast over the surface of an artificial lake. For long casts they will have a clear stretch of water, but when the utmost *finesse* of putting the artificial insect just where the angler wishes it to go is attempted, the contest will be made difficult by semi-submerged branches of trees in the water and bushes irregularly disposed about the water's edge, where they are likely to prove metaphorical thorns in the impatient fisherman's flesh.

The fly-casting tournament will go on every afternoon and evening during the sportsmen's show.

The entrance fee for contestants will be $2 for one event, or $5 for three or more events. There will be eleven different contests, every one of which is bound to be interesting to all fishermen and to every spectator.

A Man We've All Fished With.

ST. LOUIS, Mo.—Regarding the excellent pen pictures by Mr. Mather of men he has fished with, he seems to have been a mighty fortunate individual, for all his fishing companions appear to have been thorough good fellows. Is it possible that he never went fishing with John Doe, who was never willing to row up-stream; who wanted the first cast at every favorable point; who took the biggest bait in the bucket; who would slap down his hook beside yours when you had a bite and was always grumbling when the fish did not bite fast enough to suit him! John Doe ought to be written up, and we hope brother Mather will run his gaff under him and hold him up to public view. John may not be a reader of FOREST AND STREAM, and again he may be, but we think he is known to all its readers. ABERDEEN.

MEN I HAVE FISHED WITH.

XXXIV.—Charles F. Bell.

CHARLES was almost like a son to me. One of the dreams or desires of early life was that I might have a son of my own, but it never came to pass. In imagination I would show him the secrets of angling, and be sure not to spoil him by sparing the rod, whether of ash or lancewood or split bamboo; yet a real son might not have cared for these things as the dream son did. My fondness for a boy naturally led to the companionship of the sons of other men, and Charley Bell was with me constantly for some eleven years, from childhood to man's estate. He grew up under my care and we were great friends. It all happened in this way:

Robert H. Bell was a wood carver in Albany, and was also foreman of one of the old volunteer fire companies. I made his acquaintance in 1862, when he was a captain in the regiment in which I served. He was then a man nearly fifty years old, and while we were in the forts about Washington he brought his family there, a wife and two sons. The eldest, and subject of this sketch, was then nearly ten years old. When we were sent to the front, in May, 1864, Captain Bell was wounded, and died a month later. It was in July of the next year that we took Charles on that piratical cruise with Shaw, and although only twelve years old he could sing very fair bass—a very strange voice for that age. Then he wanted to go fishing with me down the old Popskinny, and I longed once again to forget all about spearing and shooting fish, as learned in the West, and even to drop all ideas about fly-casting, which I had learned from Charles Hallock, and sit on the bank and pull 'em in hand under hand, in good old boy fashion. In the third one of these sketches it is related how John Atwood sneered at fishing with a pole by saying: "There ain't no fun in it, for you h'ist 'em out too quick with a pole. Throw that away and take off your float; rig yer sinker below the hooks, and when you get a fish haul 'em in hand over hand, and feel 'em wriggle all the way in; that's sport!"

Writing of this brings a desire to fish that way once more. Bait the hooks with good-sized worms, spit on the bait for luck, whirl the sinker three times by the right side and let it go just on the upward start to plunk in the water at the proper distance, running out the neatly coiled line at your feet, and then, taking in all slack, wait for a bite. Nibble and strike, nibble and strike; "I've got him!" And then haul in fast, with the fish sending electric thrills up the line, and all the while you are nerved up by wonder as to the kind of fish and its probable size. An eel of 2lbs. makes you think you've got the biggest perch that ever swam, and your heart beats fast until you see what it is, and then, with all your care, the beast puts knots in the line in a minute that will take you a long while to untangle, and you knock satisfaction out of him with your heel. Verily, looking back upon my life as an angler, there seems to have been no sport like this. Of course, you will say that the high strung animal which we call a boy enjoyed things which he would not care for half a century later, when he is a man and *blasé*. So be it. Have your own way, only let me enjoy the recollections. Our pleasures are in the past or are to come. "The good old days" are gone, but the boy of to-day will look back at the closing days of this century with regret in 1950.

Of course, no man could be about that island creek in those days without meeting with old Port Tyler. The bayou was only some six miles long, cutting in below Douw's Point, a mile or so below Greenbush, and coming out again above Castleton, and Port ranged it for fin, fur and feather most of the year. Summer was at its height. Pond lilies bloomed in bends where the current was not strong, elderberries were ripening and the milkweed pods were almost ready to burst. It was near noon; the fish were taking a rest, and Bell had wandered off after blackberries, while I lay in the shade of a willow and slept.

The early start, the generous snack, with the pleasant odor of the mud flats at low tide, had a soothing effect. If my dreams were peaceful it was because of the surroundings. If they suddenly changed to bursting shells and the cheers of charging hosts it was because Bell rushed in on me, calling out: "Get up and run; there's a wild man down there in the brush and he's got a gun!"

"What did he do? Did he say anything to you?"

"No, he only looked at me; but I saw the gun. He's a wild man sure, for he's got white whiskers under his chin. Oh, come on, let's go."

"Did he point his gun at you, or threaten you in any way with his whiskers?"

"No; but I was picking blackberries in the brush, and when I looked up he was on the other side of the bush with his face close to mine, and I never heard him coming. His eyes were like coals of fire and he was going to grab me, but I ran away."

The description was amusing, and while enjoying the boy's fright and lazily thinking what to say to him the "wild man" came to the willows where I lay and Bell bolted for the open field. I told Porter how he had scared my boy, and he laughed in that silent way usual to men who live with nature and said: "I was comin' up the crick and stopped to pick a few blackberries, when the boy came to the same bush. I on'y stood still and looked at him, an' was goin' to speak, when he seed me an' away he goes like a cottontail."

After a while Bell made a reconnoissance, and found the enemy smoking the pipe of peace under the willow, and he came in with some misgivings, but with an eye on those Horace Greeley whiskers. In his short life there had been nothing like those "lace curtains," as he afterward called them, seen in either military or civil life. It was this slight frame to the human countenance which had alarmed him. He crawled up and listened to the talk, which was upon the culinary excellence of young quawks, of which Porter had three, and Bell looked them over with great curiosity. In the immature plumage they resembled the adult poke, but Porter pointed out the fact that the young night herons had no dark patch on the side of the neck, nor buff stripes on the throat, although they were spotted with brown like their day-feeding relatives.

"Now these here birds is night feeders," said the old trapper, pleased to find one who took interest in questions which to him exceeded all others, "an' in order to help 'em get fish on dark nights—fur they've got to feed no matter how dark or stormy it may be—and when you can't see yer hand afore yer face they've got to see a fish in the water. Jess look at his long shanks with no feathers on 'em to get wet. That's so's he can wade out where he can watch fer fish, an' his long neck and bill lets him get down after 'em when he strikes. Ye see, he can stand up as high as a turkey, while his body ain't bigger nor a pa'tridge. His wings are big, and that makes him fly easy; but the p'int is how he kin see a fish in the water on a pitch-dark night. These here yaller patches o' down does it; they gives out a light like a bit o' fox-fire, and many a night I've thought it was fox-fire;* but when I've put the boat in to'ards 'em a quawk allers got up. But before he got up the light went out Now ye can see that when he stands in the water an' sort o' opens his wings—get down, here comes a shitepoke." He shot picked up the bird, showed the difference between the species, remarked that he didn't care to eat a poke, and settled down to his pipe, after his very long lecture on biology, although he would not have known what the word meant if he heard it. After he left us the boy said: "Mr. Porter knows a whole lot about birds, doesn't he?"

"Yes, Charley, he knows a whole lot about ev'ry living thing that he sees He would be a treasure to a closet naturalist. Tell me, what made you afraid of him when you saw him at the blackberry bush?"

"I dunno; he was so still. I was picking berries, and when I lifted my eyes there he was a-lookin' at me; and then he was so different from the men in the city. I can't tell you how it was."

In the fall it had been arranged that Porter and I should have a day with the ducks, snipe, yellow-legs, rail and sandpipers. Charley had a hint that he was not wanted, but when Porter and I met at the old barn in the evening, and had talked ourselves out before going to sleep in the hay, the boy turned up.

"Charley," said I, "what did you come down here for? You know you should be in school to-morrow. Are you sure that you asked your mother if you could come down?"

"Yes, sir, I have permission; and as to-morrow will be Saturday there is no school. I thought I'd be lonesome and I did want to see you shoot. Please let me go. I'll promise not to be in the way, and will keep back and not be a nuisance."

I was for sending him home in the morning, but Porter said: "Let the boy stay; he can take care of the boat an' set us ashore or across, an' it'll save us a walk back to the boat, if he'll on'y watch where we go an' keep well behind."

That settled it Porter had taken a fancy to the boy because of his interest in living things and a desire to know more than how to kill them. Looking back upon it, there seems no other reason for my liking him, outside the sentimental ones connected with his father's death and the fact that his open, honest way was attractive. There was a bit of water, then known as Dead Creek, which ran from the river up into the island, and we got our boat over into that and Charley pushed Porter among the rushes, where the rail congregated, while I looked for yellow legs and other shore birds. Porter said that the boy soon understood every signal, and his bag of rail was evidence of the success of the trip

In April, 1867, I got my first ideas of fish breeding from Port Tyler by seeing the strings of eggs of yellow perch hanging in the air on twigs when the spring freshets subsided. Porter said: "When the perch lays these eggs there ain't nothin' in 'em, but the he one comes along an' fills 'em up an' they hatch." Bell was greatly interested when I took some strings of eggs which had not dried, and he saw the fish move in the egg. We put a lot in a box and saw the fish swimming next day. A year later we fertilized some eggs and hatched them in the State Geological Rooms in Albany.†

This very bright and good boy had become my familiar, and when, in 1868, I bought a farm in western New York to engage in trout breeding he went with me. He was then fifteen years old and helped me make ponds, and in his enthusiasm brought in a great number of spawning trout from the adjoining brook. He went through the public schools and wanted more. I sent him to the academy at Brockport, N. Y., where he graduated in two years, and then wanted to study medicine. In the report of the American Fishculturists' Association, held in New York in 1873, will be found a paper by Charles Bell on the fecundation of fish eggs, in which he denies that the spermatozoa are distinguishable as independent organisms, instead of being merely free-moving cells. He attacked some of my theories, but he was my own boy and I admired his dash and his learning.

We all remember how Lord Byron hated Lord Castelraugh, and, when the latter cut his throat, the poet quoted from the reports: "'He severed the carotid artery,' my blessings on their learning.' In this spirit I read Bell's learned discourse on independent organisms and free-moving cells without giving an order to my hatter to enlarge my hat block; but there remained that personal pride which we take in the foot-ball team from our school, and which after all is only a personal pride—the team or the boy is part of our own personality, which, by the way, is the greatest thing on earth.

We lived a mile west of the village of Honeoye Falls, some sixteen miles south of Rochester, N. Y., and Charles studied with Dr. Brayton for a while and then got the notion that he would go to Albany to finish up, for, said he, "If I'm going to be a medical Johnny I've got to get where there is a chance to see the big medical Johnnies operate and hear them lecture. My studies so far are only preparatory to serious study, just the A B C of the business. There's nothing more to be learned here."

"At the Brockport Academy do the boys speak as disrespectfully of all the learned professions as you have now done of one which you hope to follow?"

"Yes, they've got names for all of them; you know that boys are not overburdened with reverence. What can you do to get me a job in Albany that will help pay for my schooling?"

I gave him letters and he went to the stock yards at West Albany and weighed cattle for some time, but in 1874 he learned that I was going to Germany with young shad and he wanted to go. My assistant had been selected by Prof. James W. Milner, then in charge of the shad work of the U. S. Fish Commission, and I begged to have Bell substituted. The other man I had never met, but as it was careful work, for the success of which I was partly responsible, I urged that I should name my assistant. Mr. Milner was with me, but the man had thrown up his business at his request and Bell did not go to Germany. Knowing his enthusiasm and care of all details, he was my choice. It would, however, have made no difference in the result. Mr. Anderson was as faithful and attentive as a man could be, but the young fish starved to death because they needed food which to-day we cannot supply.

Throughout the next winter the boy's letters to me showed a desire to get back on the trout farm, to go with me in the shad work and travel. There was less said about ambition to be a "medical Johnny," and reading between the lines it was plain that his ideals had changed. This is a very common thing with boys, as I have studied them, and myself. Reading Marryat's novels and Cooper's sea tales, I struggled to like plug tobacco, but failed. Robinson Crusoe seemed to live the right kind of life until "The Life of Charles XII., of Sweden," came in my way, and then the career of a soldier seemed to be the only desirable one. This in turn was knocked out by Cooper's "Leatherstocking Tales," and I can at this late day understand how a boy just entering manhood may be undecided between several ideals The story of Whittington and his cat, or the yarn of Ben. Franklin walking Philadelphia streets, had the slightest inducement to emulate them. Few boys know their minds from year to year; why should I expect Charley to be an exception? Somehow he wanted to get back, I wanted him back, and he came.

In the spring of 1875 Prof. Baird wished me to make experiments in retarding the hatching of shad eggs, with a view to hatching them *en route* to Germany. Prof. Milner had met Bell, as I had taken him as an assistant to Des Moines, Iowa, with shad fry from the Hudson, and he assigned him to help me in experiments on the Delaware River,* but we did not feel satisfied with the trials when Mr. Milner telegraphed that two other men were ready to go with their apparatus. They went and failed. They knew of our experiments and hurried to get ahead, but we agreed to stay. The result was the "Bell and Mather Hatching Cone," which was the first thing that hatched fish eggs in bulk without the use of screens for layers of eggs, and the original is now in the National Museum.

After showing the new cone to Milner, Clark, Chase and other fishculturists who were hatching shad at South Hadley Falls, Mass., Milner asked if it was or would be patented. When we told him that it would not be patented because we had a prejudice against patents, having used the product of other men's brains in almost everything we handled, he said: "Well, you've solved the problem of hatching fish eggs in bulk." Bell had gone on with me and I was anxious to push him, so I gave him all the praise and credit possible; I didn't need any.

We had taken a lot of quinnat salmon from Niles, Mich., to Austin, Tex., in baggage cars, a long and tiresome trip, but the boy liked it, and when at the close of the shad hatching season of '75 I was sent to Tickfaw, La., with a lot of fry for the Natalbany River, and to collect the fishes of that region, Bell went to assist. Later in the year he was sent to Austin, Tex., to put up troughs and hatch quinnat salmon in a tributary of the Colorado. His last letter said: "The workmen here are slow. I've been working up to my waist in water and have a severe cold." The next known of him was when he staggered into the house of Prof. Milner, at Waukegan, Ill., on Nov. 30, delirious with typhoid fever, where he died four days later, aged twenty-two years. He lies in the Rural Cemetery at Albany, N. Y., his native city.

FRED MATHER.

---

* This is the name given to wood when it is in that state of dry rot which gives a phosphorescent light. Only those who have been in the woods at night, and have found a portion of a stump which has been protected from moisture, have seen fox-fire; but the writer has seen pieces which came as near being "light enough to read by" as he ever saw moonlight. He has read of brilliant moons, but never could read by one.

† An account of this will be found in the reports of the American Fisheries Society, and perhaps in the United States and the State reports. The volumes are not at hand as I write.

* See Reports U. S. Fish Commission for that year.

Penobscot Salmon.

MR. E. A. BUCK, of Bangor, Me., the man who makes the moccasins for Uncle Sam's red men, as well as hunting shoes of all kinds for sportsmen, is a dyed-in-the-wool salmon fisher.

The other day he talked of fish and flies and wound up by asking me if I had ever seen a "singed cat." I had seen a singed cat, but I failed to see what that had to do with salmon fishing till Mr. Buck kindly explained that he referred to a nondescript fly that had proved successful in the Bangor pool where others failed to get a rise. A singed cat is a dusky drab-colored fly that does not belie i s name, and a salmon must be in a pessimistic mood when he favors this diet.

Last year was a great year for salmon at Bangor. Mr. Buck said they came up the river in myriads, and probably twice as many were caught as during any other season in recent years. He thinks that the latter part of the run were cultivated fish, with which the river has been stocked. They were all young fish, averaging 5lbs. less in weight than the usual fish, and of a different shape and characterized by blunter snouts.

Mr. Buck caught his first salmon April 27 and his last June 18. The week from May 22 to 27 he took ten fish. On the 25th he took four. It was full moon and the time of big tides. He was out on the river on the last of the ebb, as soon as it was light enough to see, and at 5:30 stopped fishing, having landed three salmon that weighed 45lbs. After supper that day he went out again and took one 20lb. fish.

The pool is about five minutes' walk from Mr. Buck's house and only a little further from his place of business. Is any such sport to be found so close to civilization at any other place in the known world? J. B. B.

Pike-Perch in Missouri Waters.

ST. LOUIS, Mo., Feb. 22.—Anglers in Missouri were treated last week to a genuine sensation in a press dispatch from St. Joseph, Mo., where there is located a State fish hatchery. The dispatch stated that some public-spirited citizens were to contribute funds, and that the Fish Commissioner at St. Joseph was going to hatch wall-eyed pike for introduction into the lakes and rivers in Missouri. The wall-eyed pike were to be obtained from Minnesota, and the consent of the Governor of that State and the Fish Commissioner were to be obtained to seine some Minnesota waters to secure the fish When one considers that there is no more abundant game fish in the waters of Missouri than wall-eyed pike, or as is commonly called "jack salmon," it is readily seen where the sensation comes in. Perhaps the Fish Commissioner at St. Joseph does not know that the jack salmon and the wall-eyed pike are the same fish, and that the proper name for it is the pike perch. Anglers of Missouri are to be congratulated that politics have no consideration in choosing Fish Commissioners in this State, but that they are selected for their knowledge of fish and fi-hculture. ABERDEEN.

"Angling Talks."

WE have a very few copies of George Dawson's "Angling Talks," a series of chapters of entertaining chat about men, fishermen, fish, fishing and fishing places. Cloth, 50 cents. Forest and Stream Publishing Co.

April 7-10.—Stockton.—Stockton Kennel Club.
April 14-17.—Los Angeles.—Southern California Kennel Club.

THE NEW YORK DOG SHOW.

The twenty-first annual dog show of the Westminster Kennel Club was held in Madison Square Garden on Feb. 22 to 25.

The judges and their classes were as follows: Miss A. H. Whitney, St. Bernards and Newfoundlands; Mr. Chas. D. Bernheimer, Great Danes; Mr. Geo. E. Pollock, Chesapeake Bay dogs; Mr. Geo. Raper, of England, mastiffs, bloodhounds, greyhounds, English foxhounds, pointers, setters, Irish water spaniels, Clumber spaniels, field spaniels, whippets, pugs and toy spaniels; Mr. L. P. C. Astley, of England, Russian wolfhounds, deerhounds, collies, Old English sheep dogs, all terriers, schipperkes, Pomeranians, Italian greyhounds and miscellaneous; Mr. John H. Matthews, bull dogs; Mr. R. D. Perry, American foxhounds; Mr. Geo. B. Post, Jr., beagles; Mr. H. W. Lacy, poodles; Mr. L. A. Klein, dachshunde; Mr. Andrew Laidlaw, cockers; Mr. Dwight Baldwin, Boston terriers.

There was a great deal of discontent over the awards in a number of classes, particularly in some of those judged by the talent from across the water.

Dr. H. Clay Glover attended to the veterinary requirements of the show in his usual satisfactory manner.

The benching and feeding was done by Spratts Patent, and well done; the new and brighter colored paint of the benching making a much more pleasing general effect.

Mr. James Mortimer superintended the show, and it is unnecessary to add that it was skillfully superintended.

Good weather prevailed, and the show was well attended. Every circumstance indicates that it was a financial success, as well as a success in all other respects.

The judging of the setters and pointers was received with much more than the ordinary complaints which are inseparable from dog showing, and there was ground for much of it. Those classed had a remarkably strong support, and it was generally expected that the foreign judges would give much better satisfaction than the home talent, but so far as the setters and pointers are concerned it was otherwise.

Foxhounds were but eighteen all told, English and American. Of the former there was but one, Songster, shown in the challenge class. There were seven in the open dog class, first going to Blackburn, a strong, symmetrically built hound, but rather short coupled. Pope's Samson, second, is somewhat loosely built and light in bone. Pope's Striver was a good third. The reserve went to a tidily built black and tan, Rice, excellent in shoulders, back, quarters, neck, legs and feet; plain in head. There were seven bitches. Flirt, a well-known competitor, won first. Flash, second, is lighter in build than Flirt, symmetrical, lean neck well set on good shoulders; feet a trifle open. Veracity, third, is heavy in head and strongly made. Frisky, reserve, is poor in head and of average merit otherwise. Challenge class for dogs and bitches had three competitors, of which Big Strive competed for specials only. Bowsprit, an excellent bitch in every way, took first; Duke, a well-known winner, taking second.

Chesapeake Bay dogs were treated rather harshly and rather unjustly, in that the first prizes were withheld, though the number and quality of these dogs were far above the average. There is no breed before the American public to-day which needs so much encouragement as does the Chesapeake Bay dog, so far as its bench show interests are concerned. In its special field it has a fame for excellent performance, and as a working dog it is much prized. To the bench shows the owners have not taken kindly. The dogs shown at New York are the best specimens which have competed at the bench shows in recent years, and nearly all had a first prize win to their credit. The dogs were in good condition. To withhold first under the circumstances was treating the owners most unjustly, as well as indicating that the judge was not so well informed of the situation as his position as judge would seem to indicate. Five competed in the dog class, and Deacon, shown in excellent condition, was awarded second prize. Beaver was awarded third. He is better in head than the winner, and is a much smaller dog. Five bitches competed. Lot, in good coat and a fairly good bitch, won second; third going to Dell, also a bitch of merit. No commended cards were given.

Pointers were in good numbers and quality. The Westminster Kennel Club had four of its famous pointers on exhibition, namely: King of Kent, Sandford Druid, Hempstead Daughter and Ightfield Tyne—all in good condition. There were five dog puppies. Brandywine, first, is long cast and light in barrel, straight in shoulders and stifles, slack built, good head and neck. Sir Donald, second, is flat-chested, in at elbows, feet turn out in front, fairly good in head. Rocket, third, is better in muscular development than first or second, and had also more symmetry and was better in legs, feet, body, neck, and had a fairly good head. The novice class had nine competitors. Fairview Jim, first, is good in head, is wide sprung in ribs, thin in thighs, yet is a fairly good pointer. Tick Kent, second, is light in muzzle, is better in legs than the winner, and stands better on them; body well shaped. Lad of Bang, third, is moderately splay-footed, too heavy in shoulders, excellent in back and quarters, symmetrical, and was better than first in many respects. Spot Gold, reserve, is light and thin. Open dogs, under 55lbs., had ten entries. First was won by Princess Boy, tending to legginess, though symmetrical. Sir George, second, is light in head, leggy, throaty, long cast. Third went to Fairview Jim, already mentioned; and the reserve to Straightaway, the winner of first at Boston. Omega, vhc., is quite a fair pointer. Dogs, 55lbs. and over, numbered ten. Sir Walter won somewhat easily. He is a smooth, sound dog. Heath's Roswell, second, is a bit heavy in head, not coarse, as we stated of him in our last comments on him. Furlough Mike was third. The reserve, King of Lynne, is throaty. Challenge dogs, under 55lbs., numbered three—Ridgeview Comet first, Shotaway second, Ridgeview Chancellor third. Challenge dogs, 55lbs. and over, was a troublesome class; for first Lad of Kent was awarded the prize in a walkover. He was shown in good condition. Molton Banner, his only competitor, was marked absent. Then Mr. Lewis, handler of Banner, presented the plea that Banner was not absent, and later the class was rejudged and Molton Banner was awarded first, which was quite as wrong as it could be; for first he was in bad condition, with some rather evident traces of mange, and second, Lad, is a better dog, though he has his faults. Mr. Geo. Jarvis, Lad's owner, protested against the rejudging, and the protest was allowed, the win then standing to Lad's credit. There were four bitch puppies. Zella Strideaway, first, is light in head and long cast. Furlough Maud, second, is light in muzzle, but otherwise is a well-made puppy, better than the winner in legs, feet, body and head, and also stands better in front. Dilwyn Belle, third, is commonplace. There were fourteen novice bitches. Fairview Meally, first, is not clean-cut in head, is flat in chest and stands in at elbows; in quality about fair. Belle of Eastchester, second, is a well-made bitch, shown a shade too thin in flesh, good in neck, a trifle too shallow in chest and plain in head. Ightfield Blossom, third, is heavy in shoulders, yet a good bitch. Mischief of Huntington, the reserve, is light in muzzle, too straight in shoulders and stifles. Furlough Bloom, vhc., is a smoothly made bitch, better in head, body, shoulders, chest, legs and feet than first or second. Westlake Startle, vhc., was symmetrical, but thin in flesh. There were thirteen bitches under 50lbs. Kent's Kate, quite a good bitch, won first. Fairview Meally was second and Belle of Eastchester was third, both already mentioned. Princess Trilby, reserve, is light in head and is throaty, otherwise quite a good bitch. Bitches, 50lbs. and under, had six competitors. Urada won first; she had the like honor at Boston. Ightfield Blossom was second and Furlough Bloom was third. Beggie, fourth, is heavy in shoulders and loosely built, is poor in head and wide in front. The challenge class for light-weight bitches had four. Miss Rumor was placed over Lady Gay Spanker, which was an error, and the reserve went to Brighton Flossie. In challenge bitches, heavy weight, Alice Leslie was placed over Josie Bracket, which was another error. There were two in the field trial class—Ightfield Diana and Strideaway, first and second in the order mentioned. George J. Gould took the kennel prize. Molton Banner was awarded the prize for the best pointer owned by a club member.

English setters were well represented in numbers, and mixed as to quality. Nine dog puppies competed. Arden Rod, a fairly good puppy, took first. Philip, Jr., second, has a light head. Braggelone won third. There were nine novice dogs; Orangeman, throaty, and loosely built, though a fairly good setter notwithstanding, took first. Paxtang II., a throaty, stockily built dog, took second. Knight Templar, third, is good in head, legs, feet, body, and was the best dog in the class. Rockingham II., reserve, has much merit. There were twelve in the open dog class. Freckled Monk, first, is slab-sided, heavy in movement, narrow-chested, in at elbows. Second went to Count Dick, a much better dog than the winner. Orangeman won third. Rambler, reserve, has a plain head, short neck, and is wide in ribs. Cactus, shown in good condition, had a walkover in the challenge class. There were seven bitch puppies. Suffolk Beauty was first, and Psyche, a good bitch, took second. Sappho, a pretty, light-built puppy, took third. There were seven novice bitches. Juno, first, is a good all-round bitch. Nellie Hunter, second, is short in muzzle, light in head, over-sprung in ribs, and about ordinary in quality. Blanche G., third, was the best bitch in the class. Nine bitches competed in the open class. Juno was first. Flower of Sulphur, second, is long cast, slack in loin, light muzzle, slightly throaty. Nellie Hunter took third. Laundress, fourth, is narrow in muzzle; she is a fairly good bitch. John Brett won the kennel special. Maid Marion had no competition in the challenge bitch class, and Montell beat Rodfield in the field trial class, though the latter excels the former in many respects.

Irish setters were fairly well represented in numbers, but in quality were about average. There were eight in the dog puppy class. Red Signal, first, is a little light in muzzle, fairly good head, and is a tidily built and symmetrical puppy. Parker, second, is an inferior specimen, an unnoticed dog, Guy Baker being far his superior. Hunter, third, is inclined to lathiness, but is far better than Parker. There were eleven in the novice class, first going to St. Elmo, good in neck, back and quarters; ears set on well, and his symmetry is superior. Kildare Swiveller, second, is straight in shoulders, faulty in head and was less symmetrical than St. Elmo. Pilot of Effingham, third, is a fairly good dog. Prince Elcho, vhc., was better than two placed in the money next over him. In open dogs there were eleven competitors. Shamrock O'More, first, stands in at elbows; is flat in ribs, head not clean-cut, and he shows some throatiness, but is a fairly good dog nevertheless. St. Elmo, second, is a better built dog than Shamrock. Third went to Kildare Swiveller, already noticed, and fourth to Pilot of Effingham. In the challenge class for dogs Kildare won over Finglas and Pride of Patsy, the latter being reserve. There were two bitch puppies: Bessie Thasmo and Belle Thasmo, first and second respectively, and both not above average. There were three novice bitches. Belle of Kildare, first, is throaty, but fairly good otherwise. Second went to Lady Lockwood, light in build and muzzle, and somewhat leggy; and third went to Molly Redstone, short in neck, and shoulders not well set. The open bitch class numbered seven. Trine, first, is a good all-round bitch. Belle of Kildare was second and Lady Rockwood third. Ruby Glenmore II., short in head, thin in flesh, won fourth. She would have shown much better had she been in condition. There were six in the challenge bitch class, Queen Vic carrying off the honors with much to spare. Duchess won second, and Delphine was reserve.

Gordon setters were about average in number and quality. There were two dog puppies, both very ordinary. Five novice dogs competed. Grouse Ranger won first; he stands on good legs and feet, has good black and tan color, and pleasing symmetry. Ladview, second, is throaty, faulty in head, and is moderately swaybacked. Brandy, third, was out of coat. Gordon, reserve, has a short, light muzzle, is rough in coat and lacking in Gordon character. There were eight in the open dog class. Doc, first, is throaty, but is a fairly good dog. Heather Bruce was a good second. His shoulders are well set, he has a good neck, though he is throaty; head rather plain. Forest Guy, third, is narrow in head and too heavy in shoulders. Jack Sharp, fourth, is poor in head and lacking in symmetry. There were two challenge dogs, Heather Lad and Heather York, the former carrying off the honors. Bitch puppies had but one entry, and that so faulty that it deserved nothing. Four novice bitches faced the judge. Mabel R., first, has a short muzzle, a light head, excellent neck, shoulders and quarters, and sound legs and feet. Princesview, second, is shallow in chest, light in body, small head, a very commonplace bitch. Brunhilda, third, is smudgy in tan and plain in head. This class was a poor one. There were eight in the open bitch class. Dwight Bee, first, is narrow in muzzle, but is a fair bitch. Sally Beaumont, second, is light in muzzle, plain in head and throaty. Venus, third, has a light muzzle, is throaty, plain in head, good in body, shoulders and quarters. Dwight Sarah, fourth, is a soundly made bitch. The reserve went to Princesview. Heather Bee won over Flomont in the challenge bitch class, and Flomont and Sallie Beaumont were first and second respectively in the field trial class. The kennel prize was won by James B. Blossom, and his Heather Bee captured the special for the best Gordon.

Beagles were a rare good lot and were strong in numbers. The judging was well done and gave reasonably good satisfaction. Nine appeared for judgment in the puppy class for dogs and bitches. Thornwood, an excellent beagle, though a little long cast, won first with something to spare. Churchman, second, is quite a sound dog, not so symmetrical and smoothly turned as the winner. Soda, third, is also quite a good beagle. There were ten novice dogs and bitches. Truman, first, is out at elbows, otherwise a soundly made, symmetrical beagle. Directum, second, is marred by a throaty, heavy neck, but is thin and sound otherwise. Wharton's Harkaway, third, is light in bone and his forefeet turn out, yet he is prettily formed. There were five in open dogs not exceeding 13in., and of these Leader was disqualified for being over size. Hector, first, in knees is a trifle faulty, but he is clean and tidy in build; a very sound dog all over. Thornwood took second and Young Royal third, the latter heavy in shoulders, light in bone and wide in ribs. Open dogs, 13in. and not over 15in., had thirteen competitors. Florist, first, is a finely formed, good all-round beagle. Lee III., second, is wide in front, pinched in muzzle, out at elbows, and has large feet. Robino II., third, is a strongly made dog, much better than Lee III. in every way; he stands on good legs and feet, has a well-shaped body, and is quite a good, sound dog. There were three challenge dogs, Ringleader taking first over Roy K. Bitches, not exceeding 13in., had nine competitors. Lonely II., heavy in shoulders, took first. Marjorie, second, is light in bone and wide in ribs. Eldred Briar, third, is deficient in short ribs. The reserve went to Beagle. Bitches, 13in. and not over 15in., had six competitors. First went to Oronsay Matron, a good all-round beagle; second to May R., well made, but lacking the symmetry of the winner. Frantic, third, was well made and more symmetrical than May R. Lady Glenwood, reserve, is heavy in shoulders. Lonely had a walkover in challenge bitches. Frank Forest won over Leader in the field trial class. The special for the best kennel was won by the Hempstead beagles. The special for the best beagle in the show was a closely contested prize. It was won by Harker, shown in much better condition than at Boston. He was closely pressed by Ringleader, the latter better in many respects, if not quite his superior.

AWARDS.

ENGLISH FOXHOUNDS.—Challenge—1st, Bragdon & McGregor's Songster.

AMERICAN FOXHOUNDS.—Open—*Dogs:* 1st, Walker & Hagan's Blackburn; 2d and 3d, N. Q. Pope's Pope's Samson and Pope's Striver. Res., J. H. Van Dorn's Rice. *Bitches:* 1st and res., N. Q. Pope's Flirt and Frisky; 2d, Walker & Hagan's Flash; 3d, J. Gibbs's Veracity.—Challenge—1st, Muske(under Kennels' Bowsprit; 2d, N. Q. Pope's Duke.

CHESAPEAKE BAY DOGS.—*Dogs:* 2d, Oak Grove Kennels' Deacon; 3d, Wm. Simpson's Beaver No 2. *Bitches:* 2d and 3d, Wm. Simpson's Lot and Dell.

POINTERS.—Puppies—*Dogs:* 1st, C. P. Willcox's Brandywine; 2d Electric City Kennels' Sir Donald; 3d, R. A. Fairbairn's Rocket.—Novice—*Dogs:* 1st, Anderson & Wilcox's Fairview Jim; 2d, A. M. Hopper's Tick Kent; 3d, Electric City Kennels' Lad of Bang. Res., Dr. J. R. Daniels's Spot Gold.—Open—*Dogs* (under 55lbs.): 1st and 2d, W. G. Brokaw's Prince's Boy and Sir George; 3d, Anderson & Wilcox's Fairview Jim.—(55lbs. and over): 1st, W. G. Brokaw's Sir Walter; 2d, C. Heath's Heath's Roswell; 3d, G. J. Gould's Furlough Mike. Res., P. H. Andee's Kentish Lad.—Challenge—*Dogs* (under 55lbs.): 1st and res., G. J Gould's Ridgeview Comet and Ridgeview Chancellor; 2d, G. W. Lovell's Shotaway.—(55lbs. and over): 1st, G. Jarvis's Lad of Kent.—Puppies—*Bitches:* 1st, F. S. Eaton's Zella Strideaway; 2d, G J. Gould's Furlough Maud; 3d, Dr. J. E. Hair's Dilwyn Belle.—Novice—*Bitches:* 1st, Wilcox & Burtis's Fairview Meally; 2d, W. G. Brokaw's Belle of Eastchester; 3d, F. J. G. McArthur's Ightfield Blossom. Res., G Furguson's Mischief of Huntington.—Open—*Bitches* (under 50lbs.): 1st, F. J. Lenoir's Kent's Kate; 2d, Wilcox & Burtis's Fairview Meally; 3d, W. G. Brokaw's Belle of Eastchester. Res., Tallman & Davenport's Princess Trilby.—(50lbs. and over): 1st, F. J. Lenoir's Urada; 2d, F. J. G. McArthur's Ightfield Blossom; 3d, G. J. Gould's Furlough Bloom; 4th, G. Furguson's Beggie.—Challenge—*Bitches* (under 50lbs.): 1st and 2d, G. J. Gould's Miss Rumor and Lady Gay Spanker. Res., Mrs. R. Armstrong's Brighton Flossie.—(50lbs. and over): 1st, E. M. Beale's Alice Leslie; 2d, G. J. Gould's Josie Bracket.—Pointers that have been placed in any public field trial in the United States or Canada—1st, G. J. Gould's Ightfield Diana; 2d, E O. Damon's Strideaway.

ENGLISH SETTERS.—Puppies—*Dogs:* 1st, L. D. Smith's Arden Rod; 2d, C. G Pierce's Uno; 3d, J. White's Braggelone. *Bitches:* 1st, G S. Raynor's Suffolk Beauty; 2d and 3d, A. Boote's Psyche and Sappho. Res., Glenwood Kennels' Beauty Bondhu II.—Novice—*Dogs:* 1st, J. Brett's Orangeman; 2d, E. E. Beach's Paxtang II.; 3d, R. W. Cunningham's Knight Templar. Res., H. Bartholomae's Rockingham II. *Bitches:* 1st, A. Boote's Juno; 2d, W. L. Harris's Nellie Hunter; 3d, W. H. McGarry's Blanche G.—Open—*Dogs:* 1st, C. R. Hickok and Mrs. L. McK Garrison's Freckled Monk; 2d, Oak Grove Kennels' Count Dick; 3d, J. Brett's Orangeman; 4th, Miss E Rogge's Rambler. *Bitches:* 1st, A. Boote's Juno; 2d, J. Brett's Flower of Sulphur; 3d, W. L. Harris's Nellie Hunter; 4th, Eldred Kennels' Laundress. Res., D. J. Peters's Robin's Juno.—Challenge—*Dogs:* 1st, J. Brett's Cactus. *Bitches:* 1st, H. Pape's Maid Marion.—English Setters that have been placed at any public field trial in the United States or Canada—1st, H. L. Keyes's Montell; 2d, P. T. Madison's Rodfield.

IRISH SETTERS.—Puppies—*Dogs:* 1st, H. A. Smith's Red Signal; 2d, E. W. Tynan's Parker; 3d, P. T. O'Neill's Hunter. *Bitches:* 1st and 2d, F. M Thomas's Bessie Thasmo and Belle Thasmo.—Novice—*Dogs:* 1st, S. Coulson's St. Elmo; 2d, W. L. Washington's Kildare Swiveller; 3d, Effingham Park Kennels' Pilot of Effingham; Res., W. S. N. Tilden's Chief *Bitches:* 1st, W. L. Washington's Belle of Kildare; 2d, Woodbury Kennels' Lady Lockwood; 3d, Redstone Kennels' Mollie Redstone.—Open—*Dogs:* 1st, G Shippen's Shamrock O'Moore; 2d, S. Coulson's St. Elmo; 3d, W. L. Washington's Kildare Swiveller; 4th, Effingham Park Kennels' Pilot of Effingham. *Bitches:* 1st, D. E. Bowers's Trine; 2d, W. L. Washington's Belle of Kildare; 3d, Woodbury Kennels' Lady Rockwood; 4th, E W. Tynan's Ruby Glenmore II.—Challenge—*Dogs:* 1st, Oak Grove Kennels' Kildare; 2d, W. L. Washington's Finglas; Res., J. M. Bullock's Pride of Patsy. *Bitches:* 1st and 2d, Oak Grove Kennels' Queen Vic, and Duchess; Res., J. B. Blossom's Delphinne.—Irish Setters that have been placed at any public field trial in the United States or Canada: 1st and 2d, J.

B. Blossom's Lady Alice and Bedford; 2d, W. L. Washington's Finglas.

GORDON SETTERS.—PUPPIES—*Dogs:*—1st and 2d, L. P. Braive's Taral and Dogget. *Bitches:* 1st, E. H. Morris's Pinemont.—NOVICE—*Dogs:* 1st, W. C. Gleason's Grouse Ranger; 2d, J. R. Oughton's Ladview; 3d, A. W. & C. R. Swain's Brandy; Res., Woodbury Kennels' Gordon. *Bitches:* 1st, John Redfield's Mabel R.; 2d, J. R. Oughton's Princesview; 3d, C. K. Clarke's Gunhilda.—OPEN—*Dogs:* 1st and 2d, J. B. Blossom's Doc and Heather Bruce; 3d, C. A. Stone's Forest Guy; 4th, C. E. Mather's Jack Sharp. *Bitches:* 1st, 4th and Res., J. R. Oughton's Dwight Bee, Dwight Sarah and Princesview; 2d and 3d, J. B. Blossom's Sally Beaumont and Venus.—CHALLENGE—*Dogs:* 1st, J. R. Oughton's Heather Lad; Res., J. B. Blossom's Heather York. *Bitches:* 1st and Res., J. B. Blossom's Heather Bee and Flomont.—GORDON SETTERS THAT HAVE BEEN PLACED AT ANY FIELD TRIAL IN THE UNITED STATES OR CANADA: 1st and 2d, J. B. Blossom's Flomont and Sallie Beaumont.

IRISH WATER SPANIELS.—OPEN—*Dogs:* 1st, T. A. Carson's Mike C. *Bitches:* 1st, F. D. Baylay's Kittie O'Donnell; 2d, Miss A. Green's Venus.—CHALLENGE—1st, T. A. Carson's Marguerite. Res., Miss A. Green's Dennis.

CLUMBER SPANIELS.—OPEN—*Dogs:* 1st and 2d, H. Jarrett's McGregor and Major Gilfeather. *Bitches:* 1st, H. Jarrett's Susie.—CHALLENGE—1st, H. Jarrett's Glenwood Greeting.

FIELD SPANIELS.—PUPPIES—2d, Miss A. Green's Berry Nell.—NOVICE—1st, H. P. Mullens's Woolton Dagmar; 2d, Miss A. Green's Darkest Africa.—OPEN—BLACK—*Dogs:* 1st, Toon & Thomas's Endcliffe Bishop; 2d, M. A. Viti's Royd Monarch; 3d and res., Miss A. Green's Wardleworth Sweep and Fashion. *Bitches:* 1st, Toon & Thomas's Endcliffe Myrtle; 2d, W. A. McClellan's Princess Alice; 3d, Miss A. Green's Zulu.—ANY OTHER COLOR—*Dogs:* 1st, H. P. Mullens's Woolton Wonder. *Bitches:* 1st and 3d, R. P. Keasbey's Gypsy Belle and Saybrook Cyprus; 2d, H. P. Mullens's Woolton Dagmar.—CHALLENGE—*Dogs:* 1st, H. P. Mullens's Woolton Baron; 2d, Dr. S. J. Bradbury's Drayton Warwick. Res., R. P. Keasbey's Coleshill Rufus. *Bitches:* 1st and 2d, R. P. Keasbey's Moonlight Belle and Drayton the Shrew.

COCKER SPANIELS.—PUPPIES—1st and res., G. Douglas's Premier and Patron; 2d, F. McK. Robertson's Red Mollie; 3d, H. P. Mullens's Woolton Cherry.—NOVICE—1st, 3d and res., Mepal Kennels' Miss Jerry, Mepal's Floretta and Mepal's Beetle; 2d, G. Douglas's Premier.—OPEN—BLACK—*Dogs:* 1st and res., G. Douglas's Havoc and Arab; 2d, Brookside Kennels' Figi; 3d, A. C. Wilmerding's Watnong I. *Bitches:* 1st and 3d, Brookside Kennels' Brookside Miss Phyllis and Woodland Belle; 2d, Mepal Kennels' Mepal Jerry. Res., C. & D. Priest's Trilby II.—RED OR LIVER—*Dogs:* 1st, F. McK. Robertson's Red Wonder; 2d, G. Bell, Jr.'s, Red Coat; 3d, Brookside Kennels' Brookside King. Res., H. N. Munn's Cardinal. *Bitches:* 1st, G. Douglas's Silk Gown; 2d, F. McK. Robertson's Red Nell; 3d, Raven Kennels' Baby Ethel. Res., Dr. J. H. Lyke's Commotion.—ANY OTHER COLOR—*Dogs:* 1st, W. T. Payne's Brown Hal; 2d, H. P. Mullens's Woolton Blue Gown; 3d, A. C. Wilmerding's Watnong Tommy. Res., Midvale Kennels' Bruton Bathbrick. *Bitches:* 1st and 2d, W. T. Payne's Belle and Tansy; 3d, Brookside Kennels' Woodland Trilby. Res., F. McK. Robertson's Cora G.—CHALLENGE—BLACK OR LIVER—*Dogs:* 1st, J. H. Herbertson's Pickpania; 2d, Mepal Kennels' Commodore.—ANY OTHER COLOR—1st, Belle Isle Kennels' Gaiety Girl; 2d, Raven Kennels' Hamilton Jack. Res., Brookside Kennels' Red Dolly. *Bitches:* 1st, Mepal Kennels' Baby Ruth.

National Beagle Club of America.

A QUARTERLY meeting of the National Beagle Club of America was held at the Madison Square Garden, Feb. 22. President Hermann F. Schellhass presided. The following members were present: Jas. W. Appleton, George B. Post, Jr., A. Wright Post, George F. Reed, Wm. Saxby, John Bateman, N. A. Baldwin, H. L. Kreuder, Jas. L. Kernochan, A. C. Pickhardt, L. C. Peters and George W. Rogers.

It was voted that the same futurity committee be appointed for another year, dating from Feb. 2, 1897; that no specials be offered at any show unless the judges be selected from the club's official list of judges or from the members of the club; that a bronze medal be offered at the Baltimore Kennel Club show for the best beagle in the show, opened to members of the N. B. C. of A. only; that the scale of points and standard be also revised, and the chairman appoint two separate committees of two practical breeders and owners of beagles, members of the N. B. C. of A., to consider the scale and standard and refer matters of difference to an umpire first to be agreed upon, and present a scale and standard at the regular meeting of the club to be fixed by the chair. A Produce Stake was submitted and voted that a committee be appointed by the chair to arrange the above stake on the lines submitted by Mr. Kernochan. The following were elected to membership: John Caswell, Boston, Mass.; Maxwell Stephenson, Hempstead, L. I.; R. H. Post, Bayport, L. I.

Meeting adjourned. GEO. W. ROGERS, Sec'y.

National Greyhound Club Meeting.

THE meeting was held in Madison Square Garden Feb. 25. There were present Messrs. H. W. Huntington, H. Nelson, L. C. Whiton, R. F. Little, Jr., J. L. Kernochan, C. F. Lewis, A. McGregor and Dr. Barr.

The election of officers resulted as follows: President, H. W. Huntington; Secretary, R. F. Little, Jr.; Treasurer, L. C. Whiton; Vice-Presidents, Dr. Barr, J. L. Kernochan, H. W. Sharpless, A. L. Page; Delegate to A. K. C., H. Nelson.

The following were elected as members: Mrs W. W. Green, P. Daly, R. C. Brinkley, H. M. Nelson, F. Herring, F. Holy, H. S. Griffen, W. D. Griscom, Robert White, R. L. Lee, W. L. Andrus, Robert Walker, C. M. Higgins, G. H. Lambert, Dr. Behrendsohn, E. L. Kraus.

Executive Committee: H. W. Huntington, Dr. Barr, R. F. Little, Jr., L. C. Whiton, Dr. Lykes.

Treasurer's report was adopted as read.

The dues for 1897 were remitted to those who had paid dues for 1896. H. W. HUNTINGTON, Pres.

The Death of India.

MONTPELIER, Miss., Feb. 22.—*Editor Forest and Stream:* It is with much regret that I write you of the death of the pointer bitch India. The kennel has sustained a most severe and sad loss, and one that is almost impossible to replace. She was in whelp to Jingo, some of which died before birth and gave her blood-poisoning, which caused her death. She was by Rip Rap ex Dolly D., and won the Pointer Derby at West Point, Miss., in 1896. Really good pointer bitches are very rare and hard to breed. She was one of the highest class field bitches I ever saw, and this quality, combined with her rare form, constitution and character, made her one of the best and most valuable bitches in America. Her death is a general loss to the pointer interests of the country.

C. E. BUCKLE.

Collie Club Meeting.

AT a meeting of the Collie Club, held on Feb. 24, at Madison Square Garden, a list of officers was elected as follows: President, Jenkins Van Schaack; Vice-Presidents, J. Pierpont Morgan and J. L. Lincoln; Secretary, James Watson; Treasurer, J. D. Shotwell; Executive Committee, the above-mentioned officers and W. L. Stewart, W. T. Ford, R. McEwen, C. Y. Ford, J. A. Long, Henry Jarrett. A few revisions were made in the constitution, the most important one being that the dues of those elected to membership cover their indedtedness for a year so far as dues are concerned, beginning from the first of the month in which membership begins.

A. K. C. ANNUAL MEETING.

THE annual meeting of the A. K. C. was held in Madison Square Garden on Feb. 24; Vice-President Edward Brooks presided. There were present: Associate members (G. W. H. Ritchie and H. K. Bloodgood), American Fox Terrier Club (H. H. Hunnewell, Jr.), American Dachshund Club (L. A. Klein), American Scottish Terrier Club (James L. Little), American Spaniel Club (E. M. Oldham), Baltimore Kennel Association (William P. Riggs), Bloodhound Club of America (Dr. Alfred F. Stahl), Boston Terrier Club (L. A. Burritt), Collie Club of America (James Watson), Columbus Fanciers' Club (J. M. Taylor), Danbury Agricultural Society (G. E. Sears), Gordon Setter Club (James B. Blossom), Great Dane Club of America (Clifford Wood), Mascoutah Kennel Club (C. F. R. Drake), National Beagle Club (H. F. Schellhass), National Greyhound Club (Horatio Nelson), Pacific Fox Terrier Club (C. B. Knocker), Poodle Club of America (H. G. Trevor), Mohawk Kennel Club (W. T. Ford), Butterfly Bench Show Association (D. E. Waters), New England Kennel Club (Edward Brooks), Southern California Kennel Club (C. D. Bernheimer), St. Bernard Club of California (George Bargate).

The secretary announced the election of officers and delegates of the associate members as follows: President, H. H. Hunnewell, Jr.; Vice-President, H. G. Trevor; Secretary, F. E. Lewis; Delegates: A. C. Wilmerding, H. K. Bloodgood and G. W. H. Ritchie.

The credentials of B. S. Horn, delegate of the Duquesne Kennel Club, not being in proper form, were rejected.

The minutes of the last meeting and of the financial report were accepted as published in the *Gazette*.

Officers were elected as follows: President, August Belmont; Vice-President, Edward Brooks; Stud Book Committee: James Watson, chairman, and Messrs. Schellhass and Knocker; chairman of field trial and coursing committee, H. F. Schellhass; Committee on Constitution and Rules: H. K. Bloodgood (chairman), G. W. H. Ritchie vice Dr. Foote, and Messrs. Watson and Schellhass.

For finance committee the present members were re-elected, excepting that Mr. L. A. Burritt was elected in the place of James Mortimer; Mr. A. C. Wilmerding is chairman. Messrs. Oldham and Bernheimer were elected members of the membership committee.

The credentials of Mr. R. McEwen as representative of the Canadian Kennel Club were read and accepted. The purpose of the representative was to arrange terms of reciprocal agreement, and failing better terms to close with the A. K. C. on the basis of the agreement rejected by the C. K. C. three years ago. With him was associated Dr. Wesley Mills. The aforesaid representatives were granted a hearing, and the A. K. C. appointed a committee of three to confer with a like committee of the C. K. C.

The report of the committee on constitution and rules, as published in the August and January numbers of the *Gazette*, regarding the amendments that were put over from the September meeting, was read, and after considerable discussion unanimously adopted. It was carried that the changes in the constitution take effect March 1.

As a reply to a communication from the Bull Terrier Club asking what rights they had in offering prizes at different bench shows, and whether the bench shows could accept such prizes from a suspended club, the following resolution was passed: "That no special or regular prize can be accepted from any person or club under suspension or disqualification."

The executive committee then met. The afore-mentioned delegates were present.

On recommendation of the committee on field trials and coursing meetings, the application of the New England Beagle Club to have recognized the wins of its first and second annual field trials, held respectively in 1893 and 1894, was granted.

The matter of holding a bench show by the California State Poultry and Kennel Association on dates which included Sunday, and which matter came up at the September meeting and was referred to the Pacific Advisory Board, was acted on by that body as follows:

Whereas, The California State Poultry and Kennel Association has already completed arrangements for holding its bench show on certain dates, therefore be it

Resolved, That the best interests of said Association demand that the dates claimed—viz., Jan. 9, 10, 11 and 12—be granted it, notwithstanding the fact that one of these dates falls on Sunday.

Resolved, That the Pacific Advisory Board, by the authority vested in it by the A. K. C., does hereby consent to the holding of said show in the city of Sacramento on Jan. 9, 10, 11 and 12, 1897.

On motion that report was accepted and placed on file.

The matter of the protest made against the bull terrier Harper Whiskey at the Stockton show, the ground of the protest being that the dog belonged to the judge, and that the dog was shipped to the judge, and that Mr. Heller had the shipping tag, and that he took off the tags, was disallowed. He was also protested on the ground of deafness. The Stockton Club did not sustain the protest. Mr. Heller appealed from their decision. The A. K. C. sent the papers to the Pacific Advisory Board for investigation, and that body reported that after a careful reading of the evidence submitted by both parties the board found that Harper Whiskey was the *bona fide* property of J. J. Sparrow at the time of his entry in the Stockton show; that the money was paid for the dog on the day before the entry was made, and that said entry was made within the legal time. The board found further that Harper Whiskey is so deaf that he cannot hear the ordinary commands, but the board could not decide whether or not such was his condition at the date of the Stockton show. The board recommended that as to the matter of deafness the appeal be dismissed and the award allowed to stand. The board further recommended that the forfeit money put up by Mr. Heller be returned to him.

The board's report was accepted and placed on file.

In another report the board by resolution decided against the recognition of the Olympic Gun Club and in favor of a kennel club. This resolution was, on motion, laid upon the table.

The report of the committee on membership was next taken up, and it reported three applications for admissson to the A. K. C. from clubs in California, namely, the San Francisco Kennel Club and the Olympic Gun Club, of San Francisco, and the Santa Clara Valley Poultry and Kennel Club, of San Jose. The application of the Olympic Gun Club was disapproved by the committee, as it did not qualify properly for membership. Some debate followed, showing the animus of the Olympic Gun Club toward a special kennel club in San Francisco. The report of the membership committee was accepted and its recommendations adopted, upon the ground that the Olympic Gun Club was not eligible to membership. On ballot, the San Francisco Kennel Club and the Santa Clara Valley Club were admitted to membership.

Mr. A. P. Vredenburgh was elected secretary.

The resignations of the Live Stock Society of America, the Washington City Kennel Club and the Northwestern Beagle Club were accepted.

Mr. Samuel Hammond's communication recommending the making of a new rule compelling specialty clubs to file each year a correct list of accepted judges and roll of membership with the A. K. C., and the communication from Mr. Chas. M. Bryant on the subject of making a new rule to govern all breeds of dogs where divided by the weight limit, were referred to the committee on constitution and rules.

The appeal of F. J. Rommell, Chicago, for reinstatement, was referred to the Stud Book committee. He was disqualified in 1893 on the matter of a pedigree.

In respect to the violations of the rules by exhibitors at Boston, the wins of the following dogs were disqualified: the pointer Alice Leslie; the setter Cactus; the spaniels Woolton Baron, Scandal, Middy, Commodore, Woodland Princess and Goldie S.; the bull terrier Starlight; the fox terriers Warren Safeguard and Warren Captious. The following violations were the fault of the N. E. K. C.: Bloodhounds Nenus, Clumber, Glenwood Greeting; fox terrier Thornfield Knockout; Scottish terriers Rhudunan, Wankie Tam and Wankie Diana. The above entries having been made correctly by exhibitors, the club's forfeit of $25 was forfeited.

The secretary was directed to notify the clubs in arrears that if their dues were not paid within thirty days from date they would be dropped from the roll.

The treasurer's report was as follows: Balance on hand Jan. 1, 1897, $3,256.97; receipts from all sources to date, $1,946.25; total, $5,203.22; disbursements from Jan. 1, 1897, $664.16; balance on hand, $4,539.06.

Nine clubs were reported in arrears. The Seattle Kennel Club informed the A. K. C. of the suspension of the bank in which its funds were on deposit, and promising to liquidate as soon as possible.

The membership committee approved the applications for membership of the Irish Terrier Club of America, the Kansas City Kennel Club and the Kentucky Kennel Club, and they were declared active members.

The following prefixes were granted: Abaco, Mrs. M. P. Dawson; Briar Cliff, E. J. & F. Becker; Bristol, Oliver Ames; Cherokee, W. S. Applegate; Diamond, M. M. Mitchell; Hudson, C. H. Mantler; Rodney, C. G. Hopton; Shiloh, W. Le Monnier; Woodbine, Frederick Jacobi.

American Spaniel Club.

THE annual meeting of the American Spaniel Club was held at Madison Square Garden Feb. 23.

The president presented the meeting the inclosed report of the executive committee, showing the work done by the committee during the past year.

Mr. M. A. Viti, as chairman of the committee on revision of by-laws, reported the following changes have been made: Article IV. to read as follows:

Section 1. It shall be the duty of the executive committee to endeavor to obtain suitable classes for spaniels at all bench shows, and that at such shows as agree to abide by the standards of the club, and appoint a judge who has been duly elected to the club's list of judges; the committee shall have full power to offer such prizes as they may deem advisable in addition to those given by the show authorities.

Section 2. At all shows adopting classification No. 1 the executive committee shall offer the following prizes: Cash specials for the best brace of field, Clumber, Irish water and cocker spaniels.

At all shows adopting classification No. 2 the executive committee shall offer cash specials for the best brace of field, Clumber or Irish water and cocker spaniels, and at all shows adopting classification No. 3 the executive committee shall offer cash specials for the best brace of all spaniels over 28lbs. and for the best brace of cocker spaniels. Provided, however, that the special prizes to be offered as aforesaid shall not be paid or awarded to any exhibitor unless at least two braces of spaniels shall compete for these prizes, and provided further, that the secretary shall so notify any show committee adopting the club's classifications.

At all shows adopting classification No. 1 the executive committee shall offer at least two challenge prizes, and at all shows adopting classification No. 2 the executive committee shall offer at least one challenge prize, in addition to the above cash special prizes.

Section 3. That these prizes shall be known as "American Spaniel Club special prizes."

In Article V., changing Section 1 so as to provide for the annual election of club judges.

Also by changing Article IX. to read as follows: "These by-laws may be altered, amended or suspended by a majority vote of the members present at the annual meeting of the club, provided ten (10) days' notice has been given to each member of the club of the proposed change. Notice of such alterations or amendments shall be sent at once to each member of the club."

The executive committee also reported that in future the words "over 28lbs. and under 28lbs." shall be stricken out wherever they appear, and that the spaniels be designated as field spaniels and cocker spaniels according to the standard of the club.

Some slight changes have been made in classification No. 1, copy of which is herewith inclosed.

Ballots were taken for an executive committee for the ensuing year, and the following gentlemen duly elected: E. M. Oldham, M. A. Viti, Dr. S. J. Bradbury, H. K. Bloodgood, R. P. Keasbey.

Meeting of the new executive committee was held immediately after the annual meeting. Mr. E. M. Oldham was elected president, and Dr. S. J. Bradbury sec'y-treasurer, and Mr. E. M. Oldham was elected delegate to the American Kennel Club.

The following motions were duly seconded and carried:

Whereas, R. P. Keasbey, Esq., has by diligent efforts efficiently served the club as its secretary for several years, and whereas Mr. Keasbey has declined a nomination for that office.

Resolved, That the thanks of the club be extended Mr. Keasbey for his services during the past, and that these minutes be spread upon the records of the club.

Resolved, That a vote of thanks be offered to Dr. S. J. Bradbury for the use of his apartments by the executive committee for their regular monthly meetings.

The annual dinner of the club was held at 17 East Twenty,

second street, Zaughere, on the same evening, and was voted a great success by all present. The executive committee only hope that another year will see more present.

DR. S. J. BRADBURY, Sec'y-Treas.

Irish Setter Club.

THE annual meeting of the Irish Setter Club of America was held at the Madison Square Garden, New York, Feb. 25, at 12 o'clock; Dr. G. G. Davis in the chair.

Present: Dr. G. G. Davis, James B. Blossom, B. L. Clements, F. L. Cheney, Woodruff Sutton, Geo. H. Thomson, and by proxy W. L. Washington.

The minutes of the previous meeting were read and approved.

The treasurer's report, showing a balance of $68.46, was read and approved.

It was moved and seconded that the secretary be empowered to have the constitution and by-laws printed as amended, with the list of officers for the ensuing year.

It was decided to continue the standard for Irish setters originally adopted by the club.

It was also decided to offer a special prize of $10 to the Kentucky Kennel Club and $10 to the Baltimore Kennel Association for the best Irish setter in open classes that has been placed in any stake in a field trial, said setter to be owned by a member of the Irish Setter Club.

Mr. James M. Bullock, of Philadelphia, was elected a member.

A field trial committee, consisting of Messrs. Cheney, Clements and Thomson, was appointed, with power to offer such prizes at field trials and bench shows as in their judgment may be best calculated to further the interests of the Irish setter.

The following gentlemen were then elected to hold office for the ensuing year: President, Dr. G. G. Davis; Vice-President, James B. Blossom; Secretary-Treasurer, Geo. H. Thomson; Executive Committee: F. L. Cheney, Woodruff Sutton, B. L. Clements, Dr. William Jarvis and Ray Tompkins.

There being no further business, the meeting adjourned.

GEO. H. THOMSON, Sec'y.

Gordon Setter Club.

THE annual meeting of the Gordon Setter Club of America was held in Madison Square Garden on Feb. 22.

The minutes of the previous meetings and the secretary-treasurer's report were approved. The president was empowered to make arrangements for and hold field trials during the coming autumn if in his judgment he should find sufficient support to do so. The president, Mr. Blossom, was continued as delegate to the A. K. C. The election of members during the past year was approved. It was resolved that the managers of dog shows be requested to increase the number and value of prizes in the challenge classes, so that the good dogs which were continually being buried therein might be resurrected to public competition by inducements at least equal to those offered to poor novices and poorer puppies. The following were re-elected officers and executive committee for the ensuing year: President, James B. Blossom; Vice-President, John R. Oughton, Dwight, Ill.; Secretary-Treasurer, L. A. Van Zandt; Executive Committee: C. C. Hendee, E. K. Sperry, Geo. Bleistem, E. H. Schusen.

Pointer Club of America.

THE annual meeting of the Pointer Club of America was held on Feb. 22, at Madison Square Garden, New York. Present: Messrs. Jarvis, Brush, Root, Mott, Blyth, James, Westlake, Knox, McSherry, Webster, Lewis and Pickhardt. Mr. J Roger McSherry presided. The minutes of the last meeting were read and accepted. The treasurer's report was read and accepted.

The election of officers for the ensuing year resulted as follows: President, George J. Gould; Vice-President, Frederick S. Webster; Treasurer, C. F. Lewis; Secretary, W. H. Brush; Board of Governors: J. Roger McSherry, Thomas Blyth, R. E. Westlake, J. D. James, George Jarvis, James Mortimer; Delegate to the American Kennel Club, George Jarvis. Mr. Frederick G. Lenoir was elected to membership.

It was resolved that the Pointer Club of America shall offer a breeder's cup, the conditions under which it shall be competed for shall be regulated and determined by the board of governors.

E. F. T. C. Meeting.

A MEETING of the Eastern Field Trials Club was held in Madison Square Garden at 4 P. M., Feb. 23. Twelve members were present. Pierre Lorillard, Jr., President, in the chair. The reports of the secretary and treasurer were read and approved. The treasurer's report showed a balance of $65 in the treasury for the year ending Dec. 31, 1896.

The club's trials are to be held at Newton, N. C., on the club's preserve, beginning with the Members' Stake, Saturday, Nov. 13, to be followed with the Derby, open to all pointers and setters whelped after Jan. 1, 1896. The All-Age Stake is open to all pointers and setters which have not won a first prize in the open stakes of the United States and Continental trials. The purses in each stake are $600. The Subscription Stake is open to the world for pointers and setters. The heats in the first series to be two hours each. Purse $500. The judges selected are: Col. Arthur Merriman, Memphis, Tenn., and S. C. Bradley, Greenfield Hill, Conn. The third judge will be selected later.

S. C. BRADLEY, Sec'y.

Irish Terrier Club.

A RATIFICATION meeting of the Irish Terrier Club of America, which was organized in December, 1896, was held on Feb. 23, at Madison Square Garden, New York. Mr. Edward Brooks presided. Present: O. W. Donner, Edward Brooks, G. M. Weld, H. G. T. Martin, E. L. Beadleston, S. L. Sackett, W. A. Thomson, Morton E. Cobb, Bancroft C. Davis, M. Bruckheimer, Thos. Wise, Jr., Singleton Van Schaick. A constitution and by-laws was adopted, and an election of officers for the ensuing year resulted as follows: President, Oliver Ames; Vice-President, W. L. Beadleston; Treasurer, S. D. Parker; Secretary, O. W. Donner; Board of Governors: Oliver Ames, W. L. Beadleston, S. D Parker, O. W. Donner, Edward Brooks, B. L. Sackett, G. M. Weld, W. A. Thomson; Delegate to the American Kennel Club, W. L. Beadleston.

The standard adopted by the club is the revision made by the Irish Terrier Club of Great Britain.

THE GOULD CUP.

MONTPELIER, Miss., Feb. 22.—*Editor Forest and Stream:* I have just received FOREST AND STREAM of Feb. 6, in which your reporter ably describes one side of the question of the All-Age Absolute for the Gould Cup, which should have been run for at West Point, Miss., Jan. 23. I will endeavor to give another side, which the said reporter carefully ignores.

First: The holder of the cup had no right whatever to have the said cup in his possession, his time of holding it having expired, and it should have been delivered over to the secretary of the club before the competition.

Second: The said holder of the cup had no possible further claim on the same, as he was beaten in the All-Age Stake.

Third: In Rule I. of the U. S. F. T. will be found that the management shall be intrusted to the governors of the club, and with them lies the interpretation of all rules. They shall decide upon all matters not provided for in their rules.

I think it will be found in the minutes of the club meeting that evening that the judges did not decide that Tippoo had won by default of Tony Boy, as stated, but that it was so decided by the members present. I know Mr. Dexter presided at the meeting and declined to vote or have any say in the matter, he being the owner of Tippoo.

I believe in the case of all horse and yacht racing when one competitor fails to start the cup is awarded to the other. In the face of this, I would say that if the judges erred at all it was in not making Tippoo run over the course that day for the two-hour limit.

Of course I am aware that a win by default is a very empty honor, but the cup was awarded to Tippoo, and legally so, by the rules of the club, and in the face of the above I fail to see the right of the former winner to withhold the same.

C. E. BUCKLE.

[Briefly touching on Mr. Buckle's foregoing charge of an *ex parte* treatment of the matter of the absolute heat for the Gould cup at the recent U. S. F. T. C. trials, it is but fair to say that the cup matter was treated in the most impartial manner by us, and in accordance with the facts pertaining to it. As Mr. Buckle is a directly interested party, it is not a cause of wonderment that our impartial statement might to him seem to be partial when it was opposed to his personal interests and beliefs. Under such circumstances his letter might have been in better taste had it dealt with the matter on its merits instead of weakly pleading unfairness.

As the circumstances may not be known to every one, it may be well to review them. On Saturday, June 23, the All-Age running was finished. The Derby absolute was run. The All-Age setter and the All-Age pointer winners were next in order of competition for the Gould cup. Mr. Rose then announced that Tony Boy was ill, and therefore he objected to running him. Both judges made a personal examination of him. Mr. Buckle, who was near by all the while, then announced that he did not care to win the cup by default. The discussion and hesitation lasted some minutes. At last the judges announced that the heat between Tony Boy and Tippoo was postponed to some day in the week following. The party returned to town with this understanding. The secretary wrote it on the club's bulletin board and it so stood during several hours. We maintained in our report that there was no default on the part of Tony Boy under the circumstances. The consent of all concerned to a postponement of the heat till a day in the following week waived all question of default. That later the club or judges or both arbitrarily decided that Tippoo had won by the default of Tony Boy is no more pertinent to the matter at that stage than if the King of Ashantee had so decided it, since they had no authority to decide in that manner.

In his letter to Mr. W. B. Stafford, Secretary U. S. F. T. C., Mr. George J. Gould, announcing the gift of the cups, imposed certain conditions, among which were these: "The winner of the Pointer All-Age Stake and the winner of the Setter All-Age Stake to run a final trial for the trophy, the heat or heats not to be shorter than two hours, the judge or judges to insist on thoroughly broken dogs."

Mr. Gould specified that the trophies were offered under the "conditions and restrictions" specified by him.

It is palpable that the donor did not contemplate a win by default, and it is equally palpable that the U. S. Club so interpreted it when it incorporated the following in its rules: "The absolute trial for the Gould cup *must be* at least one hour's duration in the Derby and two hours' duration in the All-Age Stake," etc. This is a mandatory condition. This rule fully provides for the matter, contrary to Mr. Buckle's third objection, dealt with hereinafter.

Mr. Buckle makes his objections under three heads. The first one will now be considered. The holder of the cup had a right to hold it till there was competition for it again. The "conditions and restrictions" of the gift absolutely required competition for it. The U. S. Club's rules were mandatory in requiring competition. Now there either was competition or there was not. If there was, the cup could be awarded. If there was not, it could not. Mr. Buckle did not compete for it, and therefore he has no more standing in the matter than all others who did not compete. That he was qualified to compete makes no difference. Actual competition is what is essential. To be eligible is another matter.

Now as to his second objection, it may be said in reply that the All-Age stake within itself had no bearing whatever on the cup except in so far as to qualify a competitor for it. The cup had no relation to the determination of the All Age Stakes. It was distinctly detached from them. It applied only to the winners of them. The competition of the two winners for the cup related to the two winners and no other dogs. Whether the holder of the cup was or was not beaten in the All-Age Stake is entirely irrelevant. Until there was competition for the cup, the last holder of it was rightfully the legal holder. The competition in the absolute heat is the point at issue, and not what was done elsewhere.

As to the third objection, the club's rules undoubtedly govern its own affairs. The cups, however, were special prizes, governed by "conditions and restrictions" not in the club's rules, and yet they were "conditions and restrictions" to which the club had acquiesced when it accepted the trophies. Those special restrictions were paramount to the club's rules. They govern the trophies absolutely.

Mr. Buckle raises very indiscreetly the point that the management shall be intrusted to the governors of the club, and with them lies the interpretation of the rules, and that they shall decide on all matters not provided for in their rules. The implication is that they can do about as they please. However, the plea made by Mr. Buckle is irrelevant: first, because managing the affairs of the club is something distinctly apart from the judging; and, second, the whole question at issue *is* fully provided for in the rules. He thus is wrong in his understanding of the board's relation to the matter. If the board of governors rejected the decision of the judges in the matter, and took it upon themselves to decide arbitrarily as it best pleased them, they could place any dog in the stake as they pleased, overrule the judges as they pleased, and generally convey a most unpleasant implication of the extent and trend of their powers. And yet if they choose to act illegally, as Mr. Buckle holds they did do, it by no means follows that their ruling will be either respectfully heeded or obeyed. If the judges did not decide that Tippoo won, the board surely had no right to arbitrarily take the matter into their own hands.

The matter of horse and yacht racing is not analogous. If the horse or yacht owner waived his right to win by default, the case would then be analogous to the one under consideration.

In conclusion it may be said that once recognize the soundness of a win by default and the honor of winning the cup would not be worth a picayune.]

POINTS AND FLUSHES.

The prize list of the Duquesne Kennel Club's fourth annual show, to be held beginning March 24, can be obtained of the secretary, Mr. W. E. Littell, Box 754, Pittsburg. Entries close on March 13.

Mr. S. B. Cummings, secretary of the Monongahela Valley Game and Fish Protective Association, writes us that the association's next trials will be held on its preserve, Greene county, Pennsylvania, on Nov. 2 to 6.

At a field trial held recently at Aiken, S. C., Mr. H. B. Duryea, judge, Mr. F. R. Hitchcock's Tory Topaz won the cup offered by Mr. F. T. Moorhead. The number of entries and other particulars are not at hand, but it was a friendly local affair of the kind that could be copied with profit throughout the game country.

Mr. W. E. Littell, Secretary of the Duquesne Kennel Club, writes that Mr. L. C. Sauveur has resigned as judge at the Pittsburg show, and that his classes have been turned over to Mr. J. Mortimer.

Owing to delays in making arrangements for the show of field trial winners at the Sportsmen's Exhibition, the matter has been given over for this year.

"My Dog and I," a treatise on dogs, by H. W. Huntington, the latest work on canine matters from the press, contains the scale of points and description of nearly every recognized breed of dogs There are also special departments devoted to the dog in health and sickness.

The first field trials of the Alabama Field Trials Club were run on Feb. 15 at Madison, Ala. The judges were W. B. Stafford and W. B. Hamilton, Columbus, Miss. There were five starters in the Derby, namely, H. H. Mayberry's pointer Alabama Girl, T. W. O'Byrne's pointer Redskin, H. K. Milner's pointer Alameda, Ashford & Spencer's Otho, and T. T. Ashford's pointer bitch Balsora. Winners: First, Alabama Girl; second, Alameda; third, Balsora. In the Alabama Stakes there were four starters: F. W. Dunham's pointer Elgin's Dash, T. T. Ashford's Hessie D., W. J. Love's Love's Kent, and R. M. Ward's setter dog Brook's Gladstone. Winners: First, Elgin's Dash; second, Hessie D.; third, Brook's Gladstone.

A meeting of the committees of the A. K. C. and the C. K. C., in the matter of reciprocity between the two clubs, was held in the A. K C rooms, 55 Liberty street, New York, on Feb. 25, and no settled conclusion was reached. The C. K. C. was requested to formulate what it would concede.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable.

Wheeling for Trout in the White Mountains.

IPSWICH, Mass.—*Editor Forest and Stream:* Frank and I had been at Jackson for two weeks on a fishing excursion. We had brought our wheels, for although the surrounding country is very hilly we thought that it would be easier to wheel than to walk, and much more economical than to hire a carriage every time we wished to go a-fishing.

Jackson is a summer resort in the White Mountains. It is a veritable fisherman's paradise, abounding in numerous streams filled with sleek, gamy trout.

One evening after a very fatiguing tramp through the Notch and Tuckerman's Ravine, I was sitting on the piazza of the hotel enjoying my cigar, when Frank came to me and said: "Ted, I have just been talking to Mr. Crawford, and he tells me there is excellent fishing at Glen Ellis Falls. I want you to go with me to-morrow. Will you?"

"Yes," said I; "but as it is a seven-mile jaunt and mostly up-hill work, we will need an early start."

"Is 4 o'clock too early?"

"Not a bit."

Having thus settled the matter, we left orders for an early breakfast and lunch to be put up, oiled our bicycles and put our tackle in order.

After a very short sleep, in fact it seemed to me as if I had just closed my eyes, there came a loud knock at my door. I hustled into my clothes and soon joined Frank.

On emerging from my room I heard some people moving about downstairs, and soon a carriage drove up to the door.

"What does all this mean, Frank?" said I.

"It means that some of the other guests have heard of our prospective trip and are going to follow us to the fishing ground," he replied.

"Well, in that case I don't need any breakfast," said I. "Is the luncheon and bait ready? Yes? Well, let's mount and get away."

At last we were under way and swiftly pedaling on toward our destination. After an hour's hard riding we arrived at the falls, and unstrapping our rods and lunch we hid our silent steeds in the woods.

We had been fishing nearly half an hour before we heard the hotel party. Their horses seemed very much worn out and exhausted, as if they had been urged in trying to catch

up with our wheels. The three men who composed the party soon appeared on the banks of the stream arrayed in long fisherman's boots, shooting jackets and large sombreros. We went up stream while they went down.

At noon Frank had twenty beauties, I had only seventeen.

While eating our lunch we saw a great dark cloud gathering overhead.

Frank remarked that he believed it would rain cats and dogs inside of two hours, but as the fish were rising freely we waited a little longer before turning homeward.

Just as we were taking our rods apart the party from the hotel came in sight. They had had poor luck, having only caught ten small trout for three rods.

"It's all your fault," they said. "You fished out the stream ahead of us and got all the best trout."

Naturally they were not in the best of humors. While talking to them we made fast our rods to our wheels and prepared to leave, but the hotel party were loath to go, hoping to retrieve their bad luck. Afterward they had reason to regret that they did not go when we did. Having got everything ready, we started on our downward journey. It was a thrilling coast! Not having on brakes, and not being able to hold back on the pedals, we had to coast. Down we flew, bumping over stones and swerving from side to side as we rushed on. Soon the lightning began to flash and small raindrops to strike our faces. The church spires of Jackson were in view, and there was only one mile more to go. Looking at Frank, who was ahead of me, I saw his wheel give a leap into the air; he went at least 1ft. above his saddle and I expected to see him fall, but he did not. By some miracle he regained his seat, steadied his wabbling wheel and continued on his way.

In watching him I had failed to notice a deep gully in the road made by the rain until too late. Now I was in the air, my wheel seeming to leap from under me. By luck I regained my seat and flew on.

Soon the hotel loomed up, and I managed to put my foot under the front fork against the tire, thus stopping slowly and gradually. I uttered a silent prayer of thanksgiving for my preservation and restoration to the comforts of civilization.

After we had been home for three hours, during which time it rained fast and furiously, the hotel carriage started for the party who had chosen to go fishing with a team rather than on wheels. Frank and I did not envy them their enforced stay in the woods, exposed to the fury of the elements.

THEODORE S. HALE.

Bicycle Tools.

AMERICAN riders, as a rule, like to ride with their wheels stripped of all encumbrance. Anything tending to detract from the appearance of their machines or to increase the weight is looked upon with disfavor. Even lamps and tool bags are dispensed with when possible.

From time to time we meet with ingenious riders who utilize the hollow space of the tubing for carrying the articles which commonly go into the tool bag. When the seat post is out there is a convenient receptacle in the center brace tube which can be utilized by fitting inside a long, narrow bag. The wrench, provided it is small enough, small hand pump, tire repair outfit, including plugs and tape, graphite, extra links for chain, etc., may all be carried in this bag, care being taken to wrap the metal articles so that they will not rattle. Sometimes the seat post itself is utilized instead of the tubing of the frame, but as a rule its inside dimension is too small to admit carrying the common tools.

The chief objection to this method of dispensing with the tool bag is that it makes too much trouble getting at tools. It offers an advantageous receptacle for extra nuts, links, or tire repair outfit, articles which are not often needed; but the pump and wrench should be where they can be gotten at more easily.

We are told that a combined pump and wrench that will shortly be put upon the market will have an important effect in doing away with the tool bag. The pump is a hand pump of the best type, which has an elliptical cross section, and which, while more easily carried in hip or breast pocket than the ordinary pump, has about double its capacity. The wrench fits inside, and is characterized by great strength and leverage, gained by the addition of the pump section. A screw driver is also incorporated in the tool.

A Pocket Bicycle.

A FRENCHMAN named Leguir, who is an enthusiastic bicyclist, and has untold trouble with train guards and baggage-men when transporting his wheel on the railways, has invented a pocket bicycle. This name is not to be taken literally; the bicycle cannot be folded so closely as to go into a man's pocket. However, each wheel, after the rubber tiring has been removed, may be taken apart in four sections and these sections clapped together as a fan would be, so that the whole machine goes into a case of about the size required for five or six umbrellas. M. Leguir carries the package with a shawl strap. A Berlin editor who went to Paris to examine the machine, with the intention of having one made for his own use, remarked after his return: "All very well, but we shall think a long time before trusting our own bones to this machine."

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

NOW THAT the building season is nearing its end, it must be admitted that the show of new boats is most unsatisfactory. When the proposed changes in the rules were before the clubs in the fall, stories were heard on every hand of men who were eager to build racing yachts, schooners, 70-footers and 51-footers, but who would be deterred if the limit of draft and similar measures were not at once rushed through. The rules as proposed were adopted, willingly in some clubs and unwillingly in others—and with the result that not one new keel was laid. The only racing yacht of even moderate size that will be launched this spring is the 51-footer Syce, F. M. Hoyt, and this yacht begun before the limit of draft was proposed. Later on in the year, too late for the racing, another yacht will be added to the class, the Fife yacht designed for J. B. Mills. Both of these yachts would have been built just the same, whatever the fate of the draft limit scheme had been.

In the smallest class, the Seawanhaka 20-footers, the indications are that quite a number will be built, and in the East the 17ft. l.w.l. class will be strong in new boats. In the West the 20-footers and 1-raters promise to be very popular, and a number of new boats are under way.

The next size, the "raceabout," or the *fin de siècle* perversion of the late knockabout, promises to be popular and numerous. The Herreshoffs alone have orders for four of these boats, Lawley's shops are full of both "raceabouts" and knockabouts, and other Eastern designers and builders are busy over the same classes. Some veritable knockabouts are on the stocks, but it is very evident that they must be essentially cruising and not racing craft.

The larger classes up to 30ft. or so promise to be well filled with new and old boats about New York and Boston as well, and the only racing of the year will be in these different small classes. In the large schooners the rebuilt Emerald will meet Colonia for what promises to be the final struggle of the pair.

The greatest activity in building is in the class of naphtha and other power boats of small to moderate size. Much has been done of late to develop the naphtha craft of 60ft. or so l.w.l., a size that gives fair accommodation and is capable of general cruising, and more of these boats are under construction than ever before. The demand for the smaller cabin launches of 35 to 40ft. is also very good; while the open launches of all kinds are quite as popular as ever.

In steam yachts proper very little is being done, some five or six yachts of moderate size, and no very large ones. Taken altogether, and considering the long prevailing depression in business, the outlook is not so bad as it might be; but as far as the revival of yacht racing in the large and medium classes is concerned, it is most discouraging.

THE meeting of the representatives of the Boston and New York clubs took place at the Boston Athletic Club on Feb. 22, there being present from the Y. R. A. of Massachusetts Messrs. Louis M. Clark, A. H. Higginson, A. T. Bliss, H. M. Faxon, T. E. Jacobs, Walter Burgess and N. B. Stone; and from the Y. R. A. of Long Island Sound, Messrs. F. B. Jones, E. B. Hart and C. P. Tower. Pres. Clark occupied the chair, with Mr. Bliss as secretary. The question of a national association, and of its details, was thoroughly discussed, the opinion being in favor of some action, in spite of certain obvious obstacles. It was finally decided to call a conference of American yachting associations and clubs, to be held at New York on Oct. 1, 1897, with a view to the organization of a permanent national association.

As matters now stand in yachting, the Boston and New York associations have taken the best action possible in postponing immediate action just prior to the opening of the racing season, but at the same time determining on a definite and positive policy for future action. At the present time it would be impossible to accomplish more than a nominal union, with a few uniform rules and a general difference in the main point, the measurement rule. Seven months hence the conditions may be different; for one thing, the idea of union will be a familiar one to all interested. It is further possible that by that time some practicable suggestion for a new measurement rule may be produced; and also that the mischievous tendencies of a length rule with no tax on sail may be fully demonstrated in the East, thus paving the way for a more rational and modern rule.

The progress thus far in the direction of union, in spite of the wet blanket thrown by the New York Y. C., is most gratifying. The idea has been widely exploited and generally well received, yachtsmen have become interested in it and are now studying its possibilities. By the time of the conference the way should be open to organization on a permanent and fairly complete basis.

One-Design Boats for the Bristol Channel.

THE *Yachting World* of Feb. 12 publishes the conditions of a new one-design class established by the Penarth Y. C. on the Bristol Channel, all being built from a design by Harold Clayton. The committee has drawn up the following regulations, the object being to produce a wholesome and useful type of boat of limited cost, and yet capable of racing:

1. All boats to be built from the accompanying designs and specifications, and under the supervision of the designer.
2. Sail area limited to 200sq. ft., Y. R. A. measurement, to be distributed at the discretion of the owners. Sail area to be measured by official measurer of the class.
3. No boat is allowed any alterations of hull or ballast, and any alteration rendered necessary by change of rig must be notified to the committee.
4. Each boat shall be provided with either tanks or corks, so as to be rendered unsinkable with crew on board. All boats to be so tested by official measurer.
5. Sailing Rules.—(a) Y. R. A.; (b) crews shall be limited to two; (c) no paid hands allowed; (d) each boat shall carry when racing an anchor not under 15lbs. in weight and 15 fathoms of rope, also a life buoy ready for use.
6. Management of Class.—All members of the P. Y. C. shall be eligible as members of the class.
7. Gentlemen not members of the P. Y. C. may be admitted at discretion of the committee of the class on payment to the designer of his fee of £1 1s. for use of design, and shall be allowed to compete in all races.
8. A committee consisting of boat owners of class (one boat, one vote) shall be formed, which shall decide on all questions (other than racing) concerning boats competing in this class.
9. No alteration or addition to these rules shall be made without a two-thirds majority.
10. All races shall be sailed under the management of the sailing committee of the P. Y. C.

SPECIFICATIONS OF BOATS.

Keel—American elm, 6×1½in. amidships, tapering to fore end.
Stem—English oak, also apron.
Transom—American elm.
Timbers—Bent timbers, American elm, 1×½in.
Deck Beams—¾in.×3in. in middle and 2in. at gunwale, of white pine. Beams at each end of well to be of elm, with upright support underneath.
Center Case—Yellow pine, 1in., 5ft.×15in., slot ½in., with larger hole for bulb to come up.
Rudder Trunk—Brass pipe.
Planking—½in. full archangel spruce, picked wood, ten strakes a side.
Deck—½in. spruce, to be covered with calico and painted, the middle plank to be ¾in., and let in flush with the rest. Deck, 7in. round at the highest point.
Cockpit Carlins—1×2in. white pine joined to gunwale by half beams ¾×2in., 1ft. apart.
Rubbing Strake—American elm, 1×1½in., half round.
Coamings—American elm, 4in. high forward and 3in. high aft.
Samson Post—Oak, 2½in. square, to be fitted 4ft. from stemhead.
Mast Step—Block of oak to be screwed on to keel.
Cockpit Floor—½in. soft wood flooring, to be supported on six soft wood timbers, ¾in., to be butted against center case and screwed to skin of boat.
Moulds—Boat to be built on eleven moulds (a full-sized drawing of which will be supplied).
Fastenings—All fastenings to be of copper or brass.
Painting—Two coats of paint inside and one outside, to be supplied.
Rudder—English elm, ¾in.
Weight of Plate—80lbs., with bulb 180, made of ¼in. mild steel and galvanized.
Draft with Plate—4ft.
Price of Boat—£20. Estimated price complete, including sails and all fittings, 15 fathoms of mooring line and moorings, £30.

The Lake Yachtsmen.

WE have received copies of the new books of the Yacht Racing Union of the Great Lakes and the Lake Yacht Racing Association. The former thus far includes the following clubs: Buffalo Y. C., Citizens' Y. A. of Detroit, Cleveland Y. C., Detroit Y. C., Put-in-Bay Y. C., Sandusky Y. C., Toledo Y. C. and the West End Y. C.; all forming the Interlake Y. R. A. of Lake Erie; and the following clubs forming the Lake Y. R. A. of Lake Ontario: Bay of Quinte Y. C., of Belleville; Buffalo Y. C., Kingston Y. C., Oswego Y. C., Rochester Y. C., Queen City Y. C. and Royal Canadian Y. C., of Toronto; Royal Hamilton Y. C., Victoria Y. C., the latter two of Hamilton, Ont.

The officers are: Chairman of Council, Æmilius Jarvis, R. C. Y. C.; Sec'y, Frank R. Frey, Toledo Y. C. Members of Council: E. W. Radder, Cleveland Y. C.; F. B. Hower, Buffalo Y. C.; S. H. Jones, Detroit Y. C.; E. H. Ambrose, R. H. Y. C.; J. E. Burroughs, Rochester Y. C.

Thus far the Lake Michigan clubs have held aloof from the Union, some of the yachtsmen being opposed to the rules adopted by the yachtsmen of the other two lakes as to measurement, Corinthian crews, limitation of midship section and other important points. It is unfortunate that differences exist which prevent a union of all the clubs on the chain of lakes, as the interests of fresh-water yachting demand on all such a union as now exists on two. The rules of the Y. R. U. have already been published in the FOREST AND STREAM.

The officers of the L. Y. R. A. are: Pres., E. H. Ambrose, R. H. Y. C.; Vice-Pres., T. B. Pritchard, Rochester Y. C.; Sec'y, Frank M. Gray, R. C. Y. C. Council: F. B. Hower, Buffalo Y. C.; Frank Strange, Kingston Y. C.; R. A. Downey, Oswego Y. C.; Owain Martin, Queen City Y. C.; Rev. C. E. Whitcombe, Victoria Y. C. The rules of the L. Y. R. A. differ from those of the Y. R. U. only in that they recognize a 22ft. class and that the limit of midship section is less by 1⅛ per cent. owing to the action of some of the delegates, as already recorded.

The Imperial Yacht Club, of Germany.

WE have just received a copy of the very handsome year book of the Imperial Yacht Club, of Germany, one of the most elaborate books of the kind published. The illustrations, as usual, are a prominent and interesting feature, the frontispiece being a double-page illustration in colors of a painting by Hans Bohrdt of the Imperial yacht Meteor, winning the race of June 19, 1896. Meteor's dimensions are given as follows: Length over all, 123ft. 4in.; l.w.l., 89ft. 3in.; beam, extreme, 24ft. 1in.; l.w.l., 23ft. 4½in.; draft, 18ft.; sail area, 12,477sq. ft.; measurement by German Sailing Union rule 226.00, by Y. R. A. rule 101.9 L. R. Some excellent half-tone views are given of Meteor under way and in dock, and of her steam tender Evangeline. Other pictures are views of German yachting ports. Very full accounts of all the races of the season, and also of cruises made by the club yachts, are given. The collection of designs, which is always an interesting feature of the book, this year includes three small yachts, as these craft are now of special importance to German yachtsmen. Two bulb-fins, Luv and Hay, with the famous Sorceress, now owned and raced by a German yachtsman under the name of Cuckoo. His Majesty, the Emperor of Germany, is commodore of the club, and his brother, Prince Henry of Prussia, is vice-commodore.

The Indiana Yacht and Boating Club.

WE have received from the Indiana Yacht and Boating Club, of Wawasee Lake, Ind., a very handsome pamphlet, containing a list of members and yachts, fixtures, etc. This inland club was founded through the exertions of one man, Dr. John F. Wright, of Columbus, Ind., an amateur designer, mechanic and sailor, whose work has been illustrated in the FOREST AND STREAM. It is located far from yachting centers and from other clubs, and was formed under many difficulties; but it has now a membership of twenty-five and a fleet of eleven yachts. Races are held regularly through the season, the programme for 1897 being: Series for club trophy, July 6, 13, 20, 27, Aug. 3; annual fleet manœuver, Aug. 10; series for Wawasee Inn trophy, carnival week, Aug. 16, 18, 20. The officers are: Com., Dr. John F. Wright; Vice-Com., R. M. Fishback; Sec'y-Treas., J. K. Lilly, Indianapolis, Ind. Regatta Committee: W. P. Kappes, H. S. Hicks, J. K. Lilly. The book is illustrated by excellent half-tones, a portrait of Com. Wright, and views of the yachts and waters. The Wawasee Inn trophy was won last year by the 20-footer Problem, designed by Com. Wright.

The Mediterranean Races.

THE first day of the Mediterranean races, Feb. 20, was rainy and hazy off Marseilles. Ailsa, Britannia, Samphire and other yachts of various sizes started in a handicap race over a 24-mile course, three rounds of a triangle, for three prizes offered by the President of the French Republic, open to yachts of over 10 tons. Britannia won, with Ailsa second and Samphire third. The next day was clear, with a strong N.W. wind; the same course was sailed, Britannia beating Ailsa by 8 seconds in corrected time.

YACHTING NEWS NOTES.

The annual meeting of the Interlake Y. A., of Lake Erie, was held at Sandusky, O., on Feb. 13, the following officers being elected: Commodore, S. O. Richardson, Toledo; Vice-Commodore, Henry Look, Detroit; Secretary-Treasurer, O. Schimansky, Sandusky; Rear-Commodore, George T. Bliss, Erie, Pa.; Fleet Captain, W. L. Otis, Cleveland; Measurer, J. W. Hepburn, Toledo; Fleet Surgeon, Dr. E. Beeman, Cleveland. Regatta Committee: R. D. Potter, Toledo; Otto Barthel, Joseph Bressler, W. G. Bean, Detroit, and G. F. Anderson, Sandusky. The association formally voted to accept membership in the Yacht Racing Union, and the following delegates were elected: W. Radder, Cleveland; F. B. Hower, Buffalo, and S. H. Jones, Detroit. The Detroit Boat Club was admitted to membership.

The decision of the courts by which the original verdict in the suit of C. C. Clark against Bayard Thayer, for damages in the collision of the schooners Idlewild and Constellation was set aside, has just been reversed by the Appellate Court, and the verdict of $4,500 for personal damages in Mr. Clark's favor stands, the allowance of $450 for damages to his yacht being set aside.

Another new yacht has been ordered for the Seawanhaka 20ft. class, to be designed by Gardner & Cox, for Com. Rouse and Colgate Hoyt, of the club. She will be a fin-keel, and will be sailed by Sherman Hoyt, who handled Paprika so ably last season. Mr. Cox and F. M. Hoyt, owners of the new 51-footer Syce, will sail this week for Bermuda, taking Paprika with them. They propose to race her against the smallest class of Bermuda boats.

The Kingston (Mass.) Y. C. has elected the following officers: Commodore, Capt. John C. Danes; Vice-Commodore, Capt. Nathan B. Watson; Fleet Captain, Capt. Justus A. Bailey; Secretary, Henry M. Jones; Treasurer, Lemuel R. Ford; Measurer, Edward A. Ransom; Regatta Committee: Commodore John C. Danes, Philemon W. Maglathlin, Waldo S. Cole, Harrison I. Cole and Edward A. Ransom; Executive Committee: Commodore John C. Danes, Alexander Holmes and Charles H. Drew. Dr. Wendell H. Adams was appointed fleet surgeon. The club has voted to join the Y. R. A. of Mass. and chosen Vice-Commodore N. B. Watson as its delegate. The club has a membership of 271.

The steam yacht designed by Watson for John E. Brooks, of New York, was launched at the yard of the Ailsa Ship Building Company, on the Clyde, on Feb. 18, being christened Andria by Mrs. Brooks. The yacht is of 440 tons, 161ft. long, 23ft. 6in. beam and 14ft. 3in. depth. When completed, Mr. and Mrs. Brooks will sail on a long ocean voyage.

The regular February meeting of the Seawanhaka C. Y. C. was held on Feb. 23, the following amendments being passed: To add a new Chapter V., to read as follows, and to change the numbers of all succeeding chapters: Chapter V.—A signal officer shall be appointed by the commodore, and shall have charge of making and returning colors and making and returning salutes and signals from the flagstaff at the club house at Center Island, and shall rank as captain. The amendment of the regulations on club uniforms will be moved as follows: Under the heading of "Full Dress Sleeve Ornaments," after the words "fleet captain," insert the words "signal officer." Under the heading of "Cap Ornaments," after the article on "fleet captain," introduce new article to read as follows: "Signal officer. Same device as for fleet captain, substituting the letters 'S. O.,' in silver, for the letters 'F. C.'"

B. B. Crowninshield has established himself in business as a yacht designer and broker, with an office at 31 State street, Boston, and already has several orders placed and others in prospect. One of the orders is for a racing knockabout, and after his experience in Vishnu Mr. Crowninshield should be able to turn out a fast one. The knockabout is for A. D. Irving, of New York, who spends his summers at Marblehead Neck, and will race the boat in Marblehead waters. She will not be a wide departure in any respect from previous models, but will be fined away to the limit, and will be of light construction. Her lead keel will not be bulbed, and her metal rudder will be hung on the sternpost in the same manner as Vishnu's. The model shows clean lines and a very easy form all around. Robert Saltonstall has ordered a 17ft. centerboard knockabout for use at Manchester. She will be designed solely for afternoon sailing. For Horton Bros. Mr. Crowninshield is designing a "splasher," for racing with the Nahant Dory Club. She will be 23ft. over all, 18ft. waterline, 7ft. beam and 9in. draft, with a big rig. Mr. Crowninshield has sold the sloop Vandal to C. F. Ayer. Also the 18ft. cat Elsa, built by Lawley last year for Sidney Burgess, to Charles Sargent, Jr. It is possible that Mr. Crowninshield will have a boat for his own racing in the knockabout fleet.—*Boston Globe.* [Mr. Crowninshield did his early sailorizing on the cutter Witch, whose lines were published some years ago in the FOREST AND STREAM, an excellent little boat in her day. We wish him all success in his new venture.]

The Roberts safety water tube boilers, after thorough trial, have found favor with the United States Government, as is shown by the following list of vessels in which they are now used: Snag boat Mandan, on Upper Mississippi River; dredges Ohio and Oswego, on Ohio River; Commandant's barge Minnie, Brooklyn Navy Yard; torpedo planter Dyne, Whitestone Station; revenue cutter Penrose, Pensacola Station; revenue cutter Tybee, Savannah Station; revenue cutters Scout and Guard, Puget Sound Station; revenue cutter Johnson, Detroit Station; War Department steamer Reid Whitford, Georgetown Station; War Department steamer Angler, Savannah Station; War Department steamer Gen. George Thomas, Newbern Station; U. S. Harbor Supervisor's steamer Scout, New York Station; U. S. Harbor Supervisor's steamer Alert, New York Station; U. S. Harbor Supervisor's steamer Active, New York Station; U. S. Harbor Supervisor's steamer Argus, New York Station. Roberts boilers are also used in the New York city police boat Inspector, the New York city dumping boat Cinderella, and the Quarantine Commissioners' steamer State of New York.

The Rev. F. L Humphreys, Morristown, N. J., has ordered of the Daimler Motor Co. a large auxiliary yacht. She will be 82ft. 6in. over all, 60ft. 9in. l.w.l., 12ft. 10in. beam, 3ft. 6in. draft. Two Daimler motors of 24 H. P. each are located abaft the midships, driving twin screws. Forward of the engine room is the main saloon, toilet roon, one stateroom and pilot house. Aft is a galley and the smoking room. The yacht will be schooner-rigged. A smaller yacht for F. Skinner, of Boston, is under way at the Daimler works. She will be 57ft. over all, 44ft. l.w.l., 9ft. beam, and 3ft. 9in. draft. She will have a Daimler 16 H. P. motor and will be schooner-rigged.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

Commodore, John N. MacKendrick, Galt, Canada.
Sec'y-Treas., John R. Blake, Galt, Canada.
Librarian, W. P. Stephens, Bayonne, N. J.

Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

THIS year the officers of the Atlantic Division propose to profit by the numerous disastrous experiments carried out by their predecessors in the form of division meets. In place of a fixed camp site and arrangements which were always expensive and usually very faulty, a cruising party will spend a week on the Delaware River, four days of cruising, ending with two or three days in camp at one spot. The novelty of the cruise should attract men to it, and we hope that the efforts of the officers will meet with the appreciation which they deserve. There must be still some cruising canoes in the various club houses, with the dusty remains of canoe kits and cruising duffle. Now is the time to get them out and overhaul them; the rendezvous at Easton is easily reached from New York and Philadelphia, a short trip by rail, and the river offers an easy course down stream. The most enjoyable canoe meets ever held in this country were those primitive and informal camps at Plum Point in 1884-85, camps which cost nothing to the general treasury, but which were successful both in attendance and in the true camp life which characterized them. With proper support from the members of the division, a similar meeting may be had this spring.

The North Shore Canoe.

THE Rice Lake canoe has become so widely known, and is in such general use, that it has usurped the name Canadian perhaps without just right, for there is another Canadian canoe which I think was developed long before the Rice Lake and which is a typical boat of the great river of Canada, the St. Lawrence.

Above the Long Sault the pleasure boats of the river are the St. Lawrence River skiffs, as built at Clayton, Gananoque, Brockwell, Kingston, and a modification of the Rice Lake canoe—boats developed by the English-speaking people who live upon its shores.

Below the Long Sault the boats are those of a simpler race, who "hold by the right of birth" to a degree that the English speakers do not, for the French-Canadians are by length and purity of descent more truly American than any other European people upon this continent.

The Rice Lake canoe, I am confident, has been developed not from the birch canoe, but from the log. This is a matter of dispute, I know, but I have traced the descent of the built boat of practically the existing model directly from a log canoe, have traced the history of that individual canoe and obtained the evidence of the oldest white settlers of the Trent districts. The Trent canoe would be a far more correct name for the boat in question than any now used, and I have no doubt whatever that the prototype of the Rice Lake canoe was the log canoe and no other.

There is, however, among the typical boats of the St. Lawrence a canoe that has been developed from the birch bark, and the best of the birch barks, and this craft is the North Shore canoe. The North Shore is that great stretch of wild

north land that lies beyond the St. Lawrence from below the island of Orleans to the gulf, where it merges into Labrador. Below Quebec there is a fringe of farms and villages on the river's bank, but gradually they thin down, until the ancient wilderness is only broken by isolated fishing stations, and nowhere is the wilderness very far away.

This wilderness, a stern north land, but not a barren, has been from time immemorial the country of the Montaignaics, the most easterly branch of the great Algonquin people; and the Montaignaics, like all their kin, are clever workmen and great hunters and trappers. Their canoes, in particular, are the best birch barks made—graceful, strong, seaworthy, and fairly well modeled. The French-Canadians, to a greater extent perhaps than any other of the European settlers of America, were content to learn of the Indians. It is probable, I think, that their hold on the soil, their prosperity in the face of adverse circumstances, and their astounding fecundity, particularly during the first quarter of this century, has been in great measure due to this. They adopted the birch bark canoe as their own from the first, and they have used it ever since, and continue to use it.

I would like to discover whether the white man has ever learned to build the bark, or has ever built it in any numbers. It would seem as if he never had, for as soon as the Indians begin to fall back before the clearing and birch barks begin to grow scarce, the white man seems to replace them with built boats. It was so on the North Shore at all events, but on the North Shore the built boats were as close a copy of the bark canoe as the builders could make them. This is the origin of the North Shore canoe.

The North Shore canoe is used principally of course on its native waters, from Quebec to Tadousac and beyond. And there it carries the mails, is surf boat, pleasure boat, fishing boat, everything and anything and a little more. Its lines are not ungraceful, but its construction is, and in this respect it is much inferior to the Rice Lake. The boats are clinker built, but the lands are not thinned down and the work is very coarse. They have about five streaks a side, ½in. stuff, and the timbering is heavy. The paddle is not relied on, as it is in the Rice Lakes, the pin oar being generally used.

A good many of these boats have drifted up the river, and they are so strong, stiff and seaworthy that they stand an unlimited amount of abuse. They are generally about 14ft. long by 32in. beam, but as each builder doeth what is good in his own eyes, and the use of a foot rule is not compulsory on the Shore, they are about any dimension, and might be classified in "fathoms" like a bark if they were built in large sizes.

RETAW.

Yonkers C. C. Dinner.

THE members of the Yonkers C. C. celebrated the eleventh anniversary of the organization of the club by enjoying a dinner at Bardin's Hotel, South Broadway, Yonkers, on Wednesday evening, Feb. 17. There were about forty present, including guests from the New York, Knickerbocker, Brooklyn and other clubs.

The menu cards were the work of the club artist, Mr. W. G. Wood, representing the Y. C. C. house, the A. C. A. and Y. C. C. flags, canoes and various emblems of the sport, together with an enticing list of good things.

Mr. Wood also painted little canoeing scenes in water color on the designation cards at each place. Beside each plate was a package of cigars and cigarettes, held together by a rope grommet. The Roman punch was served in the shape of canoes with a little Y. C. C. flag stuck in the end of each.

When cigars were lighted Com. Paul B. Rossire opened the speech-making in an appropriate manner, and then called upon Everett Masten, who told of the "Early History of the Club;" P. F. Hogan, of the Brooklyn C. C., who gave his version of "Jonah and the Whale;" Jas. K. Hand, of the Knickerbocker C. C., spoke of "The 1897 Meet;" Rev. W. M. Gilbert, chaplain of the club, told what he thought of canoeing, the club and its members; Gabriel Reeves, an ex-commodore, responded to the "Ex-Members." Mr. L. W. Seavey, of the K. C. C., spoke of his early canoeing; Mr. T. S. Oxholm told what he thought of the ladies; and Mr. H. Lansing Quick, Mr. Louis Simpson, Edwin A. Quick, F. W. Retter (president of the Palisade Boat Club, of Yonkers) and D. B. Goodsell were not outdone in eloquence by any of the others.

The speeches were varied with songs by Mr. Frank Taylor, of the Newburgh C. C., and instrumental duets by Messrs. Taylor and Hale.

The other diners were: Robert Peebles, of the K. C. C.; S. L. Cooper, C. C. Rossire, W. R. Haviland, Louis Hunter, Edward Muller, E. M. Underhill, C. B. Carling, A. D. Ballard, B. F. Barnes, J. J. Lawrence, Robert Edgar, W. R. Simpson, Samuel Raynor, E Russell Coles, Elliott Holbrook, J. E. Humason, G. I. Eddie, J. W. Fowler, Leo Shire, W. G. Wood, A. M. Reese, W. J. Moore and W. N. McVicar.

The arrangements showed that the dinner committee, consisting of Messrs. Hale, Quick, Holbrook and Fowler, had been selected because of efficiency.

The present officers of the club are: Com., Paul B. Rossire; Vice-Com., Thos. Hale, Jr.; Sec'y, D. B. Goodsell; Treas., Everett Masten; Capt., Elliott Holbrook; Lieut., J. W. Fowler.

The Atlantic Division.

THE executive committee of the Atlantic Division, American Canoe Association, has decided in place of the regular Division meet to hold a combined four-days' cruise down the Delaware River, from Easton, Pa., and three-days' meet at Delanco, N. J., at the end of the cruise. The programme is: May 27, rendezvous at Easton, Pa.; May 28, down the Delaware to Frenchtown, N. J.; May 29, to Trenton, N. J.; May 30, to Arlington, N. J.; May 31, to Delanco, N. J.; June 1 to 3, meet held at Delanco, N. J.

Washington Canoe Association.

THE Washington Canoe Association held its eleventh annual dinner on Feb. 22, many members and guests being present. Mr. E. S. Hubbard gave an exhibition of lantern slides. The officers are: Com., E. S. Exley; Vice-Com., R. J. Whitton; Sec'y, Dr. Charles A. Davis; Treas., I. P. Libbey. The association has a membership of 97. Some time in the summer a meet will be held down the Potomac, lasting several days, with races for canoes and yachts.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Cal., Feb. 14.—Notwithstanding a steady drizzle, there was a good attendance to-day at the medal shoot of the Columbia Pistol and Rifle Club. The records made were:

Rifle, 200 yards, re-entry matches, F. H. Bushnell medal, 3 shots. Scores: A. H. Pape 10, F. O. Young 10, Dr. L. O. Rodgers 12, D. W. McLaughlin 18.

William Glindermann military medal, 10 shots (Creedmoor count): F O Young 47, F H. Bushnell 47, E. Jacobsen 44, C. F. Waltham 42.

F. O. Young rifle record medal, 10 shots: F. O. Young 65, A. Gehret 74, D. W. McLaughlin 75, F. E. Mason 63, V. J. Lamott 171.

Class medals for members only, 10 shots:

Champion Class—A. H. Pape 56, F. O. Young 60, Dr. L. O. Rodgers 76, F. E. Mason 94, D. W. McLaughlin 204.

First Class—H. J. Wicker 57, O. A. Bremer 64, E. Jacobsen 87, A. B. Dorrell 88, L. Barrere 96, C. M. Daiss 100, H. Hillberg 109, A. Gehret 113.

Second Class—J. E Gorman 93, G. Schultz 107, F. H. Bushnell 113, G M. Barley 135, M. J White 162.

Third Class—C. F. Waltham 93, A. Hinterman 145, A. Kennedy 166, W. J. Unfred 205, V. J. Lamott 132.

Pistol, 50yds., class medals for members, 10 shots: Champion Class—C. M. Daiss 42, J. E. Gorman 49, F. O. Young 54, Ed. Hovey 56, A. B. Dorrell 63, A. H. Pape 65, L. Barrere 110.

First Class—Dr. L. O. Rodgers 55, M. J. White 62, F. E. Mason 67, D. W. McLaughlin 75, E. Jacobsen 101, Captain J. E. Klein 109, A. Gehret 132.

Second Class—F. H. Bushnell 72, G. M. Barley 72, O. A. Bremer 106.

Third Class—C. Roberts 64, Mrs. M. J. White 68, C. F. Waltham 112, W. J. Unfred 116, A. Hinterman 140, V. J. Lamott 183, R. W Fores. 202.

All-comers' re-entry matches—Diamond pistol record medal, 10 shots: F. O. Young 51, Ed. Hovey 52, A. B. Dorrell 61, J. E. Gorman 64.

Gordon Blanding, 3-shot scores—A. B. Dorrell 7, F. O. Young 8, J. E. Gorman 10, F. H. Bushnell 14.

Howard Carr, any-revolver medal, 6 shots—A. B. Dorrell 43, 38; C Roberts 45, 47.

Achille Roos, .22cal. rifle medal, 5 shots—Ed Hovey 10, A. B. Dorrell 12, 12.

ROEEL.

Carleton Rifle Association.

CARLETON, Mich., Feb. 16.—The Carleton Rifle Association held its regular shoot to-day on its range near this city. These shoots are held twice a month, on the first and third Tuesdays. To-day there was a good attendance of shooters and some capital scores were made. Below are some of the best scores made on the 200yds. range, standard target, 8in. bullseye:

Members' Record Rest Match

J Orion	12	11	11	12	9	10	9	10	12	12—108
	10	9	16	12	9	10	9	12	12	10—103
James Osborn	11	11	9	7	9	12	10	12	9	7— 97
	9	9	11	7	9	9	9	10	11	9— 93
John Cole	10	12	8	12	9	9	10	9	10	7— 96
	9	12	12	7	9	8	10	11	9	9— 96
L Richards	9	9	9	10	11	10	12	9	9	—— 95
	9	9	7	6	9	10	12	8	8	11— 89
Orva Harwood	9	11	8	9	11	7	8	8	8	11— 90

All-Comers' Off-Hand Match.

H Williams	7	3	6	6	8	6	8	7	4	5— 55
Joe Foye	8	7	3	8	4	7	4	4	3	6— 54

The Carleton Rifle Association has received a proposal from the Idaho Springs Rifle Club, of Idaho Springs, Col., to shoot a series of three or five match shoots under the following conditions: 200yds., off-hand, standard target, teams to consist of six or eight members, each team to shoot at its own range, scores and targets to be exchanged. The proposal will be accepted by our club. J. ORION.

Small Calibers at the Sportsmen's Exposition.

THE programmes for the rifle tournament, to be held in Madison Square Garden during the week of the Sportsmen's Exposition, March 13-20, are ready for mailing, and will be sent to parties desiring same on application to J. A H Dressel, secretary-treasurer Sportsmen's Association, Room 1,009 No. 317-319 Broadway, New York; or to Edward Banks, secretary Tournament Committee, care of FOREST AND STREAM, 346 Broadway, New York.

There is no change in the official programme from that published last week in these columns, with the exception of a note at the conclusion of the conditions of the Individual Championship match, which states that entries may be made to either of the above-named officials, or to any member of the Tournament Committee.

The conditions of the Individual Championship match give the entrance fee for the 100 shots as $5, including season ticket of admission to the Garden during the entire week of the Sportsmen's Exposition. Any person who is already a member of the Sportsmen's Association, and who is therefore possessed of a season ticket as above, will be entitled to compete in this match on payment of the entrance fee less the price of such season ticket.

The ranges will be open for shooting from 3 P. M. to 11 P. M. on each day of the Exposition, with the exception of Saturday night, March 20, when all shooting will close at 9 P. M. Competition on the bullseye target closes on Friday night, March 19.

Revolver Shooting in England.

LONDON, England, Feb. 12.—The English National Rifle Association has just issued its report of the Bisley meeting for 1896. The revolver competitions seem not to have been quite as popular as in 1895. There were 3,379 entries as compared with 3,952 in '95, a decrease of 573.

The chief falling off was in the two series 3, the rapid-firing ones for military and "any" revolvers. These dwindled down from 560 and 748 respectively to 127 and 315, less than half of former entry lists. Mr. Winans has by practice become so expert at this that it is a foregone conclusion that he will come out on top as soon as he begins shooting, and this is most likely the reason other shooters have become discouraged. As this is, however, the most practical set of series for revolver shooting of the lot, it cannot well be dispensed with even if it is unpopular, as all difficult things generally are. Where the greatest increase in entries came in was at the disappearing series, which is too slow, and consequently easy. C.

Cincinnati Rifle Association.

CINCINNATI, O., Feb. 21.—The members of the Cincinnati Rifle Association were out to-day in good force. The weather being bad, good scores were the exception. Following are the records made on the Standard target, 200yds., off-hand, 7-ring black:

Gindele.

10	9	10	10	7	7	9	9	7	9—87		9	10	9	7	9	6	10	9	9	9—87

Carlisle	77	74	74	81—77	Hepburn	64	63	57	61—61

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

March 16-19.—BAYCHESTER, N. Y.—Second annual tournament of the Cobweb Gun Club; live birds and targets. Cobweb handicap at live birds, $500 guaranteed. Open to all. Nobody barred.

March 23-25.—NEW YORK.—Interstate Association's fifth annual Grand American Handicap (live birds), at Elkwood Park. $1,000 guaranteed in the main event, all surplus added. Entries close March 20.

April 14-16.—ATCHISON, Kan.—Airy Lou Hart's third manufacturers' amateur and fourteenth open-to-all tournament.

April 7.—HACKENSACK, N. J.—Third contest for the Recreation cup, under the auspices of the Bergen County Gun Club, Cup contest at 12 noon sharp. C. O. Gardner, Sec'y.

April 14-16.—BALTIMORE, Md.—Tournament of the Interstate Association, under the auspices of the Baltimore Shooting Association.

April 15.—YOUNGSTOWN, O.—First tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

April 15-17.—SAN ANTONIO, Tex.—Tournament of the San Antonio Gun Club. Open to amateurs only. Willard T. Simpson, Chairman Ex. Com.

April 10.—WINDSOR LOCKS, Conn.—All-day tournament of the Windsor Locks Gun Club. Targets. C. F. Cleaveland, Sec'y.

April 20-23.—LINCOLN, Neb.—Twenty-first annual tournament of the Nebraska State Sportsmen's Association. Added money later.

April 21-23.—SAN ANTONIO, Tex.—Second annual meeting and tournament of the Texas State Sportsmen's Association. O. C. Guessaz, Sec'y.

April 27-30.—FONDA, Ia.—Tournament under the management of Geo. E. Hughes and C. R. McCord. Live birds. $800 added money.

April 28-29.—RICHMOND, Va.—Tournament of the Interstate Association, under the auspices of the West End Gun Club.

April 28-29.—PERU, Ind.—Tournament under the management of J. L. Head.

May 5-7.—NEWBURGH, N. Y.—Annual spring tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

May 11-13. PEEKSKILL, N. Y.—Annual tournament of the Peekskill Gun Club. First two days, targets; last day, live birds.

May 12-13.—CONNERSVILLE, Ind.—Tournament of the Connersville Gun Club. Live birds. T. F. Thomas, Sec'y.

May 17-22.—KANSAS CITY, Mo.—Annual tournament of the Missouri State Game and Fish Protective Association. Fred T. Durrant, Sec'y.

May 18.—ALBANY, N. Y.—Annual spring tournament of the West End Gun Club. Horace B Derby, Sec'y.

May 19-20.—SAVANNAH, Ga.—Tournament of the Interstate Association under the auspices of the Forest City Gun Club.

May 19-21.—CANTON, S. D.—South Dakota Sportsmen's Association annual. C. S. Seely, Sec'y.

May 20.—GREENVILLE, Pa.—Second tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

May 26-29.—EAST ST. LOUIS, Ill.—Annual tournament of the King's Smokeless Gun Club.

May 31.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters League tournament, under the auspices of the Canajoharie Gun Club. Charles Weeks, Sec'y.

June 2-4.—SPRINGFIELD, O.—Annual tournament of the Ohio Trap-Shooters' League, under the auspices of the Springfield Gun Club.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 10.—NEWCASTLE, Pa.—Third tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

June 15-18.—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man. $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Secretary Charles Weeks, of the Canajoharie (N. Y.) Gun Club, writes that the Eastern New York Trap-Shooters' League will hold a tournament at Canajoharie under the auspices of the above-named club on May 31. All events will be at targets.

Field Sports, one of our cotemporaries that is doing its best for sport on the Pacific slope, makes a grave error in its issue of Feb. 20: "With the opening of the trap-shooting season there promises to be a very general revival in the use of hand-loaded shells The belief is growing stronger each year that the best results at the trap can only be obtained by the use of carefully hand-loaded ammunition. The experts have recognized this for several years, and always go to the traps with shells of their own loading, or those loaded by some one in whose care and precision they have unbounded confidence, and their scores emphasize the correctness of their judgment." While the above might have been true a very few years ago, it is far from being correct for the condition of affairs at the present time. The experts are now to a very large extent using factory-loaded ammunition, without any apparent diminution in their percentage of receipts from the purses." In the same issue of this paper is given a sample of *Field Sports'* score card, Rose system. It is a cleverly gotten up affair, being practically a cashier's card as well as a score card. A footnote states that "these score sheets may be used for either live-bird or bluerock scores, under the Rose system, the ordinary percentage system, or class shooting." The last three words, "or class shooting," are misleading, as the Rose system is only one of several schemes for dividing purses in class shooting. All purses are divided under one of these two plans, high guns or class shooting. When it is class shooting there are several ways of dividing the purses: the old and inequitable system, the Rose system, Jack Rabbit, Pumphrey's system, etc. And the Rose system is the best of all, and keeps the boys shooting because it is equitable, reduces the winnings and losings, and prevents crooked work. FOREST AND STREAM found Mr. Rose, and Mr. Rose found the system. Some people may not like the system, but you all know why that is.

Mr. Edward C. Drawbaugh, of Shenandoah Junction, W. Va., writes under date of Feb. 22: "I inclose you a few items for your Drivers and Twisters column. There is a lively interest in trap-shooting circles, and I think this part of the State will furnish you with frequent batches of material for your trap columns this season." One of the items referred to reads as follows: "Dr. T. C. Stotler, of Shepherdstown, W. Va., has moved to Harper's Ferry and will practice his profession there. It will be remembered that the doctor usually manages the Morgan's Grove trap-shooting tournament, which is given by and is a feature of the Morgan's Grove Fair Association, at Shepherdstown, W. Va. Last year he was ably assisted by Dr. Fort, of Ellicott City, Md., in the management of this tournament. These shoots are affairs of some magnitude, and are much enjoyed by the local contingent as well as by shooters from a distance. It is hoped that this association will hold another tournament in connection with the fair this year, and that we will again hear the doctor asking his usual question, 'Have you entered this event? Dollar, please.'" Another runs thus, showing that trap-shooting is not dead in West Virginia: "There is a great deal of interest displayed in trap-shooting circles at Harper's Ferry, W. Va., which bids fair to blossom into a good-sized tournament at that point this coming summer. Walter Winters and Dr. Stotler have been grinding up a few targets for their own amusement. When Capt. Spencer, Shep. Gatrell and Charlie Cavalier hear of it, they will take a hand too."

Capt. A. W. Money arrived from England on Monday morning, Feb. 22, on board the steamship St. Paul. He had just gotten his baggage through the customs when he was met by Noel Money and C. Kennard, Noel's brother-in-law, both with a gun over their shoulders, being *en route* for the grounds of the Westchester Country Club. "You've got to come along and shoot," said they. Although in his best store clothes, Capt. Money didn't demur, but, picking a gun out of those he had along with him, went as he was bid. As it happened, there were three cups up for competition at the Country Club on that date. Noel Money won the first, Capt. Money the second, and Noel the third! Mr. Kennard left for Indian Territory on the Pennsylvania Limited on Friday morning. He expects to be absent on this trip for two or three months.

A correspondent, who for certain reasons desires to be known as "Gun Crank," writes to us from Cincinnati, O., under date of Feb. 23, as follows: "I notice in your issue of Feb. 20 a letter from your Chicago correspondent, Mr. E. Hough, in which he claims that certain guns in the possession of a Chicago gunmaker are of great interest because the barrels are made of a 'new material, known as the Krupp special steel, which in reports once printed in FOREST AND STREAM by Mr. Armin Tenner was shown, etc.' Now, Mr. Editor, how long does it generally take for a 'new material' to get out to Chicago? If I mistake not, gun manufacturers and gun dealers in cities in the East can tell something about this 'new material' Krupp special steel barrels are good, but 'new!' I don't think."

It seems a pity that pigeon shooting should be mixed up with prize fighting, but from what one reads such is going to be the case at Carson, Nev., on or about March 17. The Kansas City *Star* has quite a lengthy note on the subject in its issue of Feb. 22, and appears to rejoice in the fact that Stuart has announced something that reads like "$1,000 added," as that amount entitles him to call upon the *Star* to put up its cup (now held by Jim Elliott) for competition at Carson at the same time and place as "the fistic carnival" Calling the exhibition to be given by Corbett and Fitzsimmons a "fistic carnival" doesn't lesson the fact that it is simply a prize fight, something with which trap-shooting has nothing in common.

In our issue of Jan. 30 we printed an invitation from T. W. Morfey, of Paterson, N. J., to John L. Winston to shoot a match on Winston's own terms, on Winston's own dates (March 1 to March 10), and on Winston's choice of grounds (Elkwood or Yardville), for $100 a side, the amount named by Winston. A forfeit of $50 accompanied Morfey's invitation. It will also be remembered that when the match was made, viz., on Jan. 16, nothing was put up, but Winston bet Morfey a $5 hat that he, Morfey, would not shoot. The "invitation" was, as stated above, published in our issue of Jan. 30, and over five weeks have elapsed since it appeared. When this issue makes its appearance there will be just one more week for Winston to make good his side of the case or buy the hat.

The Windsor Locks (Conn.) Gun Club will give an all-day shoot on Fast Day, April 16. The programme contains seven 10-target events, four 15-target events, a 20- and a 25-target event, making a total of 175 targets all told. The entrance fee for the whole programme is $15.15. Targets will be thrown at 2 cents each, with four moneys in all events. Refreshments are free to shooters, shooting commencing at 9:30 A. M. Anyone may shoot "for birds only." S. B. Douglas is president of the club, and C. F. Cleveland secretary. Messrs. F. L. Harvey, H. L. Cutler and Videon, members of the Windsor Locks Gun Club, were present at the New Haven Gun Club's shoot on Washington's Birthday.

The Jacksonville, Fla., *Citizen* of Feb. 20 contains the following item of interest from Tampa, Fla.: "The first live-bird shoot occurred at the hotel this morning, and it was very interesting. Pigeons were used at a 30yd. rise, with a 50yd. boundary, both barrels being used. Only three entries were made—F. Bacon, Boston; F. H. Brown, Connecticut, and Arthur Schleman, hotel guide. The score was: Bacon 9, Brown 7, Schleman 8. Guide Schleman to day sold Jack and Molly, his two finest pointers, to S. B. Sexton, of New York, for $300. The dogs are superb hunters, and after using them during his stay Mr Sexton became so much attached to them that he decided to purchase them."

Paradise Lost, the gentleman whose letter we criticised last week, and who is supposed to hail from Worcester, Mass., should cast his eye over our trap columns this week and then write his impressions of the decadence of trap-shooting with a new pen and another kind of ink. It seems a shame to mention the worthy name of the city of Worcester in connection with such an epistle. A city that claims V. D. Kenerson, J. T. Mascroft and W. L. Davis, not to mention lots of others just as good as her citizens, can, however, afford one Paradise Lost.

The 25-bird race shot on Saturday, Feb. 27, on the grounds of the Larchmont Y. C., Pelham Manor, N. Y., was won by Louis T. Duryea with 24, from the 30yds. mark. There were seventeen entries, six of the number tieing on 23 for second and third moneys. On the shoot-off (miss-and-out) for these moneys, J. P. Knapp, F. G. Moore and E. R. Laidlaw divided with 6 straight kills. The other three dropped out as follows: Justus von Leugerke in the 6th round, Col. Butler in the 5th round, and G. S. McAlpin in the 3d round.

For the information of some of our correspondents we would state that we have been informed that all handicaps for the Grand American Handicap will be figured on the 12-gauge basis, and that everybody using a 16 or 20-gauge will have to shoot at the distance awarded him. The reason for this is that the Interstate Association rules recognize no guns of any other caliber than 12-gauges. No gun over 8lbs. in weight will be allowed.

Programmes for the Cobweb Gun Club's shoot at Baychester, N. Y., March 16-19, during the week of the Sportsmen's Exposition at Madison Square Garden, are now ready and can be obtained by addressing the secretary, George W. Thompson, Jr., Cobweb Club 2277 Third avenue, New York City. The first two days are at targets, the last two at live birds, with the Cobweb Handicap, $500 guaranteed, as the *piece de resistance* on the last day, March 19.

Prior to leaving for the Indianapolis sparrow tournament and the Texas Midwinter, Rolla Heikes gave an exhibition of rapid work on targets with a Winchester repeating shotgun for the benefit of the Mutoscope Company, of New York Ferd Van Dyke stood by Rolla and loaded the guns as fast as they were emptied. Photographs were taken at the rate of forty to the second, and every one is as clear as possible. The whole thing will be shown at some date in the near future at Keith's New Union Square Theater.

Ferd Van Dyke, of the W. R. A. Company, will be one of the entries in the Grand American Handicap this year. Van was at Elkwood on Saturday, Feb. 27, and shot a few birds, incidentally scoring 15 straight in the handicap event on the programme and pocketing first money, $57. For the next few weeks Van will be in evidence at most of the important shoots around New York, being temporarily located in this city until after the Sportsmen's Exposition week.

G. S. McAlpin made an excellent score on Thursday, Feb. 25, at Riverton, N. J., when he defeated T. S. Dando, of the Riverton Gun Club, by scoring 80 to 73 out of 50 pairs of live birds, 25yds., 50yds. boundary. McAlpin's record for this season has been a remarkable one, his string of victories being almost entirely unmarred.

Memphis, Tenn., will have three entries in the Grand American Handicap; Irby Bennett says so, and as he has just returned from that city he should know all about it. W. R. Oliver, of the firm of Oliver-Finnie in that city, was in New York on Wednesday last. He spent the fore part of the week in New Haven with Mr. Bennett.

A new league of gun clubs has been organized in Connecticut for the purpose of furthering the interests of trap-shooting and increasing local enthusiasm in the sport. The objects of the league and its members is the subject of a note made elsewhere in these columns.

The tournament of the Cobweb Gun Club at Baychester, N. Y., during the week of the Sportsmen's Exposition, promises to be a popular one. The train service between New York and Baychester is very handy. Trains leave the terminus of the Third avenue elevated at a quarter before each hour, and it only takes fifteen minutes to run to Baychester.

A trap-shooting league has been formed from the clubs that shoot in the vicinity of Philadelphia, Pa. The chief object of the new league is to bring the trap-shooters in that vicinity into closer touch by promoting monthly team contests between the clubs composing the league.

The next contest for the E. C. cup, on the grounds of the Bergen County Gun Club, of Hackensack, N. J., will be held on March 27. This club will hold its anniversary tournament early in the month of June, and will make the shoot attractive by hanging up a little added money.

The rivers have been on the boom around Pittsburg, Pa., lately. Those present at the Pittsburg Gun Club's tournament last June can form some idea of the amount of water in the rivers from the fact that at one time 12ft. of water covered the place where that tournament was held.

The interest in this year's Grand American Handicap seems to us so much greater than in any previous year that we feel almost emboldened to prophecy a new record for the Interstate Association to brag about for the next twelve months.

Mr. J. L. Head, of Peru, Ind., writes us that he is promoting a tournament at that place for April 28-29. As told elsewhere in Mr. Head's own words, his object in promoting this tournament is to organize a league of the gun clubs within a radius of 75 to 100 miles of Peru.

Thursday, March 4, Inauguration Day, the following programme will be carried out at Elkwood, Park, commencing at 12:30 P. M.: McKinley handicap, 25 to 31yds., 12 birds, $15 entrance, birds included; high guns. Ties, miss-and-out. Sweeps at other two sets of traps.

The Unknown Gun Club, of Brooklyn, N. Y., will hold its regular monthly live-bird shoot on March 11, at Dexter Park, L. I. After the club shoot the ties for last year's gold medal will be shot off.

The Connersville (Ind.) Gun Club will give a two days' tournament at live birds May 12-13. Programmes will be gotten out later and may be obtained of the secretary, T. F. Thomas, Falmouth, Ind.

Annie Oakley defeated Frank Kleinz on Saturday last, Feb. 27, at Yardville, N. J., in a 50-bird race by the score of 36 to 35.

The West End Gun Club, of Albany, N. Y., will hold its annual spring tournament on May 18.

MARCH 2. EDWARD BANKS.

Larchmont.

NEW YORK, Feb. 27.—There was an excellent attendance to-day at Larchmont, an attractive programme having been gotten up by Mr. A. Marshall, chairman of the shooting committee. The birds were a good lot, and several of the shooters found difficulty in stopping them within the 21yd. boundary. In the main event, a 25-bird handicap, Louis Duryea shot very steadily, running his first 24 straight, losing a twisting driver in the last round. Six tied for 2d and 3d moneys and shot off, with the result shown in the scores which follow:

No. 1, 5 birds, handicap rise, $5; 3 high guns, ties, miss-and-out: W. S. Edey (28) 7, G. S. McAlpin (30) 7, E. F. Thomas (29) 7, J. P. Knapp (30) 6, F. G. Moore (29) 6, W. A. H. Stafford (28) 4, J. G. Knowlton (29) 4, F. Muser (27) 3, Col. H. S. Butler (28) 3, B. A. Gould (27) 2, L. T. Duryea (30) 1, D. I. Bradley (28) 1, H. S. Redmond (27) 1.

No. 2, all at 30yds., two misses out, $10: G. S. McAlpin 20, L. T. Davenport 19, H. B. Gilbert 17, Fred G. Moore 15, Noel Money 11, E. R. Ladew 9, J. P. Palmer 2, F. Muser 1, H. S. Redmond 3, B. A. Gould 3, Col. Butler 5, W. S. Edey 3, D. I. Bradley 8, Dr. J. G. Knowlton 2, W. A. H. Stafford 6, E. F. Thomas 4, G. S. Hoyt 3, W. Hoyt 6

No. 3, 25 birds, handicap rise, $25, a cup valued at $50 to the winner, ties at 5 birds, seventeen entries: L. T. Duryea (30) 24, J. P. Knapp (30) 23, Fred G. Moore (29) 23, E. R. Ladew (28) 23, J. von Lengerke (29) 23, Col. Butler (28) 23, G. S. McAlpin (30) 23. Others who shot were: H. B. Gilbert (29), B. A. Gould (27), H. S. Redmond (27), Fred Muser (27), W. S. Edey (28), D. I. Bradley (28), W. A. H. Stafford (28), G. S. Hoyt (27), W. Hoyt (26), N. E. Money (29)

The shoot off for second and third moneys resulted as follows:

J. P. Knapp, F. G. Moore and E. R. Ladew (divided), 6, J. von Lengerke 5, Col. Butler 4, G. S. McAlpin 2.

Rochester Rod and Gun Club.

ROCHESTER, N. Y., Feb. 22.—The Rochester Rod and Gun Club held an open tournament to day. There were ten events on the programme, but rain interfered, and only seven events were shot off. No. 6 was a free merchandise event, with ten prizes, which were won as follows: Bolton first, Lane second, Hadley third, Gardiner fourth, Schleyer fifth, Rogers sixth, J Rissinger seventh, G. Dust eighth, East ninth, Ho Jack tenth. Mr. McClintock announced just before No. 6 event opened that he would give five 1lb. cans of King's Smokeless powder to the five high guns failing to win a prize. The five were Hicks, C. Rissinger, McClintock, Borst and Tassell. The scores of the day follow:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	10	15	10	10	25	10	Targets:	10	10	15	10	10	25	10

DE WITT.

Catchpole Gun Club.

WOLCOTT, N. Y., Feb. 25.—Below are the scores made by members of the newly organized Catchpole Gun Club, of this city, at the club's weekly shoot held this afternoon. The weather was very cold and stormy, and altogether unfavorable for trap shooting. Mr. Wride, a member of the Rochester (N. Y.) Rod and Gun Club, was a guest of Uncle Benn's, and took part in the shoot.

	No. 1.	No. 2.	No. 3.

E. A. WADSWORTH, Sec'y.

English Gunpowders in America.

THE London *Field* of Feb. 20 contains the following upon the gunpowder situation in the United States as concerning English powders:

"We understand that it has been decided to amalgamate the American interests of the Schultze Powder Co., Ltd., and the American E. C. Powder Co., Ltd. This decision has been arrived at by reason of the undesirable state of affairs prevailing in the States at the present time. It is stated that this resolve will not affect in the slightest degree in the United Kingdom the interests of the Schultze Gunpowder Co or the original E. C. Powder Co. (the latter being entirely distinct from the American E. C. Powder Co.)."

Classification of Trap-Shooters.

PROFESSIONALS AND AMATEURS DEFINED.

PROFESSIONAL: Any person who makes his livelihood in whole or in part by shooting at the trap; that is, any person who receives a salary or remuneration in cash from a firm of manufacturers of sporting goods for shooting a certain make of gun, a certain brand of powder, or a certain shell, for the purpose of showing the merits of the same, is a professional trap-shooter. ALSO: Any person who shoots exhibition matches for gate receipts, or who receives pay for taking part in the same, is a professional trap shooter.

AMATEUR: All other trap-shooters who do not come under the above conditions are amateur trap-shooters.

A MUCH-VEXED QUESTION.

The definition of what constitutes a professional in trap-shooting circles has been a much-vexed question ever since the sport first came into existence. The rapidity with which "paid men" came into the field to take part in tournaments for the purpose of exploiting certain guns, powders and guns, started the ball rolling. It was kept rolling so fast that it has now acquired an impetus that needs summary treatment, otherwise the well-being of a most healthy sport, as well as health giving amusement, will be in danger of compassing its own undoing.

It has always been customary for FOREST AND STREAM to step into the breach and speak its mind without fear or favor. In every branch of sport its record is the same. Game hogs, pot-hunters, despoilers of the nati nal parks and reservations, game law breakers—all alike have felt the power of the press and public sympathy through the medium of the columns of FOREST AND STREAM. Yachting and Kennel have both done their part to bring about a more satisfactory condition of affairs in the world of sport most intimately connected with those departments.

And so with Trap. The dropper has been dropped upon until he has almost dropped out of sight. The adoption of the Rose system for dividing purses was first advocated in these columns, and it was a long time before others, seeing the handwriting on the wall, fell into line and whooped her up as if they had discovered something new. Skin games in the trap-shooting world and trap-and-handle matches have been scored heavily in the trap columns of FOREST AND STREAM, until such affairs are now almost out of date, or are only prosecuted behind closed gates and with the utmost secrecy, much after the plan adopted when a cock fight is booked to take place.

We have delayed defining

WHAT CONSTITUTES A PROFESSIONAL

for certain good and sufficient reasons. We may have run a risk of one or other of our competitors getting ahead of us in this matter by opening up a discussion in its columns, but this risk was fancied rather than actual, as there are some who always prefer to follow instead of going ahead and showing the way.

The definition given above as to what constitutes a professional has not been made recklessly. The question has been discussed in all its aspects and has been carefully considered, and we hold that the definition is concise, accurate and well turned. Of course there will be some who do not agree with us altogether, but we feel that they will form such a small minority that they may almost be left out of consideration. It must be understood, however, that we court criticism to the fullest extent. FOREST AND STREAM'S columns are open to all its readers, and nothing but good to the sport of trap-shooting can come of such a discussion.

"IN WHOLE OR IN PART."

The definition reads: "Any person who makes his livelihood in whole or in part by shooting at the trap. * * * is a professional trap-shooter." The explanation that follows in the definition seems to us to cover the ground, if any explanation of the above terms is necessary. A man's salary, that is, his means, or part of his means of livelihood, must be dependent upon his shooting at the trap for such an one to be called or classed as a professional. He must be paid a certain sum to be present at tournaments to show off guns, powders or shells, to come under the head of a professional.

The "gate money" part of the definition is self-evident, and needs no additional explanation.

We have heard it claimed that shooting or taking part in

SWEEPSTAKES FOR CASH

was enough to make a man a professional. If such were the case, then 90 per cent. or more of the trap-shooters of this country are professionals. But such a hypothesis is absurd.

If the fact that a man competed for cash prizes was sufficient to cause him to lose his amateur status, then Pierre Lorillard, August Belmont and others in the horse-racing world in this country must be professional racing men. Also the Emperor William of Germany, the Prince of Wales, Mr. Barclay, the Marquis of Ailsa, Mr. Edwin Gould, and others who race yachts for cash prizes must be classed as professional yachtsmen. Again, a man who plays a match or a three-cornered game at billiards with friends for a side bet of "a half" climbs at once into the same class with Ives, Slosson or The Wizard, although he may be selling gent's furnishings over a counter all day long, and every day of the year except Sundays and holidays.

That the L. A. W. has forbidden amateurs to race for cash prizes has nothing to do with trap shooting. Bicycling tournaments are few and far between, and no man competes in ten or a dozen events in one day for three or four days at a time, as in trap-shooting tournaments.

AN INCENTIVE IS NEEDED.

In all competitive contests of skill some incentive is needed to keep up the popularity of that sport Cups may do very well in some branches of sport, but trap-shooting is so constituted that cups are only possible as adjuncts; that is, to mark some one special event or circumstance. Some other incentive outside of trophies is needed to keep up the interest of the shooters, and to urge them on to improving their skill in the use of the gun. Hence sweepstakes, in very many instances for merely nominal sums, are shot at all, or nearly all, gun club shoots. The club shoot for yearly medals, or for a special cup, may have no sweep attached to it, but that is for the reason that an incentive to win the trophy or the badge already exists. In all contests there must be something to mark the winner, something to compete for; and in shooting at the trap under all conditions nothing fills the bill as satisfactorily as sweepstakes.

THE TITLE OF "AMATEUR"

has been misapplied more often probably than any other word used in a similar sense. It is frequently, we might say generally, applied to a man who is a comparatively poor shot. It should be remembered that trap-shooters are more properly classified as professionals and amateurs. These two classes may each again very aptly be divided into three sub-classes: experts, semi-experts and novices. Read the definitions of professional and amateur at the head of this article, and don't use amateur when you mean novice.

The question is now open to debate.

Greenville Gun Club.

GREENVILLE, Pa., Feb. 22.—The Greenville Gun Club held a shoot this afternoon. Among the events was a special match race, which has been looked forward to for some time and which was watched with a great deal of interest by local shooters. The match was 100 targets per team, 50 per man, between G. H. Grauel, Cam, J. A. McNary and C. E. Witmer. Although shot in a drenching rain the score ood:

Grauel	1101101111111111111011111010111111111111111111101101111—43
Witmer	1001110111110010101111100100110001010011000000000—25
Cam	1111100111111011100111011011101111111111110111111110—40
McNary	1101011111111111110111111000111111111111111101111000—40

Grauel and Cam won with the score of 83 to 65. Cam is the name which Dr. C. A. Miller adopts when shooting.

During the shoot Warren Taylor, of Sharon, a member of the team which represented this city in the Pennsylvania and Ohio Border League last year, was presented with a handsome gun case by the members of the club. Mr. Taylor will be a member of the team this year, which, by the way, will be a good one, if hard work and good management count for anything.

Weekly shoots are held by our club every Tuesday afternoon.

ROBERT E. BEATTY.

Harrisburg Shooting Association.

HARRISBURG, Pa., Feb. 22.—A few members of the Harrisburg Shooting Association had a live-bird shoot to-day. The chief event was a 25-bird handicap, $25. No. 2 was at 5 birds, $5, one money; Nos. 3, 4, 5 and 6 were $2 miss-and-outs; Nos. 7 and 8, 4 birds, $2. Scores were:

PENN.

Eureka, of Chicago.

CHICAGO, Ill., Feb. 23.—Eureka Gun Club, of Chicago, held its annual meeting and banquet last evening, Feb. 22, at the dining hall of the Sherman House, some twenty-four members of the club present, President John G. Glover in the chair. The banquet was nicely served and proved a very enjoyable little affair. The tables were handsomely decorated, the club trophies occupying places of honor along the long board. Most conspicuous of these was the big Mussey Emblem, a great cup indicative of the club team championship of the Cook County League. This is a very fine bit of silver and worthy of the honorable title that goes with it. Mr. Mussey, its donor, was present as the guest of the club. Other trophies were the E. C. cup won by the hard-shooting Mr. Steck, and the *Shooting and Fishing* trophy won by the club in the State team contests. It was in evidence that the men of Eureka are handy with the shotgun beyond their brethren of this vicinity.

It was about 10 P. M. when the meeting was called to order for transaction of the club business. Secretary A. C. Paterson made his report at some length, and in satisfactory tenor. Treasurer O. J. Buck in his report showed that the club was in possession of some $900 worth of personal property and was out of debt, though the balance in the treasury was small. A number of minor matters were referred to the board of directors. The trophy committee reported. It was resolved to hold regular live bird shoots during the winter months hereafter, beginning in October and continuing until April, monthly. Suitable medals will be provided for A, B and C classes in these live-bird events, to go to the best averages in not less than four shoots of the season. A motion to lease a magautrap was laid on the table. It was resolved to extend the courtesy of 1-cent targets to any member of a Cook County League club in good standing, when such member should be a visitor at Eureka grounds upon any but a club contest day. It was voted unanimously that hereafter the Eureka Gun Club shall not at any future banquet allow the use of any wines or liquors on its tables It was suggested that ladies be invited to the next banquet. One new member, Mr Thos. L. Parker, was proposed for membership, his name going to the board of directors for their next meeting. One name, that of A. W. Morton, was dropped from the club lists for violation of Section 3 of the by-laws. It was arranged to employ a regular scorer during club contests, and all remaining matters were handed over to the directors, as the hour of midnight was by this time approaching. In the election of officers Dr. C. W. Carson was chosen President; F. P. Stannard, Vice-President; W. A. Jones, Secretary; E. M. Steck, Captain. (The offices of secretary and treasurer were by vote under the by-laws declared one.) The Board of Directors was chosen as follows: Messrs. J. L. Jones, J. G. Glover, H Carson, L. H. Goodrich, O. von Lengerke. The Classification Committee will be Messrs. C. W. Carson, E. M. Steck and W. D. Stannard. The Medal Committee will be Messrs. J. L. Jones, E. M. Steck and W. A. Jones.

The affairs of Eureka Club are in highly prosperous condition, and it enters upon the duties and the pleasures of another shooting season better equipped than ever in its history as a representative shooting club.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Marlboro Defeats Poughkeepsie.

POUGHKEEPSIE, N. Y., Feb. 18.—Teams of 12 men each, representing the Poughkeepsie and Marlboro, N. Y., gun clubs, respectively, met to-day on the grounds of the Poughkeepsie Gun Club. The teams shot at 300 targets each—that is, 25 targets per man. The Marlboro team won by 15 targets; breaking 224 to 209. There was a large crowd of spectators present to witness the shooting. Mr. J. W. McDonald acted as referee. The scores in this race were as below:

Marlboro.

Trap Around Philadelphia.

FLORISTS' GUN CLUB.

PHILADELPHIA, Pa., Feb. 22.—The attendance at the Florists' Gun Club's shoot to-day at Wissinoming Station was affected by the bad weather, rain falling until about 11 A. M. In addition to the 12 events on the programme, several extras were also shot. In the table below we give the scores made in the programme events. Nos. 1, 3, 5, 7, 9 and 11 were at known traps and angles; the balance at unknown angles. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Nichols vs. McKeon.

NEW YORK, Feb. 19.—Grant Nichols and P. F. McKeon, both members of the Cobweb Gun Club, of this city, shot a match to-day at the club's grounds at Baychester, N. Y., at 50 birds per man, Nichols winning easily, although the scores were both below the average. The pair met on Jan. 29 under similar conditions and shot a tie race, each scoring 45 birds. To-day was favorable for the birds, a strong northwest wind blowing directly over the traps; the sky was bright and clear. A good crowd of friends of both men were on hand to witness the match. E. Miller acted as referee, Fred Pringle as trap puller and G. W. Thompson, Jr., as scorer. Scores were:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co.

	3	1	5	3	3	5	5	3	3	1	4	5	4	4	4	3	5	2	3	2	3	2	1	1	2

A small team race, two men to a team, 5 birds per man, 30yds. rise, was also shot, with the following result:

A Elliott	20122—4	J Elliott	02202—3
Cashan	•2201—3—7	H Hoffman	0•100—1—4

G. W. THOMPSON, Sec'y.

Poughkeepsie Gun Club.

POUGHKEEPSIE, N. Y., Feb. 22.—The Poughkeepsie Gun Club held an all-day shoot to-day at live birds, eighteen shooters taking part in the sport.

The shooters from out of town were: Dr Hill, Mr Hume and Mr. Myer, of Kingston; Covert, Rhodes and Kniffin, of the Marlboro team; Russell, Sleight, Wicks and Hover, of Hyde Park; Tallman and Foster, Millbrook; A. Tallman, Hopewell Junction; Jameson, of Clinton Corners, and Cramer, of Red Hook. The best shooting of the day was done by E. J. Foster, of Millbrook, who scored 30 out of 35 shot at. Nos. 1, 2 and 4 were at 5 birds, $2.50, three moneys, class shooting; Nos. 3 and 5, 10 birds, $5, three and two moneys respectively. Scores were:

	No. 1.	No. 2.	No. 3.	No. 4.

Tournament at Lockport, N. Y.

LOCKPORT, N. Y., Feb. 22.—The Lockport Gun Club is not an old organization, but it held a tournament to-day that would have made a record for many an older club. Shooters were on hand from Buffalo, Rochester and Hulberton, among the visitors being many of the cracks Simon Glover, of the Rochester Rod and Gun Club, was as usual high average for the day. In the team race the Audubon Gun Club, of Buffalo, came out on top, defeating the Rochester by the narrow margin of 1 break, and taking the cup to Buffalo in consequence. Scores in the team shoot were:

Audubon No. 1—C. S. Barkhardt, Norris and Hammond—38.
Audubon No. 2—E. C. Burkhardt, Kelsey and Alderman—38.
Rochester No. 1—S. Glover, E. C. Meyer and L. V. Byer—37.
Bison G. C., of Buffalo—Seagrist, Wheeler and Banman—34.
Lockport No. 1—Ward, Covert and Atwater—31.
Rochester No. 2—Davis, Weller and Quirk—27.
Lockport No. 2—Burt, Welsher and Angevine—26.

The scores made in the sweeps shot in addition to the team race are given below in tabulated form:

A New League in Connecticut.

AN organization of gun clubs of the State of Connecticut has been effected under the title of Connecticut Trap-Shooters' Association. The idea of the organization is to have monthly shoots during the season on the grounds of the different clubs forming the Association, and to generally boom trap-shooting in the Nutmeg State. Among the clubs that go to make up the Association are: New Haven Gun Club; Colt Gun Club, of Hartford; Parker Gun Club, of Meriden; Windsor Locks Gun Club, etc. The first shoot will be held on the grounds of the Parker Gun Club at a date that has yet to be named.

The programme at all these joint shoots will be a uniform one, and the conditions of the tournaments will be as follows:

"On each ground where a shoot is held the club holding the tournament agrees to give as added money the sum of $15; $10 of this amount is to be contested for in a six-men team race, 40 targets per man, 20 at known angles and 20 at unknown angles, the money to be divided 60 and 40 per cent. to the two best team scores, the remaining $5 to be divided 50, 30 and 20 per cent. to the three best individual scores in the team race; optional sweep of $1 on each 20 targets in the team race; one man from each club to constitute the managers of the tournaments, the managers to issue a uniform programme to govern all contests of this association; places for holding these tournaments to be drawn for."

The programme is as follows: No. 1, 10 targets, known angles, 50 cents; No 2, 10 targets, unknown angles, 75 cents; No. 3, 15 targets, known angles, $1; No. 4, 15 targets, unknown angles, $1; No. 5, team race; No. 6, 15 targets, known angles, $1; No. 7, 15 targets, unknown angles, $1; No. 8, 10 targets, reversed order, 75 cents; No. 9, 15 targets, unknown angles, $1; No. 10, 10 targets, known angles, 75 cents.

McAlpin Wins Another Match.

ON Thursday, Feb. 25, G. S. McAlpin went down to Riverton, N. J., and shot a race at 50 pairs of live birds with T. S. Dando, of Philadelphia, a member of the Riverton Gun Club. The conditions were two birds in each trap, 5 unknown traps, 25yds. rise. McAlpin shot strongly and won easily, scoring 80 to Dando's 73. McAlpin had three fall dead out of bounds, Dando lost 8 dead out. The scores were as below:

McAlpin (25)	11 11 11 01 11 •1 11 01 01 11 11 11 11	
	11 11 11 00 11 10 •1 11 11 11 11 11	—42

IN NEW JERSEY.

AT ELKWOOD PARK.

Feb. 20.—Eleven events in all were decided on the Elkwood Park grounds to-day. All were $5 miss-and-outs with the exception of Nos. 3, 7 and 11. No. 3 was the Brookdale Handicap, 10 birds, $10; No. 7 was similar to No. 3; No. 11 was a match at 5 birds between Messrs. Barker and Walters. Scores in all the events were as below, handicaps being readjusted at the end of each event, as usual:

Feb. 22.—There was quite a good crowd of shooters to-day at the Elkwood Park traps. The programme, too, was an interesting one, and contained variety enough to satisfy anybody.

Event No. 1 was a star miss-and-out. The purse in this was divided at the end of the 14th round between five of the eleven starters. Of this five, Justus von Lengerke was the only one that had not lost a bird. Loening and Walters starred in the 1st round; Morfey in the 2d; Walters starred again in the 6th, Canon also letting his bird go in that round and starring. Canon had to do the same trick in the 7th round. From that point all killed out and agreed to divide as above.

No. 2 was a 10-bird handicap, $5 entrance. 27 and 28yds. men allowed one miss as no bird. Walters, Sanders and Muirhead lost their first birds and used up their allowance as shown in the score. Loening missed in the 3d round, Green in the 4th and White in the 7th, and used their allowances as shown in the score, White's allowance being of some use to him, as he shared in the division. The four 10s divided.

No. 3 was 15 birds, $15, three moneys, Rose system: Morfey, with 15 straight, took first money; Walters with 14 and Canon with 13 took second and third moneys respectively. This made the division just the same as it would have been under the old system.

No. 4 was at 5 birds, $3, three moneys. Canon and Walters with straights divided first and second. The tie for third was not decided until the 15th round, when Hank White outshot Morfey.

No. 5 was the same as No. 4. In this event the scores were: Canon (26½) and White (28) 5 (divided the purse, there being only two moneys). Wooley (28), Walters (28½) and Greene (28) 3, Morfey (29½) lost his first two birds and withdrew.

Scores in the first four events are given in detail below:

	No. 1, Star Miss-and-out.	No. 2.
T W Morfey (29)	20221222121222	(30)....22222220

THE EAST SIDES WIN AGAIN.

Feb. 25.—The East Side Gun Club, of Newark, has now fairly turned the tables upon its opponents, the Endeavor Gun Club, of Jersey City, by making it two straight in the series of team matches at live birds arranged between these clubs. The Endeavors won two straight in the target team matches, so honors may be said to be even.

The East Sides are hard men to beat on live birds, the team again making an average of 90 per cent. Koegel shot well during the afternoon, scoring all his 18 birds. The shoot took place on the grounds of the East Side Gun Club, Ferry street, Newark. The birds were a mixed lot, some sitters among them, but some of these when started were as fast as one could wish. The weather was against the birds, being dark and damp. There was some hard luck in the matter of dead out of bounds, the visitors having rather more than their share of that article. Still the East Sides won, and won on their merits. The members of that club are also, in addition to being good live-bird shots, royal entertainers when they invite their friends to visit them. Scores were:

East Side Gun Club.	No. 1.	No. 2.
Koegel	2112122211—10	12211—5	111—3
Hassinger	2122110112— 9	12121—5	102—2

GRANT.

E. C. CUP AT HACKENSACK.

Feb. 27.—The regular monthly contest for the E. C. cup was shot at Hackensack this afternoon on the grounds of the Bergen County Gun Club. It was a lovely day, with a bright, clear sky, a considerable touch of frost in the northwest wind, but not enough strength in that wind to bother the steady flight of the targets. The number of entries for the cup was small, owing to the large amount of shooting that has been going on in this section during the past week. The winner was M. Herrington, who had the satisfaction of landing the E. C. cup with some of his company's W-A powder! Herrington's 25 straight in the second string of his 50 was a good piece of work, and his win of the cup with 47 out of 53 was both well-deserved and popular. Capt. Money, who seemed to have a good chance at the end of the first string, made a poor showing for him in the last 25. Sweeps and a 6-men team race, all at unknown angles, made up the programme for the afternoon. Capt. E. G. Horton as usual acted as entry clerk, squad hustler, second cook, host, etc., while C. E. Dawson straightened out many a kink in his vocal chords when it came to calling "Dead" or "Lost." The scores were:

Herrington (3)1101110111111101100111111111111111111111111111111111—45
101 — 2—47

No. 12 was the team race.

FORESTER GUN CLUB, OF NEWARK.

Feb. 22.—The Forester Gun Club, of Newark, held a pleasant shoot to-day and threw over 2,000 targets. The strong wind and the club's new expert traps proved too good a combination for the shooters. The scores given below fully prove that fact; when such shooters as Warren Smith and F. S. Sinnock (W-A) fell down, the game must have been a hard one.

No. 1 was at 10 known and 10 unknown; No. 2 at 10 unknown; No. 3, reversed; No. 4, same as No. 1; No. 5, 10 known and 10 reversed; No. 6, unknown; No. 7, 10 known and 10 reversed; No. 8, 10 unknown and 10 reversed; No. 9, known; No. 10, 10 known and 10 reversed; No. 11, unknown; No. 12, 10 unknown and 10 reversed; No. 13, 10 unknown and 10 known; No. 14, unknown.

The scores were as below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

ENDEAVOR GUN CLUB.

Feb. 22.—The Endeavor Gun Club held a shoot to day on its grounds at Marion. The attendance was small, every club in the vicinity having a shoot on this date. A special feature of the sport was a team race between 6-men teams, captained respectively by Carl von Lengerke and G. H. Piercy. The match resulted in an easy win for Von Lengerke's team by the score of 62 to 50. Scores in this event were as follows:

Piercy's Team		Von Lengerke's Team.	
G Piercy	100100101101010— 7	C von Lengerke	011011111111111—13

A. R. STRADER, Sec'y.

BERGEN COUNTY GUN CLUB.

Feb. 22.—The Bergen County Gun Club held a shoot to-day for a Winchester repeating shotgun. The event was at 30 targets per man, handicap allowance of misses as breaks, $2 entrance, re-entries allowed. T. Bell won the gun with a highest possible, made on his re entry. With his first chance he scored 29, tieing Van Keuren for the gun unless a highest possible had been made. Several sweeps were also shot during the day. All the scores are given below:

Bell (re-entry—3).....111111110011111111111111111111—28+3—31
Bell (1st chance—3).....111101111011010111111111111—26+3—29

E. G. HORTON, Capt.

A TIE RACE AT PIGEONS.

Feb. 22.—The North Bergen Gun Club and the Hackensack River Gun Club met to-day on the grounds of the Hackensack River Gun Club, Bergen county, N. J., and shot a 6-men team race at 10 live birds per man. The race resulted in a tie, both teams scoring 47 out of the 60 shot at. Darkness prevented the tie from being shot off. The birds trapped were a fair lot. A. Greenleaf was referee and A. Gregory scorer. The scores were:

North Bergen Gun Club.		Hackensack River Gun Club.	
Hefflich	1211121122—10	Hexamer	2121011201— 8
Thourot	2122220022— 8	Outwater	1222211112—10

Englebrecht	2101122222— 9—47	Jack	1201102022— 7—47

WM. HEXAMER, Sec'y pro tem. H. R. G. C.

DAVIS AND TERRY AT WESTFIELD.

Feb. 22.—Wm. Terry and George Davis, both of Westfield, shot a small race to-day at 15 birds. This race was a sequel to the tie match shot on Nate Astfalk's grounds, at Elizabeth, recently. To-day's match was shot at Westfield under the following conditions: 15 live birds per man, one trap, 30yds. rise, 50yds. boundary, use of both barrels, $25 a side. There was a good gathering of spectators, among the number being: Fred Divine, of Utica, N. Y.; Chet Smith; Owen McVeigh, of Point Pleasant; John Davis, of Greenville; Nicholas Hollins and Alex Reid, of New York; Ellison Davis, of Perth Amboy; Iccas Lambert, Clarence Lambert, Scott Terry, W. Grogan (stakeholder), J. M. Singer, W. Chamberlain, John Miller, C. H. French, Thos. O'Neill, James English, John Marsh, John Robinson, Aug. Frantz, John Benner, etc.

In the match Terry outshot his opponent with ease, the match being over at the end of the 14th round, the scores standing then 13 to 11, as below:

Wm Terry.....2122112202222-13 G Davis.....22011221102120—11

After the above match had been decided a move was made to Benner's hotel, the Fanwood Road house, to witness a match at 15 live birds between the proprietor, John Benner, and Clarence Lambert. The conditions were: 15 live birds per man, $10 a side, loser to pay for the birds, Benner at 29yds., Lambert at 26yds. The result was a win for Lambert, the score after Benner had shot at his 14th bird standing 11 to 9 in favor of Lambert, who had only shot at 13 birds. Scores:

John Benner (29).02010220122110 - 9 C Lambert (26)...20210122112222—11

BOILING SPRINGS GUN CLUB.

Feb. 22.—The live-bird handicap, open to members only, shot on the grounds of the Boiling Springs Gun Club to-day, was a great success, 26 entries being marked on the score sheet. The event was originally fixed for 15 birds per man, but the birds ran short and the event had to be cut down to 14. Of the 26 entries A. A. Hegeman was the solitary straight when the end came. B. James and Collins (not Eddie Collins) were next with 13 each.

After the live-bird shoot, three target events were decided, Dr. De Wolfe easily carrying off the honors with 29 out of 30. Scores in the target events were:

No. 1, 10 targets, unknown angles: Huck, De Wolfe, Frank and Baron 9, Hall, Laue and Coe 8, Lewis, Broshart, Harding, Palmer and Abbott 7, Beam, Wise and Jeanneret 6, Adams and Strader 5, Hutchinson 3.

No. 2, same: De Wolfe 10, Huck and Harding 9, Baron and Laue 8, Beam, Wise, Frank and Jeanneret 7, Adams, Abbott, Palmer, Coe, Strader and Collins 6, Lewis, Hall and Black 5.

No. 3, same: De Wolfe and Wise 10, Huck 9, Hall 7, Abbott, Frank and Jeanneret 6, Beam, Palmer, Broshart, Coe, Baron and Hutchinson 5, Laue and Lewis 4.

The scores in the live-bird handicap were as below:

FOUR MONTHS' PROGRAMME FOR ELKWOOD PARK.

In addition to the week's shooting at Elkwood Park the latter end of March, the main feature of the week being the Grand American Handicap, Messrs. Daly and Chanfrau, managers of the new shooting grounds, have arranged a programme for the coming four months, the last event scheduled being the first summer handicap on June 26. Below is a complete list of these fixtures:

March 9—Preliminary handicap, 25 to 33yds., 25 birds, $10 entrance, high guns.

March 13—The Hoey cup handicap, 25 birds, $25 entrance, open to all amateurs 45 per cent. and cup to winner, 30 per cent. to second and 20 per cent. to third, high guns, ties at 5 birds, if not decided then miss-and-out; post entries; miss-and-out events on other traps. Shooting commences at 12:30 P. M.

April 3—Navesink cup, 30yds. all, amateurs only, 20 birds, $15 entrance, high guns.

April 10—Wolf Hill handicap, 25 to 33yds., 10 birds, $7.50 entrance, birds extra, Rose system.

April 17—Monmouth county handicap, 26 to 31yds., 20 birds, $20 entrance, birds included, high guns.

April 24—Spring handicap, 25 to 33yds., 15 birds, $15 entrance, high guns.

May 1—Floral handicap, 25 to 33yds., 15 birds, $20 entrance, birds included, Rose system.

May 8—The Kinnekeet prize, 30yds. all, 10 birds, $10 entrance, high guns.

May 15—Salvator handicap, 27 to 30yds., amateurs only, 25 birds $10 entrance, high guns.

May 22—Hepatcong handicap, 25 to 30yds., 10 birds, $12.50 entrance birds included, Rose system.

May 29—Pennsylvania Club cup, 15 birds, $15 entrance, professionals 33yds., amateurs 30yds., high guns.

June 5—Bird allowance handicap, 26 to 30yds., 15 birds, $10 entrance, contestants at 26yds. allowed 3 misses as "no bird," 27yds. 2 misses as "no bird," 28yds. 1 miss as "no bird," allowances to carry until used, high guns.

June 12—The Lakewood prize, all at 30yds., 7 birds, $7 entrance high guns.

June 19 Bird allowance handicap, 25 to 31yds., 15 birds, $15 entrance, birds included, 27yds. and under 2 misses as no birds, 29yds and under 1 miss as no bird, allowance not to run on ties, high guns.

June 26—First summer handicap, 25 to 31yds., 15 birds, $15 entrance high guns.

In these events all ties will be shot off at miss and-out unless otherwise stipulated.

Boston Gun Club.

WELLINGTON, Mass., Feb. 23.—Though but one day separate Washington's Birthday, an acknowledged New England trap-shooting holiday, and the Boston Gun Club's weekly shoot, yet a dozen sportsmen journeyed to Wellington this afternoon for the purpose of entering another prize score. Delightful weather rendered the shooting enjoyable, and several events were shot up till within a minute of train time. The convenience of the grounds for Boston people is a fact often commented upon and duly appreciated; a simple 10 minutes' ride in the train at an expense of 6 cents, with only a step from the train to the club's boarded walk, allows of shooting 15 minutes after leaving Boston, and it is quite possible for a business man to practice at 50 or 75 targets with the loss of only a couple of hours all told.

Horace and Gordon divided the honors in prize match.

e Washington's Birthday Handicap resulted as follows, the allow- of extra targets to shoot at being shown in brackets after each ter's name;

B. Hall (0) 22, A. R. Fish (0) 20, G. C. White (2) 20, B. B. Tilt (4) . G. Geddes (2) 18, J. H. Prentiss (2) 16, Grant Notman (2) 16, J. napp (3) 16, T. R. Coffin (3) 14, W. Kitchen (0) 7.

BILLY MILLS'S BENEFIT.

b. 22.—The attendance of shooters to-day at Dexter Park showed igh appreciation in which the services of trapper Billy Mills are by those who shoot regularly at this popular resort. Billy put o guns to be shot for; Dr. Hudson winning the first, and Job and Henry Bramwell holding title to the other after a tie on the ound with Dr. Hudson. Scores in these events and in the three pstakes also shot are given below. The birds were an excellent flyers, and reduced the ranks of the entries in the gun shoots rapidly.

. 1, gun shoot, 7 birds per man: Dr. Hudson 7, C. F. Dudley 2, k Gildersleeve 2, John Wye 2, J. B. Craft 2, William Lair 1, Her- Otten 1, Walter Seaman 1, E. J. Clark 1, Henry Bramwell 1, Lott 0, Charles Steffens 0, Robert Packard 0, William Sands 0, G. Long 0, Owen Mulcahey 0, Emil Matson 0.

2, same:

AUDUBON GUN CLUB.

Feb. 20.—To-day's scores must be classed as good ones, owing to the high wind that blew across Audubon Park. In the badge contest McArthur won the Class A medal with 25 straight; U. E. Storey won in Class B, and J. E. Dodge in Class C. Scores were:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8
Targets:	*10*	*15*	*25*	*15*	*15*	*15*	*20*	*10*	Targets:	*10*	*15*	*25*	*15*	*15*	*15*	*20*	*10*

BROOKS & KLIPFEL TROPHY.

Feb. 25.—A programme of five events was shot to-day at Audubon Park. No. 2 was the last of the series of championship events for the Brooks & Klipfel trophy. E. C. Burkhardt won to-day's contest with 44 out of 50, and this gave him two wins, tieing him for the trophy with Warren. In the last three events this tie was to have been decided, but Burkhardt and Warren could not be separated, tieing in each event. Scores were:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	10	50	25	15	15	Targets:	10	50	25	15	15

WASHINGTON'S BIRTHDAY AT AUDUBON PARK.

Feb. 22.—Five target events were shot to-day at Audubon Park, and also two events at live birds. The attendance was small, owing to several members of the Audubon Gun Club, of this city, being away from home, taking in the Lockport, N. Y., shoot. The scores in the live-bird events were:

No. 1, 5 birds: Oehmig, Floss, Huebbers and A. O. H. 5; Alexander 4; Du Pont and Geisdorfer 3.

No. 2, team shoot, 5 birds per man:
Du Pont 5, J. Soergel (captain) 4, Garbe 4—13.
G. Zoeller (captain) 3, Floss 3, Phillips 3—9.
Target scores were made as below:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	*10*	*15*	*25*	*10*	*10*	Targets:	*10*	*15*	*25*	*10*	*10*

Washington Heights Gun Club.

NEW YORK, Feb. 22.—The Washington Heights Gun Club, of this city, held a live-bird shoot to-day at its grounds, One Hundred and Seventieth street and Kingsbridge Road. There were eleven shooters present, and each shot at 9 birds in the club event; E. Meckel was first with 8 out of 9, losing his last bird; Arthur Belden was second with 7 kills. The birds were a fast lot, and the dark background had much to do with the low scores made. Scores were:

E Meckel	111111110—8	F M Sherry, Sr	111100001—5
Arthur Belden	11110:101—7	R Romer	111000110—5
E Searles	111001011—6	George Moore	111001100—5
F M Sherry, Jr	111000111—6	C R Terwilliger	011110001—5
H W Oliver	001111011—6	George McKowen	001110110—5
John Hainhorst	111001101—6		

G. A. P.

Trap Around Pittsburg.

EAST PITTSBURG GUN CLUB.

PITTSBURG, Pa., Feb. 16.—Below are the scores made at the tournament of the East Pittsburg Gun Club, held to-day on the club's grounds. The weather was fine and the attendance very good. Some good shooting was done during the day. Prof. Briggs, Mack, Oliver and Nimrod had some good scores to their credit, but Uncle John and Old Hoss were not up to their standards. The latter is probably saving his sand for Elkwood Park in March. Scores follow:

Events:	*1*	*2*	*3*	*4*	*5*	*6*	*7*	*8*	*9*	*10*	*11*	*12*	*13*	*14*	*15*	*16*	*17*	*18*

SWENSON, Sec'y.

NORTH SIDE GUN CLUB.

Feb. 22.—The shoot of the North Side Gun Club, held to-day on the Marshall avenue grounds, was a good one. The scores too were good under the existing circumstances. As announced, two trophies were to be competed for to-day, both silver kegs of W. A. powder presented by the Laflin & Rand Powder Co. to the North Side Gun Club and the Pittsburg Gun Club respectively. The conditions under which these trophies were shot for were as follows: The member of the North Side Gun Club making the highest total out of the first 50 targets shot at to win that club's trophy; the member of the Pittsburg Gun Club making the highest total in the second 50 shot at to win that club's trophy. John Shafer won the North Side's trophy with 43 breaks; Old Hoss won the Pittsburg Gun Club's trophy with 41, beating Elmer Shaner by 1 target. Scores in all events were as below:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

HERRON HILL GUN CLUB.

Feb. 22.—Owing to the wet weather, the attendance to-day at the Herron Hill Gun Club's grounds was only small. The 25-bird race was not shot on account of the weather, but several miss-and-outs and a 15-bird race were decided. Scores were as follows:

	No. 1.	No. 2.	No. 3.	No. 4.	No. 5.	No. 6.

Pawtuxet Gun Club.

PAWTUXET, R. I., Feb. 22.—The Pawtuxet Gun Club held a shoot to-day for 500 shells loaded with Hazard's Blue Ribbon. The shells, which were donated by the Hazard Powder Co., were divided into eight prizes, the winners being: First, Arnold; second and third, Sheldon and Whitaker (tied); fourth, fifth and sixth, Greene, Hammond and Root (tied); seventh and eighth, Badminton and W. Hawkins (tied).

Our next all day shoot will be on March 17, when we shoot for a keg of Du Pont's Smokeless presented to the club by the Du Pont Co.

To-day's scores were as below, several visitors taking part in the shoot:

F Arnold (30)	1010111111111101101110010110011 —21
W Sheldon (25)	1110011110111111101111101 —20

* Brownell, Latham, Woodruff, Barstow and Moore were visitors and not eligible to compete for the prizes.

Crandall, Mooney, Talbot and Lippitt did not shoot out their handicaps. Their allowances were 3, 3, 7 and 10 extra targets respectively.

W. H. SHELDON, Sec'y.

Washington's Birthday at New Haven.

THE New Haven (Conn.) Gun Club announced a few weeks ago that it would hold an all-day shoot on Washington's Birthday. For reasons that are immaterial the trap editor of FOREST AND STREAM deemed it advisable to go and see how shoots are run in the city that boasts of one of America's greatest universities. It is putting it very mildly to state that they know how to run things on the grounds of the New Haven Gun Club. The fact is, the members of the club's board of management are past masters in the art of hustling things and making it pleasant for the club's guests If there was a kick made during the day we could not name the party that made it, for we heard no kick registered. It was a pleasant shoot from beginning to end.

THE DULL GRAY SKY,

without a touch of sunshine all day, was enough to make shooting hard on almost any grounds. On the New Haven grounds the want of a good, bright sky was manifested in the totals made. The background is a hard one, particularly when the targets are thrown low; they skim across a slight dip in the ground and then rise above the railroad embankment and the distant hills; but by the time they have gotten above the horizon, they are about 45yds. from the score. They stole away time and time again in an almost miraculous manner; snap shooting was an impossibility, one had to be deliberate and hold true to break.

THE CLUB IS POPULAR.

The New Haven Gun Club claims about sixty active members, and of this number more than the ordinary proportion was on hand. There were thirty shooters in all that took part in the events, but of course many of that number were from out of town. Among the latter were Messrs. C. E Willard, of the Colt Gun Company; Pitkin, Burbridge, Bishop and Green, all of Hartford; W. F. Parker, of the firm of Parker Bros.; Gaines. Hull and Faupel, all of Meriden; F. L. Harvey, H L Cutler and J H. Videon, of Windsor Locks; Merritt, of Springfield, Mass ; Mills, of Bristol; U M. C. Thomas, of the U. M. C. Company, of Bridgeport; Ed Taylor, of the Laflin & Rand Powder Company, of New York; E. L Post, of Wallingford, and the representative of FOREST AND STREAM, from New York.

The home club had a strong contingent on hand in the shape of Ferd. Van Dyke, B. W. Claridge and Whitney, of the W. R. A. Company; Myron H. Clark, the president of the club; Bristol, Cowee, Stevens, Stevenson, etc. President Clark's shooting to-day was but another example of the fact that a man cannot do himself justice with a gun and at the same time hustle around, score, and do the thousand and one things that Mr. Clark did to help along the shoot. Mr. Bristol also was always in evidence, paying more attention to everybody's comfort than his own. His scores likewise suffered severely in consequence.

In the cashier's office everything was in the hands of Messrs. J. H Gould and W. H. Hazen, the latter gentleman being the club's energetic secretary. There was no ball up in this department, and the purses, all of which were of course divided under the Rose system, were paid out as promptly and accurately as one could possibly wish.

WHERE THE GROUNDS ARE LOCATED.

The club's grounds are located out near Schuetzen Park, right at the end of the trolley line, and are easy of access, cars running frequently—that is, somewhere about every 10 minutes. The distance is about 20 minutes' run from the center of the city (if you take the above route, which is the quickest). Should you be as unlucky as we were and take another route, it may be anywhere from an hour to two hours before you land up at Schuetzen Park. The conductor of the car we boarded at 8:55 knew all about it; could put his finger right on the grounds themselves; they were located out near Yale Field. Relying upon his information, we went along with him and were dumped at the end of *that* line without a soul in sight. A gun and a trip, the latter with 250 shells in it, are no light matter to tackle up a small hill, but it had to be done We did find some people a little way up the road who told us it was "about a quarter of a mile further." When we had covered that distance without hearing a shot fired, or seeing a person that looked like a trap-shooter, we held up a milk wagon; this was the result: "You want to be over that way about half a mile; it's on Chapel street You go up to the next cross road and keep that road until you come to Chapel street. Then turn to your right and you'll find it right ther ." We didas we were told, being at the mercy of the inhabitants. The day was a pleasant one for a walk, but we were in heavy marching order, and that 35lbs. of shells began to weigh more than double. We can also testify to there having been quite a snowfall some days previously. There's a drift up there—between Yale Field and Chapel street—that is likely to be in evidence for some weeks yet. There is also a little house 'up there" for which we have the kindliest feelings; it shelters an honest Danish lad, eight months in this country, who, when we found him, was hitching up a white horse to a light wagon. The Danish language being a strong point of ours, we stayed by the boy and in that wagon until we met a street car going cityward. It was 10:40 before we reached Schuetzen Park. Time, 1 hour and 40 minutes from the hotel. The return trip was made in less than 25 minutes.

AVERAGES FOR PRIZES.

The club donated $10 in gold as prizes for the four best averages, to be divided into four moneys, 40, 30, 20 and 10 per cent. Events 4-12 were counted as average events, a total of 125 targets. At the close Van Dyke and Stevens were tied for first with 112 breaks each; Whitney was next with 111, Claridge third with 110, and Edwards fourth with 106. Five others finished in the following order: Ed. Taylor 104, Burbridge 103, Pitkin 102, Merritt 99, Videon 97. It is hardly necessary to add that Ferd Van Dyke was tickled with the showing made by the Winchesters; out of the five men in for average prizes all but one, Stevens, shot repeating shotguns.

TRAPS WERE KEPT BUSY.

Some idea of the way in which the traps worked, and the promptness with which the shooters got to the score, may be judged by the fact that although it was a short day owing to the dull sky, over 4,200 targets were thrown from one set of 5 bluerock traps. This is good work indeed, as anybody who knows anything about running shoots will agree. There is another point about the scores that is worth noting, and that is the fact that only four out of the thirty shooters on hand shot at less than 100 targets; this shows that the boys were there to shoot, not to look on. The natural conclusion is that the Interstate shoot on these grounds next July will be a bumper.

BROKE OR LOST.

Events:	*1*	*2*	*3*	*4*	*5*	*6*	*7*	*8*	*9*	*10*	*11*	*12*	*13*	*14*

H L Cutler	..	8	6	9	9	12	4	11	11	8	6	8	..	..	145	92	63.4
Faupel	9	5	5	7	5	9	..	..	11	8	9	5	..	..	125	73	58.4
Crane	..	..	4	..	..	13	7	5	5	7	..	2	..	..	100	53	53
Avery	..	..	5	..	4	..	..	..	..	..	..	..	..	..	20	9	45

The above fourteen events were all at either known or unknown angles, with the exception of No. 7, which was at reversed order. This event was a stumbling block to many in the hunt for averages, and had a good deal to do with Van Dyke's position of tied-for-first, as he scored only 5 in that event.

A NOVEL MISS-AND-OUT.

Another event was also shot, the scores of which do not appear in the above table. It was a miss-and-out, 25 cents entrance, targets out of the purse. This event had twenty entries, but under the conditions that govern these events at New Haven the 5th round saw a division. The conditions were these: Everybody shot in turn at a straightaway from No. 3 trap; as soon as the first round was finished, the survivors stepped back to "the next joint in the platform," about 6ft.; this made the rise about 18yds. At the end of the second round the survivors stepped back another 6ft. toward the club house; 20yds. rise. At the end of the third it was a case of another 6ft. back, a rise of 22yds. When the fourth round was finished there were only four left in to go back another yard and stand against the club house; these four were M. H. Clark, F. Van Dyke, Gaines and Stevenson. Clark led off and missed; Van Dyke followed suit; then Gaines broke and received a round of applause that was renewed with vigor when Stevenson also broke and divided the purse. The scores were:

Gaines and Stevenson 5, Clark and Van Dyke 4, Cowee, Claridge, Edwards and Harvey 3, Taylor, Whitney, Parker and Post 2, Merritt, Hull, Stevens and Bishop 1, U. M. C., Cutler, Willard and Videon 0.

EDWARD BANKS.

John F. Weiler Gun Club, of Allentown.

ALLENTOWN Pa., Feb. 22.—The all-day shoot of the John F. Weiler Gun Club, held to-day at the Duck Farm Hotel grounds, was an entire success, 31 shooters taking part in the events, among the number being visitors from Reading, Lehighton, etc. Scores in all the events are given below:

Events:	1	2	3	4	5	6	7	8	9	10
H Porter	8	7	10	8	8	9	10	8	9	8

ALLENTOWN.

Altoona Rod and Gun Club.

ALTOONA, Pa., Feb. 22.—The second all-day shoot of the Altoona Rod and Gun Club for the year 1897 was held to day on the Campus Ridge shooting grounds. The day was not favorable for trap shooting; dark, lowering clouds hung all around with just enough wind and rain to make the targets erratic and goose eggs numerous. The weather conditions, however, were the only drawback to the day's sport, as in point of attendance and a general good time the event was a success in every particular; 24 shooters took part during the day. There were present as visitors the following: Messrs. Wentworth, Earhart, Melley, Highberger, Dr. Hough and Capt. Kerr, from the Cresson Gun Club; and U. S Houck and Ike Greenberg, from the Huntingdon Club

This being the first target practice the boys have had since last fall, they were, of course, a little slow in getting on to 'em. This, combined with bad weather, accounts in a measure for the low scores made

The scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17
Booky	9	7	7	5	7	4	6	8	7	6	7	5	8	6	8	8	6

W. S. B.

Osoma Valley Gun Club.

SALEM, N. Y., Feb. 22.—The Osoma Valley Gun Club considers its initial shoot in every way a successful one. The day was not bad for shooting, there being little wind and no sun. The club was complimented on its grounds, and particularly upon its live bird traps, which were designed and made by its president, Mr. J. M Williams. The club hopes that it may at some future date be favored with a shoot given by the Interstate Association. To-day's scores were:

	No. 1.	No. 2.	No. 3.	No. 4	No. 5.	No. 6.	No. 7.
J M Williams (27)	11221	0011010	...	...	11•	.....	10

No. 8 was another miss and out and resulted as follows: Lant 3, Burgess and Robertson 2, M. B. Roberts and Commodore 1, Mason and Baker 0.

W. L. CAMPBELL, Sec'y.

Trap at Lincoln, Neb.

LINCOLN, Neb., Feb. 22.—The Capital City Gun Club, of this city held an all-day shoot to-day at targets and live birds. The stock kept away visitors from out of town, but the home contingent turned out well. Event No. 9 on the target programme was a 15-target handicap for a Winchester repeating shotgun This event created a great deal of interest, and had the largest number of entries of any event decided to-day. Harley, Mockett and Young tied for the gun on 15 each. Scores in all the events were as follows:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	15	15	10	15	15	10	10	15
Gardner	9	13	14	9	14	14	9	8	11
Hagerman	6	12	12	10	14	13	8	7	13
Green	10	14	14	10	15	..	8	10	..
Welch	7	13	12	6	11	..	9	..	12
Linderman	9	14	13	9	14	11	8	10	14
Rogers	10	12	13	..	..	..	..	..	13
Harley	6	11	14	9	11	..	7	..	15
Jones	..	..	9	9	8	10	8	9	14
Alexander	..	..	..	7	12	8	7	7	..
Mulford	..	..	..	..	..	11	5	..	14
Ray	..	..	..	..	..	..	5	..	13
Erb	..	..	..	..	..	..	..	..	14
Mockett	..	..	..	..	..	..	..	..	15
Denham	..	..	..	..	..	..	..	..	6
Bain	..	..	..	..	..	..	..	..	10
Young	..	..	..	..	..	..	..	..	15

There were four live-bird events shot during the day No. 1 was miss and-out, $1 entrance. At the end of the 7th round the purse was "eaten up by the birds," so the contest ended thus: Green, Gardner and Hagerman 7, Linderman 6, Jones 3.

The other live-bird events resulted as follows, No. 4 being a $1 miss and out, in which the purse was exhausted with four men tied on each. Scores:

	No. 2.	No. 3.	No. 4
Gardner	02222—4	20—1	222111
Alexander	21000—2	..	.....
Jones	2 22 5	..	.....

Lamberton	.....	..	222112

R. M. WELCH, Sec'y.

Proposed Trap-Shooters' League for Indiana.

PERU, Ind., Feb. 20.—It is my intention to open the trap-shooting season of northern Indiana with a tournament at this place on April 28-29 I have reason to believe, from the encouragement I have already received from the shooters in this vicinity, that the tournament will be one of the largest in point of attendance held in this vicinity in years, as well as one of the largest amateur tournaments that will be held in the middle West this season. I had the pleasure of attending a large number of tournaments in this vicinity last season, and a great many shooters spoke to me concerning the formation of a Northern Indiana Trap Shooters' League.

We have within 100 miles of this place more than 250 trap-shooters and it is with the intention of forming such a league that I am giving this tournament so early in the season. We should be able to secure a circuit of from twelve to fifteen cities within a radius of 75 to 100 miles thus rendering the distance the shooters would have to travel comparatively short. Such a league, with a short circuit, would certainly prove interesting, as well as furnish plenty of shooting for Indiana shooters and their neighbors.

I am now negotiating with a well known manager of tournaments to be present and look after the details of this tournament, and am taking plenty of time to prepare for the comfort and enjoyment of the shooters. My programme will be out the latter part of March

J. L. HEA

C. A. S., Florence, Mass —I have some plain braided silk line of good quality and want to make it waterproof; can you tell me what manufacturers use for doing this? Ans. 1. Soak it in boiled linseed oil and strip off superfluous residue by drawing the line through between the thumb and finger. 2. Or take two parts boiled linseed oil and one part best coach body varnish mixed together and warmed until it will singe a feather. Soak twice and rub once, the mixture being at a temperature not exceeding 100° Fahr. Finish and polish with paraffine candle.

W. P., Milton, Ont.—There are several methods which have been found to be successful The most successful methods are those which associate the report of the gun with something pleasurable to the dog. At meal time, when he is fed, a light load should be fired. The report of a percussion cap is sufficient at first. If he refuses to come forward and eat, remove the food and make no further attempt until the next meal time. This, if patiently persisted in, will generally prove effective. Or if you can shoot a rabbit or other small wild animal ahead of him, or where he can readily see it killed, then permit him to eat the entrails, a cure may be effected at once Or take him to a tournament and chain him in open ground where he cannot hide and he will become habituated to the noise sooner or later.

PUBLISHERS' DEPARTMENT.

The Disagreeable Weather Driving People South.

For the last two weeks the travel southward has been very large. The cold and changeable weather in the North has been doing the work. The principal resorts South are being rapidly filled, and the transportation lines in that direction have been doing an immense business. The Southern Railway system, whose northern terminus is at Washington, D. C., and penetrates every State South, operating trains from New York over the Pennsylvania to Washington, thence over its own rails, has made great improvements in railway transportation, in every instance looking to the comfort of Southern travel, and they are being rewarded by running their three limited trains daily from New York filled to their capacity. The service offered by this great system is equal to that offered by any railway on the American continents. Its limited train service to Florida, New Orleans and the Pacific Coast is perfect in every respect. Any one contemplating a trip to any points South, Southwest or the Pacific Coast should write the New York office of the Southern Railway, 271 Broadway, and secure complete information relating to schedules, etc., and descriptive matter of the charming country through which this great system takes you on a Southern journey.—*Adv.*

FROM SNOW TO SUMMER IN A LITTLE OVER TWENTY-FOUR HOURS is a quick and startling transition, but improved railway travel has accomplished it. Good roadbeds, handsomely-equipped trains, record breaking time make a trip from New York to Florida a pleasant one. The Atlantic Coast Line *via* Richmond is one of the most popular lines to the South In connection with the Pennsylvania Railroad it carries passengers in solid vestibuled, steam-heated and electric lighted trains, known as the "New York and Florida Special," from Jersey City to St. Augustine in exactly twenty-seven hours It also has fast through-car service to Aiken, S. C., and popular Georgia resorts. The bureau of information is at 229 Broadway, N. Y.—*Adv.*

Pleasure Boats and Canoes.

C. B. MATHER & Co., Rowley, Mass., publish a catalogue which includes a complete line of canvas and cedar pleasure boats and canoes (finished in various styles, decked or open, paddling or sailing), flat dories, clipper sailing dories, sneakboxes, yacht tenders, etc. The catalogue will be sent free to any address. - *Adv.*

St. Lawrence River Skiffs.

MESSRS WILBUR & WHEELOCK, of Clayton, N. Y., build a handsome line of pleasure boats at reasonable prices for honest work. Inquiries regarding prices, construction, etc., will be promptly answered and satisfaction guaranteed in case of purchase.—*Adv.*

Bow-facing Oars.

FRED A. ALLEN, Monmouth, Ill., issues a neat little folder of specialties, which, besides his well-known "bow-facers," include duck calls, decoy frames, game covers, brass shells, swages, etc. *Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MARCH 13, 1897.

VOL. XLVIII.—No 11. No. 346 BROADWAY, NEW YORK

For Prospectus and Advertising Rates see Page x.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

FOREST AND STREAM OFFICE
346 Broadway
NEW YORK LIFE BUILDING

Present Entrance on Leonard Street

He who follows game with a camera, and who feels the satisfaction of matching his faculties against those of his game, will, however, derive a keen sporting enjoyment from his failures; and if he meets with success, great will be his pride and contentment. He will learn much about the habits of game which has escaped him before; and, not needing to use his rifle, his opportunities for observation will be more frequent and satisfactory. For myself, the few pictures that comprise the results of my hunting with the camera have brought me a keener enjoyment and a greater sense of satisfaction than the finest heads in my collection, possibly on the ground that we are disposed to value most that which has cost us most.

W. B. Devereux.

CONCERNING RIGHTS AND PRIVILEGES.

A CORRESPONDENT who writes from Pennsylvania, where a proposition is before the Legislature to forbid the sale of game, bases an objection to the proposed law upon the misconception that it will take away from citizens "the same equal rights and privileges that they enjoy under the Constitution." No valid objection to the law forbidding the sale of game can reasonably be based upon constitutional grounds, for the courts have repeatedly upheld the right of the State to control the disposition and use of game after its reduction to possession, and the constitutionality of such statutes has been fully upheld. The latest of these instances, and the most important because the most decisive and far-reaching, was the Connecticut case recently determined by the United States Supreme Court, in which it was held that the State might extend its authority over its game so far as to prescribe the purposes for which the game might be killed and to prohibit its exportation to another State. Indeed, the whole fabric of game legislation may be said to be built upon the principle that the State confers upon the individual only a qualified right to take game and only a qualified possession in game after it shall have been taken. Nothing is more firmly established in game legislation than this constitutional right of the State even to game which has been killed and reduced to possession. The law not only prescribes seasons for killing, but seasons for selling, transportation and having in possession.

When we consider the purpose of such restrictive limitations and reflect how absolutely essential they are to any efficient system of game conservation, we shall not rebel at the principle involved, nor denounce it as a violation of our individual rights. Our "natural rights" are hedged about, restricted and abrogated in countless ways. Deprivation of full individual liberty with respect to game is by no means a peculiar hardship differing in principle from other deprivations and restrictions in various fields. If we cannot all do as we would with our game alive or dead, no more are we free from the law's control with respect to our cattle alive or dead. If the farmer's cows are afflicted with certain diseases the law steps in and destroys them; if he would market his veal before a certain age, the law seizes it; if he would convert his potatoes or corn or rye into whisky, the law prescribes certain rules with which he must comply; if he would build a house on his city lot, the law prescribes what he may build and what he may not. In short, in the control of his live stock, his crop, his lands and his houses, the citizen is subject to restrictions about which he might just as vociferously and just as reasonably complain on constitutional grounds as about the game and fish laws.

These restrictions are among the characteristics of society which distinguish the civilized man from the savage. All men may have been created free, but when the human animal comes to live in communities, the individual with his fellows, the common interest requires such a curbing of the pristine freedom as shall make society bearable and advantageous. The rule of the greatest good to the greatest number holds sway, and if the greatest good is found to require it, even the small boy who wants to snare a partridge for market must forego that particular one of his 'equal rights and privileges under the Constitution."

All of which has been said before, and all of which will be said again. For while the game laws do not differ in principle from other laws, no other statutes are more often denounced as unconstitutional; and of no others are violations so frequently excused as being assertions of constitutional privileges.

ADIRONDACK FOREST INTERESTS.

THE committee of the New York Legislature known as the Wagstaff committee, which was appointed last year to investigate the condition of the Adirondack forests, has made a report recommending that for the preservation of the water supply for the Erie Canal, the Champlain Canal, and the Hudson and Mohawk rivers the State should act at once in the acquisition of lands covering these watersheds.

The lands now included in the Forest Preserve are in disjointed tracts, with other lands lying between, and so separating them as to render difficult their due protection and seriously impairing the effectiveness of their purpose as a water reservoir. In accordance with the recommendations of the Wagstaff committee, a bill was introduced on March 1 by Senator Ellsworth "to provide for the acquisition of lands in the Forest Preserve," a defective title, by the way; for all the "land in the Forest Preserve" was acquired before it could be in the Forest Preserve; the meaning is, as set forth further on, to acquire land "in the territory embracing the Forest Preserve." The measure provides that the Governor shall appoint from the Commissioners of Fisheries, Game and Forests and the Commissioners of the Land Office, to be confirmed by the Senate, three persons to constitute a Forest Preserve Board, who shall serve without pay, and whose duty it shall be to "take such measures as may be necessary to acquire for the State land, structures or waters, or such portions thereof in the territory embracing the Forest Preserve, as defined and limited by the fisheries, game and forest law, as it may deem advisable for the interests of the State."

The board may take possession of any land, structures or waters, the appropriation of which it shall deem necessary for the purposes of the forest preservation law. The owner of such property is to be notified that his lands or waters or structures have so been appropriated; and thereafter, upon such notification, the property shall be deemed the property of the State. Claims for the value of property taken may be adjusted by the board if an agreement can be reached with the owner; otherwise they will be determined by the Court of Claims. The act appropriates for the purpose one million dollars.

The seizure of land is an heroic measure; in it the State has resort to the right of eminent domain. The justification of the step is declared to be found in the facts submitted by the Wagstaff committee, showing the necessity of immediate action. Gov. Black is understood to be in favor of the bill.

AN ENTHUSIAST.

AS A rule all sportsmen have a supreme faith that the particular sport they themselves pursue and cherish is the most wholesome, spirited and difficult of all sports to master in its full compass and refinement. To them the dullness of appreciation of others by no means affects the worth of their sport, though it may win a sympathetic feeling for nature's omission—that is to say, the lack of capacity to appreciate the beneficent and the recreative at their best.

The quail shooter extols the merits of broad fields, with stubbles, hedges, brush, ditches, fences and woods with glades and thickets, in which dwell his favorite bird, all of which furnish the setting for the galloping dogs, the find, the flush and the miss or kill. The ruffed grouse wins the praise of its devotees for its rare cunning and swiftness, the density of its habitat and the consequent high attributes in the way of woodcraft and skill required by man and dog. The woodcock, mystic bird of darkness and secluded haunts, has a following of enthusiasts who paint their sport in the delicate coloring of devout faith in the transcendental excellence of their sport above all others. And so it is with the fishermen as compared with the followers of the gun, and each class of fishermen against other classes.

And this supreme faith is a most admirable trait, for it is the true index of genuine enthusiasm and honest sincerity. To each, as his own peculiar choice of wholesome sport affords him the highest degree of satisfaction, it is the best, for however the manner of it may be, it is all sport.

But each kind of sport seems to evoke a different kind and degree of enthusiasm from its followers. The quail shooter will admit that there is much of good in ruffed grouse, duck, snipe, woodcock and chicken shooting, and *vice versa;* though the knight of the gun is often loth to admit any merit in the knight of the rod, and the latter has a pity for the coarseness of the work with the gun when compared with the gentleness and bloodlessness of his more refined pastime. And this is all good up to the time when the fisherman catches a ouananiche. His nature then changes; henceforth it is measured and bounded by things ouananiche. Others may describe the merits of other fish, or the thrill of pursuing birds with dog and gun. Their efforts are crude and inefficient. They are weak in details and lack persistence in the theme as a whole and in its parts. The true ouananiche fisherman is fired with his subject the moment it seizes him. He not only describes his battles in words—he lives them over as a reality. His being is changed, for no longer is the past sport a pleasant memory. It becomes on the instant a present reality. His ardor at the start of a reminiscence is greater than all other followers could work up as a climax. Each detail is a sweet morsel to be enjoyed bit by bit, for does the ouananiche leap out of the water ninety and nine times he describes each one of the times specially, showing how the rod bent and the line cut the water in that direction, and the butt of the rod was held in this direction, all at the same time, and how each moment had its peculiar emotional thrill; and at last the beauty was landed, its panting sides glistening in the light. And now follow in rapid succession the attempts to lure the next fish, each detail, each incident with the proper side notes appertaining; and then the glories of the ensemble—a store of ecstacy too great to be measured by hours or space. The apex of the pyramid of sport is the ouananiche. It is fine gold as compared to boulders. No fish or bird affords the afflatus for high color and sweet sound that it does. A ouananiche enthusiast is the most enthusiastically enthusiastic enthusiast in the whole realm of enthusiasm.

THE SPORTSMEN'S EXPOSITION.

THE Sportsmen's Exposition, which will open in Madison Square Garden in this city on Saturday of this week, gives every promise of supplying abundant interest and entertainment. In some respects—particularly in the collection of trophies and prizes—the display will excel anything before shown in this country. There will be revolver and rifle competitions for prizes, and fly-casting under conditions peculiarly favorable for record making. The projected bench show of field trial winning dogs has been abandoned.

The FOREST AND STREAM will welcome its friends at Space 73, where all to whom these presents may come are invited to call.

The Sportsman Tourist.

AMONG THE SEMINOLES.

THE Everglades of southern Florida are very well described as a trackless waste of saw grass and water with an occasional island, scattered through which are a few small villages occupied by the Seminole Indians. The most feasible route to travel to reach the Everglades from the East Coast is by the way of the Florida East Coast Railway to New River, which empties into the Atlantic Ocean 341 miles south of Jacksonville. New River is a broad, deep stream, and is navigable to a point within two miles of the Everglades, which are about fourteen miles from the ocean. The river affords great sport to the angler, as any fish from the shiner to a shark can be caught in its waters. At the head of navigation the river forks out into a forest of cypress, live oak and a great variety of other trees and shrubbery which borders along the edge of the saw grass.

With one of our Seminole friends we once made a tour of about fifty miles of this great unexplored wilderness. Seated in the bow of a canoe with our camera, we took a great many snap shots at some of the moss-covered cypress, giant live oaks and broad spreading rubber trees. The great number of narrow channels leading through the saw-grass requires a careful eye to follow the right one and not get lost in a saw grass pooket, or lake, where there is no visible inlet or outlet. There is no part of the United States which could be compared to the Everglades, except the chain of lakes in northern Minnesota between Duluth and Brainerd.

The Seminole Indian, who has held undisputed possession of the Everglades, are the only Indians in the United States who hold possession of their ancestral homes. They have successfully resisted all attempts to remove them. We venture the assertion, based on an experience of fifteen years among the Western and Southwestern Indians, that the Seminole Indian is the only pure-blooded tribe in the United States. A conservative estimate of their number would be about 700, and they are increasing gradually. Their form of government is pure socialism. Collective ownership of all the means of production and distribution is a great feature in their government. Honor and virtue are their strong traits of character. The council meets once a year at Big Cypress City, and all the men over thirty-five years of age are entitled to a seat. There is no head chief of the tribe, as the council selects a head man each year to preside over the council for the session. When the council adjourns the head man is just the same as one of the common members of the council, and all are guardians or officers of the law. Immorality is punished by death. Dishonesty and rascality are punished according to the seriousness of the offense. In some cases the tops or bottoms of the offender's ears are cut off or a scar like a letter X is cut on the forehead. Indians bearing these marks are not allowed to sit in the council. There are but a few which are marked in this way.

The council meets yearly in the little moon in June. After the council meeting is over, the Green Corn Dance, which is one of their annual festivals, takes place. The dance lasts from ten to fifteen days, and all the marriage rites are performed. The men are not allowed to marry under twenty-five years of age, and the women must be over twenty years old.

The dress of the Seminole is very picturesque. The men wear moccasins and leggings of tanned deer skins, which are fringed and beaded. Their coats and shirts are made of many colors of calico, frilled and pleated in a way which would be a credit to many a white seamstress. The men's hats are made by folding a shawl to about 4in. in width, and wrapping it around a framework of palmetto fiber like an Arab turban. The women as a rule go barefooted, and wear long skirt dresses and a waist or jacket similar to the Eton jacket which is worn by the white ladies.

The Hunting Dance is one of their annual festivals which takes place during the little moon in September, and lasts from four to ten days. We were given an invitation by Cypress Tiger, Old Doctor and Tom Ah-list-ah to attend their dance at Pine Island, which is about twenty-five miles from Stranahan's camp on New River. After packing a large basket of provisions, and laying in a supply of fancy colored calicos, thread, beads and some staple groceries, we started from Stranahan's store in true Indian style. J. G. Farrow, who is a guide in the tourist season and hunts alligators and otter in the hunting season, held the position of honor at the stern of the canoe, while I with a paddle of mammoth proportions furnished the motive power at the bow. As we were late in the day getting started, we were compelled, after going six miles, to camp at Robert Osceola's old camp on the south fork of New River. True camper's luck came to us during the night, as it rained in torrents and we had to use all available canvas for covers for our supplies and roll ourselves under the palmettoes for shelter. Daylight found us up, and after a hasty breakfast we started out determined to reach the island for dinner. The water at this season of the year is very high, and in many places small rapids are formed which call for more weight on the pole to propel the canoe. The saw grass, which grows high and rank, often made us change our course, but we arrived at the island at about 1 o'clock in the afternoon.

About 100 men, women and children were at the landing to meet us, as they had seen us coming for about a mile. After a general all-round handshaking our canoe was unloaded and the contents taken up the hill to Jackson Charlie's house, where the best quarters were placed at our disposal. This house is a very elaborate building, and is 75ft. long by 25ft. wide. It is built of lightwood posts and peeled cypress poles, and roofed with palmetto fans. The house is braced in a way which shows good mechanical ideas in its construction. There are three rows of tables about 3ft. high, 10ft. long by 5ft. wide, five tables in a row, and one large table at the end of the building, where the meals are served. The small tables are used for sleeping on, and during the day the house is a headquarters for all the village.

Soon after our arrival the never-failing *sofka* kettle was placed in the center of the large table, surrounded by large pots of strong *cofah* (coffee), baked *ah-hahs* (potatoes), baked *cusha* (squash), roast *echo* (venison), *pin-e-wa-tik-a-lege* (turkey pot-pie), boiled *sal-o-le-sok-ah-to se-na* (pork and beans), and a number of other dishes. A bell which was hung over the table was rung by Old Doctor's squaw, which was a signal to *humbugus-stah-ojus* (eat plenty). We took our seats in the circle, and after a few signs and motions by Old Doctor were made to know that we had the honor of starting the feast, which we did with a vengeance, for there is nothing which will create a good, hearty appetite like pushing a canoe with a pole for about twenty-five miles.

After dinner the usual smoking and visiting took place until about 3 o'clock, when we were given an invitation to witness a game of *tok-in-ha*. In the center of about an acre of cleared ground stood a pole about 50ft. high; 10ft. from the top of the pole a black ring was painted around the pole, about 5ft. from the ground the pole was hewed flat on two sides where the score was kept by marking with a piece of charred light wood. The game was played with ten men on a side and each man had two bats similar to a tennis or la crosse bat. The ball, which was about 3in. in diameter, was thrown in the air by the scorekeeper and a wild scramble began, accompanied by yells which would be a credit to a national game of football. The players were not allowed to touch the ball with either hand or foot, and the point in the game was to get possession of the ball and throw it and hit the pole above the black ring. Each hit counted a score, ten scores counted game The *tok-in ha* game lasted about two hours and was won by Tom Tiger's team by a score of 10 to 8.

After the ball game we went back to the pavilion and opened our store and sold and traded our small stock in a short time. After supper we made preparations for the dance. Arrayed in our best suit of Indian clothes, we were escorted by Old Doctor and old John Jumper to a seat where we could see and hear what was going on. The opening of the dance was announced by a series of yells, after which Tom Tiger went to the fire and, taking a burning brand, held it high over his head and made a short speech, which was vigorously applauded by all. A circle about 40ft. in diameter was then formed around the fire and the leader began singing and marching in a circle, keeping step to the time. There was no music except of a drum made by stretching a raw cowhide over a barrel head and pounded with two drum sticks. After a few dances we were invited to join in the alligator dance. There were seven women and seven men in this dance beside the leader. We took our places in the circle, and after a few words from Tom Ah-lis-tah, our leader, we joined hands with the dusky damsels and saluted the fire. The leader started the song, which reminded us of the first of the chorus in "The Sweet By and By," and at times a trace of harmony could be detected; but taken all together the singing is like chant music. The alligator dance lasted about thirty minutes, and we received many compliments for the good steps we made in it. The men were dressed in their finest clothing. The women, in addition to their fancy colored dresses, wore a piece of deer skin about 6in. wide which was mounted with five box terrapin shells which contained a number of small sea shells and sea beans and hard berries. This attachment was worn just below the knee and was held by tying or lacing it. The sound which comes from these shells while the women are dancing is similar to that of the rattle-box which is used to beat the time for a sand shuffle. The deer dance, the bear dance, the panther dance and several other dances were danced before the gray streak in the east came, and a short dance to the sun ended the ceremony for the night. We retired to our quarters at the pavilion and arranged our blankets and mosquito bar and were soon sound asleep.

About 9 A. M. the bell rang and we rolled out to find that we were the last ones up. After a refreshing bath in the fresh-water lake we ate breakfast and were kept busy the rest of the day answering questions and explaining the many customs and ways of other Indians of the West.

We remained at the island three days, and then having loaded our canoe with alligator skins and other things we had bought and traded for, we shook hands all round and started for home. Old Doctor was one of the last to shake hands with us, and bestowed the honorable title of Good-white-man-doctor on me, while Mr. Farrow received the title of White-man-good-hunter.

The Everglades afford a great field for the naturalist, botanist, geologist and historian. We may be able at some future day to give you a more definite idea of the country and its inhabitants.

J. W. STRANAHAN.

DR. JIMMIE TUSTANOGEE WITH HIS TWO WIVES AND THE CHILDREN.

From the "Standard Guide" to the Florida East Coast.

RECOLLECTIONS OF IOWA.—I.

"LULLED in the countless chambers of the brain,
Our thoughts are linked by many a hidden chain.
Awake but one, and lo! what myriads rise!
Each stamps its image as the other flies!"

It is midnight! wife and baby in an adjacent room are enjoying the "honey-heavy dew of slumber," the south wind is sifting Oregon mist against my window, and I sit here gazing into the fire and reflecting.

You must know that our baby Jennie is now twenty-one months old, healthy as a wild rose and pretty as—but pshaw! was there ever a baby, white, black, red or yellow, that was not pretty? All babies are pretty to me—even a China baby. Yes, she is healthy and fine, but I am on the verge of nervous prostration every chilly night (and most of the nights seem chilly to me) since she had the croup one night nearly a year ago; so I sit up, look after the fires and watch the thermometer until the wee sma' hours nearly every night. It does beat all how idiotic us old fellows can be over a baby, particularly when the baby's mother was teaching it to call us papa.

The neighbor women say that croup never comes after midnight. So, when the "iron tongue of midnight hath tol'd twelve" a sense of relief comes to me, and generally I can go to bed and to sleep. But to-night I don't feel sleepy, and so I continue to sit here alone, gazing into the fire and reflecting. To-night I am thinking of old Iowa, and for some reason she, like Banquo's ghost, will not down. But while she has "driven sleep from mine eyes away," she is a good-natured ghost, and

"Invites my steps and points to yonder glade."

The seventeen years of life in Oregon, with all their ups and downs, seem like only a well-greased mental tramway for my thoughts to roll back to the scenes and incidents of my early life in dear old Iowa. God bless her!

In the year 1847 a young fellow by the name of Benjamin Greene, from Oswego, N. Y., was teaching school at Keokuk, Ia. By the decree of fate or otherwise he made the acquaintance of a Hawkeye girl by the name of Parmelia Sturges and married her. In February, 1849, they were blessed with a baby girl (wonder if she was sweet and croupy like the one next room), and Benjamin began to feel the responsibilities of a married life. Iowa was young then, Government land was plentiful, and Benjamin concluded to "go West and grow up with the country," setting an example which even Horace Greeley afterward referred to as the correct thing to do. He hitched his yoke of oxen to his prairie schooner, loaded his wife, baby girl and rifle into it, started up the Des Moines River, followed it until he came to old Fort Des Moines (now the capital of the State), at the junction of Main Raccoon River with the Des Moines; thence traveled due west twenty-one miles to the west bank of North Raccoon, where he took up some Government land and founded the town of Adel, now a prosperous village and county seat of Dallas county, one of the wealthiest and best counties of the State. It was a sort of trading post prior to his settlement there and known as Penoach (Indian for far away, as near as I can determine); but at father's suggestion the Indian name was dropped and the name of Adel adopted. He, with his wife, four married daughters, and a subsequent generation or two still live there. In fact, he is now living at the identical spot where he erected his cabin nearly half a century ago.

"And to-night he sits by the fireside
In a mansion quaint and old,
With his children's children around him,
Having reaped a thousandfold."

In 1850 they were blessed (?) with a boy, who still lives (thank God!), and now growing old in the land of the setting sun.

In the spring of 1852 grandfather Sturges loaded his earthly possessions, consisting in the main of wife, five children and his rifle, into a wagon and started across the plains, impelled probably by the same restless spirit that had led him westward from the Adirondacks many years before. After six months of weary toil, danger and privation, they at last settled on the banks of the Molalla in Clackamas county, Oregon, where now the ashes of dear old grandfather and grandmother are mingling in the dark union of insensate dust.

"In the heart of the grand old forest,
A thousand miles to the west,
Where a stream gushed out from the hillside,
They halted at last for rest.
And the silence of ages listened
To the axe-stroke loud and clear,
Divining a kingly presence
In the tread of the pioneer."

Obviously my recollections of what transpired prior to and probably for some time after Feb. 13, 1850, are rather vague and indistinct. To be exact, possibly I ought to reckon from Feb. 14. It has never been definitely determined whether I was born on the 13th or 14th, as our folks had no clock or other timepiece then, and fixed upon the 13th as the auspicious day only for the reason that none of the family, except mother, had retired for the night. However,

it might have been done in order to give me the advantage of an additional day on earth, or possibly in consideration of the luck that is supposed by some to cluster around the number 13.

Mrs. Warden, the first friend I met on my arrival home that fateful morning, has often told me that she knew I was born on the 14th, "because there was quite a peep o' day when I let my fust yell." However, a day or two, or even a year or two, doesn't cut much figure in some lives, and this is not intended as an autobiography except in so far as it relates to those scenes and incidents in Iowa's early history "all of which I saw and part of which I was."

The first thing I recollect "for sure" is carrying a bull pup home.

The difficulties I encountered in capturing the little fellow among the old boxes and barrels out in the back yard at our neighbor Beasley's made a lasting impression upon my young brain, aside from the exquisite pleasure I derived from the knowledge that I at last owned a pup of my own. That must have been in 1854, for old Cola lived fifteen years and died while I was away at college in 1869. He was strictly business and left a good record, not only as a farm dog, but in the matter of varmints. He was also one of the best retrievers on water fowl I ever saw, strange as it may seem. But he dearly loved to hunt prairie wolves, and in this connection I might add that the next in order of my distinct recollections is standing by the window and watching father come home from across the prairie in the winter time with two, three, four or more wolves hanging across his horse. He was a dead shot, as in fact were nearly all those frontiersmen, but he never used a gun in hunting wolves. His arms and accoutrements consisted of a greyhound, bull dog, hickory club and a rattling good horse His methods were simple and positive. The outfit would sight a wolf; the greyhound would speed away and overtake him and entertain him until the bull dog could get there, when the controversy was ordinarily soon settled. If the wolf happened to be unusually large and strong, the hickory club closed the arguments. Many and many a time I have seen father come home with all the wolves his horse could carry. Father never could resist the temptation to give chase to a wolf, no matter what the conditions or circumstances. In those days people that lived within five or ten miles of each other were regarded as neighbors. Over on South Raccoon, some six or seven miles from Adel, lived a family by the name of Hill, with whom our folks were on very friendly terms. The two families visited nearly every pleasant Sunday. Either we would go to see them or they would come to see us. I remember one bright Sunday in late winter of the early fifties father hitched up, loaded us all in and started over to Hill's for the usual visit. We had nearly reached our destination when a large wolf crossed the road, and having reached a respectful distance, stopped and looked at us. Father could not resist the temptation. He jerked the harness off old Nance, tied the other horse to the wagon, and away he went. Old Nance was no spring chicken at the business, and entered into the spirit of the chase with all the ardor of a three-year-old. There seemed to be trouble on the wolf's mind the way he spun across the prairie, and father seemed to be gaining on him when they disappeared over the ridge. Presently father returned leading the mare and holding his face, which was covered with blood and terribly disfigured. The mare had stepped into a badger hole, and in falling had struck father full in the face with one of her hoofs. That was more than forty years ago, and when I last saw father, ten years ago, that frightful scar was just about as much in evidence as ever. Doubtless it will go with him to the grave.

Probably the abundance of raccoons in the woods along North, South, Middle and Main Raccoon suggested the names for the streams. There were coons everywhere, and, by the way, the streams are not called Raccoon by the people living there—just plain Coon. I remember being out with father one day along North Coon Bottom among the elms and cottonwoods. We sighted a big nest of some kind up among the branches of a big cottonwood, and father figured for a long time on what it could be. To settle the question he sent a shot up through it, when out tumbled a big fat coon. We were bending over the victim and examining him when—spat! another big coon fell dead at our feet; a pretty good chance shot, was it not? There were plenty of fur-bearing animals in Iowa in those days—beaver, mink, musk-rat, coon, otter, and some bob cats, panther and bear. There were antelope and buffalo on the prairie not far west of us. Deer and wild turkeys were in abundance along all the Coon rivers, and doubtless they were equally abundant along other Iowa streams. When five or six years old I was out one day with a party of men after wild turkeys just above town. One of the party captured a young hen turkey alive and gave it to me. I took it home, put it in a pen, and tried very hard to raise it; but it declined to eat and soon died.

One July 4 in the early '50s exuberance of patriotism induced the settlers to hire a band of wandering Indians to give an exhibition war dance for the entertainment of their families and as a manifestation of patriotic sentiment that could not, under the circumstances, find expression in firecrackers and brass bands. I can only dimly recall the entertaining features of the dance, but the memory of the wind-up is quite vivid. The settlers became uneasy at the earnestness with which the Indians entered into the spirit of the entertainment, and finally hurried their families away and got their rifles in anticipation of trouble. The Indians took the hint and moved on.

Probably most of the older readers of FOREST AND STREAM are more or less familiar with the horrible outrages and massacres that occurred the following spring (March, 1857) at Spirit and Okoboji lakes, in northern Iowa, and at Springfield, in southern Minnesota. Chiefs Ink-pa-du-tah and U tanka-sa-pa (Black Buffalo) headed a band of about eighteen lodges of Sioux, who robbed the settlers and committed the most inhuman outrages, culminating in the massacres of the 8th and 9th of March, 1857. During the year 1856 a dozen or more families had settled about the lakes, while along the valley of the Little Sioux River at Smithland, Cherokee and Rock Rapids there were settlements. Ink-pa-du-tah and his band commenced their depredations at Smithland, and passing up the Little Sioux continued their depredations, killing stock, etc , but committed no murders until they reached the settlement at the lakes. There and at Springfield, a small settlement in Minnesota a few miles northeast, they killed forty-one, wounded three, and took with them as captives four women—Mrs. Howe, Mrs. Thatcher, Mrs. Marble and Miss Gardner. Twelve persons were missing, some of whose remains were afterward found. Of the four women taken as captives two were killed on their flight—Mrs. Howe and Mrs Thatcher. Mrs Marble and Miss Gardner gained their freedom some months afterward. The settlement on the lakes was entirely wiped out. Some of those bloodthirsty devils approached our settlement to within a few miles, and I well remember how father, during those trying times, walked the floor nights with his rifle lying across the table. And I remember, too, how the horseman dashed through our settlement crying at the top of his voice: "The Indians are coming! The Indians are coming!" And how Brady escaped from his captors and came into the settlement nearly or quite naked. Twenty years later, on the bank of a little stream in the Black Hills, I sat and listened to the details of that horrible affair from the lips of a Sioux that participated in the massacre. He seemed to thoroughly enjoy his own story in all its most horrible details, and my finger played with the trigger of my Ballard so nervously that my companion insisted that we should move on at once, for any bad break on our part would certainly have resulted very disastrously to us, as the Indians were quite numerous and very bold

About the time of the Spirit Lake massacre, father, in some trade with the Indians, secured a handsome little bay mare. That same evening I rode her after the cows. All frontier boys in those days almost literally left the cradle for a horse. At seven I was about as good a horseman as any of the Indian boys of my age, was a fair shot with the bow, and could skate and swim—all the accomplishments considered necessary to gain admission to the inner circles of the best society, particularly among the kids. The rifle and lariat belonged to our elders. Well, as the sun was setting behind the grassy billows of the west, I jumped, or rather, climbed "the pony" and started out across the prairie after the cows. Evidently the pony had been used by the Indians in hunting buffalo or stealing cattle (probably both), and was right on to her job. No sooner had I turned in behind the cows than the circus commenced. And talk about your Iowa cyclones! That pony could have given a cyclone cards and spades. Away went the whole outfit on the dead run. Not a creature was allowed to lag behind; and if one showed any disposition to weaken she was brought to a realization of what was required of her by a vicious bite on the rump that started the hair if not the blood. These evolutions were something new to me. They were not down in my code, and right at the start I came near losing my seat. Hold her I could not; she paid no more attention to my earnest efforts than she would have paid to the attack of a buffalo gnat, probably not as much. We were more than a mile from home, and I could plainly see that the programme meant the fulfillment of more than the ordinary circus advertises—three rings under one tent and something new and novel transpiring in each ring without delays. I dropped the reins and hung on to her mane for dear life. And let me say right here that I came in along with that circus, and sitting right up in the band wagon The cloud of dust that loomed up ominously in the west admonished father that something was wrong, and he came out to meet us, but he quickly got out of the way and let the procession pass, while his anger gave place to anxiety. I didn't see him for, I was otherwise engaged, and found no time to view the scenery or engage in conversation. When we reached the corral the whole thing was over with the pony in a second, and as for the poor cows you could have lassoed their eyes with a grape-vine, and I really do not remember whether their milk was saved that night or not. A strange feature of the whole business was the fact that mother and the girls could all pile on that pony at once and she would go along like an old sheep, but the moment a man bestrode her she was like a whirlwind let loose. She died from lockjaw after a fifteen-mile run after a wolf one sleety day of a winter late in the fifties, and there was mourning in our family—at least among the women folks. I felt bad enough, of course, but it wouldn't have been "manly" in me to cry, you know. Her colt, Gip, a bright iron gray, fell to me as a matter of course. A boyish claim of that kind is seldom disputed until later on. Ordinarily it is a case of "baby's pig and daddy's hog." But in this particular instance I asserted and continued to assert my claim to Gip with so much earnestness and confidence that it was finally conceded by everybody, even father himself. Gip was a dandy in his class, and I cannot remember the last time I rode him. He had some peculiarities, however, which I never felt inclined to encourage. He would carry me like the wind until he took a notion that he had gone far enough. Then he would stop And I might add that that stop was generally suggestive of the point of contact between a catapult and a stone wall. Ordinarily I could not bring myself to the same mental conclusion and physical condition simultaneously with his aforesaid conclusion and condition, and the result was that I would go over his head like a rocket. Then he would look at me in a knowing sort of way and go to eating grass. But if I stuck he would buck, and generally Gip came out winner. We were great friends nevertheless.

There was politics even in those good old Whig and Democratic days, and embryo Presidents (in their own minds) were just about as numerous as nowadays. I well remember at least a dozen of our old frontier neighbors, all of whom were thoroughly qualified (in their own minds) to fill any office in the gift of this great republic. There was Bob Bailey, O. D. Smalley, Jerry Perkins, L. D. Burns, Squire Babb, George B. Warden, two or three Millers and others, and even father was not averse to holding office when called, like Cincinnatus, from the plow. I think father was Dallas county's first prosecuting attorney, and I know that he was in the Legislature of the State two terms during the fifties. O. D. Smalley and Bob Bailey were both Democrats and warm friends. Perkins was a consistent Whig, and I remember that at one of the early elections Smalley and Perkins were opposing candidates for some office, county judge, I think. Smalley lived over on the Des Moines River, and had shortly before this election killed a very large bear. Some orator from Fort Des Moines had come up to Adel to present the political issues of the day from the Whig standpoint. He was very gushy and let the eagle soar pretty high. Incidentally he proceeded to give his friend Perkins a send-off for county judge, and Bob Bailey was correspondingly mad. "Gentlemen and fellow-citizens," said the orator, "it is with pride and pleasure that I take this opportunity to remind you, my fellow-citizens, that you have among you a gentleman and a statesman of whom you should feel justly proud, one who is most capable and willing to serve you in the capacity of county judge. I need not speak his name, fellow-citizens, for you all know of whom I speak, Jerry Perkins." Bob was getting madder and madder. "Fellow-citizens," continued the orator, "there is a man blessed not only with great learning, but with quickness of perception, great penetration of mind and the faculty of nice discrimination. He came among you when the country was young, when you needed bold and determined men; he drove back the howling wolf and killed the bear." Bob could stand it no longer. Bob was nothing if not dignified. He arose with all the dignity of a Roman senator and said: "Mr. Chairman, I rise to a point of personal privilege. It wasn't Perkins that killed the bear; it was Smalley."

PORTLAND, Ore., February.

ON THE POTOMAC.

IF we take into consideration the great length of time which has elapsed since the lands bordering on and adjacent to the river Potomac have been permanently colonized and cultivated, in connection with its central and accessible location, there is no other river in our country which retains to such an extent its original features, or presents to the eye such a primeval aspect as this grand old historical stream. There are numerous points along its meandering course where jutting headlands or a series of rugged hills have been neglected and unimproved to this time, and are still crowned with some of the aged monarchs of the forest primeval. Many of the decayed and massive trunks of once towering oaks, whose foliage sheltered the aborigines, coeval with the earliest settlers, still remain, though bereft of vitality. The cause of the apparently immutable condition of those points spoken of may be accounted for in the immense extent of the domain of the early colonists, who selected from their countless acres the most accessible and easily cultivated, a practice which has been continued by their descendants. Consequently those neglected places which meet the eye of the tourist stand out in bold relief as mementos of the early days in the history of the Old Dominion.

If permitted to draw a simile in connection with the text of this article, I would say that the banks of the Hudson represent the progress and refinement of the present, while those of the Potomac retain unequivocal evidence and mementos of the past; representing the time and location where our earliest great statesmen lived, meditated and counseled together to devise and implant principles in the political body of our infant republic which would make its future, if possible, indestructible.

In fact, there is scarcely any portion of the river between Arlington and Wakefield that is not teeming with historic lore. Therefore it may be styled the classical river of North America with as equal propriety as that appellation has been conferred upon the Eurotas of Greece or the Tiber of Rome.

The above general description I propose to supplement with more definite details of personal experience about sixty years ago. As a great many incidents in connection with transactions of those halcyon days have, from the lapse of time, become dim, I concluded to revisit the localities with the view of restoring to memory some of the incidents nearly obliterated. Therefore, with anticipated pleasure of gazing upon and wandering once more amid those sylvan scenes of boyhood, I set out from Washington during the last days of October to accomplish my tour by crossing the Potomac. The first notable object which meets the eye on the Virginia hills is the stately mansion at Arlington. This fine old colonial edifice, apparently gazing down upon the Federal city, was once the home and patrimonial estate of G. W. P. Custis, the adopted son of George Washington, and more recently the residence of Gen. Robert E. Lee, the son-in-law of Mr. Custis, from whom the general inherited it. The spot is now in possession of the United States, and a part of it has been converted into a national cemetery.

The next point of interest in the tour, about six miles below Washington, was the ancient city of Alexandria, now sleeping on the banks of the Potomac, which sixty years ago was a scene of animation, and one of the principal business marts of foreign commerce. This city was also a center of social refinement from its earliest history. Among the prominent residents sixty years ago were many of the descendants of those who ardently and conspicuously contributed their wealth and intellectual ability to advance the revolt of the colonies from its conception through the darkest days of adversity to its ultimate triumph. A few of those family names are still fresh in my memory: the Herberts, Taylors, Brents, Fitzhughs, Lees, Dulanys, Fendalls, Thorntons, Vowells, and others. In addition to the *coterie* of brilliant resident magnates, there was a large number of distinguished transient visitors, whose frequent presence contributed greatly to the social intercourse of the city. It was here that the wealthy planters of the northern neck of Virginia, and also those from the Maryland banks of the Potomac, shipped the surplus products of their plantations—tobacco, grain, etc.—and received in return products of foreign climes. Those business transactions and familiar visits were carried on for years prior to the Revolution as well as subsequent thereto, and history informs us of the character and ability of the planters along the Virginia banks of the Potomac, and also of those residing on the green hills of Maryland adjacent to this majestic river; and in the catalogue of visitors to this ancient and hospitable city we find the name of Washington at a time when the site for the city which now bears his name was a howling wilderness. George Mason, the author of the bill of rights and of the constitution of Virginia, upon which the constitution of the Republic was founded; Col. Fairfax, whose plantation joined that of Mount Vernon, and who voluntarily abandoned his inheritance and title as one of the lords of England's realm to spend his days in the wilds of America; Philip H. Lee, the father of the late Gen. Robt. E. Lee, who, by his splendid horsemanship and heroic exploits during the Revolution at the head of his cavalry, acquired the significant title of Light Horse Harry; John Randolph, of Roanoke, the talented and eccentric Virginian who had the reputation of successfully answering in six words—"The Greeks are at your doors"—a speech which Mr. Clay was two days in delivering in favor of an appropriation for the suffering Greeks; in fact, all the prominent men who had occasion to travel north from the western or southern portion of Virginia necessarily came through Alexandria. Therefore we find emblazoned upon the pages of history numerous names of those who honored the city with their social familiarity, and whose fame will increase as years roll on.

In addition to the distinguished men who conferred honor upon the ancient city there are many interesting

historical objects still existing in tangible form; notably the ancient English church and the historical Braddock house, both of which are in good preservation. It was in this house that the unfortunate general called around him several of the Colonial Governors and also a few of the prominent provincials, among them Geo. Washington, although then only about twenty-two years of age, but who held a colonial commission as colonel, to consult with him in reference to measures necessary to prosecute the projected campaign against the encroachments of the French on English colonial territory at Fort Du Quesne, Pittsburg, to which place Washington accompanied him as aid-de-camp.

Although the troops were completely routed and Braddock was killed, yet the skill and coolness displayed by Col. Washington in saving the remnant of the army gained for him a military reputation which subsequently placed him in command of the army that gained us our independence. Incidents and historical events crowd memory, but admonished by time and space I forbear.

Then my course led to the margin of Hunting Creek, which I crossed a short distance above its junction with the Potomac, to which it is tributary, and also forms the southern boundary of Alexandria. It is over a mile in width at its mouth, and as it does not diminish nor contract perceptibly for two miles above, it occupies an extensive area, the entire bed of which produced a great abundance of the different aquatic grasses and other vegetable productions suitable for the various species of waterfowl which annually migrate hither. It always appeared to me that it was an especially favorite resort with them. I know it was the case with myself. Possibly mutual feelings produced reciprocal tastes. At any rate, we frequently met there, although I had but poor facilities to entertain them—nothing but a single-barrel with a flintlock. Double-barrels were not very plentiful, and percussion locks were a curiosity, and I do not think the inventor of the modern breechloader was born. Nevertheless I generally secured some of them. Of course, not by my skill as a wing shot—you know a sportsman scorns to boast, except perhaps when they go to Canada and catch some weighty salmon—but simply for the reason that I discharged my gun, if she did not snap, which was always expected, in the direction of the greatest number; consequently all could not escape. It was not the acquisition of the game, so easily obtained, which fascinated me with this magnificent feeding resort for all the various species of waterfowl known as divers; all of which were here, robed in their diverse and magnificent plumage, and apparently unrestrained in their natural habits and movements, which I greatly enjoyed, and which was the attraction to me. I have frequently, from a secluded position, watched them with delight for hours within close range, but felt no desire to disturb them in their interesting and graceful evolutions.

Adjacent to this famous feeding resort of the diving fowl, in fact, only separated from it by an embankment thrown up around the shores of the creek and river, there is an extensive tract of swamp and jungle, covering perhaps 500 acres, equally as attractive and prolific in food suitable for the various classes of non-divers, and also numerous species of birds and animals belonging to the progressive or evolutionary class of amphibians, a detailed description of which I will postpone for the next stage of my tour. At this point in past years I have frequently left with regret

"Where oft I have lingered and gazed with delight
On my feathered companions, in repose or in flight"

Natural History.

THE INTERCOMMUNICATION OF IDEAS AMONG THE LOWER ANIMALS.

I HAVE been interested lately in the question of the intercommunication of ideas among the lower animals because of some questions in biophilism which have been asked me, and because of what I have noticed from Mr. Thompson, F. E. W. and others in the Natural History department of FOREST AND STREAM.

That ideas pass from the mind of one animal to that of another there is no one, I take it, who even passingly sees animals (to say nothing of observing them) who will doubt when his attention is called to the matter, as most people's must be to anything relating to the orders of beings under man. But intercommunication is something more than communication. I communicate an idea to a person when I smile at him, frown at him, or make some passing remark. Intercommunication between that person and me begins when he returns an idea to me upon receiving mine. In the intercommunication of ideas reason is involved—the arrival at a conclusion, the adoption of means to an end. The common use of the word conversation conveys the notion of intercommunication of ideas.

In his "Introduction to Comparative Pyschology" C. Lloyd Morgan gives this story, "communicated to me," he says, "by my friend, Mr. Robert Hall Warren, of Bristol:" "My grandfather, a merchant of this city, had two dogs, one a small one and another larger, who, being fierce, rejoiced in the appropriate name of Boxer. On one of his business journeys into Cornwall he took the smaller dog with him, and for some reason left it in an inn in Devonshire, promising to call for it on his return from Cornwall. When he did so the landlord apologized for the absence of the dog, and said that some time after my grandfather left the little dog fought with the landlord's dog and came off much the worse for the fight. He then disappeared and some time afterward returned with another and larger dog, who set upon his enemy and, I think, killed him. Then the two dogs walked off and were no more seen. From the description given my grandfather had no doubt that the larger dog was Boxer, and on returning home found that the little dog had come back, and that both dogs had gone away, and after a time had returned home, where he found them."

Were it not for his "canon of interpretation," as he calls the measure to which he submits all facts (if they do not conform with which, the worse for the facts), Mr. Morgan would freely admit that between the little dog and his big friend Boxer there was intercommunication of ideas. This seems to me much more reasonable than that the little fellow only indicated to the big fellow that he wanted him to follow over weary miles, and that the big fellow did so blindly. Boxer went because he saw at the end of the way what he so dearly loved—a fight.

To show that dogs have the power to intercommunicate ideas—the power of conversation—allow me to tell a story which came to me from a Mr. Woodruff, of this State. There were two dogs at a summer hotel in the Catskill Mountains. They were once noticed to chase a woodchuck into a hole. To this hole there were two openings—one on each side of a stone fence. The dogs saw the two openings, and each of them took one and began digging. Because the day was hot and the work hard, because they saw that the stony character of the ground would not allow the sufficient enlarging of his opening to let the larger dog in, or for some other reason, the dogs simultaneously quit digging and met in consultation on the wall. When their plan was completed, the smaller dog, who had sufficiently enlarged the opening at which he had been working for the admission of his body, entered, while the larger dog took his station at the other opening. What took place in the hole I do not know. All that I know (on the very best evidence) is that the woodchuck soon appeared at the larger dog's opening, was nabbed, dispatched, and the two dogs had a great feast.

As to how these dogs carried on their conversation I cannot say, but that they did so there can be no doubt. They formulated a plan. Their knowledge of the plan was mutual. Their snouts were together as they talked on the wall. Their interchange of ideas may have been telepathic, if there be such a thing as telepathy, of which I am not sure.

CHARLES JOSIAH ADAMS.

ROSSVILLE, Staten Island.

Montana Wild Life.

KIPP, Mont.—*Editor Forest and Stream:* While hunting in the vicinity of St. Mary's Lakes last fall my friend Wm. Jackson found thirteen goats, all in a pile, which had been killed by a snow slide. They had been pretty badly mangled and crushed, but from the thirteen he secured seven perfect horns, of which he has made a very handsome gun rack.

Speaking of wolves, Mr. Joseph Kipp gave me a brief outline the other day of some he once saw which gives me an idea of what wolves were in this country before strychnine was introduced.

"In the fall of 1864," he said, "the American Fur Co., at Fort Benton, sent me with a stock of trade goods to winter with the Piegans, who were camped on the Marias River. Early in February a man was sent out to assist me, and I lost no time in going on a hunt with the Indians, for I had been cooped up in a lodge all winter and wanted a change.

"One day we ran a large herd of buffalo, which we found a mile or two north of where Cutbank Stream joins the Marias. I had a splendid horse, but as soon as I killed a cow I stopped, for that was all the meat I wanted, and more too. I had reached the herd some time before the Indians did, and when they saw me dismount one of them asked me to exchange horses with him, as he wanted to make a big killing. I let him have it, and tying his horse to the horns of the buffalo I proceeded to skin it. In less than five minutes the wolves began to gather about me. It was the running season, and each bitch was surrounded by a number of dogs playing and fawning about her, and quarreling with each other just like a lot of dogs. The wolves kept about 50 to 60yds. from me, but one coyote came up quite close, and a couple of kit foxes ventured up within 8 or 10ft. I felt a little uneasy to be surrounded by such a big pack, and considered for some time whether to fire at them or not. I had only four balls left and rather wanted to keep them. Finally, however, I did shoot at a big white dog, and not only killed him, but another one beyond. The balance of them, however, didn't pay any attention. Well, I only took the depouille and bossribs of the cow, and tieing them on behind my saddle, I rode off about 50yds. The wolves immediately ran up to the carcass, and such a snapping and clicking of teeth you never heard. In a very few minutes the cow was eaten up, and the bare bones dragged and scattered about. The wolves, as soon as the carcass began to be fairly well pecked, commenced striking out toward the northeast, and finally all of them went off in that direction, leaving only the kit foxes to keep me company. I cut off several bits of meat from the ribs tied to my saddle, and they would pounce on them almost before they struck the ground.

"In the old times wolves were much more numerous than coyotes, and to-day the conditions are directly the reverse. If wolves were so much sharper and difficult to catch than coyotes, as some people say, how does it happen that they are very scarce in the whole West, while coyotes seem to be more numerous than they were in the old times?"

J. W. SCHULTZ.

Early Birds, Early Spring.

SOUTH PORTSMOUTH, R. I., Feb. 26.—In this section it is no uncommon thing to see robins during the winter, as some few specimens stay with us throughout the year in the cedar swamps of Tiverton. I have many times seen single specimens in December, January and February, but they are never seen in any numbers except when they make their appearance during their spring migration, and when they do appear the farmers think that spring has surely come. In this we are rarely mistaken, for we seldom have much severe weather once the robins come in any numbers. One season, however, they got here ahead of time—the great March blizzard in New England—and large numbers of robins and blackbirds perished from cold and starvation, no doubt. Robins have appeared the earliest this year I have ever known them to during a period of thirty-five years' observation. Feb. 17 the first blackbirds were seen, and again on the 22d. Feb. 23 robins were heard, but not seen. Feb. 25 over a dozen were seen, and one was heard singing the same as during their mating time. Large flocks of blackbirds were also seen. We trust the little fellows are not mistaken in thinking it time for spring; but it is about two weeks ahead of their earliest appearance before as noted by me. WM. M. HUGHES.

Hardy English Sparrows.

IN St. Paul, Minn., English sparrows commenced building nests on Feb. 14. Hundreds of these hardy birds have weathered the rigors of temperature ranging from zero to minus 30°. One is seldom found frozen. A good many hug the lee sides of chimney stacks and steam-heated buildings, and so keep warm. They are a sturdy and vigorous lot, producing from three to five broods in a year.

Protective Instinct in the Kildeer.

LAST June, while traveling through the southeastern portion of Nevada, I was surprised to notice the avifauna that frequented every watering place. The chaparral was fairly alive with hooded quail, and road-runners that properly belong to a more southern climate were as common as rabbits. Just after crossing the line into Utah we struck a marshy level, kept constantly moist by the running snows of the Pine Valley Mountains. This flat was covered with kildeer, most of which were newly hatched. The shrieks of the parents and the baby cries of the goslings filled the air. I had no trouble at all in picking up a couple of the fledgelings and exhibiting them to the party. Their mother, instead of flying away with the rest of her brood, hovered about the carriage, darting in our faces in her anxiety to rescue her chicks. As soon as I put the little ones upon the ground, the mother came within 1ft. of my hand, and then dragged herself away exactly in the manner of the female partridge when endeavoring to decoy the hunter from her young. She trailed a wing, was lame of a leg, and seemed absolutely forgetful of her maternal duties. As I had never heard of this trick of the kildeer, I started to pursue her, and she led me a merry dance for a quarter of a mile. She took just the direction in which we were going, and it was not until the wagon rounded a bluff, hiding the flat from our view, that with the characteristic *scaipe* she returned to her charge. I hastened back as rapidly as I could. The bird's flights were short, and she remained for a few minutes on duty as a sentinel. Then with a low single note, almost like a cluck, she called her brood about her, and in another moment the swamp was as noisy as it had been before our arrival.

Is this trait common to the kildeer, or to any other of the snipe and plover? SHOSHONE.

A Doe with Horns.

TOPEKA, Kan., March 2.—In a recent issue of the FOREST AND STREAM I see an article on does with horns, and that letter calls out this note:

In the summer of 1887, in company with four gentlemen from Boulden, Colorado, I made a trip to Steamboat Springs, and while camped there had the good fortune to kill a doe with horns. We had made a trip about ten miles up the river after meat, and on the second day killed a small buck, and were returning to camp after a pack horse, when my companion, Mr. Geo. A. Andrews, and I noticed five deer across the cañon. They were so far off they did not seem afraid, and we watched them some little time and noted that one was much larger than the balance. Thinking to see them run I, fired at the largest, and by some chance killed it dead.

The horns of this deer were in the velvet, and more resembled the horns of an elk than a deer, being very heavy two point horns. Though I did not succeed in saving them with the velvet on, I did make a fairly presentable pair of horns of them, and now have them in my office.

This was the largest deer killed on the trip, and the largest I ever saw. It was all three men could do to hang it up. This was a barren doe and had never had young. It was so fat that great chunks of tallow came off with the hide on the rump, and was of more than passing interest to the settlers; in every respect being a perfect doe except the horns. H. W. SEERY.

A Muskrat Pet.

Editor Forest and Stream:

Yesterday I received a letter from my young friend, Mr. James Savage, in which he says: "A week ago, with my friends Mr. and Mrs. H. B., who are great out-of-door people, I was on a tramp to Stony Point. As we were crossing the field we saw a setter dog after some animal, and when we got closer we saw it was a muskrat. The rat was successfully standing off the dog; it sat on its haunches like a bear, facing the dog, and rushed at it every time the setter came near. We watched it for some time at close range and longed for our cameras. After awhile I went nearer and the rat came at me with a rush; I lifted it several times, hanging on to the toe of my shoe with its teeth. It was too good a specimen to kill, so when its attention was on the dog I put my foot on it and caught it by the tail; I had never handled one alive before, and I was ready to let go if it should turn on me. It was unable to do so and I soon had my captive caged in a watering can. I feed him apples, bread and vegetables, and think I can soon tame him; he feeds out of my hand now, but I don't dare handle him yet; will get some photos of him later."

If I receive a good photograph of Mr. Savage's new pet, I will forward it to FOREST AND STREAM. Have written Mr. S. that I shall expect an invitation to the feast when he gets his musquash in prime condition for the table.

J. L. DAVISON.

African Birds.

THE Field Columbian Museum has issued a Catalogue of a Collection of Birds Obtained by the Expedition into Somaliland, by D. G. Elliot, F. R. S. E., which is No. 2 of the first volume of the museum's ornithological series of publications.

The list covers 125 species—a large number, when we consider that ornithological collecting formed no part of the expedition's plan. This was to collect large mammals, and all the party's preparations looked to this end. Mr. Elliot remarks that there was no difficulty in collecting, for birds were both numerous and tame, and had the expedition been properly equipped for this work very large collections might have been made. The list is one of interest to all who are familiar with African forms of bird life, and the notes—in some cases quite full—which are given about the different species tend to popularize it. Several new species and subspecies are described.

The Linnæan Society of New York.

A REGULAR meeting of the society will be held in the American Museum of Natural History on Tuesday evening, March 23, at 8 o'clock, and a paper will be read by Mr. Eugene Smith on the Fishes of the Fresh and Brackish Waters of the Vicinity of New York City, illustrated with specimens, in the lecture hall of the American Museum of Natural History, Seventy-seventh street and Eighth avenue.

Long Island Bird Occurrences.

EAST HAMPTON, N. Y., Feb. 17.—So far I have had mounted this winter one guillemot, two small auks, one large snow owl. The owl stands 23in. high and is a very fine specimen. E. B. MUCHMORE.

Game Bag and Gun.

PARTRIDGE SHOOTING.

AMONG the birds I have mounted this fall is one that always carries me back to the golden woods of autumn, when the trees are shedding their richly colored foliage, getting ready for the coming of old Boreas. No other bird in my collection fills me so with the spirit of the woods or creates that longing to shoulder my breechloader and call the dog for one more tramp after its gamy relatives. I refer to that lordly ruffed grouse yonder that holds its head up like a king—and king it is of all its gamy tribe. Talk of the snap shot that dropped the darting woodcock just as it topped the trembling poplars; of the shot that sent the whirring quail heels over head into the grass at 60yds. from the gun—there was twice the pleasure and satisfaction in stopping that cunning old cock as he darted from behind yon pine to the dense thicket close to it. Picking it up carefully, you smooth down the feathers and store it in your game bag. Gladly would you restore it to life for the pleasure of hunting it again along the winding brook among the pines. The delicate penciling and rich blending of brown, black and gray on its back and wings match the beautiful leafy carpet of the forest. It belongs to the woodland, and has something wild and free about it that at once stirs your forest-roving propensities. Added to this, cooking does not destroy its gaminess. What epicure would not delight in a dinner of ruffed grouse properly fried in butter. Sad to say, some cooks stew all the taste out of it, but then the bird is not to blame.

There is a fascination about the pursuit of this bird that never loses its charm so long as the sportsman can handle a gun. Hunted, as it generally is, in the balmy weather of late autumn, through woods resplendent with all the glory of their autumn covering and along running brooks of clear water, there would be a fascination without the excitement of the chase, but added to which no other sport can surpass it.

No other tries the hunter's skill and endurance so much and none is so uncertain. In dense woods, or swamps where the underbrush is thick and fallen timber plentiful, it is no easy task to tramp all day and be constantly on the alert, so as not to lose a shot at this sudden riser. Along in the afternoon perhaps you have not seen a bird for some time; your vigilance relaxes, the gun is shouldered, and instead of watching your pointer, who ranges systematically ahead, you look for the best road, when whir-r-r-r, up goes a partridge some 20yds. and flies off into the next county, leaving you in derision to recover from the nervous start he gave you.

The bird is likely to rise at any distance from 5 to 50yds. from you, and does so generally when you least expect it. It must watch the shooter, and only rise when a tree or thicket intervenes, darting off with a loud whirring noise at a fifty-mile rate for less dangerous quarters. This judgment in timing its flight has saved many an old grouse. When put up from the far side of a log or thicket, it generally flies low until out of range. The speed of a frightened partridge is from forty to sixty miles per hour. I have often shot behind them when holding 6ft. ahead at forty yards. They fly nearly in a straight line from 100 to 300yds., according to the shelter and season, for they seldom stop in poor cover, and they fly further in the latter part of the season than in the earlier. They lie much closer in the bright and sunny days of September and early October than they do in the stormy, windy days of November.

Two different guns are needed for grouse shooting. The first, a cylinder bore, is suited for the early season, when the shooting is all at short range in dense cover, as its large killing circle increases one's chances greatly and does not mutilate the game. You may only see a gray streak in dense cover, but fire away, giving lots of lead, or the shot will go several feet behind. Hold above all birds that rise from the ground and below all that fly out of the tree tops. Keep both eyes open and fixed on the bird, and then if the gun fits the shooter it will come to place at once. Some sportsmen swing with the bird, and others hold ahead. Which is the correct or best method? Can the shooter keep his eye on the bird and trust to his arms to give the desired lead? Would some fellow sportsmen give their opinions on these important questions? No. 6 shot has an average velocity of about 840ft. per second for the first 40yds. Therefore it takes one-seventh of a second to go that distance, but in that time a bird going forty miles per hour will fly over 8ft. It also takes time to pull the trigger and for the shot to pass out of the barrel, so the lead at that range and speed would have to be at least 10ft.

To come back again to the subject of suitable guns, the second gun should have the right barrel modified and the left full chocked for late fall shooting, when the leaves are off and the birds rise wild and fly far. In September No. 7 shot is large enough, but later No. 6 will give more satisfaction. Whatever you do, don't fail to thoroughly test your gun with various loads, combinations of wads, sizes of shot and makes of powder, and when you have got the best load for your gun use that and no other. My gun handles 3drs. of powder and 1oz. of No. 6 shot better than any other load.

The shooter's clothing should be of some neutral tint, as a light gray or brown. It is better too light than too dark. In hunting this, the shiest of all game birds, make as little noise as possible, especially avoiding loud commands, etc., as the human voice is a source of terror to all wild game.

As for a dog, any real good setter or pointer will do, but it must be thoroughly broken. A wild, uncontrollable dog is worse than none at all, putting the birds up out of range, and often out of sight on ahead. If your dog is a retriever so much the better, for there is no harder bird to mark down than a partridge, and a wounded one will run and hide under a log or in some out-of-the-way place where you might hunt a week and not find it. I have a pointer bitch, Vic, which I take out and work on birds before the season opens to locate the coveys and get her in training. Her movements are controlled by the whistle and motion of the hand, and her bird sense, owing to long practice, is wonderful. She seems to know just where to look for the skulking birds. She ranges about 50yds. from me, depending, of course, on the density of the bush, quartering her ground carefully at an easy trot, with head not as high as some dogs, but meaning business every inch of it. As a rule, very few birds are flushed without her pointing, but on some days in late fall they will not let a dog get near enough to point. Her weight in hunting trim is just 45lbs., and no amount of work can tire her, which is more than can be said of many setters. Another advantage she has over her long-haired rival is freedom from burrs, which infest many of our best covers. A black or liver-colored dog is a constant source of annoyance, for even the pointing of a white dog will sometimes be overlooked in these dense thickets.

I must relate a little incident that happened on a partridge hunt this fall; for what hunter is not ever ready to tell of the wonderful feats his dog has performed? While passing through a small pine grove, the dog was ranging some 50yds. off on my right when she suddenly turned and pointed. It was a beautiful picture. Through the pines was a small creek, and beyond stretched a green meadow. There stood the dog as if chiseled out of marble, her head out straight in front and her tail straight behind, its tip trembling with excitement. Her eyes seemed to bulge from their sockets, while she measured each breath, lest she might disturb the hidden game. She was pointing into a small fallen pine which lay alongside one of the largest trees in the grove. As I approached she moved up a few feet in under the prostrate trunk, and there, with back arched under the trunk, came again to a point. Walking on tip-toe, I moved up on the other side, doing my best to get a view of the bird. As I came up opposite the standing tree Vic pointed again on the other side, and before I could take another step the partridge came round the trunk and burst into the air like a rocket, just passing within 2ft. of my face. Turning, I snapped at it as it disappeared in the thicket, but missed.

In this part of the country three or four birds in a day make a big bag, and we are often glad to get one, but one for every four shots fired is considered fair shooting, and I have known several hunters to tramp all day and fire from six to a dozen shots and then not get any. An additional charm is added to the sport by its uncertainty. Hunting ruffed grouse is like pursuing the will-o'-the-wisp. Where you most expect to find it it is not, but is hiding perhaps in some less likely part of the same woods. Although you missed the last three or four shots, still your hopes are high that perhaps the next one will count. Something was wrong with that last bird—the woods were too thick—the light poor—of course it was not your fault—and so you tramp on mile after mile after this phantom bird.

Don't let me mislead the reader to think that finding and hitting these birds are all chance and guess work; far from it. There is no other sport that so taxes the hunter's skill in shooting and woodcraft. The way our woods are stocked to-day the novice might tramp all day and not see a bird where the experienced hunter would bag two or three. In western Ontario it is found only in large, thick woods, a part of which usually is marshy, and through which a watercourse runs. It is always found in most abundance near water where the woods are thickest, and seems to have a partiality for pines. There are few better places than a pine ridge running along a stream or swamp. The birds feed upon the pine buds and roost among their sheltering branches. These birds stay in the same locality all the year round, but may be driven from one part of the woods to another by the sportsman, high water or a dearth in the food supply. The food consists mostly of buds of various plants, partridge berries and fruit, such as berries or grapes. The sportsman should never miss an opportunity to study their haunts and habits, and the better he understands them the greater are his chances of success. The spring of the year is a good time to discover their whereabouts by the drumming incessantly kept up in the mornings and evenings. If you can locate the nest or the covey of new-fledged birds, so much the better, as they are sure to be in the near neighborhood in the fall.

An article on ruffed grouse shooting would not be complete without at least one account of a hunt. Let me ask you to accompany my wife and me some hazy day in October. Starting from home about 9 A. M., we proceed south along a creek to the woods, which here run midway between the eighth and ninth concessions for more than a mile without a break, varying in width from one-fourth to three-fourths of a mile.

The winding Catfish flows through the eastern end of this wood, its narrow, shallow basin broadening out near the railroad bridge, where it is covered with long, coarse grass and dense willow thickets, making the finest woodcock ground in these parts. The woods proper consist mostly of large beech maple and elm, with here and there small pine groves, and plenty of undergrowth and down timber. The north and south edges are skirted by small streams, the southern one rising in a small swamp covered with dense willow thickets along the southwestern part of the woods. From the above description an old sport would at once pronounce it a great place for partridges, and so it was. In the early spring, while gathering sap, we could hear them drumming on all sides; and in late summer, while working my dog, I put up some ten or twelve in one covey, besides several other pairs and smaller bunches. In season the report of firearms is heard throughout the day, but, thanks to Dame Nature, she has placed the birds in such covers and endowed them with such cunning and power of wing that they still exist in spite of the persecution. One shooter told me that he went out one day and fired a dozen shots without getting any. In the early season I frequently fired six or eight shots without scoring. Pressing on along the creek through some dense beech thickets and small pines, Vic, slowly worming her way back and forth through the cover, suddenly turned and pointed. On our moving up a partridge disappeared like a shadow in the thicket beyond without giving any chance for a shot. Forcing our way through the briers, we found Vic pointing the same bird on the other side of the thicket. As she stood there, every muscle in her hard, lean body bulging out, we both agreed she was the finest and prettiest dog in the country. Whir-r! whir-r-r-r! away went the bird, keeping a dense thorn bush between itself and danger until out of range.

Upon entering the woods I noticed a black squirrel working in a tall bush, so leaving the dog with my wife, who had a hard time to hold her, I stalked on in front and secured two black beauties. We soon reached Catfish Creek, and followed it to the east end of the woods, flushing two more grouse. One from a tree top over my head seemed to dodge the shot as it went thundering down the creek. Across the creek was ten or twelve acres of dense, low woods and swamp, which we next carefully beat out, and here I made the shot of the day. We were slowly making our way over logs and brush through the thickest part of these woods when Vic suddenly turned and pointed. Up went a partridge some 20yds. to the right front, going like a cannon ball off to my right. The way it went through tree tops and missed limbs in its mad flight was surprising to us both. Off to my right was an open glade, and as the bird flew across I held ahead and pulled. The report was more like that of a cannon than a shotgun; I was hurled round, and my partner was scared out of her wits. "Did I get it?" "Are you hurt?" was her anxious response. "No; guess I must have pulled both triggers by the way it kicked," and so I had. The smoke shut out all sight of the bird after firing. Directing Vic to seek dead bird, I moved on in the direction of its flight. The faithful pointer showed game at the edge of a fallen tree, and we found the bird, a beautiful cock grouse, lying on the ground just as it had fallen, stone dead, with three or four shot in its back. The distance to where the dead bird was lying was some sixty odd paces. Smoothing down the feathers of this beautiful denizen of the forest, we put it in the game bag and went on.

"See, see the partridge, John!"

"Where? I don't see it."

"On the ground yonder, running along.'

But do my best I could not see it. The dog came up and pointed, and the bird flew off; but the cover was too thick to give me a shot.

"Why didn't you let me shoot it?" came rebukingly from my companion.

And indeed I felt guilty of uncalled-for selfishness; but men are selfish, especially in such circumstances. Shortly after she brought a big woodpecker down from a tall elm as slick as any man could. Give your wives a fair chance, boys. Don't laugh at and scare them when they first try to shoot, and they will soon take as much pleasure in it as you do. Why should the fair sex be denied the pleasant walk, exhilarating fresh air, calm excitement of a day afield? During last October and November she brought the dog and gun to school at 4 o'clock two or three times every week, and we went hunting in the neighboring coverts. These hunts shall be always treasured up in our memories as among the most delightful moments of our lives. The bag, usually a partridge or a rabbit, varied occasionally by a brace of quail or woodcock, bore no proportion to the amount of pleasure, which was greatly enhanced by having some one there to share it.

One evening when returning from one of these hunts along the creek the dog was lost to sight for some time in the dense thickets. I whistled, but she did not come; so concluding she was pointing, we stopped in a little glade surrounded by willows, and I got ready to shoot in case a bird came that way. Sure enough, on it came straight for our stand. Aiming high, I turned it with the right barrel and dropped it with my left. By the time I had reloaded and was ready to look for it my wife had returned with the grouse, and trembling with excitement held it up for my inspection.

"Isn't it a beauty? Won't you mount this one?"

To return to the subject. We hunted that woods through and ate our lunch sitting on a log beside the creek. After dinner we got more woodcock than partridges, for the thickets along the creek near the railway bridge are noted boring grounds of the longbill. The cover here is so dense that it is impossible to keep track of the dog, which in this case took good care of herself, flushing the birds if nobody came up when she pointed. It was not long before a partridge passed directly over our heads in its mad flight for cover. Swinging on it, my right was too far back, but the left brought it down amid a cloud of feathers in the very center of a bunch of willows. This dead bird also was pointed by Vic, who has been trained not to retrieve, her former owner using her mostly with other dogs which did that kind of work. A shrill, quivering whistle caused me to seize my gun and turn round just in time to make a snap shot as a woodcock disappeared in the willows, but without success. Stooping down, we half walked, half crawled under the thicket, bending the smaller bushes under foot and raising the larger with our hands until we came to another stretch of sod. Another cock rose and flew across at some 30yds. range. Missing with the right, I took a little more time with my left and had the satisfaction of seeing him turn over and fall like a wet rag some 40yds. away in a small maple. Without Vic we would have lost this one, as it looked for all the world like a bunch of dead leaves there under the willows and maples. How apt one is to shoot too quick, not covering the bird carefully enough, and consequently losing many birds and only slightly wounding others. In a great many cases I have missed with the right, but taking a little more time with the left killed the bird slick and clean. Nervous shooters are apt to get into the bad habit of snapping at everything as soon as they see it, making more misses than hits, and badly mutilating their game when they do hit it. To be able to make a good snap shot at the right moment is a great accomplishment, especially in grouse shooting, which of all shooting is the most snappy, but still there must be an approximately correct aim when the trigger is pulled to insure even a fair success. Well do I remember an amusing incident that happened while hunting with a friend from St. Thomas. We had tramped all day, and dusk found us approaching a small piece of swamp densely covered with willows. The dogs were working on ahead, when up went a large woodcock out of range. We marked it down at the far side of a small clump of willows that stood out by itself, and calling in the dogs advanced to the attack. To make a long story short, that bird got up within easy range and went nearly straight away, and may be going yet for all the difference our four shots made. And that was the last and largest cock of this season. Some farm hands husking corn in a neighboring field had the laugh on us that time. All sportsmen have their days off and days on. In the latter they run up big scores of straight kills if game is plentiful, and in the former big scores of easy misses, and the harder they try to shoot the worse the shooting. That must have been our day off.

To resume my narrative, we searched that cover thoroughly, flushing one more grouse, and adding a rabbit to our bag by way of variety by a lucky snap shot through a dense thicket. The shades of evening were settling slowly over the woods. The long, dark shadows of the pines extended across our path. Broad arrows of light descending through the scant foliage lit up the beautiful carpet of the forest. All the trees have donned their richest mantle, which now assumes a golden hue in the rays of the setting

sun. The sighing of the pines and the murmur of the brook combine with the numerous other sounds in a confused harmony the music of the forest so dear to the lover of nature. The robins are making the air resound with their chirping, as they congregate for the night in the beech thickets along the ridge yonder. Far away in the distance in the direction of the great cedar swamp comes the hoarse hooting of the owl, which is answered by a pair of screeching bluejays in the little pine grove by the creek. Small flocks of blackbirds are passing over in their long southward journey. A loud rapping from the elms on the higher land, varied occasionally by a still louder "whick-whick-whick," reminds us that a pair of great northern woodpeckers have been seen in the vicinity for a week or more. As we cross the creek on a fallen tree, some muskrats that have been sporting along its willowed margin disappear under water with a loud splash, a steady, advancing ripple marking their course to the holes in the banks. Silently emerging from a grove of pines, we are surprised to see a woodchuck sitting upon a hollow pine stump, into which he rapidly dives out of sight. Out on the commons the turtledoves are coming in in small flocks to their roosting place in the solitary trees that dot the pasture. All nature is alive and full of music. Crossing the fields, the sounds of the forest give place to the tinkling of distant cowbells, lowing of cattle, shouting of farm hands and barking of watch dogs. Trudging wearily on through wheat and oat stubbles, climbing fences and crossing brooks, we at last reach the house. Vic, business-like, retires to the kennel, and awaits her hard-earned evening meal. The gun is put in the corner to be cleaned the first thing after supper. Thus ended another hunt, the memory of which will frequently give us pleasure throughout the long winter evenings to come.

J. A. MACKENZIE.

ONTARIO.

HOURS IN THE BLIND.

The Start.

THE sky was overcast and black; wind northeast, temperature 28°; prospect of snow or rain during the day. I had eaten a good breakfast, had struggled into the heavy outer clothing needed on a day like this, and was just leaving the house when the clock struck 6. This was in good time, for the sun did not rise until 7, and it would take us less than an hour to get to our point.

Down at the boat house John was waiting in the skiff. Everything seemed to be there—guns, ammunition boxes, lunch kettle, my oil clothes—while from a little coop under one of the thwarts came the low chuckle of a live duck or two to be tied out with the wooden decoys.

The mast was stepped and we pushed out from the little dock, the wind caught the sail, the boat heeled over and began to glide swiftly along, with a pleasant ripple of water under the bow and a stronger gurgle under the stern. We had gone but a very short distance when the whir of wings and a splashing on the water warned us that we had disturbed some ducks, and a little later vociferous quacking above the marsh which we were skirting told of black ducks frightened from their reedy resting places. Now and then as we passed close to some point of land, the boat's way was checked for a moment as the tall growth of canes cut off the wind and the vessel resumeed an even keel, while the sail for a moment shook in the still air. Again, when the point was passed and the breeze was felt once more, the skiff heeled over and darted forward like a good horse touched with the spur.

Already the sky was beginning to grow light in the east when we heard before us the clear, trumpet-like calls of geese talking to one another, and a moment later the louder tones and the splashing of water, which warned us that the birds had taken wing. In an instant the air resounded with their clamor, and now we could see them against the sky before, above us, and on either hand—some of them almost within oar's length of us. Still the guns remained in their cases and still I smoked my pipe, while John still tended sheet and tiller, for the law of North Carolina provides that birds shall not be shot except after sunrise and before sunset, and we respect the law.

Soon the geese are gone, and now we can see against the sky long lines and wedges of canvasbacks and redheads winging their flight north or south to the feeding grounds, which pleases them best, while through the quivering air falls the ringing whistle of a thousand wings.

Such are the sights and such the sounds that meet us under the breaking day as we cross the Sound and enter a quieter bay, where the boat's prow touches the marsh and we have reached our ducking point.

The Land and Its People.

We had been sailing over the waters of Currituck Sound, from which the low sandy shore runs inland on a dead level for many miles. Much of this land is forest-covered, chiefly with tall trees of the Southern pine, whose straight, clean stems stand close together, often without any undergrowth, and remind one somewhat of the forests of the Northwest coast, if such small things may be compared with great. Here and there the land has been cleared and the stumps rooted out, the fields for a few years plowed and sown with corn or cotton or sweet potatoes, and then their cultivation abandoned when new growths of seeding pines spring up, and after a while the old fields start new forests again.

Most of the inhabitants of this country are to day small landholders—farmers during the summer and fishermen and gunners in winter. They are a kindly, well-disposed people, truly Southern in the deliberateness of their actions, in their courtesy and in their hospitality. Many of the most intelligent and well-to-do of them barely know how to read and write. Although the winter weather here is often very cold, the houses are not built for cold weather, the chimneys are on the outside of the house, and the edifice itself is perched on stilts above the ground; either piers of brick or sections of thick pine logs supporting the timbers of the frame. At intervals of a few miles at the edge of the road may be seen standing in the pine forest churches at which the people gather on Sunday, for they are most of them regular attendants at church, this being the only form of entertainment and diversion which they have.

In the corner of some lot along the road near each farm that one passes may be noticed tiny shingled pent roofs, 6 or 8ft. long and half as broad, standing a foot above the ground and supported at each corner by a post. For several years, as I passed through the country, I speculated as to what these might be.

These roofs are shelters built over the graves of the dead, and there is surely a deep pathos in this custom of protecting from beating rain and drifting snow the last resting places of the forms of those whom we love so well. Many a mourning mother in her comfortable home, her heart rent with the anguish of recent bereavement, has suffered an added pang, as the storm beat upon the house, at the thought that the dear form which she has so often held in her arms lies in a grave out of doors exposed to all the fury of the tempest. It is a sweet thought in these simple North Carolinans to erect these shelters over the dear ones who have left them.

Some of these roofs are new, some are now gray and weathered, and others still have fallen to decay and lie in little heaps upon the ground. The generation by which they were erected has passed away. There are left now no loving hands to tend these old time graves. Even the names of the dead are only vague memories or have been forgotten.

The dwellers on these little farms make fair livings from their produce, which they ship by rail or by steamer to a market; or if by chance their crops fail, they turn to the waters of the sound to supply them with food or with money. For his canvasback ducks the gunner receives $2 per pair, and the common duck and the fish find a ready market in a little city only forty miles away, which is reached by water transportation. So really the Sound is the people's salvation, and to-day, just as it did centuries before the white man's foot touched this continent, it supports those who dwell along its shores.

These men, between the gathering of their crops in early autumn and the preparing of their land in early spring, spend much of their lives on the Sound; so they are good boatmen and, as a rule, know all the sloughs, leads and channels in these waters. Many of them are good shots and from bush blinds and batteries kill, first and last, a great many ducks. They are also fond of hunting on the shore, chiefly with the aid of hounds, and sometimes follow the fox or drive the deer through lines of waiting men. They are a kindly people and easy to get along with, the worst faults of the worst of them being drunkenness and a failure to respect the game laws.

Of course, there is a large negro population here, though it is said to be only 25 per cent. of the whole for Currituck county. As a rule, the negroes have made very little progress since the war. They still fail to appreciate the necessity of economy and the saving of money; and eat, drink and wear all that they earn. The number of negroes who have accumulated property and become landholders in the county is very small.

The Waters.

Currituck Sound is a long and shallow lagoon two or three miles wide, separated from the ocean by a narrow sand beach. The Sound is bordered by low marshes, in which are many shallow ponds, leads, and creeks, and is dotted with islands, also low. All this low marsh land supports a growth of tall cane, which in summer is bright green, turning yellow in the autumn.

In ancient times—there are men still living who can remember it—the water had nearby connection with the sea. There were inlets through the sand beach and the tide ebbed and flowed through these channels. Beds of oysters, clams and scallops flourished here, and even now the boatman who is unfamiliar with the channels may sometimes run aground on the old shell banks whose life has long departed.

Still longer ago the primitive dwellers on this coast drew a fat living of shellfish from the waters, and to-day at many points on the marshes of the mainland may be found heaps of shells which represent spoils gathered from the waters and carried to the camps, where the shells were thrown away after their contents had been extracted. Perhaps investigation of these shell heaps—true kitchen middens—might yield implements of this primitive time which would be of real interest.

Tying Out.

The skiff's nose struck the soft marsh and Gunner sprang joyfully ashore, while the sail slatted furiously in the breeze. Then John ran forward, unshipped the sprit, rolled up the sail against the mast, and unstepping this and raising it on his shoulder, jumped ashore and carried it into the cane out of sight and left it there. I handed out on to the marsh the different articles needed in the blind, until at length nothing was left in the skiff except her furniture and the decoys. Then we carried the things up back of where the blind was to be made, and while I began to arrange matters there John returned to the skiff and pushed it off to put out his decoys.

These were piled in the skiff on either side of the centerboard trunk, and there were perhaps in all seventy-five of them The lines by which their weights were attached were 10ft. long. Using his pushing oar, John moved his boat about 20yds. from the point, and then, thrusting the oar down into the mud, tied his painter to it by a close hitch, and picking up the decoys began to throw them overboard. He rapidly unwound the line from each, and then holding decoy in one hand and the line about 2 or 3ft. above the weight in the other, he tossed them in all directions about the boat. It seemed to be very quickly and carelessly done—but there was no lack of care in it. When all that were needed had been thrown out it was seen that the head decoys were well up to windward of the blind, while the others were strung along from them to leeward, so that the last of the decoys were just a little to leeward of the blind. About opposite the windward decoys, but a little inside—toward the marsh—from them, were put the three wooden goose decoys. The finishing touch was to set out the live decoys—three in number, two ducks and a drake. For each live decoy there is a "stool," which consists of a sharpened stick 2½ft. long, surmounted by a circular or oval piece of board 6in across. Fastened to the stick which supports this board is a leather line 3ft. long and terminating in two loops, which are slipped over the duck's two feet and drawn tight so that the bird cannot get away, yet not so tight as to press unduly on the flesh.

Pushing his boat up to the head of the decoys and fastening it as before, John pressed the point of one of the duck stools into the mud until the little table on which the bird was to stand was 2in. below the water's surface. Then opening the coop, he took out the drake, passed its legs through the loops, drew them close and put the bird in the water. It flapped away from the boat with frightened quackings, but recovering at once, began to bathe and to dabble in the water. The boat was now pushed to the tail of the decoys, and the two ducks put out there. Then John pushed the skiff along the marsh, hid it behind a little point, and soon was heard coming crashing through the cane toward the blind.

Meantime I had not been idle. I had brought everything to the blind, had set up in the ground the four forked sticks which were to support the two guns, had taken off the gun covers, opened the ammunition box, loaded one gun with duck cartridges and one with those for geese, had fixed the chairs, had broken an armful of cane and begun to repair the blind. In a short time, with John's assistance, the work was all done and I was standing in the blind waiting for the birds to come.
